【英文摘要】The embryo culture in vitro of loquat cultivar Zaozhong No. 6 was conducted for establishing the regeneration system of loquat test - tube plantlet. The results showed that the optimum culture medium for the inducement of stem segment was MS + BA 0.5mg /L + NAA 0.05 mg /L; the optimum proliferation culture medium was MS + BA 1.0 mg /L + NAA 0.1 mg /L; the optimum rooting culture medium was 1 /2 MS + NAA 0.4 mg /L + IBA 0.2 mg /L. This article established the foundation for the studies of factory productionand biotechnology of loquat vitro plantlet.

【英文关键词】Chinese olive Germplasm resources Leaf Phenotypic characters Diversity Principal component analysis
【中文摘要】对农业部福州橄榄种质资源圃中80份橄榄种质资源叶片12个表型性状进行了调查分析。结果表明:这一群体橄榄种质资源的嫩叶颜色、成熟叶颜色、叶面光泽度、叶片形状、叶尖形状、叶基形状、小叶数、复叶主轴长度、小叶叶柄长度、小叶长度、小叶宽度、叶形指数等表型性状均存在丰富的多样性;不同来源地橄榄种质资源叶片表型性状差异明显。主成分分析结果表明,叶片形状、叶形指数、嫩叶颜色、成熟叶颜色、小叶数是叶片表型性状多样性构成的主导因子。
【英文摘要】The leaf phenotypic characters of 80 Chinese olive germplasm resources were investigated, from the Chinese Olive Germplasm Repository of the Ministry of Agriculture in Fuzhou. The results indicated that there were abundant diversity in new leaf color, mature leaf color, leaf glossiness, leaf shape, leaf apex shape, leaf base shape, leaflets number, compound leaf petiolar length, leaflets petiolar length, leaflets length, leaflets width, leaf index in these germplasm resources. The leaf phenotypic characters of Chinese olive germplasm resources from different source were significant differences. By the principal components data, leaf shape, leaf index, new leaf color, mature leaf color, leaflets number were the dominant factors which constituted leaf phenotypes diversity.

【英文关键词】Chinese Olive polyphenol extraction optimization technology
【中文摘要】本试验采用酒石酸铁法提取橄榄多酚,通过单因素和正交试验研究了提取溶剂浓度、浸提温度、浸提时间、料液比以及提取次数对橄榄多酚提取得率的影响。结果表明:影响橄榄多酚提取得率的主要因素及顺序为浸提时间>浸提温度>料液比>溶剂浓度。在考察范围内,橄榄多酚的最佳提取工艺条件为:乙醇浓度50%(v/v),浸提时间2h,浸提温度40℃,料液比(g/mL)1:30,橄榄多酚的提取得率为32.13%。
【英文摘要】In this paper, olive power was treated by common extraction. The results of single-factor examination and orthogonal experiments showed that the degree of the factors which significantly influenced the yield of polyphenol was in order of extraction time>extraction temperature>solid-liquid ratio>extraction solvent. The optimal parameters for this method were as follows: powder was extracted by ultasonic density of 50% with solid (g)-liquid (mL) ratio of 1:30 at 40℃ for 2 hours. The yield of polyphenol can be up to 32.13%

【题目】高多糖龙眼杂交新品系“高宝”的选育
【中文关键词】郑少泉 姜帆 蒋际谋 李韬 黄爱萍 黄金松 高慧颖 郑金贵
【英文关键词】Dimocar puslongan Lour. polysaccharide hybrid quality late mature

【中文摘要】为选育高多糖优质大果特晚熟杂交龙眼新品种,从85 株立冬本(♀) ×青壳宝圆(♂) 杂交后代群体中,应用多靶筛选法选育出果肉多糖含量高、果大、可食率高、味甜的晚熟杂交龙眼新品系“ 高宝 ”。该品系果肉多糖含量为8081.22 mg • (hg • FW) - 1 (2 a 平均) 、单果重151.5 g、可溶性固形物含量201.6 %、可食率701.8 %、成熟期10 月中旬,其综合经济性状优于目前国内外主栽的晚熟龙眼良种,是果肉多糖含量高兼具质优、果大、晚熟的杂交龙眼新品系。研究还发现龙眼杂交后代果肉多糖含量的遗传属于数量性状遗传,其性状分离呈正态分布。

【英文摘要】Long an polysacchar ides have significant health efficacy on antifatigue, memory and learning ability improvements, as well as antineo plastic. Using the hybrid of Lidongben and Qingkebao yuan, a multi-target screening method as applied to breed longan with high polysacchar ide content. The aim w as to o btain hig h polysaccharides in the aril, superior fruit characteristics and quality. The r- esult showed that the aril polysaccharide content of “ Gao bao ” was the highest (i.e., 8081.22 mg • (hg • FW) - 1) among the 85 strains. Its economic indicators appeared to be superior to the major late mature longan cultivars available on the market: (a) the average individual fruit weight was 151.5 g, (b) the soluble solid content was 201.6%, (c) the edible portion was 701.9%, and (d) it matured in mid-October. Furthermore, the genotype of this longan hybrid progeny were quantitative inherited characteristics, and the characteristic segregation was under normal distr- ibution. These fact ors are considered advantageous for cross- breeding of high polysaccharide content longan.

【题目】琯溪蜜柚高分量核DNA提取方法的建立

【中文关键词】潘腾飞

陈桂信

潘东明

【英文关键词】pummelo　HMW-DNA　BAC library　pulsed-field gel electrophoresis

【中文摘要】以琯溪蜜柚[Citrus grandis(L.)Osbeck'Guanximiyou']叶片为材料,比较了两种提取方法对高分子量核DNA(HMW-DNA)制备效果的影响。结果表明,改良Zhang法与Peterson法相比,前者更适合于琯溪蜜柚HMW-DNA的提取。改良Zhang法用温和的物理方法破碎细胞壁,在一定的渗透压下保证细胞核的完整性,运用miracloth和低速离心去除大部分的多糖和细胞壁碎片,经显微观察,所提取的细胞核完整、纯净、质量高;将这些细胞核用低熔点琼脂糖包埋,以琼脂糖小块的方式保存细胞核,以保持核的稳定;琼脂糖小块的最适消化时间为48h,脉冲场凝胶电泳分析结果表明所获得的HMW-DNA大于1Mb,这些核DNA能够被限制性内切酶消化,适合于琯溪蜜柚BAC基因组文库的构建。

【英文摘要】High molecular weight nuclear DNA(HMW-DNA)from leaves of Guanximiyou [Citrus grandis(L.) Osbeck ‘ Guanximiyou ’] was prepared by two methods(Zhang ’ s and Peterson ’ s method)and the extracting effects of the two preparing methods were compared. The results showed that Zhang ’ s method was more suitable for preparation of HMW-DNA in Guanximiyou. The cell walls were broken down by gentle physical homogenization to keep integrity of nuclei under suitable osmolarity. Debris of cell walls and most of polysaccharides were removed by filtering with miracloth and centrifugation under slow speed. The isolated nuclei were proved to be intact,pure,and high-quality by observation under microscope and were embedded with low-melting-point agarose to preserve the isolated nuclei in plugs for keeping stability of nuclei. The optimum digestion time of plugs was 48 hours,the pulse field gel electrophoresis (PFGE)results showed that the isolated HMW-DNAs were more than 1 Mb in size and were digested completely or partially by restriction enzymes,therefore,Zhang ’ s method was suitable for construction of BAC library in Guanximiyou.

【题目】琯溪蜜柚汁胞APX1 cDNA的克隆及原核表达
【中文关键词】钟凤林
郭志雄
潘东明
李开拓
【英文关键词】Guanximiyou APX1 cDNA Sequence analysis
Prokaryotic expression
【中文摘要】为了解琯溪蜜柚(Citrus grandis‘ Guanximiyou ’)汁胞在发育过程中,APX与汁胞活性氧自由基清除和汁胞粒化的关系,以琯溪蜜柚果肉为材料,运用cDNA克隆的方法,克隆得到琯溪蜜柚果肉APX1cDNA全长,并进行了原核表达。结果表明:获得了全长为1118bp的琯溪蜜柚汁胞APX1cDNA全序列,包含753bp的开放阅读框,编码250个通读的氨基酸序列。具有过氧化物酶活性位点信号和亚铁血红素结合基信号。目前APX1cDNA序列已在GenBank上注册,登录号为gb|FJ595794.1。通过构建重组质粒p32-APX1,转化至TransRosetta(DE3)中,在大肠杆菌宿主中获得了表达,从而为下一步制备该酶抗体及研究琯溪蜜柚汁胞粒化过程中APX1的功能奠定了基础。
【英文摘要】In order to understand the Citrus grandis' Guanximiyou' juice sac granulation in the development process, APX and juice sac granulation active oxygen radical scavenging and juice sac granulation pelletization in relation to the Guanximiyou pulp as material, using cDNA cloning method, get the cloningGuanximiyou pulp APX1cDNA full length, and the prokaryotic expression. The results show that won the full length for 1118 bp of Guanximiyou juice sac granulation APX1cDNA full sequence, including 753 bp open reading frame, code 250 read through the amino acid sequence. Has the activity of peroxidase site signal and heme combined with base signal. At present APX1cDNA sequence has set up a file in the GenBank on registration, registration number for gb | FJ595794.1. By constructing a recombinant plasmid p32 - APX1, conversion to TransRosetta (DE3), in escherichia coli host in a express, thus for the next step the enzyme preparation of antibody and research x2000 CBM creek MiYou juice cell granulating process the function of the APX1 laid a foundation.

【题目】琯溪蜜柚汁胞在发育与粒化过程中APX活性变化及同工酶分析
【中文关键词】钟凤林 郭志雄　李开拓 王江波 潘东明
【英文关键词】Citrus grandis　Juicy sac　Development Granulation　APX　IsozymC itrus g rand is; Juicy sac; Developm en;t Granu lation; APX; Isozym ee
【中文摘要】对不同发育时期的琯溪蜜柚(Citrus grandis -Guanx im iyou.)汁胞进行APX活性测定及同工酶分析。结果表明, 随着汁胞的发育, APX活性增大; 而柚子衰老腐烂时, APX活性迅速降低。APX同工酶随着汁胞发育而发生变化, 花后150 d的APX同工酶增加了1个组分(迁移率0. 66) , 且随着汁胞的成熟, 其表达量增加。花后230d时柚子开始衰老腐烂, 花后242 d已难以看到大部分APX同工酶酶谱。粒化汁胞的APX 活性比正常汁胞大, 同工酶酶谱亮度和清晰度也大, 推测琯溪蜜柚汁胞在粒化过程中APX可清除活性氧自由基, 抵抗氧化损伤。
【英文摘要】The changes in activity and isozyme of ascorbate peroxidase (APX) in pomelo (Citrus g randis-Guanximiyou.) juicy sac were studied at different development stages. The results showed that APX activity increased gradually with juicy sac development and decreased rapidly at aging and rotting stages. The PX isozyme also changed during juicy sac development stages. A new APX

isozyme was identified with mobility of 0. 66 on 150 days after anthesis, and its expression enhanced with maturity of juicy sac. On 242 days after an thesis, most of APX isozyme d isappeared. The APX activity innormal juicy sac was lower than that in granulated juicy sac. It suggested that APX could scavenge active oxygen free radicals and prevent the oxidative damage during pumelo juicy sac granulation stage.

卢新坤
雷龑
【英文关键词】red-fleshed sweet pomelo　bearing branches　branch length　leaf number　flowering rate
【中文摘要】以红肉蜜柚五年生结果树为材料,调查其结果枝分布位置、结果枝径粗、长度、叶片数,研究结果枝生物学指标与成花的关系。结果表明,在树冠垂直方向上结果枝主要分布在30-89 cm区域,占总量的77%,90~120 cm区域呈减少趋势,仅占总量的23%,120 cm以上区域几乎没有花穗;结果枝径粗从2-6 mm均可成花,2.5 mm占13%,3 mm占44.5%,4 mm占15%,5 mm占13%,以3 mm成花率最高;结果枝长度从5-24 cm均有成花,长度11 cm成花率占19.3%,14 cm占28.3%,17 cm占21%,以长度14 cm的成花率最高;不同区域最佳叶片数与成花关系有所不同,30-59 cm区域以6 片叶、60-89 cm区域以7 片叶、而90~120 cm区域则以8片叶成花率高,有明显的随着结果枝分布区域的上升最佳成花叶片数增多的趋势。
【英文摘要】Red-fleshed sweet pomelo five-year trees were used as material for investigating distribution position, stem diameter, length and leaf number of bearing branches and studying the relationship between the biological indicators of bearing branches and it ’s flowering. Results showed that bearing branches distribute mainly in 30-89 cm zone of vertical direction of canopy, representing 77% of the total bearing branches, reduce in 90-120 cm zone, the ratio is only 23%,almost no flower above 120 cm zone; It can flower with the stem diameter from 2 to 6 mm, the flowering rate of 2.5 mm, 3 mm, 4 mm, 5 mm is 13%, 44.5%, 15%, 13%respectively; It can flower with the length from 5 to 24 cm, the flowering rate of 11 cm,14 cm,17 cm is 19.3%,28.3%, 21% respectively; It is the highest flowering rate with the stem diameter of 3 mm, and the length of 14cm. The relationship between the best leaf number of different zones

and it ’ s flowering is different, it is the highest flowering rate with the leaf number of 6 in 30-59 cm zone, the numbers are 7 and 8 respectively in 60-89 cm zone and 90-120 cm zone, the best leaf number increase obviously with the ascent of distributionzone of bearing branches.

【英文关键词】wampee ISSR-PCR wampee, ISSR-PCR, optimizationoptimization

【中文摘要】为应用ISSR分子标记对黄皮种质资源、分子标记辅助选择育种及其遗传多样性研究,通过单因素和正交试验对ISSR-PCR反应体系进行优化。结果表明,采用改良SDS法提取的DNA条带完整、无RNA污染,适于ISSR-PCR扩增;黄皮ISSR分析最适的扩增体系是:20μl的反应体系中含30ng的模板DNA、1.5UTaqDNA聚合酶、0.4μmol/L引物、0.3mmol/LdNTPs以及引物(gA)8C的最佳退火温度为52.4℃。

【英文摘要】To study the extraction method of genomic DNA and optimization of ISSR-PCR reaction conditions for wampee. The improved SDS method was used to extract DNA. The factors influencing ISSR-PCR were investigated by a single factor test and orthogonal design experiment.The researcher used improved SDS method to extract DNA of Wampee, which meets ISSR requirements in quantity and purity. And a better amplification system of ISSR was obtained with the reation system comtaining 30ng template DNA,1.5U Taq DNA polymerase, 0.4 μmol/L primers, 0.3mmol/L dNTPs in the total volume of 20 μl.The optimized annealing temperature was 52.4℃ for primer (gA)8C. The stable and reproducible optimal ISSR-PCR reaction system and suitable annealing temperature are established for Wampee, which had laid the good foundation for ISSR analysis on studies of germplasm resources identification, molecular marker assisted breeding and genetic diversity.

【题目】混接茂谷橘橙对芦柑叶片和果实淀粉酶活性的影响

【中文关键词】赖呈纯 余亚白 陈源 王琦 谢鸿根 高慧颖

【英文关键词】Citrus Poon-kan Macrott mixed grafting amylase

【中文摘要】为探讨混合嫁接对柑橘果实物质代谢等生理过程的影响,对混合嫁接后的芦柑和茂谷橘橙淀粉酶活力进行测定。结果表明:茂谷橘橙淀粉酶活力显著高于芦柑;混合嫁接茂谷橘橙后的芦柑比未嫁接的淀粉酶活性显著增强,且变化趋势也与茂谷橘橙相似。

【英文摘要】Glucose metabolism plays a very important role in fruit quality.It is mainly governed by carbohydrate metabolism and the related enzyme activities.And,leaf photosynthesis and fruit development are closed relatd with starch catabolism.The amylase activities in Poon-kan and M acrott oragnges after mixed grafting were monitored for this study.The results showed that the amylase activity of Macrott was higher than that of Poon-kan in general.At the same time,the amylase activity of Poon-kan was enhanced after the mixed grafting.The activity changes of the two orange varieties tended to be similar.

【英文关键词】Grape　Trace element　Flame atomic absorption spectrometry
【中文摘要】应用火焰原子吸收光谱法对三明12 个葡萄品种各器官的Fe、Mn、Zn、Cu、Ni、Cr 的含量进行测定分析,结果表明,所测6 个元素在各品种器官中均有一定的分布,同一微量元素在葡萄不同器官、不同品种之间存在一定的差异,其中所测微量元素中Mn、Fe 元素在各器官中含量相对较高,Zn、Cu 其次, Ni、Cr 的含量相对较低。所测葡萄品种各器官中Fe、Mn、Zn、Cu 的含量多数在一般植物体的正常含量范围内,Cr、Ni 的含量稍高于一般植物体的正常含量范围;Fe 元素在各品种间含量差异最大,其高低顺序为:藤稔>巨峰>京亚>双味早红堤>红高>黑香蕉>京秀>87-1>汤姆逊>金星无核>矢富罗莎>维多利亚,而Ni、Cu 、Cr 元素的含量在不同品种之间的差异较小。
【英文摘要】The contents of Fe, Zn, Mn, Cu, Cr, Ni elements of the organs were measured by the method of flame atomic absorption spectrometry (FAAS) in 12 cultivars of grape from Sanming. The result showed that, six trace elements existed in all the organs of grapevine. The contents of these trace elements differed to some extent among different organs, trees or cultivars. Among them, the contents of the trace element (Fe、Mn) in the organs of grape were relatively high; The contents of Zn、Cu was the second in the organs of grape; The contents of the trace element (Ni、Cr) were relatively lower levels in the organs of grape. The contents of Fe, Mn, Zn, Cu of most organs in grape belonged to normal contents of the trace elements in plants, but the contents of Cr, Ni is slightly higher than that of the general plants. The variance of Fe content in 12 grape cultivars was the most obvious, the size order of Fe content is Tengreng>Jufeng>Jingya>Shuangweizaohongti>Honggao>Heixiangjiao>Jingxiu>87-1>Tangmuxun>Jinxinwuhe>Shifuluosha>Weiduoliya, but the contents of Ni、Cu、Cr in 12 grapevine cultivars have little difference.

【题目】基于3GWCDMA的琯溪蜜柚移动专家系统的研究
【中文关键词】潘锦山 潘东明
【英文关键词】3G WCDMA　guanxi honey pomelo　mobile expert system
【中文摘要】研究了基于3G WCDMA实现了琯溪蜜柚的移动专家系统。系统利用3G网络优势,以Microsoft ASP.NET 为开发平台,使用WAP2.0、Visual C#、WML、Javascript 等为编程语言在3G移动终端上构建琯溪蜜柚移动专家系统。通过该系统农业生产者仅需要1 部3G移动终端便可简单方便地实现专家知识交互式查询、病害虫诊断与防治等功能,不受时间、空间限制,同时其模块化的框架设计可迅速创构出同类专家系统,具有界面简洁、功能强大、使用便捷的特点,是3G技术在农业专家系统上的全新应用。
【英文摘要】The paper studied the mobile expert system of guanxi honey pomelo on the basis of 3G WCDMA technology. System made full use of 3G networks and WAP2.0, Visual C #, WML, Javascript and other programming languages with the development platform of Microsoft ASP.NET to build guanxi honey pomelomobile expert system on 3G mobile terminal. Agricultural producers only need a 3G mobile terminal canachieve expert knowledge interactive query, pest diagnosis and control functions without time and space constraints. While its modular structure frame design can quickly create a similar expert system with a simple interface, powerful, easy to use features. It was the new application of 3G technology on the agricultural expert system.

【题目】梨果形偏斜发生规律研究
【中文关键词】陈小明
陈义挺
包建平
陈婷
张长和
胡宁三
蔡盛华
雷龑
刘鑫铭
黄新忠
【英文关键词】Pear fruit shape deformation irregularity
【中文摘要】对翠冠、清香、雪青、玉冠、黄金梨等5个品种的调查研究表明,在正常疏花疏果栽培条件下,梨果实发生偏斜现象较普遍,平均斜果率为46.02%,品种间存在一定差异,其中黄金梨斜果率最低,为33.57%,其次为清香(43.78%);黄金梨、清香与翠冠、玉冠、雪青等3个品种相比,差异分别达极显著、显著水平,翠冠、玉冠、雪青等3品种之间差异不明显。梨果形偏斜现象自幼果迅速膨大期初期就开始发生,偏斜果已大量存在,梨果实偏斜指数变化可分为缓慢增大、迅速增大、相对平稳等3个阶段,幼果发育初期端正是果实在后续发育过程保持对称生长的基础,果实由顶生状转向下垂状易位过程是控制果实非对称生长的关键时期。
【英文摘要】Shape deformation of the fruits of Cuiguan,Qingxiang,Xueqing,Yuguan and Huangjin pears was investigated.The results showed that the irregularity occurred commonly at an average defective rate of 46.02% and varied with varieties in the flower- and fruit-thinning cultivation.For instance,the defective rate for Huangjin was the lowest(33.57%)followed by Qingxiang

(43.78%).Compared with Cuiguan,Yuguan and Xueqing,the deflective fruit rates of Huangjin and Qingsiang were lower,the difference were extremely significant and significant respectively.On the other hand,there was no difference on the shape deformation among Cuiguan,Yuguan andXueqing pears.The deformation appeared to start during enlarging of the young fruits,and a considerable number of deformed fruits had already existed by then.The pear deformation developed in three stages,namely,the slow growth,rapid expansion and relative stability.The good shape of young fruit in the early developing is the base of keeping growing symmetrically in the follow-up development.The progression from upward growth to downward is the crucial period of controlling fruit growing unsymmetrically.

【题目】低温对贵妃枇杷采后果实品质的影响
【中文关键词】许玲,余东,许家辉,魏秀清,张丽梅,郑少泉
【英文关键词】Low Temperature, Guifei Loquat, fruit quality
【中文摘要】为探讨贵妃枇杷适宜的采后贮藏温度及时间,延长果实供应期,该试验设0~4℃、6~8℃和常温等3个温度处理,研究贮藏期内果实品质的变化。结果表明,低温能显著抑制果实的失重,延缓糖、酸含量的下降;前期果实硬度下降,后期上升;采后各处理的可食率、可溶性固形物含量下降;贵妃枇杷的适宜贮藏温度为6~8℃,贮藏20~30天仍能保持较好的品质。
【英文摘要】To explore the Guifei loquat appropriate post-harvest storage temperature and post-harvest storage time, for extending the fruits of the supply period, the test for 0~4℃, 6~8℃, and at room temperature had been design to study the changes in fruit quality. Research on low-temperature conditions on the Guifei fruit quality of post-harvest. The results showed that low temperature could inhibit the fruit of weight loss and delay the decrease of sugar and acid. Tests showed that hardness of loquat fruit dropped during the first period, while the later period increased. The edible rate and soluble solids content have decreased of each processing. The experiment results showed that the appropriate storage temperature of Guifei loquat fruit was 6~8℃, under which fruit quality could be well kept for 20-30 days.

【题目】福建柑橘类种质资源ISSR分子评价
【中文关键词】施维属,钟凤林,李开拓,王江波,潘东明
【英文关键词】Citrus;ISSR marker;genetic relationship;cluster analysis
【中文摘要】用ISSR分子标记对福建70份柑橘种质进行分析。从95个引物中筛选出14个引物对70个柑橘种质的总DNA进行PCR扩增,共获得219个位点,有203个多态性位点,多态性百分率为92.69%,利用SPSS13.0软件构建全部材料基于ISSR数据的UPGMA树状图。结果表明:在相似系数为0.516的水平上,70份柑橘材料被划分为四大类:第一大类为枸橼类(香橼、佛手和柠檬);第二大类为枳类;第三大类为金柑类(山橘、金豆种金弹);第四大类包括宽皮柑橘类、柚类、甜橙类和杂柑类。其中,扇温州蜜柑与兴津早生相似系数为1.000,推测其为同一品种。另外,在相似系数为0.702的水平上,蕉柑、葡萄柚与甜橙聚为一个类群,该结果为蕉柑、葡萄柚的起源探讨提供数据参考。最后,对70个柑橘类种质的分类、亲缘关系进行详细探讨。

【题目】福建梨早期大量落叶诱因与防控策略
【中文关键词】黄新忠,陈义挺,雷龑,蔡盛华,陈小明
【英文关键词】pear; early falling leaves; prevention and control
【中文摘要】早期大量落叶现象已成为制约福建梨产持续丰产优质高效的瓶颈。综合实际调查与资料查阅认为,生态环境不适、品种遗传背景、病虫为害严重、气候条件异常、树体营养失衡、管理操作失当为其主要诱发因素,提出优化产业区域布局、选育推广耐高温高湿品种、稳定土壤水分状况、均衡土壤养分供给、改善树体营养状况、严防病虫害蔓延、改进管理操作技术等防控策略。
【英文摘要】A large number of early falling leaves have become a bottleneck problem to restrict the persistent high yield and efficient quality of the pear industry in Fujian. It can be concluded that, based on the actual investigation and the pertinent literatures, unfit ecological environment, genetic backgrounds of variety, serious diseases and insect pests damage, abnormal weather conditions, imbalance trees nutrition, improper management operations were its leading-induced factors. So, we put forward the corresponding prevention and control strategies as below: optimize the regional distribution of industry, select and popularize high temperature and humidity-resistant variety, maintain soil moisture conditions, balance the supply of soil nutrients and improve the nutritional status of trees, prevent the infestation of diseases and pests, promote management and operation technology.

【题目】福建枇杷锈斑病调查与分析
【中文关键词】刘友接;许家辉;蒋际谋;张泽煌;余东;林旗华;许奇志
【英文关键词】loquat;rust spot disease;survey and analysis;disease index
【中文摘要】锈斑病是普遍发生在枇杷生产上的一种生理性病害。近年来,枇杷产区锈斑病日趋严重,通过调查分析发现,不同地区、不同地点、不同时期和同一植株不同方位的枇杷果实发病情况各不相同。同一地点外围果比内膛果发病严重;云霄山顶不同方位果实发病比仙游地区严重;"早钟6号"抗病性较强;牛皮纸套袋抗病效果最好。因此,在生产中应采取不同的技术进行防治。
【英文摘要】The rust spot disease is one of physiological disorders infecting loquat fruit and occurs generally in the loquat production. In recent years, rust spot disease occurs heavily day by day in loquat fruit in the loquat producing area. Our survey and analysis of this disease showed that occurrence of this disease varied with regions, localities, stages, and positions of the same loquat plant. The loquat fruits at the periphery of the same locality were more heavily infected with the rust spot disease than those at the inner side of the same locality; the fruits were more seriously infected with the rust spot in different orientations in the summit of Yunxiao Mountain than those in the Xianyou district. Loquat cultivar 'Zaozhong 6' was higher in disease resistance. Wrapping of fruit with kraft paper was optimum in resistance to the disease. Therefore, various methods should be used to control this disease in production of loquat.

【题目】福建葡萄产业发展现状与对策
【中文关键词】雷龑,蔡盛华,詹小敏,黄新忠
【英文关键词】grape
【中文摘要】福建省属于亚热带气候。年平均气温15.2~22.2℃,无霜期长,有效积温高,有利于葡萄生长发育和提早成熟。福建自1984年开始引进种植巨峰品种,葡萄的规模化生产栽培逐渐得到发展。但福建年平均降雨量1159~2463mm,湿度大,易滋生病害,直接影响葡萄的生长,而且随着葡萄产业的发展,葡萄生产、果品质量、市场供求等之间的矛盾日益显现。为了更好地促进福建葡萄产业的发展,于4 月中下旬深入福安、建瓯、建阳等3 个主产县市开展葡萄产业发展现状与对策调查研究,基本摸清了福建葡萄面积与产量分布、生产管理状况与存在的问题,并提出了福建葡萄产业发展对策,供政府与部分决策者参考。

【中文关键词】吴如健;韦晓霞;潘少林;胡菌青;陈瑾;张泽煌
【英文关键词】Chinese olive; Germplasm resources nursery; Establisement
【中文摘要】福建省橄榄种质资源圃于2002年建立,至今已收集、保存来自福建、广东、浙江、广西、云南、四川等省(区)127份橄榄种质资源,涵盖了我国绝大部分橄榄地方品种和重要遗传材料,是我国目前保存品种最多最齐全的橄榄种质资源圃。制订了《橄榄种质资源描述规范和数据标准(试行)》,并开展了资源抗寒性测定、叶片解剖结构观察、叶片性状多样性分析等基础性研究工作,初步选育出甜榄1号、池1号、光甜等橄榄优良单株。

【英文摘要】The Chinese olive germplasm resources nursery was established in 2002 in Fujian Province. Currently, 127 accessions of Chinese olive germplasm resources have been collected from such provinces as Fujian, Guangdong, Zhejiang, Guangxi, Yunnan and Sichuan, which covers the most of olives local varieties and important genetic material in China. The basic research for accurate describing, efficient protecting and rational using the resources was carried out as follows: Ⅰ ‘ Descriptor and data standard for Chinese olive, Canarium spp. (Trial Implementation) ’ was formulated. Ⅱ Determination of cold hardiness, Observation of leaf anatomy as well as diversity of leaf character were studied. Ⅲ Superior individuals of ‘ Tianlan1 ’, ‘ Chi 1 ’ and ‘ Guangtian ’ were bred preliminarily.

【题目】福建柚类种质资源的ISSR分析
【中文关键词】钟凤林;施维属;潘东明
【英文关键词】ISSR molecular marker
【中文摘要】从100条ISSR引物中筛选出14条具有多态性谱带的引物, 对福建柚类16份种 质资源进行ISSR分析。 结果显示:14条引物共扩增出177个位点,有,123个多态性位点,多态性百分率为69.49%,福建柚类种质资源的相似系数在,0.526~0.984之间。其中, ‘ 胡柚 ’ 与 ‘ 三明金柚 ’ 相似系数最高,为0.984; ‘ 澳洲柚 ’ 与 ‘ 土柚 ’ 相似系数最低,为0.526。相似系数在0.553处,16份种质可分为两大类, ‘ 胡柚 ’、 ‘ 三明金柚 ’、 ‘ 澳洲柚 ’、 ‘ 福柚 ’ 及 ‘ 新路比葡萄柚 ’ 属第一大类,其余柚类种质为第二大类。

【题目】橄榄多糖提取工艺研究
【中文关键词】贾媛颖,李永裕,陈建烟,吴少华
【英文关键词】Canarium album Lour. Raeusch; hot water extraction; polysaccharides; optimal
【中文摘要】为优化橄榄多糖的热水浸提工艺条件。以橄榄为原料,采用热水浸提法提取橄榄中的多糖,研究不同因素(料液比、浸提温度、提取时间、提取次数)对橄榄多糖提取率的影响,在单因素试验的基础上,选择3 个主要影响因素(料液比、提取温度、提取时间)进行正交试验,并通过正交试验确定橄榄多糖的最佳提取工艺条件。结果表明,热水浸提法提取橄榄多糖的最佳工艺条件为:料液比1:8,温度100℃ ,时间3.5 h,浸提2 次,多糖提取率可达7.10% 。实验结果为确定橄榄多糖的热水浸提工艺提供了实验依据。
【英文摘要】To seek out the optimal water-extracting technology of polysaccharides from Canarium album Lour. Raeusch. The paper was to study an optimal procedure of polysaccharides from Canarium album Lour. Raeusch consisting of hot water extraction. A series of single factor experiment were conducted to investigate effects of solid/liquid ratio, extraction temperature, extraction time, extraction times on Canarium album Lour. Raeusch polysaccharides yield. On the basis of this, three main affect factors, including solid/liquid ratio, extraction temperature, extraction time were optimized for maximizing Canarium album Lour. Raeusch polysaccharides yield. Using a orthogonal array design. The results showed that the optimal preparation procedure of Canarium album Lour. Raeusch polysaccharides consisted of solid/liquid ratio of1:8, the extraction temperature at 100℃ with 3.5 h, the yield of Canarium album Lour.Raeusch polysaccharides was 7.10%. These extraction process was feasible ,and the experiment result could provide basic and instruction data for the ascertainment of water extraction technology of Canarium album Lour. Raeusch polysaccharides.

【题目】橄榄果实糖类组分分析
【中文关键词】林玉芳,李泽坤,陈清西
【英文关键词】Chinese olive;HPLC; Sugar
【中文摘要】利用HPLC方法对橄榄果实糖类组分进行分析。研究结果表明,橄榄果实含有蔗糖、葡萄糖和果糖,主要为蔗糖。不同地区、不同品种(株系)之间,各个糖类组分差异很大。在20个品种(株系)中,马坑22号、唐举3号和上岐3号3个品种(株系)蔗糖含量最高,分别为138.82 mg.g-1、112.74 mg.g-1和105.76 mg.g-1,最低的为族本,仅为9.13 mg.g-1。
【英文摘要】The high performance liquid chromatography(HPLC)was adopted to analyze sugar composition in Chinese olive fruits in this study. Results showed that Chinese olive fruit contains sucrose,glucose and fructose,and mainly sucrose. Sugar composition differed significantly among cultivars(strains)and original regions. Among the 20 cultivars(strains)investigated,Makeng NO.22,Tangju NO.3 and Shangqi NO.3 contained the highest level of sucrose,which were 138.82 mg.g-1、112.74 mg.g-1 and 105.76 mg.g-1, respectively,and Zuben contained the lowest level(only 9.13 mg.g-1).

【题目】24份甜橙种质资源的ISSR分析
【中文关键词】施维属; 王江波; 李开拓; 潘腾飞; 潘东明
【英文关键词】Sweet orange [Citrus sinensis (L.) Osbeck]; ISSR; Genetic relationship; Cluster analysis
【中文摘要】从97条ISSR引物中筛选出14条能扩增出清晰的具有多态性DNA谱带的引物,分别对24份甜橙种质基因组总DNA进行PCR扩增,共获得147个位点,其中54个位点具有多态性。利用SPSS13.0软件对数据进行分析,结果显示,24份甜橙种质间相似系数在0.815~0.983之间,表明24份甜橙种质间亲缘关系较近;相似系数在0.851处,24份甜橙种质被分为3组,ISSR分子标记的分析结果与形态学观察及传统分类结果基本吻合。通过对PCR扩增谱带的分析,结果显示,引物CW39119为‘奈维林娜脐橙’种质的特异性标记,引物CW32439为‘红肉脐橙’红梗与白梗种质的特异性标记,引物CW32445为‘纽荷尔脐橙’与‘脐橙52号’种质的特异性标记。
【英文摘要】14 ISSR primers out of 97 were selected based on the polymorphism and quality of the bands produced by the primers and used in the present study. A total of 147bands were obtained, of which 54 were polymorphic. The analytic results based on SPSS(version 13.0) software showed that the similar coefficient of 24 Sweet orange [Citrus sinensis (L.) Osbeck] germplasms was 0.815~0.983, which indicated that the genetic relationships between them were close. 24 Sweet orange [Citrus sinensis (L.) Osbeck] germplasms were divided into three groups when the simlar coefficient was 0.851. The ISSR analytic results were in consistence with the morphological observation and traditional classification system basically. Through the analysis of PCR amplification bands, the specific markers of ‘ Navelina navel orange ’ based on the primer CW39119, the specific marker between red branch breed and white branch breed of ‘ Red flesh navel orange ’ based on the primer CW32439 and the specific markers between ‘ Newhall Navel Orange ’ and ‘ Navel Orange 52 ’ based on the primer CW32445 had been found.

【题目】40个黄皮品种的ISSR分析
【中文关键词】李开拓,钟凤林,郭志雄,潘腾飞,王江波,潘东明
【英文关键词】Clausena lansium; ISSR; genetic relationship
【中文摘要】采用ISSR-PCR 分子标记技术对40个黄皮品种的遗传多样性进行分析。从 96条ISSR 引物中筛选出15条引物用于PCR 扩增,共扩增出165 条带,其中多态性条带100 条,多态性比率为60.6% 。应用SPSS软件计算各品种间的Jaccard相似系数介于0.714~1.000,UPGMA 法将40个品种分成5 组。
【英文摘要】ISSR-PCR markers were used to analyze the genetic diversity of 40 wampee cultivars. A total of 15 ISSR primers selected from 96 primers were used to amplify 165 DNA fragments and of which 100 (60.6%) were polymorphic loci. Based on SPSS 13.0 analysis, the similarity coefficient between different cultivars ranged from 0.714 to 1.000. The dendrogram constructed by UPGMA showed that 40 wampee cultivars were classified into five groups.

【题目】43份云南野生枇杷种质遗传多样性与亲缘关系分析
【中文关键词】胡文舜; 李韬; 郑姗; 蒋际谋; 黄爱萍; 章希娟; 郑少泉; 陈亮
【英文关键词】Loquat; Germplasmresource; Geneticdiversity; Phylogeneticrelationship; Molecular markers
【中文摘要】应用SSR、SRAP等2种分子标记方法, 分析了43份云南野生枇杷种质的遗传多样性及其与部分栽培品种、野生近缘种的亲缘关系。结果表明: 云南野生枇杷种质具有较丰富的遗传多样性, 其多态性位点百分数为91.32%, 平均期望杂合度为0.3165, 平均香农多样性指数为0.4753; 在相似系数0.751水平上, 43份材料可被划分入4个大类, 其中类Ⅲ在相似系数0.816处可细分为6个亚类; 主成分分析则更为直观地展现了种质间的亲缘关系。聚类结果与种质类型相关, 并呈现出一定的地域性分布规律。结合形态学特征, 鉴定该批云南野生种质以栎叶枇杷种内类型居多, 甚至有出现变种的可能。
【英文摘要】43wild loquat germplasm in Yunnan, coupled with some accessions of cultivars and its wild relatives, were analyzed for genetic diversity and phylogenetic relationship using SSR and SRAP markers. The comprehensive analysis results indicated that wild loquat germplasm in Yunnan had the rich heredity multiplicity, its polymorphism position spot percentage was91132%, the average expected heterozygosity was 0.3165, the average Shannon index was 0.4753. 43 materials were divided into 4 big groups with the similarity coefficient at 01751, in which groupIII was subdivide into 6groups at the similarity coefficient level of 0.816. Principal component analysis(PCA) more directly demonstrated the genetic relationship between germplasms. Cluster result was related to germplasm type, and showed certain geographic distribution law. Combined with morphological character, the majority of the idendified wild loquat germplasm resources in Yunnan were E. Prinoides Rehd. etWils. , and some probally were varieties.

【题目】66份荔枝古树遗传多样性的RAPD分析
【中文关键词】李焕苓; 赖钟雄; 陈义挺; 林秀莲; 徐炜; 林治良
【英文关键词】Ancient litchi trees; RAPD; genetic diversity
【中文摘要】采用RAPD技术对66份荔枝古树(其中福州市64份,广东开平市2份)资源进行遗传多样性分析。结果表明,16个随机引物共产生232条RAPD带,其中216条为多态性带,占总带数的93.10%,说明66份荔枝古树资源有丰富的多样性。根据扩增条带多态性,利用UPGMA构建了荔枝古树的亲缘关系树状图,遗传距离为0.000~1.000。当D=0.909时,66份荔枝古树资源可以分为3组;当D=0.746时,分为9组;当D=0.578时,可归为18组,同一地方的荔枝古树基本可以划分在一起,但也有个别划分在不同组,亲缘关系较远,表明福州市区荔枝古树群体存在一定的遗传变异。该研究为福州市区荔枝古树特异基因资源的保护与进一步挖掘利用提供了科学依据。
【英文摘要】Genetic diversity of 66 accessions of ancient litchi trees was evaluated by using RAPD (Random amplified polymorphic DNA). The results showed that 232 RAPD bands were amplified by 16 random primers, among which 216 were polymorphic, 93.10% of the total bands, suggesting that 66 accessions of ancient litchi trees are abundant in genetic diversity. According to the polymorphism of the amplified bands, a dendrogram showing genetic relationships among ancient litchi trees was constructed by UPGMA,and the genetic distance varied from 0.000 to 1.000,The 66 accessions of ancient litchi trees were divided into 3 group at D=0.909, 9 groups at D=0.746,and 18 groups at D=0.576.The ancient litcjo trees in the same plot were almost divided into one group, though some individuals which have a distant relationship were in the different group. This shows that there is a genetic variation in the population of the ancient litchi trees in Fuzhou area.This study can provide scientific basis for protecting, further discovering and utilizing the special genes resources of the ancient litchi trees in Fuzhou area.

【题目】NaCl、光和温度胁迫对龙眼胚性愈伤组织GPX酶活性的影响
【中文关键词】陈义挺,赖钟雄,李焕苓,何 园,林玉玲,邵 巍,蔡英卿
【英文关键词】longan, embryogenic callus, glutathione peroxidase (GPX), NaCl, light, temperature
【中文摘要】以龙眼胚性细胞系 LC2 为材料,初步研究了在NaCl、光和温度胁迫下龙眼胚性愈伤组织 GPX酶活性的变化规律。试验结果表明:与对照相比,在盐胁迫下短期内GPX酶活性增加,随胁迫时间的延长,低盐胁迫下GPX酶活性先上升后下降,而高盐胁迫下GPX酶活性则呈下降趋势;白光、绿光处理下,随光强的不断加强,GPX活性均呈先上升后下降趋势,且在同样光强下,白光处理的GPX活性均高于绿光;龙眼EC的GPX活性在低温(高温)处理下,与对照相比,随温度不断降低(升高),GPX活性呈先升高后降低趋势。以上结果均表明,在一定逆境胁迫下,细胞内GPX可以起到应答外界刺激的作用,且活性呈规律表达,是植物在逆境胁迫下防御ROS 伤害的主要标志之一。
【英文摘要】In this experiment the Line LC2 of longan embryogenic callus was used as the material for the study on the changing tendency of Glutathione peroxidase (GPX) activities in the embryogenic callus of longan under the stress of salt (NaCl), light, and temperature. The results showed that: compared with the control, the short-time salt treatment enhanced the activity of GPX, and with the time of stress prolonged, the activities of GPX under low-salt stress treatment ascending first and then descending, while it showed the downtrend under high-salt stress treatment. Under the treatment of the white light and green light, with the light intensity increased, the activities of GPX ascending first and then descending, and when the light intensity was the same, the activities of GPX was higher under the treatment of the white light than the green light. Under the treatment of low-temperature (high-temperature), with the temperature decreased (increased), the activities of GPX in the embryogenic callus of longan ascending first and then descending compared with those of the control. The above results indicated that under a certain stress, GPX played a role in response to external stimulation, and had a regular expression, and it was one of the main indicators of ROS injury defense under stress.

【题目】春见橘橙耐贮性及理化性状变化研究

【中文关键词】温寿星,黄镜浩,蔡子坚,林晓姿
【英文关键词】Citrus reticulata×C. sinensiscv.OkitsuNo. 44, changing law, storage
【中文摘要】为了确定春见橘橙的最佳销售时期,提高经济效益,将春见橘橙[(Citrus reticulata × C. sinensis) cv. Okitsu No.44] 果实采收后常温贮藏135 天,对储藏期的果实单果重、果皮厚度、果汁率,可溶性固形物、酸含量、固酸比、糖酸比,腐果率、果实病害类型等变化规律进行研究。结果表明:春见橘橙贮藏性能较好;糖含量在贮藏75天内呈上升趋势,75天后开始缓慢下降;贮藏90天后单果重较显著下降;可食率和果汁率在贮藏90天内呈上升趋势,随后逐渐呈下降趋势;贮藏期间腐果率呈幂函数变化;青绿霉病是引起果实腐烂的主要病害。贮藏前期(45天)含酸量的大幅降低是导致糖酸比值和固酸比值升高、品质提升的最主要原因;贮藏45天后是较为适宜的食用时期;春见橘橙在采收时并未进入真正的成熟期,翌年1月中旬真正成熟。
【英文摘要】To improve economic benefit, the optimal selling period of Okitsu No.44(Citrus reticulata × C. sinensis) was determined by post harvest storage of fruits for 135 days, during which changing laws of fruit weight, pericarp thickness, fruit juice percentage, soluble solids content, acid content, tss-acid ratio, sugar-acid ratio, fruit putrid rate and putrid type were studied, respectively. Result indicated that Okitsu No. 44 had better storage performance. Sugar content showed a trend of first increasing and then decreasing during storage. Fruit weight dropped significantly 90 days post storage. Esculent rate and fruit juice percentage increased within the first 90 days of storage, while they both dropped gradually 90 days poststorage. Fruit putrid rate presented power distribution during storage. Penicillium italicm and P. Digitatum caused fruit putridness mainly during storage. Reduction of acid content was the uppermost reason for tss-acid ratio and sugar-acid ratio increase and quality-improving. Fruits of 45 days post storage were more appropriate for consumption, suggesting that the Okitsu No. 44 fruit did not mature until mid-January the following year.

【题目】春见橘橙主要性状及栽培技术要点
【中文关键词】范新单; 俞晓曲; 温寿星; 黄镜浩
【英文关键词】Citrus
【中文摘要】春见橘橙系1979年日本静冈县果树试验场以清见和F-2432椪柑杂交育成,经筛选、区试而推广的橘橙品种.2001年福建省农业科学院果树研究所、三明市经济作物技术推广站从中国柑橘研究所共同引进春见橘橙,进行高接换种观察试验和规范化管理,高接树次年始花结果.经2001-2008年连续7年进行的植物学、生物学观察与果实理化分析表明,春见橘橙果大、果肉深橙色、肉质细嫩、汁多化渣、糖度高、耐贮性强、较晚熟(12月中下旬成熟)、坐果率及丰产性好.从2004年起进行了配套栽培技术研究,同时在三明市宽皮柑橘经济栽培适宜区开展区域性试验种植.现将其主要性状和栽培技术要点介绍如下.

【题目】“ 台农甜蜜 ”桃胚愈伤组织的诱导与继代保持
【中文关键词】“ 台农甜蜜 ”桃;胚;愈伤组织;继代保持
【英文关键词】peach,“ Premier ” honey peach, embryos, callus, subculture and maintenance

【中文摘要】以5 年生“ 台农甜蜜 ”桃接近成熟的胚为试验材料,研究接种方式、光照条件和不同培养基对其愈伤组织诱导影响。结果表明,黑暗条件下,将去除种皮的“ 台农甜蜜 ”桃子叶胚接种到附加2.0mg/L 的MS 培养基上培养,可以诱导出松散的、生长状态良好的桃愈伤组织。在“ 台农甜蜜 ”桃愈伤组织继代保持过程中,比较了光照条件、愈伤组织类型、不同培养基和继代方式对其生长的影响。结果表明,采用附加1.0mg/L 2,4-D 的MS 培养基与附加1.0mg/L 2,4-D、0.5mg/L KT、100mg 肌醇的MS 培养基交替继代,并在光照下培养,可以实现“ 台农甜蜜 ”桃TN2 和TN3 类型愈伤组织的长期继代保持,并使其保持旺盛的生长能力。

【英文摘要】The mature embryos of 5 old years ’ cultivars of ‘ Premier ’ honey peach were used as the materialsin this paper. The effects of the inoculation method, light treatment and different mediums on the callusinduction were studied. The results showed that the friable and well callus were obtained embryoswithout spermoderm on the MS with 2.0mg/L 2,4-D under the dark. The comparisons of the effects of thelight treatment, callus type, different mediums and subculturing method on the growth of the honey peach call us were investigated in the process of their subculture and maintenance. The conclusions were summarized as follows, the TN2 and TN3 of the honey peach callus could be maintained for a long time and kept exuberant growth when they were alternately cultured on the MS medium containing with 1.0 mg/L 2,4-D and the other MS medium supplemented with 1.0 mg/L 2,4-D, 0.5 mg/L KT and 100 mg/L inositol.

【题目】龙眼‘立冬本’花、果及营养枝主要矿质营养需求量
【中文关键词】龙眼;矿质营养;需求量
【英文关键词】longan mineral nutrient requirement
【中文摘要】对10年生高接换种‘立冬本’龙眼结果树的枝、叶、花、果年生长量及主要矿质营养元素需求量进行了研究。结果表明,龙眼‘立冬本’株产36.42 kg,果穗与营养枝数量比为1∶1.9,重量比为1∶0.25。矿质营养元素年需求量为:N 556.7 g、P 71.5 g、K 492.8 g、Ca 225.0 g、Mg 34.3 g,N、P、、Ca、Mg比例为1∶0.13∶0.89∶0.40∶0.06,为龙眼平衡施肥提供营养需求参考指标。
【英文摘要】Fruiting longan cultivar ‘Lidongben’ trees aged 10 years old were selected to determine their annual growth of branches, leaves, flowers, fruits, and requirement of mineral nutrients. The results showed that these longan yielded 36.42 kg/tree, with the number ratio of panicles to vegetative shoots being 1:1.9 and the weight ratio of panicles to vegetative shoots being 1: 0.25. The annual mineral requirements were N 0.557 kg; P 0.072 kg; K 0.493 kg; Ca 0.225 kg and Mg 0.034 kg, and the ratio of N : P : K : Ca : Mg was respectively 1 : 0 . 13 : 0 . 89 : 0 . 40 : 0 . 06 , which could be considered as a reference for recommendation for application of formulated fertilizers to meet the mineral nutrients demands of longan trees.

【题目】龙眼TPI 基因的克隆及其在体胚发生过程中的表达分析
【中文关键词】龙眼;体胚发生;磷酸丙糖异构酶;基因克隆;实时荧光定量PCR
【英文关键词】longan;somatic embryogenesis;triosephosphate isomerase;gene cloning;real-time PCR
【中文摘要】采用RT-PCR 结合RACE 法,通过T/A 克隆测序,获得龙眼胚性愈伤组织磷酸丙糖异构酶基因(TPI)两个类型的全长序列TPI Ⅰ(GenBank 登录号:FJ595244)和TPI Ⅱ(GenBank 登录号:GU073294),序列全长分别为1 084 bp 和1 113 bp,其ORF 都由765 bp 核苷酸组成,编码254 个氨基酸,与其它植物的TPI 在核苷酸序列和推导的氨基酸序列的相似性较高。qRT-PCR 结果分析表明,在龙眼体胚发生过程中,TPI 在松散型胚性愈伤组织阶段的转录水平比较低,在胚性愈伤组织Ⅱ阶段转录水平急剧升高,并一直持续到胚性紧实球形结构阶段,球形胚阶段大幅下调,之后至子叶形胚阶段都维持在较低水平,初步证明TPI 及其编码蛋白在龙眼启动体胚发生和早期体胚发育中行使重要的功能。
【英文摘要】The complete cDNA sequence of triosephosphate isomerase gene(TPI)of longan embryogenic callus was obtained by reverse transcription polymerase chain reaction(RT-PCR)with rapid amplification of cDNA ends(RACE). And the mRNA transcription level of this gene was surveyed by real-time reverse transcription PCR(qRT-PCR)during somatic embryogenesis in longan. The results showed that the full-length cDNA sequences of two type longan embryogenic callus TPI were cloned,namely TPI Ⅰ(GenBank accession number FJ595244)and TPI Ⅱ(GenBank accession number GU073294). The complete nucleotide sequences of two TPI were 1 084 bp and 1 113 bp respectively. And they all contained a 765-nucleotides-long open reading frame(ORF)which encoded a protein of 254 amino acid residues. The results showed that the mRNA transcription levels of longan TPI were different at the different stages of longan somatic embryogenesis. In conclusion,it was preliminarily revealed that two type TPI genes and their encoded functional proteins may play an important role during the early somatic embryogenesis in longan.

【题目】龙眼采后果肉脂氧合酶活性和膜脂脂肪酸组分的变化
【中文关键词】龙眼; 采后分析; 脂氧合酶; 脂肪酸
【英文关键词】longan; postharvest; lipoxygenase; fatty acid.
【中文摘要】以‘福眼’龙眼果实为试验材料, 分析果实采后贮藏过程中脂氧合酶LOX)活性和细胞膜脂脂肪酸组分的变化, 探讨其与果实成熟衰老的关系。结果表明, 龙眼果肉脂肪酸组分主要有豆蔻酸(14 ： 0)、棕榈酸(16 ： 0)、硬脂酸(18 ： 0)、油酸(18 ： 1)和亚油酸(18 ： 2), 未检出亚麻酸。随着龙眼采后贮藏时间的延长, 不饱和脂肪酸(油酸、亚油酸)和饱和脂肪酸(豆蔻酸、棕榈酸、硬脂酸)的含量变化不明显。果皮中未检出脂肪酸。果肉中的LOX 活性伴随着膜脂过氧化作用的加强而逐渐增强, 但由于LOX 的活性较低, 所以上升的幅度相对来说比较小,推测LOX可能不是导致果实衰老腐烂的关键酶。
【英文摘要】Longan (Dimocarpus longan Lour. cv. ‘Fuyan’) fruit were used as material to investigate their changes in lipoxygenase (LOX) activity and membrane fatty acid composition during postharvest storage. The results showed that the major fatty acids in the mesocarp or flesh were myristic acid (14 : 0), linoleic acid (16 : 0), oleic acid(18 : 0), palmitic acid(18 : 1), stearic acid(18 : 2), and that no linolenic acid(18 : 3) was detected in the flesh. The content of unsaturated fatty acids (oleic acid, linoleic acid) and saturated fatty acids (myristic acid, palmitic acid, stearic acid) did not fluctuate significantly during storage. And, the fatty acid content in pericarp was too low to be detected. The LOX activity of the flesh increased gradually with the increasing peroxidation of the membrane lipid but it was very low, which suggested that LOX might not be the key enzyme that leads to the senescence and breakdown of the longan fruit.

【中文摘要】在晚熟龙眼品种‘立冬本’果实发育过程中,果肉黄酮含量存在差异,其积累消长动态呈“双S 型”变化曲线。龙眼果实成熟后,果肉黄酮含量呈降趋势,但随着挂树期延长,果肉黄酮含量又回升。龙眼果肉同时还含17种蛋白氨基酸和非蛋白氨基酸(γ-氨基丁酸,GABA),果实发育过程果肉黄酮含量与总蛋白氨基酸含量呈负相关,与GABA含量呈正相关,与丝氨酸、苯丙氨酸、赖氨酸、组氨酸和脯氨酸含量呈显著负相关(P<0.05),而与甘氨酸含量呈极显著负相关(P<0.01)。生产中如以植物功能性活性成分高黄酮含量为目标,研究确立了‘立冬本’龙眼成熟前期的9月22日为最佳采收时间。
【英文摘要】The change of flesh flavonoids concentration was a "double S" curve during the fruit development of late -maturing longan (Dimocarpus longan Lour.) cultivar 'Lidongben'. Flavonoids concentration decreased during the stages of fruit development and increased at the stages of matured fruits extending hang on trees. 17 protein amino acids and one non-protein amino acids (γ-aminobutyric aicd,GABA) were detected in the fruit pulp. The results showed that the negative correlation between flavonoids concentration and total amino acids concentration except of GABA, and the flavonoids concentration linearly increased with decreasing glycine content. The best harvest day with the highest flavonoids concentration in pulp was Sep.22.

【题目】龙眼果实中多糖积累与分配研究
【中文关键词】龙眼; 多糖; 积累; 分配
【英文关键词】Dimocarpus longan Lour; Polysaccharide; Accumulation; Distribution
【中文摘要】以晚熟基因型苗翘、特晚熟基因型立冬本和中晚熟基因型青壳宝圆龙眼为试材,测定了果实发育过程中果皮、果肉和种子的多糖含量。结果表明:不同基因型龙眼的种子多糖积累高峰期不同,1个积累高峰的有立冬本(9月20日),2个积累高峰的有苗翘(8月16日、9月20日)和青壳宝圆(8月23日、9月20日)。龙眼果实各部分的多糖积累速率不同,分配也不同,3个龙眼基因型均为分配给龙眼种子最多,其次是果肉,分配最少的是果皮;在成熟后期,龙眼多糖均出现负积累。本研究为龙眼多糖的调控和开发利用奠定了基础。
【英文摘要】The late-maturing geno type-‘ Biew Kiew ’,special late-maturing genotype-Lidongben.and medium late-maturing geno type ‘ Qingkebaoyuan ’ longan were used to determ ination the polysaccharide content of the pericarp,the aril and the seed in the fruit development process.The polysaccharide content of the pericarp,the aril and the seed had no steady peak periods in three longan genotypes.The results showed that the polysaccharide content of ‘ Lidongben ’ seeds had one peaks(September 20), ‘ Biew Kiew ’ seeds had two peaks(August 16,September 20), ‘ Q ingkebaoyuan ’ seeds had two peaks (August 23 September 20).The rate of polysaccharide accumulation in various parts of longan are different and distribution are also different The polysaccharide was mainly distributed to the seed, followed by aril and pericarp is at least Longan have a negative accumulation of polysaccharide in the latem ature. This study laid the foundation for the development and utilization of longan polysaccharide.

【题目】龙眼胚性愈伤组织2个乙烯受体基因的克隆及序列分析
【中文关键词】龙眼胚性愈伤组织; 乙烯受体; 基因克隆; 序列分析
【英文关键词】Dimocarpus longan Embryogenic Callus; Ethylene receptor; Gene cloning; Sequence analysis
【中文摘要】以龙眼胚性愈伤组织为材料,采用同源克隆和RACE方法分离得到两个乙烯受体基因的cDNA序列,即DL-ETR1和DL-ERS1,并在GenBank登录(检索号分别为FJ513322和FJ513323)。DL-ETR1全长为2611bp,包含长2223bp的完整的开放阅读框(ORF)以及388bp的3-UTR,3'poly(A)尾长24 bp;DL-ERS1全长为2259bp包含一个1929bp的ORF及330bp的3-UTR,3'poly(A)尾长17 bp。两者根据核苷酸序列推测的蛋白质具有61.62%的同源性,在N端的同源性较C端高,DL-ERS1比DL-ETR1少104个氨基酸,DL-ERS1的蛋白在C端缺乏信号接受域,HisKA、ATPase_c以及GAF是它们共有的结构域,同属ETR1亚类乙烯受体。
【英文摘要】Two ethylene receptor cDNAs,DL-ETR1 and DL -ERS1,which were obtained from Dimocarpus longan Embryogenic Callus,were cloned with homologous cloning and RACE (Rapid amplification of cDNA ends).The two fragments had been submitted to the DDBJ/EMBL/ GenBank databases,the accession numbers were FJ513322 and FJ513323,respectively.The full length of DL-ETR1 cDNA,about 2611 bp [including a 24 bp poly (A) tail]consisted of an open reading frame of 2223 bp,and 3 ′ untranslated regions of 388bp,while the full length of DL-ETS1 cDNA ,about 2259 bp[including a 17 bp poly(A)tail]consisted of an open reading frame of 1929bp,and 3 ′ untranslated regions of 330bp.Both of the putative proteins,which had three conserved regions:HisKA,ATPase_c and GAF domains,belonged to the ETR1 sub-groups.And,their homology were 61.62%,their homology of N-terminal amino acids was higher than that of Cterminal end.Moreover,DL-ERS1 lacked 104 amino acids and a signal receptor domain at C-terminal end than DL-ETR1.

【题目】龙眼胚性愈伤组织ACC 氧化酶基因的克隆及其在龙眼体胚发生过程中的表达分析
【中文关键词】龙眼胚性愈伤组织 ACC氧化酶 基因克隆 序列分析 实时荧光定量PCR法
【英文关键词】Dimocarpus longan embryogenic callus ACC oxidase gene cloning sequence analysis real-time reverse transcription
【中文摘要】【目的】分离克隆龙眼(Dimocarpus longan Lour.)胚性愈伤组织乙烯合成关键酶ACO(1-aminocyclopropane-1-carboxylate oxidase)基因,并分析该基因在龙眼体细胞胚胎(以下简称龙眼体胚)发生过程中的表达情况。【方法】采用RT-PCR 结合RACE 法,获得龙眼胚性愈伤组织ACO 基因的cDNA 全长序列和DNA序列,运用生物信息学方法对序列进行分析,并通过实时荧光定量PCR(q-PCR)法研究该基因在龙眼体胚发生过程中的表达。【结果】克隆得到龙眼胚性愈伤组织ACO 基因1 315 bp 的cDNA 全长序列(GenBank 登录号为FJ534854),该cDNA 的开放阅读框推定的氨基酸序列(含315 个氨基酸)与其它植物ACO 具有86%—47%同源性,包含了5'非编码区为86 bp,3'非编码区为281 bp,3'poly(A)尾长13 bp;该基因的DNA 序列(GenBank 登录号为GU123929)长为1 660 bp,包含3 个内含子,内含子的剪切位点均符合真核生物“ GT-AG ”规则;该基因在龙眼体胚各阶段均有表达,整个变化趋势呈字母“ M ”状。【结论】确定所获得的序列是龙眼胚性愈伤组织ACO 基因的cDNA 序列和DNA 全长序列;该基因在不完全胚性紧实结构和心形胚的表达量为两个峰值。
【英文摘要】In this study, the 1-aminocyclopropane-1-carboxylate oxidase gene (ACO) was cloned from embryogenic calli of Longan (Dimocarpus longan Lour.). And the expression of ACO was determined during Longan somaticembryogenesis.【Method】 The RT-PCR(reverse transcription polymerase chain reaction) with RACE (rapid amplification of cDNAends) method were used to clone the complete cDNA sequence and DNA sequence of ACO from embryogenic calli of Longan. Andbioinformatics method was used to analyze sequences obtained and putative amino acid sequence. Then qRT-PCR (real-time reverse transcription PCR) method was used to determine the cDNA transcription level of this gene.【Result】 The full length ACC oxidase cDNA from Dimocarpus longan embryogenic callus, about 1315bp[including a 13 bp poly(A) tail], consisted of an open reading frame of 948 bp , and 5' and 3' utranslated regions of 86 bp and 281 bp, respectively. The sequence had been submitted to the DDBJ /EMBL/ GenBank database, the accession number was AY521566. The putative protein has 315 amino acids, and the identity with theother polypeptides varied between 86%-47%. Its DNA sequence (the accession number is GU123929) was 1660bp, and the splicesites of three introns contained were obeyed to the “ GT-AG ” rule.ACO from embryogenic calli of Longan expressed in the differentstages during somatic embryogenesis. And it showed approximately a “ M ” curve.【Conclusion】It is inferred that the full lengthcDNA and DNA sequence from embryogenic calli of Longan are obtained. The peak cDNA transcription level of Longan.ACO gene occurred at the incomplete compact pro-embryogenic culture stage and the heart embryo stage.【Objective】In this study, the 1-aminocyclopropane-1-carboxylate oxidase gene (ACO) was cloned from embryogenic calli of Longan (Dimocarpus longan Lour.). 【题目】龙眼胚性愈伤组织miR398a前体的克隆及其在龙眼体胚发生过程中的表达分析
【中文关键词】龙眼 体细胞胚胎发生 miR398a前体 克隆 表达
【英文关键词】Longan; Somatic embryogenesis; miR398a precursor; Cloning; Expression
【中文摘要】为了解miR398a在龙眼体胚发生中的调控机制,以龙眼胚性愈伤组织为材料,采用RT-PCR法克隆miR398a前体序列, 最终成功克隆了长83 bp的龙眼miR398a前体序列(GenBank登录号:FJ973472);该前体与其它物种的miR398前体序列具有较高的同源性,并包含miR398a的成熟序列;利用qPCR技术研究该基因在龙眼体胚发生发育过程中的表达情况,定量分析结果表明,随着龙眼体胚的发育,pre-miR398a在不同胚性培养物中的转录水平存在显著差异: 在不完全胚性紧实结构表达量最高, 球形胚阶段次之,随后是胚性紧实球形结构、胚性愈伤组织II 及松散型胚性愈伤组织,在心形胚、鱼雷形胚阶段和子叶形胚阶段表达量较低。说明pre-miR398a在龙眼体胚发生过程中的表达具有组织特异性和一定的时序性。
【英文摘要】A miR398a precursor was cloned and its expression level was analyzed for elucidating the role of miR398a during longan somatic embryogenesis. The miR398a precursor was isolated by RT -PCR and itstranscription levels were detected in longan embryogenic cultures at different developmental stages by real-time RT -PCR. The length of the miR398a precursor (GenBank loucs FJ973472)was 83 bp, including 21 bp mature sequence of miR398a. qPCR results indicated that the miR398a precursor was expressed in most of the tissues in longan embryogenic cultures at different developmental stages. The expression quantity of the miR398a precursor was incomplete compact pro-embryogenic cultures>globular embryos>compact pro-embryogenic cultures>embryogenic callus II>friable-embryogenic callus>Cotyledonary embryos>heart-shaped embryos>torpedo-shaped embryos. Longan miR398a precursor was highly conserved among different species and expressed with tissue specific and sequential characteristics during longan somatic embryogenesis.A miR398a precursor was cloned and its expression level was analyzed for elucidating the role of miR398a during longan somatic embryogenesis. 【题目】龙眼胚性愈伤组织限制生长保存及其染色体数目变异
【中文关键词】龙眼 胚性愈伤组织 限制生长保存 染色体变异
【英文关键词】longan;embryogenic callus;minimal growth conservation;chromosome variation.
【中文摘要】以龙眼“红核子”品种为材料,研究甘露醇与肌醇交互培养及蔗糖含量、琼脂含量、盐浓度、PP333、浓度、光质等对龙眼胚性愈伤组织(Embryogenic callus, EC)限制生长保存的影响, 结果表明: 同时添加20 g/L 甘露醇、0.10 g/L 肌醇,并把接种量控制在0.1 g/瓶,龙眼EC的继代周期可进一步延长到70 d左右。同时,以“红核子”、“松风本”和“聚龙105”为材料,对保存的龙眼EC及其体胚发生过程中染色体数目的变异进行研究,结果表明:染色体变异始于胚性愈伤组织,但有趋于稳定的趋势。
【英文摘要】‘Honghezi’Longan(Dimocarpus longan‘Honghezi’) was used to study the effects of mannitol and inositol cross-culture, sucrose, agar, salt,PP333 and light quality on the minimal growth of longan embryogenic callus(EC) for conservation.The results showed that the combined addition of 20g/L mannitol and 0.1g/L inositol with the inoculation amount of 0.1g per bottle,prolonged the subculture cycle to more than 70 days.At the sametime,the long cultivars ‘Honghezi’,‘Songfengben’and‘Julong 105’were used to investigate the variation of chromosome number of longan embryogenic callus during somatic embryogenesis. The results indicated that the chromosome variation occurred at the embryogenic cell stage and then tended to be stable.

【题目】龙眼胚性愈伤组织线粒体ATP合酶β亚基基因克隆及其在龙眼体胚发生过程中的表达分析
【中文关键词】龙眼 体细胞胚胎发生 线粒体ATP合酶β亚基基因 基因克隆 实时荧光定量PCR
【英文关键词】longan;somatic embryogenesis;mitochondrial F1-ATPase beta subunit gene;gene cloning;real-time PCR
【中文摘要】【目的】克隆龙眼(Dimocarpus longan Lour.)胚性愈伤组织线粒体ATP 合酶β亚基基因(mitochondrial F1-ATPase beta subunit gene),并分析该基因在龙眼体胚发生过程中的表达情况。【方法】采用RT-PCR 结合RACE法,通过T/A克隆测序,获得龙眼胚性愈伤组织线粒体ATP 合酶β亚基基因全长序列;随后通过实时荧光定量PCR(qRT-PCR)法研究该基因在龙眼体胚发生过程中的表达规律。【结果】成功克隆龙眼胚性愈伤组织线粒体ATP合酶β亚基基因完整cDNA序列(GenBank登录号:FJ222749),该序列全长2 099 bp,由1677bp核苷酸组成的ORF,编码558个氨基酸。该基因与其它植物的线粒体ATP合酶β亚基基因在核苷酸序列和推导的氨基酸序列方面相似性较高。对来源于动、植物的28条线粒体ATP合酶β亚基基因编码区序列所构建的进化树分析表明,由线粒体ATP合酶β亚基基因编码区序列所建立的系统关系树与真实的动、植物进化基本一致,龙眼处在双子叶植物中,由于该基因在龙眼同科属的植物中为首次克隆,所以有自己单独的分支。qRT-PCR 结果分析表明,随着龙眼体胚的发育,线粒体ATP合酶β亚基基因转录水平逐渐升高,到球形胚阶段达到最高,而后又急剧下降,到鱼雷形胚阶段降到最低,子叶形胚阶段略有升高。【结论】龙眼线粒体ATP 合酶β亚基基因与其它植物相应序列具有较高同源性,在龙眼体胚发育过程中,以球形胚阶段的表达最高。
【英文摘要】【Objective】The mitochondrial F1-ATPase beta subunit gene from embryogenic callus was cloned and its expression during somatic embryogenesis in longan (Dimocarpus longan Lour.) was analyzed in this experiment.【Method】Thecomplete cDNA sequence of the mitochondrial F1-ATPase beta subunit gene of longan embryogenic callus was obtained by reversetranscription polymerase chain reaction (RT-PCR) with rapid amplification of cDNA ends (RACE). And the mRNA transcription level of this gene was surveyed by real-time reverse transcription PCR (qRT-PCR) during somatic embryogenesis in longan.【Result】The full-length cDNA sequence of longan embryogenic callus mitochondrial F1-ATPase beta subunit gene was 2099 bp(GenBank accession number

FJ222749). It contained a 1677-nucleotides-long open reading frame (ORF) which encoded a protein of 588 amino acid residues. Homology searches with the deduced amino acid residues indicated that longan mitochondrial F1-ATPase beta subunit gene had a high similarity to other plant mitochondrial F1-ATPase beta subunit gene. According to the 28 mitochondrial F1-ATPase beta subunit gene sequences of animals and plants, the phylogenetic tree showed that it indeed reflected the evolution of animals and plants. It had a single branch because longan mitochondrial F1-ATPase beta subunit gene was firstly cloned. The results showed that the mRNA transcription levels of longan mitochondrial F1-ATPase beta subunit gene were different at the different stages during longan somatic embryogenesis.The highest level occurred at the globular embryo stage and the lowest at the torpedo embryo stage.【Conclusion】 Longan mitochondrial F1-ATPase beta subunit gene had a high similarity to other plant mitochondrial F1-ATPase beta subunit gene.The highest mRNA transcription level of longan mitochondrial F1-ATPase beta subunit gene occurred at the globular embryo stage.

【题目】龙眼新品种‘晚香’的选育研究
【中文关键词】龙眼 品种 晚香 优质 浓香 特晚熟
【英文关键词】Longan;Cultivar;‘Wanxiang’;Quality;Strong aroma;Very late-repening
【中文摘要】以优质、有香气、特晚熟的龙眼果实性状为主要育种目标,选育出优异的龙眼新品种‘晚香’。该品种单果重1315 g,大者可达151 0 g以上;可食率6719% ~ 711 3% ;含糖量高,可溶性固形物含量211 9% ~2216%,最高达241 6%;肉质爽脆、致密,化渣,汁液中,不流汁,极易离核;口感好,香气浓郁,极宜鲜食。在福州, 果实10月中旬至11月下旬成熟;果实退糖非常缓慢,挂树期长,挂树期间其果实鲜食品质没有明显下降,仍具有良好的商品价值。晚香龙眼果实综合经济性状明显优于国内外晚熟龙眼主栽良种立冬本和苗翘, 是一个很有希望的鲜食龙眼新品种,具有广阔的推广应用前景。

【英文摘要】Based on the cha racte ristics for quality,arom a and very late- ripening as breeding goal ‘ W anx iang ’ longan was sellected as a new cultivar for future culture. The new longan cultivar had some good charac teristics, followed by fruit weight for 131 5g (max to 1510g),edible percent for 6719%~7113%,total soluble solid content for 2119% ~2216%(max 2416%).At the same time, aril for crisp, melting, densy, dissociable from seed, middle juice, good taste and strong aroma. The mature period was from mid-October to late November in Fuzhou.And the sugar reduced slowly.The time for keeping repened fruits on trees was up to about 45 days, which had good commercial value. ‘ Wanxiang ’ longan,super to main late-ripening longan cultivars as ‘ Lidongben ’ and ‘ Biekiew ’ in the world on comprehensive economic traits, was a very promising longan cultivar and had a good prospect in application.

【题目】龙眼种质资源果实性状多样性分析及其数量分类研究
【中文关键词】龙眼 种质资源 遗传多样性 聚类分析 主成分分析
【英文关键词】Longan; Germplasm resources; Genetic diversity; Cluster analysis; Principal component analysis
【中文摘要】对国家果树种质福州龙眼圃130份龙眼果实性状进行了鉴定评价与分类研究。结果表明,18个数量性状中,穗粒数的变异系数最大,为60.5%,其次为果穗质量、果皮质量、单果质量、果皮厚度、果肉厚度等,可食率的变异系数最小为7.4%。25个描述性状平均变异类型达3.6个,果皮颜色、果肉质地的变异类型最为丰富,均为6个。总体平均多样性指数(I)为1.997,龙眼主产区福建(1.989)、广东(1.638)、四川(1.551)的多样性指数较高,泰国(1.274)、广西(1.248)、贵州(1.229)则次之。对130份龙眼种质果实性状进一步聚类分析为5个类群,各类群特征表现各异,变化丰富。主成分分析第一、二主成分解释的总变异为28.15%,更为直观地展现了种质的亲缘关系,其结果与聚类分析基本一致。
【英文摘要】The fruit characters of 130 longan germplasm resources were evaluated and classified.The results showed that among 18 numerical characters, the number of fruits per ear possessed the largest coefficient of variance,which was 60.5%,and followed by weight of fruit ear,weight of pericarp, weight of fruit,thickness of pericarp,and thickness of flesh,etc. Edible rate had the least coefficient of variance,which was 7.4%.The average variation type among 25 characters discribed was up to 3.6,and color of pericarp and texture of flesh had the most variation with coefficient6.The average genetic diversity index(I)was 1.997,and the main longan production areas of Fujian(1.989),Guangdong (1.638)and Sichuan(1.551)had higher diversity index,and Thailand(1.274),Guangxi (1.248) and Guizhou(1.229)less. 130 germplasms were classified into 5 groups,which had rich phenotypic diversity, based on the fruit characters. The results of principal component analysis(PCA)indicated that the first and second principal components could explain 28.15% of total variance,and PCA more directly demonstrated the genetic relationship between germplasms.The results were basically consistent with that of the cluster analysis.

【题目】龙眼种质资源花序性状多样性研究
【中文关键词】龙眼 种质资源 花序数量性状 相关性
【英文关键词】Dimocar pus longan Lour1;germplasm resources;inflor escence traits;correlation
【中文摘要】选取国家果树种质福州龙眼圃保存的71 份龙眼种质资源, 进行花序性状多样性的研究。结果表明:(1) 花序长度为191 9~ 391 4 cm, 花序宽度为141 0~ 331 0 cm, 花序支轴数为41 4~ 131 3 个, 雄花雄蕊数为71 1~81 8 枚, 花冠直径为51 8~ 81 8 mm, 5 个数量性状变异系数为41 9%~ 191 9%。花序长度与花序宽度、花序长度与花序支轴数呈极显著正相关, 花序

宽度与花序支轴数呈显著正相关。(2) 调查的龙眼种质花序数量性状分成5个级次, 不同级次其比率也不同, 差异较大。(3) 不同原产地龙眼种质的花序长度和花冠直径2 个花序数量性状存在明显差异, 原产广东的龙眼种质花序长度显著长于原产福建的; 而原产福建的龙眼种质花冠直径则显著大于原产广东的。(4) 龙眼种质花序支轴紧密度、柱头形态、花序主轴颜色和花蕾颜色等4 个描述性状也存在多样性; 柱头形态以/ r0 形种质最多, 占501 7%, 叉形最少; 花序主轴颜色以红褐色的种质最多, 为601 6%,绿色最少; 而花蕾颜色则以浅绿色的种质居多, 占811 7%。

【英文摘要】The inflor escence tr aits of 71 longan g ermplasms in the Nat ional Field Genebank for Longan in Fuzhou wer e studied1 The result showed that (1) the inflo rescence was 191 9- 391 4 cm long and 141 0- 331 0 cm wide w ith 41 4- 131 3 seco ndary peduncles and 71 1- 81 8 stamens in the ma le flower ;(2)the var iation co efficient of these five quartified character istics ranged from 4.9% to 20.0%;(3)the length of the inflo rescence was significantly correlated with the width or number of the axis;(4)the inflo rescence width was significantly correlated with the number of axis;(5)each of the five character istics had five differ ent levels with rather different ratios among them;(6)the inflo rescence length and width of the germplasms from different area varied greatly the length of the inflo rescence of the germplasm from Guang dong was significantly long erthan that from Fujian,and the corolla diameter of the germplasm from Fujian was signif icantly bigger than that from Guangdong;and(7) there were differences on the inflor escence of these longan germplasms in regard to the density of flower cluster, stigma shape, color of flower axis and color of flower bud as well the majority o f the inflor escences (ie , 50. 7%)had an " r " shaped stigma, the fork-shaped the least; the majority o f the inflo rescence had reddish-brown axis (ie,60.6%) ,the green-colored the least;and the greatest majority of buds were light green in color (ie,81. 7%).

【题目】龙眼种质资源亲缘关系的研究进展

【中文关键词】龙眼;种质资源;亲缘关系

【英文关键词】Longan; Germplasm resources; Genetic relationship

【中文摘要】龙眼(Dimocarpus longana Lour.)种质资源是龙眼育种研究的基础。种质资源的研究将为探讨龙眼起源、进化、分类、育种和资源保护与利用提供科学依据。从形态学、孢粉学、同工酶和分子生物学等方面综述了龙眼种质资源亲缘关系的研究进展,探讨了龙眼亲缘关系的研究现状、前景及尚待解决的问题,并分析了今后开展龙眼种质资源亲缘关系研究的方向与重点。

【英文摘要】Longan germplasmresources are very important for the breeding study. The genetic relationships of germplasm resources are the scientific basis for longan ’s origin, evolution, classification, breeding and application. The research advances in genetic relationships of longan germplasm are reviewed in the following aspects: morphology, palynology, biochemistry and genetics. The prospects of longan germplasm resources are also discussed.

【题目】闽北梨产业发展现状与对策

【中文关键词】闽北;梨;现状;对策

【英文关键词】northern Fujian, pear, current situation, countermeasures

【中文摘要】通过文献查阅、现场考察、召开座谈会等形式调查了闽北梨产业发展现状及成因,从气候资源、销售市场、山地资源等方面分析了闽北发展优质早熟梨的比较优势,从思想认识、发展方式、发展策略和服务水平四个角度提出了闽北梨产业发展的对策,以期能为闽北梨产业的发展提供有益的借鉴。

【英文摘要】Through the literature available, on-site inspection, holding a forum to investigate the current situation of the pear industry in northern Fujian and the causes of the status. The comparative advantages about developing the high-grade and early pear industry in northern Fujian were analyzed from some aspects including climate resources, selling market, mountain resources, and so on. We have put forward some countermeasures based on the four perspectives: ideological understanding, development patterns, development strategies and service level, hoping to provide useful basis for the development of pear industry in northern Fujian.

【题目】闽西北无公害梨生产病虫草害综合防治历
【中文关键词】梨
【英文关键词】pear
【中文摘要】闽西北属中亚热带气候区,为我国同纬度地区热量、春季平均气温、夏季气温日较差条件最好的区域,发展早熟梨早上加早,品质更优,进入东南沿海传统非产区市场和东南亚国际市场便捷,利用成熟上市时差可抢占北方产区梨果早市。为此,自20世纪80年代以来,福建省立足闽西北大力推动以早熟梨品种为主的梨产业发展,截至2008年全省梨种植面积达213万hm2,产量1715万,t 成为我国长江流域及其以南最具活力的新兴梨产区。但由于温暖多湿,病虫草害发生较严重,对持续丰产优质高效生产构成较大威胁。为此,我们以多年来对建宁县主要病虫草害发生种类、规律、为害程度的调查研究和防治实践经验为基础,按照无公害果品生产要求,制定闽西北梨主要病虫草害综合防治模式,为广大生产者高效、安全地开展主要病虫草防治提供参考。销售市场、山地资源等方面分析了闽北发展优质早熟梨的比较优势,从思想认识、发展方式、发展策略和服务水平四个角度提出了闽北梨产业发展的对策,以期能为闽北梨产业的发展提供有益的借鉴。

【题目】木奈果实中花青素合成酶基因PsANS 的克隆及原核表达分析
【中文关键词】奈; 花青素合成酶; 克隆; 原核表达
【英文关键词】Prunus salicina; ANS; Clone; Prokaryotic expression
【中文摘要】根据NCBI 数据库中已知的蔷薇科植物花青素合成酶基因序列设计特异引物,从本实验室已经构建好的木奈成熟果实均一化全长cDNA 文库中筛选分离得到了一个编码花青素合成酶的cDNA: 基因命名为PsANS,登录号: JN560957。该cDNA 长1 478 bp,包含137 bp 5' 非编码区,267 bp 3' 非编码区,开放阅读框长度为1 074 bp。PsANS 编码358 个氨基酸,分子量为40.41 ku,理论等电点为5.35。经BLAST 分析对比发现,PsANS 氨基酸序列与甜樱桃、苹果和草莓的ANS 氨基酸同源性都很高,分别为98%、93%和89%。将PsANS亚克隆到原核表达载体pGEX-6P-1 和pET-32a 上,在大肠杆菌BL21 中经1mmol/L ITPG 诱导表达获得了木奈PsANS 融合表达蛋白,其分子量大小与预期的一致,进一步确认本试验克隆得到的PsANS 为木奈花青素合成酶基因。
【英文摘要】A cDNA encoded anthocyanidin synthase(ANS)was separated from a normalization and full-length cDNA library prepared previously with the ripe fruit of ‘ oil Lai ’(Prunus salicina)by gene special primers designed from ANS genes of other Rosaceae plants. The cDNA named PsANS was 1 478 bp in full length and encoded a protein with 358 amino acids. The deduced amino acid sequence shares 98%, 93% and 89% identity with those ANS from sweet cherry, apple and strawberry, respectively. Prokaryotic expression was conducted with the constructed vectors used PsANS and prokaryotic expression vector(pGEX-6P-1 and pET-32a)in E.coli BL21. The obtained fusion protein had a molecular weight consistent with that expected, and it further confirmed that the PsANS obtained by this experiment encoded ANS of ‘ oil Lai ’(Prunus salicina).

【题目】枇杷茎尖愈伤组织诱导及种质体外保存研究
【中文关键词】邓朝军 章希娟 郑姗 魏秀清 李韬 郑少泉
【英文关键词】Loquat germplasm Shoot tips Callus Induction Preservation
【中文摘要】以国家果树种质资源枇杷圃中12 份枇杷种质为试材,开展了枇杷茎尖愈伤组织的诱导和种质体外保存研究。结果表明,将春季采集的枇杷茎尖不经水冲洗,直接接种于MS + 6 - BA 1. 0 mg • L-1 + NAA 1. 0mg • L-1 培养基上培养,较容易诱导出愈伤组织; 不同基因型的枇杷茎尖诱导出的愈伤组织存在较大差异,诱导率最高的是野生92 号,为96. 2%; 诱导率最低的是黄岩5 号,没有诱导出愈伤组织。采用MS + NAA3. 0 mg • L -1 + 6 - BA 1. 0 mg • L -1 + 蔗糖6% (2 ~ 3 代) →MS 培养基(1 ~ 2 代,其中有一次使用液体培养) →MS + NAA 3. 0 mg • L -1 + 6- BA 1. 0 mg • L- 1 + 蔗糖6% (2 ~ 3 代) 循环继代路线,在弱光(光照度150 lx) 下培养,能较好地保存枇杷茎尖愈伤组织,胚性没有减弱,生长势较好且仍为黄白色颗粒状。试验结果为枇杷种质体外保存、原生质体培养、细胞融合、遗传转化及离体诱变等研究打下基础。
【英文摘要】12 loquat shoot tips,collected from National Field Genebank for Loquat in Fuzhou,were cultured to induce callus and preserved in vitro. The results showed that the shoot tips in spring without washing was more easily to induce callus if inoculated directly to MS supplemented with 1. 0 mg • L -1 6-BA and 1. 0 mg • L -1 NAA. The inducing ability for callus in different genotypic loquat shoot tips was different. The highest induction rate was wide loquat -92 (96. 2%) .The lowest induction rate was Huangyan -5 which couldn ’ t induce callus. The callus were conserved better under weak light (illuminance 150 lx) with a cycle subculture process: MS supplemented with 3. 0 mg • L-1 NAA and 1. 0 mg • L -1 6-BA and 6% sucrose (2-3 generation) →MS (1 -2 generation,with once liquid culture) → MS supplemented with 3. 0 mg • L-1 NAA and 1. 0 mg • L-1 6-BA and 6% sucrose (2-3 generation) .At this condition the callus grew preferably and was yellow - white granular.The results will lay the foundation for loquat germplasm preservation,protoplast culture,cell fusion,genetic transformation and mutagenesis in vitro.

【题目】由规范残留试验数据推荐农药最大残留限量的方法概述
【中文关键词】最大残留限量;田间试验;数据;统计学;估算
【英文关键词】MRLs;field trial;data;statistics;estimate
【中文摘要】农药最大残留限量(MRLs)是指农药在食品和饲料中的最高法定容许残留浓度。MRLs的制定可检验食品生产过程中是否严格执行良好农业规范(GAP),对农产品的进出口贸易影响很大,因而,制定MRLs所依据的方法也尤为重要。综述了欧盟、北美自由贸易协定(NAFTA)成员国及经济合作与发展组织(OECD)等管理机构提出的几种基于统计学原理的估算方法,比较并讨论了各方法的优缺点。EUmethod Ⅰ方法目前已在欧盟各国广泛使用,对于相同或相近的数据集,采用该方法可得出一致的评估结果,但该方法建立在残留数据呈正态分布这一假设基础之上,而欧盟却并未对此假设的合理性作出相应的评估和测试;EUmethod Ⅱ方法适用于对任意分布的数据集的MRLs进行评估,涉及到的计算不会受到数据集中高残留数据的影响,该方法建立在将第75百分位数值加倍以确保估算得出的MRLs足够高且不会被超过的原理基础之上,但目前尚未从统计学角度对该原理予以证明;NAFTA对数正态分布方法是在EUmethod Ⅰ基础上的改进方法,也称作"95/99法则",该方法能对所有呈对数正态分布的残留数据第95百分位数的95%置信上限提供无偏估计,但要求田间试验数据集接近对数正态分布,数据集必须具有足够大的样本量以确保能准确评估第99百分位数和第95百分位数的置信上限,且数据集中必须有足够数量的高于检测限的残留数据;目前最新版本的OECD计算器方法不再对数据分布进行讨论,方法的精确度能随着数据集样本量的增加而提高,且能对高百分位数,如至少具有15到20个数据点的数据集的第95百分位数提供十分准确的估算。目前,OECD工作组正在探索"平均值+4倍标准差"的评估方法,该方法能对呈对数正态分布数据集的第95百分位数进行更好的估计。

【题目】Determination of tebuconazole, trifloxystrobin and its metabolite in fruit and vegetables by a Quick, Easy, Cheap, Effective, Rugged and Safe (QuEChERS) method using gas chromatography with a nitrogen – phosphorus detector and ion trap mass spectrometry
【中文关键词】无
【英文关键词】QuEChERS method;gas chromatography – ion trap mass spectrometry;gas chromatography – nitrogen – phosphorus detector;tebuconazole;trifloxystrobin and trifloxystrobin acid;residue
【中文摘要】无

【英文摘要】A new analytical method using QuEChERS procedure by gas chromatography with a nitrogen – phosphorus detector (GC-NPD) and ion trap mass spectrometry (GC-IT-MS) for the quantitative determination of tebuconazole, trifloxystrobin and its metabolite trifloxystrobin acid has been developed and validated. The analytes were extracted from five fruit and vegetable matrices using acetonitrile and subsequently cleaned up using primary secondary amine (PSA) or octadecylsilane (C18) as sorbent prior to GC analysis. The present methods provided sufficient sensitivity as reflected by the values of limit of detection (LOD) and limit of quantification (LOQ) of 0.4 – 7 and 1.2 – 20 μg/kg for GC-IT-MS/MS and GC-NPD. The recoveries were, on average, 68 – 117 and 68 – 121%, respectively, for three compounds by GC-NPD and GC-IT-MS/MS with intra-day precision achieved with an RSD of 2.7 – 19.1%. The inter-day precision was better than 15.1% as determined by GC-NPD. The QuEChERS procedure, by using two sorbents (PSA and C18) and the matrix-matched standards, gave satisfactory recoveries and RSD values in different matrices. IT-MS acquisition provided higher specificity and selectivity for pesticides and better limit of detection and quantification. However, the repeatability and precision of NPD method were better compared with IT-MS.

【题目】Rapid residue analysis of four triazolopyrimidine herbicides in soil, water, and wheat by ultra-performance liquid chromatography coupled to tandem mass spectrometry.
【中文关键词】无
【英文关键词】Residue analysis;Ultra-performance liquid chromatography – mass spectrometry ; Soil; Wheat;Water;Triazolopyrimidine sulfonamide
【中文摘要】无
【英文摘要】A sensitive and effective method for simultaneous determination of triazolopyrimidine sulfonamide herbicide residues in soil, water, and wheat was developed using ultra-performance liquid chromatography coupled with tandem mass spectrometry. The four herbicides (pyroxsulam, flumetsulam, metosulam, and diclosulam) were cleaned up with an off-line C18 SPE cartridge and detected by tandem mass spectrometry using an electrospray ionization source in positive mode (ESI+). The determination of the target compounds was achieved in <2.0 min. The limits of detection were below 1 μg kg(-1), while the limits of quantification did not exceed 3 μg kg(-1) in different matrices. Quantitation was determined from calibration curves of standards containing 0.05-100 μg L(-1) with r(2) > 0.997. Recovery studies were conducted at three spiked levels (0.2, 1, and 5 μg kg(-1) for water; 5, 10, and 100 μg kg(-1) for soil and wheat). The overall average recoveries for this method in water, soil, wheat plants, and seeds at three levels ranged from 75.4% to 106.0%, with relative standard deviations in the range of 2.1-12.5% (n = 5) for all analytes.

【题目】Residue analysis of four diacylhydrazine insecticides in fruits and vegetables by Quick, Easy, Cheap, Effective, Rugged, and Safe (QuEChERS) method using ultra-performance liquid chromatography coupled to tandem mass spectrometry
【中文关键词】无
【英文关键词】Residue analysis;Ultra-performance liquid chromatography-mass spectrometry;Diacylhydrazine insecticide ;Fruits;Vegetables

【中文摘要】无
【英文摘要】The new analytical method using Quick, Easy, Cheap, Effective, Rugged, and Safe (QuEChERS) procedure for simultaneous determination of diacylhydrazine insecticide residues in fruits and vegetables was developed using ultra-performance liquid chromatography coupled with tandem mass spectrometry (UPLC-MS/MS). The four insecticides (tebufenozide, methoxfenozide, chromafenozide, and halofenozide) were extracted from six fruit and vegetable matrices using acetonitrile and subsequently cleaned up using primary secondary amine (PSA) or octadecylsilane (C18) as sorbent prior to UPLC-MS/MS analysis. The determination of the target compounds was achieved in less than 3.0 min using an electrospray ionization source in positive mode (ESI+) for tebufenozide, methoxfenozide, and halofenozide and in negative mode (ESI-) for chromafenozide. The limits of detection were below 0.6 μg kg(-1), while the limit of quantification did not exceed 2 μg kg(-1) in different matrices. The QuEChERS procedure by using two sorbents (PSA and C18) and the matrix-matched standards gave satisfactory recoveries and relative standard deviation (RSD) values in different matrices at four spiked levels (0.01, 0.05, 0.1, and 1 mg kg(-1)). The overall average recoveries for this method in apple, grape, cucumber, tomato, cabbage, and spinach at four levels ranged from 74.2% to 112.5% with RSDs in the range of 1.4-13.8% (n = 5) for all analytes. This study provides a theoretical basis for China to draw up maximum residue limits and analytical method for diacylhydrazine insecticide in vegetables and fruits.

【题目】Simultaneous determination of pyrethrins residues in teas by ultra-performance liquid chromatography/tandem mass spectrometry
【中文关键词】无
【英文关键词】Tea;Pyrethrins;Ultra-perform;ance liquid chromatography coupled with tandem mass spectrometry;Multi-residue;Solid-phase extraction
【中文摘要】无
【英文摘要】A sensitive and effective method for the simultaneous quantitative determination of pyrethrin residues in teas was developed and validated using ultra-performance liquid chromatography coupled with tandem mass spectrometry (UPLC-MS/MS). The six major constituents of the pyrethrins (pyrethrin I and II, jasmolin I and II, and cinerin I and II) were successfully separated and independently confirmed in a single run within approximately 5 min. The multi-residue analysis of pyrethrins in teas involved simply extraction with acetonitrile, clean-up using a multilayer solid phase extraction cartridge, and subsequent separation by a hydrophilic end-capped Aquasil C18 columns with detection by tandem mass spectrometry using an electrospray ionization source in positive mode (ESI+). Recovery studies were carried out at three spiked levels (0.05, 0.1, 0.5 mg kg(-1)). The overall average recoveries using this method in green teas and black teas at the three concentration levels ranged from 76.15% to 101.86% with relative standard deviations (RSDs) in the range of 2.71-12.93% (n=5) for all analytes. The limits of detections (LODs) were below 0.009 mg kg(-1), which were lower than the maximum residue limits (MRLs) of 0.5 mg kg(-1) in tea samples established by the European Union legislations in 2008, while the limits of quantification (LOQ) did not exceed 0.03 mg kg(-1). This study provides a theoretical basis for China to draw up MRLs for pyrethrins in teas.

【题目】糯谷猪解耦联蛋白3和心脏型脂肪酸结合蛋白在骨骼肌中的表达和定位
【中文关键词】UCP3; H-FABP; 免疫组织化学; 骨骼肌; 糯谷猪
【英文关键词】UCP3; H-FABP; immunohistochemistry; skeletal muscle; Nuogu pig
【中文摘要】为了探索解耦联蛋白3(uncoupling protein 3,UCP3)和心脏型脂肪酸结合蛋白(heart fatty acid-bind-ing protein,H-FABP)对骨骼肌细胞中脂肪代谢的调节作用,采用RT-PCR和免疫组织化学方法,研究了地方猪品种糯谷猪骨骼肌细胞中UCP3和H-FABP基因的表达和细胞内定位,并与外二元杂交猪相比较,结果表明,糯骨猪的肌细胞及其细胞间隙较大,血清游离脂肪酸和肌内脂肪含量较高;但UCP3和H-FABP基因表达量和蛋白分布密度均较杂交猪低。说明糯谷猪肌细胞中UCP3和H-FABP的表达量较少,肌细胞中ATP的生成效率较高,对脂肪酸供能的依赖性较低,脂肪得以贮存。提示UCP3和H-FABP主要以蛋白量的变化参与猪骨骼肌细胞的脂肪代谢调节,从而影响地方猪种的肉质等性状。

【题目】3份高羊茅材料吡咯琳-5-羧酸合成酶基因的结构及酶活性比较
【中文关键词】高羊茅; P5CS基因; 酶活性; 脯氨酸; 抗旱
【英文关键词】Festuca arundinacea, P5CS gene, enzyme activity, proline, drought resistance
【中文摘要】吡咯琳-5-羧酸合成酶(Pyrroline-5-Carboxylate Synthetase,P5CS)是经谷氨酸途径合成脯氨酸的关键酶,脯氨酸的积累有助于提高植物的抗逆性。本研究以黔草一号高羊茅(Festuca arundinacea cv.Qiancao No.1,QC1)、黔草二号细叶高羊茅(F.arundinacea cv.Qiancao No.2n,QC2n)和黔草二号宽叶高羊茅(F.arundinacea cv.Qiancao No.2b,QC2b)为材料,经RT-PCR克隆得到P5CS基因,基因长2 151bp,含有完整的开放读码框(OpenReading Frame,ORF),编码716个氨基酸,与朝鲜碱茅(Puccinellia chinampoensis)P5CS基因的相似性为94%。对3份高羊茅材料P5CS基因编码的氨基酸序列进行比较,有6个氨基酸差异,这些氨基酸均处于P5CS蛋白的谷氨酸激酶(Glu-5-Kinase,G5K)功能区,其中第37、85及142位的氨基酸所带电荷发生了改变。比较干旱处理后3份高羊茅材料叶片的P5CS酶活性及其脯氨酸含量,QC1叶片的P5CS酶活性及其脯氨酸含量最高,其次为QC2n,QC2b最低。说明P5CS中谷氨酸激酶(G5K)功能区重要氨基酸种类的改变,可能影响高羊茅P5CS的酶活性及其脯氨酸的生成量,也是高羊茅抗逆性差异的主要原因。

【题目】香猪H-FABP和UCP3基因的表达与IMF和血清FFA的相关性
【中文关键词】香猪; 骨骼肌; H-FABP; UCP3; 免疫组织化学
【英文关键词】Xiang pig; skeletal muscle; H-FABP; UCP3; immunohistochemistry
【中文摘要】为了研究心脏型脂肪酸结合蛋白(heart fatty acid-binding protein,H-FABP)和解耦联蛋白3(uncoupling protein,UCP3)基因对贵州香猪肉质的调节作用,采用RT-PCR和免疫组织化学方法,以外二元杂交猪(大白×长白)为对照,研究H-FABP和UCP3基因在骨骼肌细胞中的表达和细胞定位,并与血清中游离脂肪酸(free fatty acid,FFA)和肌内脂肪(intramuscular fat,IMF)含量进行相关性研究。结果表明:香猪骨骼肌细胞中的H-FABP和UCP3基因表达量及其蛋白分布较杂交猪低,但血清FFA和IMF含量较杂交猪高。说明,香猪骨骼肌细胞中H-FABP的表达量不足,其肌细胞从血液中摄取

FFA的量较少;同时香猪骨骼肌细胞中UCP3的表达量较低,因此,进入骨骼肌细胞的FFA消耗较少,大量存在于血液中,使脂肪沉积在肌肉细胞间或皮下等部位的机会增加。通过相关性分析表明,H-FABP基因的表达变化与IMF呈中度正相关,UCP3基因的表达变化与FFA呈中度负相关,表明,H-FABP和UCP3以蛋白量的表达变化为主影响骨骼肌细胞中的脂肪代谢,并以此调节香猪的肉质性状。

【题目】应用促卵泡激素基因SINE标记测定大约克猪纯合度
【中文关键词】大约克猪; FSH β 基因; 分子标记; SINE
【英文关键词】Yorkshire pig; FSH β gene; molecular marker; SINE
【中文摘要】为了使猪种引进有便捷、准确的检测手段,采用聚合酶链式反应(Polymerase chain reaction,PCR)方法,检测了120头大约克种猪的纯合度。结果表明:受检母猪FSH β 基因的BB纯合基因型频率为82.5%,AB杂合基因型频率为17.5%,未检测到AA纯合基因型,经计算B等位基因的频率明显高于A等位基因频率。表明,该批次大约克猪存在一定比例的内二元或内三元杂交猪,应加强管理,严格控制再引种的纯度。该检测方法适用于区分国内地方猪品种和欧洲猪品种的纯合度,为引种种猪的纯合度检测提供准确的鉴定手段,有良好的应用前景。 更多还原

【题目】日粮中添加紫花苜蓿和苦荞对猪生产性能的影响
【中文关键词】紫花苜蓿; 苦荞; 猪; 饲用价值; 生产性能
【英文关键词】alfalfa; buckwheat; emasculated boar; feeding value; productive performance
【中文摘要】为拓宽种植牧草的利用途径和探索紫花苜蓿与苦荞的饲用价值,选择长×大外二元去势公猪40头,体重(20.08±0.76)kg,随机分为5组进行生长试验与屠宰测定,研究毕节地区优势饲料资源紫花苜蓿与特色饲料资源苦荞对生长肥育猪生产性能的影响。结果表明:20~50kg、50~80kg、80~110kg体重段相应按日粮干物质的3.11%、4.58%、6.74%添加紫花苜蓿鲜草(按20%干物质估算),平均日增重(ADG)、料量比(F/G)与基础日粮组相近,反映肉质风味的肌内脂肪含量提高。20~50kg体重段添加苦荞9.24%(苦荞比例的2/3取代基础日粮中的玉米,1/3取代基础日粮中的麦麸,下同)、50kg以上添加苦荞12%处理,与其他组相比,ADG、F/G均最佳,眼肌面积最高达65.66cm2,其肉色、大理石纹评分均提高,肌内脂肪含量高于紫花苜蓿组。结论:添加紫花苜蓿、苦荞对屠宰性能的影响不明显;生长育肥猪日粮中适量添加紫花苜蓿、苦荞,可获得良好的增重效果并改善胴体品质。合理利用紫花苜蓿可有效降低饲养成本和开拓牧草利用新途径,苦荞可作为地方特色饲料资源用于优质猪肉的生产。 更多还原

【题目】Glutathione Fermentation Process Modeling Based on CCTSK Fuzzy Neural Network
【中文关键词】谷胱甘肽,模糊神经网络, 鲁棒性, 正交试验
【英文关键词】Glutathione,CCTSK fuzzy neural network, robustness, orthogonal experiment
【中文摘要】作为一个重要的智能建模方法,BP神经网络可以有效地用于谷胱甘肽发酵过程建模。然而,它通常缺乏更好的解释和它的性能。为了解决这些弊端,运用CCTSK模糊神经网络对谷胱甘肽发酵过程进行建模,并与BP 神经网络进行对比。实验证明:CCTSK模糊神经网络具有更高的可解释性和良好的鲁棒性。
【英文摘要】As one of the important intelligent modeling methods, BP neural network can be effectively used for GSH fermentation process modeling. However, it usually lacks the nicer interpretation and its performance is often deteriorated by noise existing in the sample data. In order to circumvent theses weaknesses, a robust and interpretable syllogistic-fuzzy-inference based modeling method, called CCTSK (Cascade Centralized TSK)fuzzy neural network, is introduced for GSH fermentation process modeling. Present experimental results demonstrate that the proposed method really has better robustness compared with the traditional BP neural network.

【题目】Autoregressive-model Based Dynamic Fuzzy Clustering for Time-course Gene Expression Data
【中文关键词】自回归模型,模糊聚类,基因表达的时间过程,动态模糊聚类,自关系
【英文关键词】Autoregressive model, fuzzy clustering; time-course gene expression, dynamic fuzzy clustering, self- relationship
【中文摘要】在这项研究中,一种新的称为动态模糊聚类(DFC)算法被聚类时间基因表达数据。该方法结合自回归(AR)模型和传统的模糊聚类算法(FCM)。在这种方式下,一个时间过程的基因表达数据进行分析,为一组动态的时间序列AR模型,以更有效地利用的重要动态信息和AR模型的预测过程中,可以使用相应的模糊隶属度,调整可以得到更好的聚类结果。在一个合成和两个真实情况下的基因表达数据集同样表明和其他一些传统的聚类算法如FCM和简单的动态模型为基础的聚类算法相比,这种方法能够更有效。
【英文摘要】In this study, a novel algorithm called Dynamic Fuzzy Clustering (DFC) is proposed for clustering time-course gene expression data. The proposed method combines Autoregressive (AR) model and conventional Fuzzy Clustering Algorithm (FCM). Under this approach, a time-course gene expression data can be analyzed as a set of dynamic time series with AR model in order to utilize the important dynamic information more efficiently and the forecast process in AR model can be adjusted using the corresponding fuzzy membership such that better clustering results can be obtained. Experiments performed on a synthietic and two real-world time-course gene expression datasets also indicates that this proposed approach can be more effective than some other conventional clustering algorithms such as FCM and simple dynamic model-based clustering algorithm

【中文关键词】氨基酸,谷胱甘肽,假丝酵母,优化发酵,葡萄糖
【英文关键词】Amino acids,Glutathione (GSH),Candida utilis,Optimization Fermentation,Glucose
【中文摘要】还原型谷胱甘肽(GSH)合成的前体氨基酸此外战略进行了优化,在这项研究中。 半胱氨酸和甘氨酸的加入显示出显着的对谷胱甘肽(GSH)的积累。半胱氨酸增加 胞内GSH含量很大,但抑制细胞的生长,在相同的时间。一个两步骤的氨基酸 此外strategywas。首先,在4 h的6个mmol / L的glycinewas附加,谷氨酸的混合物, 甘氨酸和半胱氨酸溶液中加入在固定相的细胞生长在12 h。的最佳浓度 三个氨基酸(谷氨酸,6 mmol / L的甘氨酸,5.5 mmol / L的半胱氨酸,6.5毫摩尔/升),通过以下方式获得 响应面法。 随着两个步骤加法策略,生物量和GSH产量达到11.65克/ L和241.4 mg / L的烧瓶 实验中,增加了10.5%和69.5%,分别与对照相比,无氨基酸 酸加成。 通过应用这种氨基酸添加策略在7 L发酵罐),谷胱甘肽过氧化物酶(GSH产量进一步分批发酵 达到383.3毫克/升,这是比对照高出78.1%。
【英文摘要】Strategy of precursor amino acids addition for glutathione (GSH) synthesis was optimized in this study.The addition of cysteine and glycine showed a significant effect on GSH accumulation. Cysteine increasedintracellular GSH content greatly but inhibited cell growth at the same time. A two-step amino acidsaddition strategywas developed. First, 6 mmol/L glycinewas added at 4 h, and a mixture of glutamic acid,glycine and cysteine was added at 12 h at stationary phase of cell growth. The optimum concentrations ofthree amino acids (glutamic acid, 6 mmol/L; glycine, 5.5 mmol/L; cysteine, 6.5 mmol/L) were obtained byresponse surface methodology.With the two-step addition strategy, biomass and GSH yield reached 11.65 g/L and 241.4 mg/L in flaskexperiments, increased by 10.5% and 69.5%, respectively, as compared with the control without aminoacids addition.By applying this amino acid addition strategy further to batch fermentation in 7 L fermentor, GSH yieldreaches 383.3 mg/L, which is 78.1% higher than the control.

【题目】A novel strategy of enhanced glutathione production in high cell density
【中文关键词】产朊假丝酵母谷胱甘肽(GSH),高密度培养;半胱氨酸此外,溶解氧(DO)
【英文关键词】Candida utilis; Glutathione (GSH); High cell density cultivation; Cysteine addition; Dissolved oxygen (DO)
【中文摘要】对高细胞密度发酵中溶解氧(DO)的浓度对谷胱甘肽(GSH)的生产和半胱氨酸氧化 产朊假丝酵母的培养的影响进行了调查。 低溶氧利于半胱氨酸的吸收但阻碍的谷胱甘肽的合成了。 高溶氧促进谷胱甘肽的积累,但加速的半胱氨酸氧化发酵液中。一个两步骤的控制策略开发的潜力,提高GSH相比, 生产和半胱氨酸的吸收。通过使用两个步骤的,DO控制策略,减少了40%半胱氨酸此外,13%的增加GSH 生产相比,观察到与在恒定溶氧 40%。
【英文摘要】Effects of dissolved oxygen (DO) concentration on glutathione (GSH) production and cysteine oxidation were investigated in high cell densitycultivation of Candida utilis. LowerDOconcentration favors cysteine absorption but retards GSHproduction. HigherDOpromotes GSHproductionbut accelerates cysteine oxidation in the broth. A two-step DO control strategy was developed and compared for the potential in enhancing GSHproduction and cysteine absorption. By using the two-step DO control strategy, a 40% decrease in cysteine addition and a 13% increase in GSHproduction are observed as compared with that at constant DO of 40%.

【题目】Functional expression of LZ-8, a fungal immunomodulatory protein from Ganoderma lucidum in Pichia pastoris,
【中文关键词】灵芝;免疫调节蛋白;LZ-8;功能表达
【英文关键词】express; immunomodulatory activity; LZ-8 protein; Pichia pastoris
【中文摘要】LZ-8蛋白是从灵芝菌丝中分离到的真菌免疫调节蛋白,具有多种免疫调节功能,然而这一蛋白的作用机制尚不清楚。
【英文摘要】LZ-8, a fungal immunomodulatory protein found in Ganoderma lucidium, has been proposed to have therapeutic effects on cancer and autoimmune diseases. To develop an efficient and facile expression system supplying of rLZ-8 of high purity and stable activity for further study and applications, a full-length cDNA of lz8 gene was cloned into the pPIC9K to construct a yeast expression vector pPIC9K-lz8, then transformed to Pichia pastoris strain GS115. The molecular weight of the rLZ-8 was about 17 kDa. The yield of rLZ-8 reached up to 270 mg L(-1) at optimal culture conditions. In vitro, the rLZ-8 was capable of hemagglutinating mouse red blood cells, but no such activity was observed toward human red blood cells, which were similar to the native LZ-8. The mouse splenocyte proliferation activity of rLZ-8 expressed in P. pastoris was much higher than the rLZ-8 expressed in E. coli. All these results suggested that the active rLZ-8 protein can be expressed efficiently in the P. pastoris expression system. This report may supply a new economic and convenient way for the application of LZ-8 protein.

【题目】Effect of polysaccharide from Auricularia auricula on blood lipid metabolism and lipoprotein lipase activity of ICR mice fed a cholesterol-enriched diet
【中文关键词】木耳多糖;血脂代谢;脂蛋白酶;胆固醇
【英文关键词】polysaccharide;Auricularia auricula ;lipoprotein lipase
【中文摘要】无
【英文摘要】Polysaccharides from Auricularia auricula (AAP) extracted in hot water and precipitated by ethanol were chemically well defined, including 42.5% total carbohydrate, 19.6% uronic acids, 15.8% sulfate groups, 1.7% N, and 20.3% ash. Gas chromatography analysis demonstrated that the neutral sugars were mainly composed of rhamnose, xylose, and glucose and smaller amounts of mannose, galactose, and arabinose. The present study was designed to investigate the antioxidant capacity of AAP on blood lipid metabolism and lipoprotein lipase (LPL) activity in ICR mice fed cholesterol-enriched diet (CED) for the 1st time. Furthermore, the relationship between the atherosclerotic index (AI) and LPL activity to total antioxidant capacity (TAC) was studied. Thirty-six ICR mice were randomly assigned to 3 groups (n=12). The mice in control group (NG) received regular diet and the mice in model group (MG) received CED; these 2 groups were provided with distilled water by oral gavage. The experimental group (EG) was fed CED with oral gavage of AAP (120 mg/kg/d body weight) for an 8-wk period. After 2, 4, 6, and 8 wk, total cholesterol (TC), high-density

lipoprotein cholesterol (HDL-C), low-density lipoprotein cholesterol (LDL-C), and triglyceride (TG) levels of the serum were determined by enzymatic methods. The results indicated that the polysaccharides significantly lowered the concentrations of serum TC and LDL-C compared with the CED control group (P<0.05). Moreover, oral administration of polysaccharides significantly improved TAC, LPL activity, and decreased MDA level, as well as AI. These conclusions revealed the beneficial effects ofAAP on the preventive actions against hypercholesterolemia.

【英文关键词】Ganoderma lucidum polysaccharides; response surface methodology; ultrasonic extraction
【中文摘要】采用响应曲面法对影响灵芝多糖提取得率的3个主要影响因素即超声功率、超声时间和水料比进行优化。利用Design Expert软件分析表明:灵芝多糖提取在超声功率680W、超声时间17min、水料比28:1的最佳工艺条件下,得率达(20.79±0.11)mg/g,实测结果与响应面拟和所得方程的预测值符合良好。
【英文摘要】Three key factors affecting the extraction yield of Ganoderma lucidum polysaccharides such as ultrasonic power, ultrasonic extraction time and ratio of water to solid were optimized by response surface methodology. Design Expert analysis indicated that the best ultrasonic power, ultrasonic extraction time and the ratio of water to solid were 680 W, 17 min and 28:1, respectively. Under these conditions, the yield of polysaccharide was (20.79 ± 0.11) mg/g, which was consistent with the predicted value..

【题目】Application of Box-Behnken design in optimisation for polysaccharides extraction from cultured mycelium of Cordyceps sinensis
【中文关键词】虫草多糖;相关性分析;提取
【英文关键词】Cordyceps sinensis; Polysaccharides; Box-Behnken design; Canonical analysis; Ridge analysis
【中文摘要】无
【英文摘要】AbstractA three-level Box-Behnken design, combined with the canonical and ridge analyses, was employed to optimise the process parameters for polysaccharide extraction from cultured mycelium of Cordyceps sinensis, one of the most valued traditional Chinese medicines and health foods. The critical factors selected for the investigation were extraction temperature, duration of time and number of times. The experimental results were fitted with a second-order polynomial equation by a multiple regression analysis and more than 96% of the variation could be predicted by the models. The canonical analysis of surface responses revealed that the three eigenvalues had different signs, indicating a saddle stationary surface. The optimal conditions for extraction of polysaccharides from the cultured mycelium of C. sinensis were determined, using the ridge analysis, as extracting 110 min at 88.9 ° C for three times. Under the optimal conditions the corresponding response value predicted for polysaccharide production was 15.85%, which was confirmed by validation experiments.

【题目】Dietary intervention with AHP, a functional formula diet, improves both serum and hepatic lipids profile in dyslipidemia mice.
【中文关键词】饮食干预;功能性配方;降血脂
【英文关键词】Dietary intervention;functional formula diet;serum ;hepatic lipids
【中文摘要】无
【英文摘要】Aurricularia aurricula, hawthorn (Crataegus pinnatifida), and Pueraria radix are well known for both traditional food and folk medicine. Each of the above 3 plants possesses a distinct pathway contributing to treat dyslipidemia. To develop a health-promoting diet against dyslipidemia, the polysaccharides from A. aurricula, polyphenol from hawthorn, and P. radix were combined to postulate as a functional formula diet (AHP) in the present study and its pharmaceutical effects and underlying mechanisms were elucidated in vivo. The dyslipidemia model associated with fatty liver was induced by cholesterol-enriched diet (CED) for up to 12 wk in male ICR mice. Mice were randomly divided into 5 groups, that is, regular diet (RD), CED, Xuezhikang treatment (positive control group, PG), low and high (150 or 450 mg/kg/d) of AHP treatment groups. Compared with the CED group, AHP groups maintained lipid profiles through lowering serum total cholesterol (TC) and low-density lipoprotein-cholesterol (LDL-C), inhibiting the accumulation of hepatic TC and triglyceride (TG). AHP could also improve both serum and hepatic biochemical activity profiles including antioxidant status, serum nitric oxide (NO), and hepatic 3-hydroxy-3-methylglutary CoA (HMG-CoA) reductase levels. Hepatic histopathological examinations showed markedly decreased fatty deposits in the liver of AHP-treated mice, illustrating the ability to reverse a condition of fatty liver. Our study indicated that this functional formula diet would be a potent alternative as a health-promoting diet, simultaneously targeting on the complexity and redundancy of dyslipidemia.

【题目】Adulteration identification of some fungal polysaccharides with SEM, XRD, IR and optical rotation: A primary approach
【中文关键词】扫描电镜;X射线衍射;红外光谱;菌多糖;鉴别
【英文关键词】Adulteration identification ;fungal polysaccharides ;SEM, XRD, IR
【中文摘要】无
【英文摘要】..Edible mushrooms have been consumed in Asian countries for healthy functions historically with polysaccharides, which have been manufactured as ending products, as one of the major bioactive components. Driven by profits, some inglorious manufacturers conducted adulteration using cheap carbohydrates. The extracted polysaccharides from Agaricus blazei Murill, Ganoderma lucidum and Lentinus edodes were chosen as products and maltodextrin, carboxymethyl cellulose (CMC), water soluble corn starch and guar gum as adulterants for adulteration investigation. Scanning electron microscope (SEM) observation implied regular granular shapes of fungal polysaccharides different significantly from the adulterants. Infrared spectra revealed alpha- and beta-anomeric types of polysaccharides and carbohydrates. X-ray diffractometry (XRD) suggested different diffraction patterns of polysaccharides from adulterant carbohydrates, the former were amorphous while the later somewhat crystalline of different crystallinity. Chiral properties of polysaccharides and carbohydrates showed big differences in specific rotation with good correlation between the content of "pure" fungal polysaccharides and adulterants.

【题目】Evaluation of antioxidative and hypolipidemic properties of a novel functional diet formulation of Auricularia auricula and Hawthorn
【中文关键词】黑木耳;山楂;功能性配方;低密度脂蛋白氧化;血脂;氧化应激
【英文关键词】Auricularia auricula; Hawthorn; Functional diet formulation; LDL oxidation; Hypolipidemic; Oxidative stress
【中文摘要】无
【英文摘要】Auricularia auricula and hawthorn are well known for both traditional food and folk medicine. To develop a novel healthy functional diet (FD), the formulation of A. auricula polysaccharide (AAP) and hawthorn flavones were postulated in present study. In vitro, FD significantly increased the radical-scavenging effects and inhibited LDL oxidation, compared with AAP. In vivo, the hyperlipidemic mice, induced by cholesterol-enriched diet, were provided either 150, 300, 450 mg/kg day of FD or 300 mg/kg day of AAP for 12 weeks to evaluate their expected hypolipidemic activity. Compared with CED, both FD and AAP groups could lower serum TC and atherogenic index (AI), improve serum and hepatic antioxidant status. Especially, formulating with hawthorn could enhance hepatic antioxidant status in dose-dependent manner, compared with AAP. Thus, it can be concluded that FD may act as a potent hypolipidemic and powerful antioxidant formulation via improving serum lipid profile and inhibiting lipid peroxidation in mice.

【题目】Methyl jasmonate induces Ganoderic acid biosynthesis in the Basidiomycetous Fungus Ganoderma lucidum,
【中文关键词】灵芝;茉莉酸甲酯;灵芝酸;诱导
【英文关键词】Ganoderma lucidum;Methyl jasmonate; induce;Ganoderic acid
【中文摘要】无
【英文摘要】This is the first time study to assess the novel use of methyl jasmonate (MeJA) to elicit ganoderic acid (GA) biosynthesis in Ganoderma lucidum and the resulting experiments demonstrated that MeJA was indeed a potent inducer of GA biosynthesis. To maximize GA synthesis, a statistical methodology called uniform design (UD) was used to optimize inducement conditions, which were determined to be 254 microM MeJA solubilized in Tween-20 that was added to the culture on day 6. The resulting GA yield was 4.52 mg/100mg dry weight (DW), which was 45.3% higher than the untreated control sample. To characterize the effect of MeJA on GA biosynthesis, quantitative real-time PCR was used to measure transcription levels of several genes in the synthesis pathway including hydroxy-3-methylglutaryl-Coenzyme A synthase (hmgs), hydroxy-3-methylglutaryl-Coenzyme A reductase (hmgr), mevalonate-5-pyrophosphate decarboxylase (mvd), farnesyl pyrophosphate synthase (fps), squalene synthase (sqs) and oxidosqualene cyclase (osc). Quantification of transcription levels determined that MeJA significantly induced expression of these genes.

【题目】Extraction, purification, characterization and antitumor activity of polysaccharides from Ganoderma lucidum
【中文关键词】灵芝多糖、纯化、抗肿瘤、特征
【英文关键词】Ganoderma lucidum polysaccharides; Purification; Characterization; Antitumor activity
【中文摘要】无

【英文摘要】Ultrasonic-aid extraction (UAE) was applied to the extraction of polysaccharides from Ganoderma lucidum and then the crude polysaccharides were purified by filtration, DEAE cellulose-52 chromatography and Sephadex G-100 size-exclusion chromatography in that order. Two main fractions, GP-1 and GP-2, were obtained through the extraction and purification steps. The characterizations, such as molecular weight, monosaccharides composition, ultraviolet spectrum and infrared spectrum of the two fractions were analyzed in this study. Furthermore, the influence of G. lucidum polysaccharides fractions upon activation of macrophage cell (RAW 264.7) and antitumor activities to the human breast cancer cell (MDA-MB-231) in vitro were evaluated by MTT (3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyl tetrazolium bromide) assay. The results indicated that GP-1 and GP-2 can increase the proliferation and pinocytic activity of macrophage significantly and play an inhibited effect on the cancer cell, moreover, the antitumor activity of the GP-1 and GP-2 increased with the participation of the antitumor factors induced from macrophage by polysaccharides fractions.

【题目】禾谷镰刀菌对多菌灵抗性的监测及其演变规律
【中文关键词】无
【英文关键词】无
【中文摘要】调查了江苏省1994—2007年小麦赤霉病的危害程度,监测了江苏省1985—2007年禾谷镰刀菌对多菌灵的田间抗性菌株频率,分析了禾谷镰刀菌对多菌灵的抗药性与小麦赤霉病发生程度及气象因子的相关。 结果表明:小麦赤霉病在江苏省的苏南江浦等县中发生以上的年份占30.8%,而在江苏北部赣榆、高邮等县,小麦赤霉病中发生以上的年份占7.7%~15.4%。 抗药性菌株频率的增减率与小麦赤霉病的发病程度、病情指数和小麦抽穗期4月中下旬的雨日呈极显著的相关关系。 研究表明在农业生产上多菌灵防治小麦赤霉病仍然具有使用价值。

【题目】高养分富集植物凤眼莲的农田利用研究
【中文关键词】养分富集植物;凤眼莲;农田利用;小麦;出苗率;生长;土壤速效养分
【英文关键词】Nutrient-accumulating plant,Hyacinth,Application in field,Wheat,Seedling emergence rate,Growth,Soil available nutrient
【中文摘要】研究不同凤眼莲施用量条件下土壤养分变化以及小麦生长情况的结果表明:当凤眼莲施用量低于8.1kg·m-2、小麦出苗数不受影响;但当凤眼蓬施用量超过8.1 kg·m-2时,小麦出苗率显著降低。凤眼莲施用量为13.5 kg·m-2时,尽管小麦出苗率显著降低,但由于具有较多的分蘖数和较高的每穗粒数,小麦最终产量与常规单施化肥处理间无显著差异。不同凤眼莲施用处理的土壤速效氮苗期差异显著,但分蘖期后处理间无显著差异:而速效磷和速效钾总体表现为随凤眼莲施用量增加而升高。此外,凤眼莲施用还可促进小麦茎秆对N、P、K的吸收和籽粒粗蛋白含量的增加。由此可见,凤眼莲是一种经济有效的农田有机肥料,其施用量以10.8~1 3.5 kg·m-2为宜,施用后土壤N、P、K、有机质含量较高,且对产量影响不大,当季还可节约施用化学N 141.75 kg·hm-2、P 36~45 kg·hm-2,K可免施。

【英文摘要】The effect of different application doses of hyacinth on the dynamic of soil available NPK,wheat seedling emergence rate,yield and its components were studied.The results show no obvious effect of hyacinth on wheat seedling emergence rate when applied at less than 8.1 kg • m-2.However,when it is applied at higher than 8.1 kg • m-2,wheat seedling emergence rate significantly decreases.Due to high tiller number and grain number per spike,treatment at 1 3.5 kg • hm-2 has no significant difference in grain yield from that of normal chemical fertilization treatment.There is also no significant difference in soil available N among the treatments during the entire growth period,except for the seedling stage,Soil available P and K increase with increasing dose of hyacinth.The findings suggest that hyacinth promotes both NPK absorption in stem and protein content in grain of wheat.Hence hyacinth is a potential high quality organic fertilizer.Its use increases soil NPK and organic matter content,while reducing the application of N by 141.75 kg • hm-2,P by 36~45 kg • hm-2,and K by 100%.Its optimum application dose is therefore in the range of 10.8~13.5kg • hm-2.

【题目】水葫芦富集水体养分及其农田施用研究
【中文关键词】水葫芦;富营养化水体;养分;有机肥;小麦
【英文关键词】Water hyacinth;Eutrophicated water;nutrient;Organic fertilizer;Wheat
【中文摘要】采用自然水体养殖及农田施用试验方法,对水葫芦(Eichhornia crassipes)的N、P、K吸收能力及其在农田施用效果进行了研究。结果表明,在研究试验条件下,水葫芦对N、P、K的富集系数分别达到N 6 641倍、P 16 667倍、K 6 560倍,42 d对N、P、K的吸收量可高达40.57、6.95和81.14 g • m-2。与常规施肥处理相比,施用水葫芦处理(等量的N、P投入)的土壤速效N除了苗期显著降低外,其他各时期无显著差异,而速效P和速效K从苗期开始一直表现为不同程度的升高,说明施用水葫芦可促进土壤速效P、K的增加。但要获得较高的产量水平,应适当增加前中期氮肥施用水平。采用水葫芦控制性种养既可实现养分在水体与农田间的循环,还可减少农田化肥的施用量和农业面源污染,是一种良性的循环模式。
【英文摘要】Water hyacinth(Eichhornia crassipes)has been widely used in recovery of eutrophicated waters.However,few studies have been focused on use of the harvested hyacinth and its integrated technologies.The objectives of this paper were to study hyacinth ’s ability to adsorb N P K and the effects of hyacinth as an organic fertilizer on wheat production.The results showed that hyacinth had high growth and N P K absorption rates in eutrophicated water.At our experimental conditions,hyacinth could absorb 40.57 g • m-2 N,6.95 g • m-2 P and 81.14 g • m-2 K from the water during a 42-day period.Compared with pure chemical fertilizer treatment,the combination of the hyacinth mulching and chemical fertilizer treatment did not cause significant difference in soil available N concentration,except that it caused a significant decrease at wheat seedling stage(56 days after the application of hyacinth mulching).The soil treated with combination of hyacinth mulching and chemical fertilizer showed higher available P and K concentrations during the entire growth period.Our results suggested that more chemical nitrogen should be applied at the early and middle stages of wheat growth to achieve high yield.The nutrient translocation from eutrophicated water to agricultural fields can be realized by controlled cultivation of hyacinth in eutrophicated water and its direct application as organic fertilizer in crop fields.This mode can also decrease amount of fertilizer applicated,thus reduce the non-point pollution and alleviate water eutrophication.

【题目】水葫芦去除不同富营养化水体中氮、磷能力的比较

【中文关键词】水葫芦;富营养化水体;氮;磷;去除率
【英文关键词】water hyacinth;eutrophic water;nitrogen;phosphorous;removal rate
【中文摘要】采用人工模拟试验方法,在20O7年l1月至20O8年10月期间比较研究了水葫芦(Eichhornia CraSSipes)对4种不同程度富营养化水体氮、磷的净化效果和去除能力。结果显示,水葫芦在4种富营养化水体中均可正常生长,全年的平均生物量增长率为0.096-0.262 kg/(m2·d),且明显受温度的影响。经过21 d的净化,水葫芦对4种富营养化水体氮、磷均表现出良好的净化效果。4种富营养化水体的TN(总氮)、NH4+-N(铵态氨)、TP(总磷)平均浓度分别由初始的2.06-20.08 mg/L、0.27~10.98 mg/L和0.14-1.43 mg/L降至0.27-8.87 L、0.06-0.71 mg/L和0.03-0.47 mg/L。水葫芦对TN的平均去除率随初始TN浓度的增加而降低,对TP的去除率则相反;水葫芦对4种不同程度富营养化水体的TN、NH4+-N、TP的平均去除率分别为55.82%-86.55%、78.15%-93.54%和76.01%-92.53%。水葫芦对TN、NH4-N、TP的单位面积负荷去除速率则均随水体初始氮、磷浓度的增加而升高,平均分别为84.69~533.70 mg/(m2·d)、12.94~478.70 mg/(m2·d)和5.01~63.06 mg/(m2·d)。
【英文摘要】From November in 2007 to October in 2008,the purification effect and removal ability of nitrogen and phosphorous from differently eutrophic water by water hyacinth were comparatively studied by simulation experiments.The results showed that water hyacinth were able to grow normally in four eutrophic water,in which biomass growth rate during experimental period was between 0.096 kg/(m2·d)and 0.262 kg/(m2·d).The water hyacinth displayed great ability to remove nitrogen and phosphorous from eutrophic water.After purification for 21 d,the average concentrations of TN,NH4+-N and TP in eutrophic water decreased from 2.06-20.08 mg/L, 0.27-10.98 mg/L and 0.14—1.43 mg/L to 0.27—8.87 mg/L,0.06—0.71 mg/L and 0.03—0.47 mg/L,respectively.The average removal rate of TN by water hyacinth droped with the increase of initial concentration of TN,while the average removal rate of TP increased with the increase of initial concentration of TP.The removal rates of TN.NH4+-N and TP by water hyacinth from four eutrophic water were 55.82%-86.55%,78.15%-93.54%,and 76.01%-92.53%,respectively.And the average load removal rates of TN,NH4+-N and TP by water hyacinth from four eutrophic water were 84.69-533.70 mg/(m2·d),12.94-478.70mg/(m2·d)and 5.01-63.06 mg/(m2·d),respectively,which increased with the increase of initial concentrations of nitrogen and phosphorous.

【题目】Transcriptome and Gene Expression Analysis of the Rice Leaf Folder, Cnaphalocrosis medinalis
【中文关键词】稻纵卷叶螟,转录组,基因表达
【英文关键词】Cnaphalocrosis medinalis,transcriptome,gene expression
【中文摘要】稻纵卷叶螟(鳞翅目:螟蛾科)是在亚洲水稻上的一种主要害虫。虽然在稻纵卷叶螟的生态学和生理学方面进行了较多的研究,但是对于它在发育调控、行为及抗药性等方面的分子机理还不清楚。目前,还没有稻纵卷叶螟的基因组信息,因此该害虫转录组表达研究能够帮助我们从分子水平上理解它的生物学功能。 我们用第二代测序技术(Illumina)进行了稻纵卷叶螟转录组测序,测出了2.3×107个短序列,经Trinity软件组装成44,941个基因,平均长474 bp。在NCBI蛋白质数据库中经过相似性比对发现有25,281(56.82%)个基因能与已知的蛋白质序列匹配。用基因本体论(GO)、蛋白质直系同源簇(COG)、京都基因与基因组百科全书直系同源(KO)进一步对这些基因进行注释。另外,我们用数字基因表达(DGE)系统分析了稻纵卷叶螟在发育过程中的基因表达谱。我们构建了5个DGE库,比较下列样本之间的基因表达差异:卵和3龄幼虫;3龄幼虫和蛹;蛹和成虫。研究结果显示在稻纵卷叶螟的不同发育阶段有数千个基因显著差异表达。许多差异表达基因进一步通过荧光定量PCR方法验证。稻纵卷叶螟转录组数据和数字基因表达数据提供了一个综合的、全面的基因表达谱信息,这将进一步促进我们对该虫不同生物学特征背后的分子机理的理解,这些生物学特征包括发育、高繁殖力、迁飞、性别分化、嗅觉行为及杀虫剂抗性等。这些结果能够帮助我们阐明稻纵卷叶螟为害水稻的内在机制,为该虫的可持续治理奠定基础。
【英文摘要】Background: The rice leaf folder (RLF), Cnaphalocrocis medinalis (Guenee) (Lepidoptera: Pyralidae), is one of the most destructive pests affecting rice in Asia. Although several studies have been performed on the ecological and physiological aspects of this species, the molecular mechanisms underlying its developmental regulation, behavior, and insecticide resistance remain largely unknown. Presently, there is a lack of genomic information for RLF; therefore, studies aimed at profiling the RLF transcriptome expression would provide a better understanding of its biological function at the molecular level.Principal Findings: De novo assembly of the RLF transcriptome was performed via the short read sequencing technology (Illumina). In a single run, we produced more than

23 million sequencing reads that were assembled into 44,941 unigenes (mean size = 474 bp) by Trinity. Through a similarity search, 25,281 (56.82%) unigenes matched known proteins in the NCBI Nr protein database. The transcriptome sequences were annotated with gene ontology (GO), cluster of orthologous groups of proteins (COG), and KEGG orthology (KO). Additionally, we profiled gene expression during RLF development using a tag-based digital gene expression (DGE) system. Five DGE libraries were constructed, and variations in gene expression were compared between collected samples: eggs vs. 3rd instar larvae, 3rd instar larvae vs. pupae, pupae vs. adults. The results demonstrated that thousands of genes were significantly differentially expressed during various developmental stages. A number of the differentially expressed genes were confirmed by quantitative real-time PCR (qRT-PCR). Conclusions: The RLF transcriptome and DGE data provide a comprehensive and global gene expression profile that would further promote our understanding of the molecular mechanisms underlying various biological characteristics, including development, elevated fecundity, flight, sex differentiation, olfactory behavior, and insecticide resistance in RLF. Therefore, these findings could help elucidate the intrinsic factors involved in the RLF-mediated destruction of rice and offer sustainable insect pest management.

【题目】江苏地区凤眼莲叶片光合作用对光照度和温度的响应

【中文关键词】凤眼莲; 光合特性; 环境影响因子

【英文关键词】Eichhornia crassi es; photosynthetic characteristic; environmental influencing factor

【中文摘要】为太湖地区凤眼莲高产栽培技术提供技术支持, 以江苏地区人工围养生长的凤眼莲群落为研究对象,在8月份其旺盛生长季节, 采用L I 6400光合作用测定系统, 以开放式气路测定了其不同叶位的净光合速率, 以及功能叶片在不同光照度和温度时的光合曲线。结果发现, 倒3~ 倒6叶都是成熟的光合功能叶片, 其中倒4叶的最大光合速率(Pmax)、光补偿点(LCP) 和表观量子效率(AQE)分别为(34. 50±0.72) mmol/(m2 s)、(20.25±3.6) mmo l/(m2 s)和0.0532±0.0014,均显著高于水稻和玉米;凤眼莲光饱和点为(2458±69) mmol/(m2 s),也明显高于水稻,与玉米接近; 凤眼莲光饱和点为(2458±69) m mo l/(m2 s) , 也明显高于水稻, 与玉米接近。认为江苏地区光合有效辐射和大气温度是限制凤眼莲生物量的重要环境因子。

【英文摘要】Photosynthetic characteristics o fE ichhornia crassipes with artificial culture w ere monitored using LI-6400 portable photosynthesis system in Jiangsu Province in August, 2009. N et photosynthetic rate (Pn) in the leaves at different positions and Pn ’s response to light and temperature in the fourth leaf from top were measured in an open-circuit gas channel system. The third to sixth leaves from top w ere all mature leaves with high Pn. The values of the maximum net photosynthesis(Pmax), light component point(LCP) and apparent quantum efficiency (AQE) of the fourth leaf from top leaves in Eichhornia crassipes were (34.50±0. 72) mmo l/(m2 s), (20.25±3. 60) mm o l/(m2 s) and 0. 053 2±0. 0014, respectively, which were both higher significantly than those in r ice and maize. Moreover, light saturation point of the leaves in Eichhornia crassipes was 2 458±69 mm o l/(m2 s), which was significantly higher than tha t in r ice and close to that in maize. It came to a conclusion that air temperature and photosynthetic active radiation (PAR) in Jiangsu Province are important environmental factors restricting dry matter accumulation in Eichhornia crassipes.

【题目】氯虫苯甲酰胺对黑肩绿盲蝽捕食作用的影响
【中文关键词】氯虫苯甲酰胺;黑肩绿盲蝽;捕食作用;功能反应;寻找效应
【英文关键词】chlorantraniliprole; Cyrtorhinus lividipennis (Reuter); predation; functional response; searching efficiency
【中文摘要】为协调褐飞虱Nilaparvata lugens (St å l) 的化学防治和生物防治提供参考,本文采用稻茎浸渍法研究了氯虫苯甲酰胺对黑肩绿盲蝽Cyrtorhinus lividipennis (Reuter) 捕食褐飞虱功能反应的影响。结果显示,在氯虫苯甲酰胺的推荐剂量下,黑肩绿盲蝽功能反应模型的结构没有改变,但影响到了模型的各项参数;在推荐剂量下氯虫苯甲酰胺可降低黑肩绿盲蝽的瞬时攻击率,黑肩绿盲蝽若虫的处理猎物时间比对照分别增加163.03%、104.21%和95.11%,成虫则分别增加81.97%、102.45%和99.52%;药剂处理后黑肩绿盲蝽日最大捕食量降低,其寻找效应也被减弱。研究表明氯虫苯甲酰胺对黑肩绿盲蝽捕食褐飞虱存在着不良影响。
【英文摘要】For providing a reference to coordination of chemical and biological control on Nilaparvata lugens (St å l), the effects of the chlorantraniliprole on the functional response of Cyrtorhinus lividipennis (Reuter) preying on N. lugens were studied with rice

stemdipping method. Results revealed that the functional response models of C. lividipennis preying on N. lugens were all still conformed to Holling ’s type Ⅱ curve in spite of pretreated with the labeled dose of chlorantraniliprole(LDC). However, the parameters in the models changed. The instantaneous attacking rate of C. lividipennis pretreated with the insecticide declined. The handling time extended by 163.03%、104.21% and 95.11% in the C. lividipennis nymph pretreated with LDC and 81.97%、102.45% and 99.52% in the C. lividipennis adults pretreated with LDC, respectively. The maximal predatory capacities of C. lividipennis pretreated with the insecticide reduced. The searching efficiency of C. lividipennis pretreated with LDC reduced than that of untreated predators. These results suggested that the chlorantraniliprole at labeled dose had harmful influence on the predation of C. lividipennis.

【题目】Enhanced glutathione production by using low-pH stress coupled with cysteine addition in treatment of high cell density culture of Candida utili

【中文关键词】假丝酵母,半胱氨酸添加,分批发髻

【英文关键词】Candida utilis, cysteine addition, fed-batch

【中文摘要】目的:研究在pH压力的情况下添加半胱氨酸对高密度培养假丝酵母生产谷胱甘肽(GSH)产量的影响。方法和结果:我们观察到,大部分假丝酵母细胞在胞外pH值在1-2 情况下维持3 h就会产生细胞内谷胱甘肽泄漏分泌到培养基中。一个半胱氨酸添加策略应用于生产谷胱甘肽分批发酵过程中。无pH压力情况下,单独添加半胱氨酸方法较两次调价半胱氨酸产生的谷胱甘肽浓度高。细胞内谷胱甘肽含量的增加对γ-谷胱甘肽合成酶(γ-GCS)产生抑制作用。一个策略相结合的半胱氨酸添加以及低pH值控制用来缓解胞内谷胱甘肽对γ-GCS酶的抑制作用。结论:没有pH压力情况下,单次添加以及两次添加半胱氨酸产生的谷胱甘肽分别为1423 mg/L和1325 mg/L。相比之下,在低pH值压力情况下产生的谷胱甘肽分别为1542 mg/L和1730 mg/L。在低pH压力情况下,谷胱甘肽分泌到培养基中的分别为673mg/L与1 558毫克同时增加γ-GCS酶活力分别为1.2倍和1.5倍,。特定的谷胱甘肽的生产收益率从1.76%上升到1.91%(w/w)(单次添加),由1.64%至2.14%(两次添加)。这项研究的意义和影响:低pH值压力应用到缓解反馈抑制细胞内谷胱甘肽在γ-GCS分泌谷胱甘肽的介质。这个策略是通过添加半胱氨酸提高假丝酵母生产谷胱甘肽。

【英文摘要】Aims: To investigate the effects of pH stress coupled with cysteine addition onglutathione (GSH) production in the treatment of high cell density culture ofCandida utilis.Methods and Results: We have previously observed that most Candida utiliscells remained viable after being subjected to pH at 1.2 for 3 h and that someintracellular GSH leaked into the medium. A cysteine addition strategy wasapplied in fed-batch production of GSH. A single cysteine addition resulted inhigher GSH yield than two separate additions without pH stress. An increasein intracellular GSH content triggered inhibition of γ-glutamylcysteine synthetase(γ-GCS). A strategy that combines cysteine addition with low-pH stresswas developed to relieve the inhibition of γ-GCS.Conclusion: Without pH stress, single shot and double shot cysteine additionyielded a total GSH of 1423 and 1325 mg l)1. In comparison, a low-pH stresscounterpart resulted in a total GSH of 1542 and 1730 mg l)1, respectively.With low-pH stress, we observed GSH secretion into the medium at 673 and558 mg l-1) and an increase in the γ-GCS activity by 1.2- and 1.5-fold, respectively.The specific GSH production yield increased from 1.76% to 1.91%(w / w) for single shot, and 1.64% to 2.14% for double shots.Significance and Impact of the Study: Low-pH shift was applied to alleviatethe feedback inhibition of intracellular GSH on γ-GCS activity by secretingGSH into the medium. This strategy is coupled with cysteine addition toenhance GSH production in Candida utilis.

【中文关键词】三磷酸腺苷添加,假丝酵母,发酵,谷胱甘肽,前提氨基酸,响应面方法

【英文关键词】Adenosine triphosphate addition, Candida utilis, fermentation, glutathione, precursor amino acids, response surface methodology.

【中文摘要】目的:三个前体氨基酸和三磷酸腺苷(ATP)是发酵生产的谷胱甘肽必要的。在这项研究中,我们的目标是开发一个策略通过在高细胞密度培养假丝酵母中添加三个前体氨基酸结合ATP以提高谷胱甘肽的生产。方法与结果:08年一株高产高谷胱甘肽的假丝酵母酵母WSH 02 被用在这项研究。整个发酵过程对谷胱甘肽的生产被分为两个阶段:细胞生长和合成谷胱甘肽。细胞浓度增加通过高细胞密度培养。与此同时,细胞内谷胱甘肽浓度的增加是通过三个额外的前体氨基酸的添加来提高谷胱甘肽的产量。通过响应面方法对三前体氨基酸添加进行了优化。研究表明在 加入三个氨基酸15小时后添加ATP可以进一步增强谷胱甘肽的生产。基于上述的现象,一个策略添加三个前体氨基酸以及添加ATP用来增强谷胱甘肽生产。结论:没有添加三个前体氨基酸和ATP,发酵60 h总谷胱甘肽的1123 mg/L。相比之下,添加三种前体氨基酸谷胱甘肽的1841 mg/L。此外,通过结合添加氨基酸以及ATP,发酵72 h总谷胱甘肽的2043 mg/L,分别增加了81.9%与11%。这项研究的意义和影响:这是第一次在高细胞密度生产谷胱甘肽的发酵研究细胞内三前体氨基酸和ATP,谷胱甘肽合成酶活性。一个策略相结合的三种前体氨基酸和ATP被应用与假丝酵母谷胱甘肽的生产。

【英文摘要】Aims: Three precursor amino acids and adenosine triphosphate (ATP) are necessary for fermentative production of glutathione. In this study, our aims were to develop a strategy to enhance glutathione production by adding three precursor amino acids coupled with ATP in high cell density (HCD) cultivationof Candida utilis.Methods and Results:A high-glutathione yeast strain, C. utilis WSH 02-08,was used in this study. Whole fermentative process for glutathione production was divided into two phases of cell growth and glutathione synthesis. Cells concentration was increased by HCD cultivation. Meanwhile, intracellular glutathionecontent was enhanced by the addition of three precursor amino acids.on centrations of three precursor amino acids added at stationary phase were optimized by response surface methodology. Moreover, the addition of ATP 15 h after the addition of the three amino acids can further enhance glutathione production. Based on aforementioned phenomenon, a strategy of adding three precursor amino acids coupled with ATP was developed to enhance glutathione production.Conclusion: Without the addition of three precursor amino acids and the ATP, a total glutathione of 1123 mg l)1 was achieved after 60-h cultivation. In comparison, addition of three precursor amino acid counterparts resulted in a total glutathione of 1841 mg l)1. Moreover, by adding amino acids combined with ATP, a total glutathione of 2043 mg l)1 was achieved after 72-h cultivation,increased by 81.9% and 11%, respectively, as compared with the control and the one without ATP addition.Significance and Impact of the Study: This is the first report on investigating changes of the intracellular three precursor amino acids and ATP, and c-glutamylcysteine synthase activity in HCD cultivation of C. utilis for glutathione production. A strategy of combining addition of three precursor amino acids with ATP was developed to enhance glutathione production in C. Utilis.

【题目】A new strategy to enhance glutathione production by multiple H2O2-induced oxidative stresses in Candida utilis

【中文关键词】分批发酵,假丝酵母,谷胱甘肽,过氧化氢胁迫,CAT

【英文关键词】Batch fermentation,Candida utilis,Glutathione (GSH),H2O2-induced oxidative stress, Catalase (CAT)

【中文摘要】假丝酵母H2O2诱导氧化应激对谷胱甘肽(GSH)生产的影响研究。基于该研究结果,过氧化氢可以有效地刺激谷胱甘肽积累但抑制细胞生长同时,多中策略进行添加不同浓度H2O2不同时期(4 h 1 mmol/L,8 h 2 mmol/L,12 h 4mmol/L)被用于提高谷胱甘肽的生产。结果:谷胱甘肽最高产量为218 mg/L,对应的细胞内谷胱甘肽含量为2.15%,分别较对照提高了54.6%和58.1%。通过进一步应用此策略在7 L发酵罐发酵谷胱甘肽产量和细胞内谷胱甘肽含量328 mg / L和2.30%。此外,提高过氧化氢酶活性和谷胱甘肽还原酶(GR)活性表明,谷胱甘肽和CAT都直接参与保护细胞抵抗过氧化氢氧化影响。

【英文摘要】Effect of H2O2-induced oxidative stress on glutathione (GSH) production in Candida utilis was investigated.Based on the results that H2O2 can effectively stimulate GSH accumulation but inhibit cell growth simultaneously, a novel strategy of multiple H2O2 stresses with different concentrations (1 mmol/L at 4 h,2 mmol/L at 8 h, and 4 mmol/L at 12 h) were developed to maximize GSH production. As a result, a maximal GSH yield of 218 mg/L was achieved and a corresponding intracellular GSH content was 2.15%, which were 54.6% and 58.1% higher than the control. By further applying this strategy to 7 L fermentor,GSH yield and intracellular GSH content were 328 mg/L and 2.30%. Moreover, increased activities of catalase (CAT) and GSH reductase (GR) indicated that GSH and CAT were directly involved in protecting cell against oxidative stress by H2O2.

【题目】Enhancement of glutathione production with a tripeptidase-deficient recombinant Escherichia coli
【中文关键词】谷氨酰胺转氨酶,三肽酶,大肠杆菌,谷胱甘肽降解,生物催化
【英文关键词】Glutamyltranspeptidase ,Tripeptidase ,Escherichia coli, Glutathione degradation, Biocatalysis
【中文摘要】谷胱甘肽(GSH)降解酶法合成中存在对谷胱甘肽的大肠杆菌,然而,其降解途径不是很清楚。本文回顾了关键酶降解反应谷胱甘肽大肠杆菌,目的是改善谷胱甘肽的生产。这些酶,很可能与谷胱甘肽研究有关降解打乱了他们的基因。结果表明,伽马谷氨酰转肽酶(GGT)和tripeptidase(PepT)是关键酶的谷胱甘肽的退化,GGT做出了更多贡献比PepT谷胱甘肽退化。此外,活动的影响大、培养温度的作用,并对谷胱甘肽退化GGT可以消除缩短文化时间在30摄氏度和延长感应时间在42度 .然而,PepT谷胱甘肽的影响在退化可能消除只有扰乱PepT基因。最后,谷胱甘肽退化是未观测到由大肠杆菌JW1113合成谷胱甘肽(pepT(-),pBV03),它是在30摄氏度培养3 h和42摄氏度5 h。谷胱甘肽浓度达到了15.60毫米,这是2.19倍的控制。据我们所知,这是第一个关于禁止谷胱甘肽的恶化与PepT-deficient重组大肠杆菌。这个结果对谷胱甘肽代谢途径和研究构建一个谷胱甘肽的生物合成系统。
【英文摘要】Glutathione (GSH) degradation exists in the enzymatic synthesis of GSH by Escherichia coli, however, its degradation pathway is not very clear. This paper examines the key enzymes responding to GSH degradation in E. coli with the purpose of improving GSH production. The enzymes that are probably associated with GSH degradation were investigated by disrupting their genes. The results suggested that gamma-glutamyltranspeptidase (GGT) and tripeptidase (PepT) were the key enzymes of GSH degradation, and GGT contributed more to GSH degradation than PepT. Furthermore, GGT activity was affected greatly by culture temperature, and the effect of GGT on GSH degradation could be eliminated by shortening the culture time at 30 degrees C and extending the induction time at 42 degrees C. However, the effect of PepT on GSH degradation could be eliminated only by disrupting the PepT gene. Finally, GSH degradation was not observed in GSH biosynthesis by E. coli JW1113 (pepT(-), pBV03), which was cultured at 30 degrees C for 3 h and 42 degrees C for 5 h. GSH concentration reached 15.60 mM, which was 2.19-fold of the control. To the best of our knowledge, this is the first report of prohibiting GSH degradation with PepT-deficient recombinant E. coli. The results are helpful to investigate the GSH metabolism pathway and construct a GSH biosynthesis system.

【题目】Enhancement of glutathione production in a coupled system of adenosine deaminase-deficient recombinant Escherichia coli and Saccharomyces cerevisiae

【中文关键词】腺腺嘌呤,脱氨酶,谷胱甘肽脱氨酶,大肠杆菌,谷胱甘肽的生产,酿酒酵母菌
【英文关键词】Adenosine deaminase,Adenine deaminase,ATP,Escherichia coli,Glutathione production,Saccharomyces cerevisiae
【中文摘要】三磷酸腺苷(ATP)是必要的酶生产的谷胱甘肽(GSH)。我们的目的是提高生产效率的谷胱甘肽通过增加ATP的再生在一个耦合系统。以前的研究结果建议低谷胱甘肽的生产在耦合系统是由于不可逆变换的腺苷(Ado)次黄嘌呤(Hx)通过肌苷(间接宾语)途径在大肠杆菌JM109(pBV03)。在这项研究中,阻止转换成Hx和增强的Ado谷胱甘肽的生产,一个耦合ATP再生系统是由腺苷脱氨酶缺乏重组大肠杆菌JW1615(pBV03)和酿酒酵母WSH2。谷胱甘肽的生产是改进(2.94倍的控制),和ATP再生反应成立于耦合系统。结果适用于ATP再生在其他微生物过程。
【英文摘要】Adenosine triphosphate (ATP) is necessary in the enzymatic production of glutathione (GSH). Our aim was to improve GSH production by increasing the efficiency of ATP regeneration in a coupled system. Previous results suggested that low GSH production in the coupled system is due to the irreversible transformation of adenosine (Ado) to hypoxanthine (Hx) via inosine (Ino) pathway in Escherichia coli JM109 (pBV03). In this study, to block the transformation of Ado into Hx and enhance GSH production, a coupled ATP regeneration system was constructed with adenosine deaminase-deficient recombinant E. coli JW1615 (pBV03) and Saccharomyces cerevisiae WSH2. GSH production was improved (2.94-fold of the control), and ATP regeneration reaction was established in the coupled system. The results are applicable to ATP regeneration in other microbial processes.

【题目】Salt-induced osmotic stress for glutathione overproduction in Candida utilis
【中文关键词】氯化钠诱导渗透压力,假丝酵母,谷胱甘肽,半胱氨酸, γ -谷胱甘肽合成酶、谷胱甘肽还原酶
【英文关键词】NaCl-induced osmotic stress,Candida utilis,Glutathione,Cysteine, γ -Glutamylcysteine synthetase,Glutathione reductase
【中文摘要】氯化钠诱导的影响渗透压力对谷胱甘肽(GSH)的生产是在假丝酵母utilis调查。基于事实,氯化钠应激可以增强谷胱甘肽的生产但抑制细胞增长同时,小说策略的多个渗透压力的不同的生理盐水添加(0.2摩尔/ l在4 h,0.4摩尔/ l在8小时,和0.6摩尔/ l在12至16小时)对谷胱甘肽开发生产过剩。经过30 h栽培,谷胱甘肽的产量达到238 mg / l和细胞内谷胱甘肽含量为2.34%,分别增加了66.4%和70.7%比控制。进一步的应用策略7 l发酵罐,谷胱甘肽的产量356 mg / l是达到30小时,65.6%高于控制。此外,氯化钠应力导致增加细胞内半胱氨酸含量和活动的 γ -glutamylcysteine合成酶,谷胱甘肽还原酶、谷胱甘肽合成酶和解释机制参与诱导细胞谷胱甘肽积累。
【英文摘要】The effect of NaCl-induced osmotic stress on glutathione (GSH) production was investigated in Candida utilis. Based on the fact that NaCl stress can enhance GSH production but inhibit cells growth simultaneously, the novel strategies of multiple osmotic stresses with different NaCl additions (0.2 mol/l at 4 h, 0.4 mol/l at 8 h, and 0.6 mol/l at 12 and 16 h) were developed for GSH overproduction. After 30 h cultivation, GSH yield reached 238 mg/l and intracellular GSH content was 2.34%, increased by 66.4% and 70.7% respectively compared to the control. Further applying the strategies to 7 l fermentor, GSH yield of 356 mg/l was achieved at 30 h, which was 65.6% higher than the control. Moreover, NaCl stress led to an increase in intracellular cysteine content and activities of γ -glutamylcysteine synthetase, GSH synthetase and GSH reductase, explaining the mechanism involved in inducing cellular GSH accumulation.

【题目】过氧化氢胁迫促进产朊假丝酵母合成谷胱甘肽
【中文关键词】过氧化氢,胁迫,产朊假丝酵母, 谷胱甘肽
【英文关键词】H2O2, stress, Candida utilis, glutathione
【中文摘要】谷胱甘肽(GSH)在生物细胞抵御外界环境条件的刺激和胁迫时起到非常重要的作用。考察了不同时间不同浓度过氧化氢胁迫和过氧化氢连续胁迫对产朊假丝酵母合成GSH的影响, 发现低浓度过氧化氢的连续胁迫对GSH的合成有明显促进作用。进一步在发酵罐上应用了低浓度过氧化氢(36 mmol/L)持续胁迫策略, 最终GSH产量为922 mg/L, 胞内GSH含量为1.64%, 比对照分别提高了7%和35%。
【英文摘要】Glutathione (GSH) plays an important role in the responses of microorganisms to the environmental stimulation and stress. The effect of H2O2 stress under different fermentation time and H2O2 concentration as well as continuous stress on GSH fermentation of Candida utilis were investigated in this paper. It was found that low concentration of H2O2 accelerated GSH production. When treated by low concentration of H2O2 (36 mmol/L), the final concentration of GSH reached 922 mg/L and the intracellular GSH content reached 1.64%, which increased by 7% and 35% than the controls, respectively.

【题目】基于熵准则的鲁棒的RBF谷胱甘肽发酵建模
【中文关键词】谷胱甘肽, 相对熵, RBF 神经网络, Parzen 窗法, 鲁棒性
【英文关键词】GSH, relative entropy, RBF neural network, Parzen window, robustness
【中文摘要】在谷胱甘肽的发酵过程建模中,当试验数据含有噪音时,往往会导致模型预测精度和泛化能力的下降。针对该问题,提出了一种新的基于熵准则的RBF神经网络建模方法。与传统的基于MSE准则函数的建模方法相比,新方法能从训练样本的整体分布结构来进行模型参数学习,有效地避免了传统的基于MSE准则的RBF网络的过学习和泛化能力差的缺陷。将该模型应用到实际的谷胱甘肽发酵过程建模中,实验结果表明:该方法具有较高的预测精度、泛化能力和良好的鲁棒性,从而对谷胱甘肽的发酵建模有潜在的应用价值。
【英文摘要】The prediction accuracy and generalization of GSH fermentation process modeling are often deteriorated by noise existing in the corresponding experimental data. In order to avoid this problem, we present a novel RBF neural network modeling approach based on entropy criterion. It considers the whole distribution structure of the training data set in the parameter learning process compared with the traditional MSE-criterion based parameter learning, and thus effectively avoids the weak generalization and over-learning. Then the proposed approach is applied to the GSH fermentation process modeling. Our results demonstrate that this proposed method has better prediction accuracy, generalization and robustness such that it offers a potential application merit for theGSH fermentation process modeling.

【英文关键词】Nitrogen; Phosphorus; Runoff; Nutrient loss
【中文摘要】采用田间小区定位试验研究了自然降雨条件下江苏稻麦两熟农田稻季养分径流流失规律。结果表明:稻季径流水量可达5705.55 m3·hm-2;常规施肥(T0)条件下,稻田径流流失全N(TN)、全P(TP)和速效K(AK)的总量分别为11.29、0.19 和13.22kg·hm-2,流失率分别为3.8%、0.21%和9.8%;径流水中全N 和速效K 质量浓度随距施肥时间的延长而呈逐渐下降趋势;较常规施肥处理而言,秸秆还田(T1)和还田减肥(T2)处理不仅能够有效降低径流水中TN、TP 和AK 质量浓度,而且能够减少稻季养分径流流失总量,分别减少13.48%、17.55%,25.00%、31.25%和22.69%、53.48%,并降低养分流失率,分别达13.16%、-2.63%,23.81%、14.29%和22.45%、41.84%。
【英文摘要】Field plot experiment was carried out to study the characteristics of surface runoff of nutrients losses during the paddyseason of intensive rice-wheat double-cropping season of Jiangsu province under natural rainfall conditions. The results showed thatthe total volume of runoff water reached 5 705.55 m3 · hm-2 during the whole paddy season. Under conventional fertilization conditions(T0), the total runoff losses of TN, TP and AK reached 11.29, 0.19 and 13.22 kg · hm-2, and the rates of nutrients losses reached3.8%, 0.21% and 9.8%, respectively. The concentrations of TN and AK in the runoff water showed a gradual downward trend alongwith the extension of time from the fertilizer. Compared with T0 treatment, wheat straw returning (T1), wheat straw returning andreducing fertilizer (T2) not only effectively reduced the concentrations of TN, TP and AK, but also reduced the quantities of TN, TPand AK losses in the runoff water during the paddy season, decreased 13.48%, 17.55% (TN), 25.00%, 31.25% (TP) and 22.69%,53.48% (AK), respectively; furthermore, these treatments reduced the rate of nutrients losses, which decreased 13.16%, -2.63% (TN),23.81%, 14.29% (TP) and 22.45%, 41.84% (K), respectively.

【题目】稻田径流侵蚀泥沙对磷素流失的影响
【中文关键词】磷;径流;侵蚀泥沙;养分流失
【英文关键词】Phosphorus; Runoff; Erosive soil; Nutrient loss
【中文摘要】采用田间小区定位试验研究了自然降雨条件下稻田径流泥沙流失规律及其对磷素流失的影响。结果表明:常规施肥(T0)条件下,稻季径流侵蚀泥沙量可达5113.63 kg·hm-2,秸秆还田(T1)和还田减肥(T2)处理均显著降低侵蚀泥沙量,分别达6.02%和7.18%。T1、T2处理能降低侵蚀泥沙中全磷(TP)和速效磷(AP)的平均浓度,分别达6.23%,22.16%和3.99%,13.40%。同时,T0处理的稻季侵蚀过程中由泥沙流失的磷素总量达1115.34 g·hm-2,T1、T2和T3(肥料运筹)处理均能显著降低侵蚀泥沙TP流失量,分别达18.14%,23.93%和15.21%,磷素流失率也显著地降低。
【英文摘要】Field plot experiment was carried out to study the characteristics of erosive soil by surface runoffand its effect on phosphorus loss in the paddy field under natural rainfall conditions.The results showed that the total quantity of runoff soils reached 5 113.63kg/hm2 during the whole paddy season,compared with the treatment of conventional fertilization conditions(T0),wheat straw returning(T1)and wheat straw returning and reducing fertilizer(T2)significantly reduced 6.02% and 7.18% of the quantity of runoff soils. And,T1,T2decreased the concentrations of total phosphorus(TP)and available phosphorus(AP),which reached 6.23%,22.16%and 3.99%,13.40%.Furthermore,the total quantity of TP loss reached 1 115.34 g/hm2(T0)during the whole paddy season,T1,T2and fertilizer application(T3)treatments not only significantly reduced the quantity of TP loss by the erosive soils,decreased 18.14%,23.93%and 15.21%,respectively; furthermore,these treatments significantly reduced the rate of phosphorus loss.

【题目】稻田流失养分循环利用系统构建研究数据库

【中文关键词】稻田;地表径流;流失养分;养分拦截;循环利用

【英文关键词】rice paddy; overland runoff; nutrient loss; nutrient hold up; recycling

【中文摘要】针对长江三角洲经济发达地区集约化农田化肥投入超量、稻区水体N、P、K富集度超高,农田生态环境遭到严重破坏等现状,该文系统研究了农田流失养分从农田到水体,再由水体回到农田的循环利用过程,并构建农田养分流失循环利用系统工程,为我国农田流失养分循环利用和农业生态环境健康提供科技支撑。研究结果表明:本区域农田面积为18.6 hm2,水稻季农田化肥N、P、K投入量分别为305.7、44.9、150.8 kg · hm-2;整个水稻季本区域农田地表径流量为4 518.0 kg · hm-2,其中N、P、K流失量分别为16.6、0.5、9.6 kg · hm-2,占水稻季N、P、K肥投入量的5.45%、1.07%和6.37%;农田周围净化池塘中水生植物的N、P、K拦截量分别为67.8、8.1、99.7 kg,分别占本研究区域N、P、K流入量的21.84%、90.31%和55.73%。将水生植物还田,晒干水葫芦(Halerpestes cymbalaria)按4 500 kg · hm-2 农田施用,可分别减少农田化肥N、P、K的投入量106.2、9.5、105.8 kg · hm-2。该研究成果对于减轻农业生产面源污染,推进农业生产可持续发展具有积极意义。

【英文摘要】As intensive agriculture in economically developed Yangtze River Delta areas inputs excess fertilizer and N, P, Kenrichments of rice water are ultrahigh, agricultural ecological environment has been seriously damaged. Field experiment wasconducted by measuring the loss of nutrients from rice paddy to the water and back to the rice paddy from water, to build recyclingsystems engineering of rice paddy loss nutrient and supply technologic support for recycling systems engineering and healthyagricultural ecological environment. The results show that: The area of rice paddy area of 18.6 hm2, chemical fertilizer N, P, K in riceseason inputs were 305.7, 44.9, 150.8 kg · hm-2; the rice season overland runoff water was 4 518.0 kg · hm- 2, in which N, P, K losseswere 16.6, 0.5, 9.6 kg · hm-2, accounting for N, P, K fertilizer inputs of 5.45%, 1.07%, 6.37% respectively; N, P, K hold-up of the pondaquatic purification plant around rice paddy are 67.8, 8.1, 99.7 kg, accounting for the study area N, P, K inflows of 21.84%, 90.31%,55.73% respectively. Using dried water hyacinth back to rice paddy under 4 500 kg · hm-2 can reduce chemical fertilizer N, P, K inputsby 106.2, 9.5, 105.8 kg · hm-2. The research achievement is of positive significance to reduce pollution on agricultural production andpromote sustainable development of agricultural production.

【题目】不同土壤类型下Cd和Pb在水稻籽粒中累积特征 及其环境安全临界值
【中文关键词】Cd;Pb;植物富集;土壤类型;安全临界值
【英文关键词】Soil Cd; Soil Pb; accumulation in plant; Soil type; Security threshold
【中文摘要】研究水稻籽粒对土壤重金属的累积特征和水稻产地土壤重金属安全临界值,可为水稻安全生产和产地安全适宜性评价提供重要参考。 以杂交籼稻KU818作为材料, 通过外源添加不同质量分数的Cd 和Pb,于2008年在南京采用盆栽试验方法,研究不同土壤类型下水稻籽粒对土壤重金属 Cd 和 Pb 的累积特征及其环境安全临界值。结果显示,水稻籽粒对重金属的累积量总体上随着外加重金属质量分数的增加而呈现增多趋势, 籽粒中重金属含量与处理水平及盆栽土壤中重金属有效态含量呈现显著或极显著正相关。籽粒对Cd、Pb 的累积特征呈现出土壤类型之间的显著差异,水稻土栽培下,籽粒对重金属的累积高于潮土栽培下的。根据国家《食品中污染物限量(GB 2762-2005)》标准中重金属的限量标准和水稻籽粒重金属的累积特征推算出水稻产地(潮土和水稻土)安全临界值:Cd为1.63 mg·kg-1和0.74 mg·kg-1,Pb为230 mg·kg-1和110 mg·kg-1,均高于国家《食用农产品产地环境质量评价标准(HJ 332-2006)》的指标。结果表明,由于临界值在土壤类型之间差异较大,制定统一的农产品产地重金属限量标准还需结合当地土壤性质加以评价。
【英文摘要】Increasing publics attentions have been paid to the concerns of toxic heavy metals contamination of human food. Rice isthe most important staple food in China, and the highway construction has developed quickly during the last decades, implying acontamination high risk of rice sown around the roadsides. To learn the accumulation characteristics of toxic heavy metals in ricegrain growing around the highway and their safety threshold will contribute a great to rice cropping with high safety and environmentalsecurity assessment of paddy field. Therefore, we conducted pot cultivation experiments with two exogenous heavy metals ofCd and Pb and one hybrid Indica rice(KU 818) under two typical soil types (Alluvial soil and Paddy soi) in Nanjing, Jiangsu province,in 2008. Our objectives were to investigate the accumulation characteristics of soil Cd and Pb in rice grain and their environmentalsecurity threshold. Results showed that the contents of Cd and Pb in rice grain increased along with the treatments level, andthat the contents were significantly positively correlated with the treatments level and the effective contents of Cd and Pb in

soils(P<0.05). The accumulation characteristics of Cd and Pb in rice grain indicated significant differences between the two soil types.The contents of Cd and Pb in rice grain were significantly higher in the paddy soil than in the alluvial soil. According to the NationalStandards of “ Codex General Standard For Contaminants And Toxins In Foods (GB2762-2005) ” and the accumulation characteristicsof Cd and Pb in rice grain, we calculated the security threshold values of Cd (1.63 mg · kg-1) and Pb (230 mg · kg-1) for Alluvial soil,and Cd (0.74 mg · kg-1) and Pb (110 mg · kg-1) for Paddy soil. These threshold values are higher than the National Standards of “ Farmlandenvironmental quality evaluation standards for edible agricultural products (HJ332-2006) ”. Since the threshold varies widelybetween soil types, this study suggests that local soil properties should be paid more attentions to make uniform standards of heavymetals in agricultural produce.

【题目】不同土壤类型下重金属 Cd 对水稻剑叶光合特性和产量构成的影响
【中文关键词】水稻;Cd;剑叶;光合作用;产量构成
【英文关键词】rice; Cd; flag leaf; photosynthesis; yield components
【中文摘要】以杂交籼稻(K 优 818)为材料,设置不同 Cd 浓度水平,采用盆栽试验,研究了不同土壤类型下(潮土和水稻土)重金属 Cd对剑叶光合特性和水稻产量及其构成的影响。结果显示,在3 mg · kg-1浓度水平下,与对照相比,两种土壤类型下 Cd 处理均提高了水稻剑叶净光合速率(Pn),其中潮土条件下 Pn 提高了 6.4%;而当 Cd 处理浓度达到 7 mg · kg-1时,两种土壤条件下 Pn 均显著下降,其中水稻土条件下Pn 与对照相比下降了 13.8%。 Cd 在低浓度水(1~3 mg · kg-1)时,两种土壤类

型下水稻结实率和单穗重均略有下降;但在高浓度水平(5~7 mg• kg-1)下,水稻结实率和单穗重均显著下降(P<0.05)。不同土壤类型下,Cd 的毒害效应差异显著,相同处理水平下水稻土 Cd 对水稻Pn 和单穗重的抑制效应显著高于潮土。

【英文摘要】Increasing attentions have been paid to the food safety along with people ' s living improvement. Cd is one of the most deadly heavymetal to human healthy. Due to unreasonable use and management, a considerable area of farmland soil has been contaminated by Cd. In orderto understand the impacts of soil Cd on rice production, a pot culture experiment was conducted with one rice variety of hybrid Indica KU818 under two soil types(alluvial soil and paddy soil)in 2008, Nanjing City. Five soil treatment levels(0、1、3、5、7 mg Cd · kg-1 soil)were selectedwith three replicates. The effects of soil Cd on flag leaf photosynthesis, chlorophyll fluorescence characteristics and grain yield componentswere tested in this experiment. The results showed that below the Cd treatment level of 3 mg · kg-1, the net photosynthesis rates(Pn)ofrice flag leaf significantly increased in the two soil types, and the increment was 6.4% in the alluvial soil. Above the level of 3 mg · kg-1, thevalues of Pn significantly decreased in the two soil types, and the reduction was 13.8% at the level of 7 mg · kg-1 compared to the CK in thepaddy soil. Also, below the level of 3 mg · kg-1(1~3 mg · kg-1), the single spike weight and seed-setting rates of rice slightly reduced relative tothe control, but the reduction was significant compared to the CK when the treatment level increased(5~7 mg · kg-1). There were significantdifferences in the inhibitory effects of Cd on the Pn, SPAD values, and single panicle weight between soil types, significant higher inhibitoryeffects existed in the paddy soil. These results suggest that soil Cd may stimulate rice growth under low level, and the mechanism need to furtherstudy. Moreover, different practices should be executed for crop production with high quality and safety in different field condition due tothe soil condition differences.

【题目】土壤重金属Pb和Cd在小白菜中的富集特征及产地环境安全临界值

【中文关键词】小白菜;土壤重金属;Pb;Cd;富集;临界值

【英文关键词】pakchoi (Brassica chinensis L.); soil heavy metal; Pb; Cd; accumulation; critical value

【中文摘要】探究蔬菜对土壤重金属的富集特征及植株重金属含量与土壤环境含量的关系,对无公害蔬菜生产及其安全产地适宜性评价至关重要。通过盆栽方法,研究了不同土壤条件下(水稻土和潮土)小白菜可食部分对Pb和Cd的富集特征,并探讨了Pb与Cd在产地土壤环境中的安全临界值。结果表明,不同土壤条件下,小白菜可食部分对Pb和Cd的累积量均随处理浓度的增加呈递增趋势。和对照相比,2种土壤中小白菜可食部分Pb的最高含量分别提高了18.31倍和9.49倍, Cd的最高含量分别提高了15.4倍和10.04倍。同一处理水平下,水稻土中的Pb和Cd比潮土中的更易被植物富集。水稻土中小白菜可食部分Pb含量是潮土中的2.54倍,Cd含量则是潮土中的1.92倍。依据国家食品污染物限量标准(GB2762—2005)进行方程拟合,得出种植小白菜的水稻土中Pb和Cd的安全临界值分别为36.54 mg/kg和0.30 mg/kg,低于或等于国家土壤环境安全标准限制的临界值(HJ 332—2006)。潮土中Pb和Cd的安全临界值分别为110.21 mg/kg和1.09 mg/kg, 高于国家土壤环境安全标准限制的临界值(HJ 332—2006)。

【英文摘要】It is very important to explore the enrichment characteristics of soil heavy mental by vegetable and the relationship between heavy metal content in vegetable and in soil. The experiment was conducted to study the dose-response relationship of soil lead (Pb) and cadmium (Cd) concentration with their uptakes by Pakchoi (Brassica chinensis L.), as well as their environmental critical values in Pakchoi production area for food security. The results showed that: generally, the contents of Pb and Cd in the edible parts of Pakchoi increasedalong with the concentrations of soil Pb and Cd in two soils (alluvial soil and paddy soil). Compared with the control, the highest contents of Pb in the edible parts of Pakchoi increased by 18.31 and 9.49 times, and the highest contents of Cd increased by 15.4 and 10.04 times in the two types of soil, respectively. Pb and Cd in the paddy soil were easily enriched by the crop than in the alluvial soil. Pb and Cd concentrations in the edibleparts of Pakchoi in the paddy soil were 2.54 and 1.92 times higher than those in the alluvial soil, respectively,under the same treatment level. Based on the national standards for maximum levels of heavy metal contaminants in foods (GB 2762-2005), the environmental critical values of soil Pb and Cd in the paddy field were calculated as 36.54 mg/kg and 0.3 mg/kg, respectively, which were equal or lower than those in National standards of soil security (HJ 332-2006). The environmental critical values of soil Pb and Cd in the alluvialfield were calculated as 110.21 mg/kg and 1.09 mg/kg, respectively, which were higher than those in national standards of soil security (HJ 332-2006).

【题目】土壤铅和镉胁迫对空心菜生长及抗氧化酶系统的影响
【中文关键词】空心菜;土壤重金属; Pb ; Cd ;生物量; 抗氧化酶
【英文关键词】Swamp cabbage(Ipomoea aquatica Forsk.); soil heavy metal; lead; cadmium; biomass; anti-oxidative enzyme
【中文摘要】研究了不同浓度水平的土壤铅和镉胁迫对空心菜生长及抗氧化酶系统的影响。结果表明:低浓度的Pb胁迫会提高空心菜的生物量,但高浓度胁迫下空心菜的生长受到抑制,在900mg/kg Pb处理下空心菜生物量仅为对照的32.4%。土壤

Cd胁迫下,空心菜的生长受到一定程度的抑制,在7mg/kg Cd处理下植株生物量为对照的83.6 %。空心菜叶片中丙二醛(MDA)含量随着Pb和Cd浓度的增加而增加,在最高浓度Pb和Cd胁迫下,MDA含量分别比对照提高了12.9%和29. 5%,说明Cd对空心菜生长的胁迫作用大于Pb。空心菜叶片中超氧化物歧化酶(SOD)、过氧化物酶(POD)和过氧化氢酶(CAT)活性均随Pb浓度的增加先上升后下降, 说明在低浓度下三种抗氧化酶有较好的协同效应,空心菜表现出较强的自我调节能力。Cd胁迫下, 随着处理浓度的增加,空心菜叶片中SOD和CAT的活性也是先上升后下降,而POD的活性变化不明显。

【英文摘要】The effects o f s ing le p lum bum (Pb) and cadm ium (Cd) stresses on the grow th, lipid perox idation and antiox idant enzym e system o f sw am p cabbage (Ip om oea aqua tica Forsk.) were investiga ted by pot exper im ent. The resu lts showed that low Pb concentrations stress could slightly increase the b iom ass o f sw am p cabbage, w hereas itsg row th w ou ld be significantly inh ib ited under high concentrations. The b iom ass in 900 m g /kg Pb trea tm ent was on ly 32. 4% of tha t in the contro .l Its g row th w as also inh ib ited under Cd stress. The biom ass in 7 mg / kg Cd treatment was 83. 6% of tha t in the contro.l The lea f content ofm a londialdehyde (MDA) increased w ith increasing Pb and Cdconcentrations. TheMDA contents under the h ighest concentrations of Pb and Cd increased by 12. 9% and 29. 5%,respectiv ely com pa red to the con tro ,l indicating that sw am p cabbagew as m ore res istan t to Pb than Cd. The ac tiv itieso f superox ide d ism utase (SOD), perox idase (POD), and ca talase (CAT) in its leaves increased in itia lly and thendeclined w ith the increasing o f Pb concen tration. The results ind ica ted that the three anti ox idative enzym es hadrem arkab ly synerg istic effects under low concentrations o f Pb than Cd, and could increase sw am p cabbag e adaptationto heavy me tal stresses

【题目】Preliminary study on quantification of duck color based on Fuzzy k - nearest neighbor method

【中文关键词】鸭肉;肉色;模糊K近邻;BP神经网络;数字图象处理
【英文关键词】Duck, Fleshcolor, Fuzzy K-nearest neighbor, BP neural network, Digital image processing
【中文摘要】为了迅速准确地量化鸭肉肉色,在本研究中开发了一种可见光图像采集系统。首先,使用过阈值分割法从原始图像中提取鸭胸肉;然后通过颜色空间转换提取包括L*,a* 和b*的平均值的图像肉色特性;最后,肉色特性被作为特征参数去建立基于F-KNN和BP的鸭肉肉色的量化模型,并对这两种方法得到的实验数据进行了对比分析。试验结果表明F-KNN法的测试样本的准确率高于BP神经网络,它们的准确率分别为83.78% 和78.38%,因此,在本研究中选择F-KNN法来量化鸭颜色。
【英文摘要】In order to quantify duck color quickly and accurately, a visible light image acquisitionsystem was developed in this study. Firstly, duck breast meat was extraced from the original image using over-threshold segmentation method; and then image fleshcolor features including average value of L*,a* and b* were extracted through color space conversion; finally, shcolor features were used as characteristic parameters to establish quantification model for duck color based on the method of Fuzzy k-nearest neighbor (F KNN) and BP neural network and the experimental datas gotten from the two methods were analyzd in contrast. The results showed the accuracy rate of test samples by F KNN method was higher than that of BP neural network, the accuracy rate was 83.78% and 78.38% respectively. Therefore, F KNN method was selected for quantification of duck color in this research.

【题目】Design of poultry meat edible quality detection device using multiple image sensors
【中文关键词】禽肉;食用品质;X射线;CCD;检测装置
【英文关键词】Poultry meat, Edible quality, X-ray, CCD, Detection device
【中文摘要】一个检测装置被设计用来检测禽肉的食用品质。这个检测装置是一种结合X射线技术、可见光技术和荧光诱导技术的机电一体化设备。这种装置不仅能够克服传统的测量方法会破坏样本和检测时间长等缺点,而且可以同时进行多个质量指标检测。这个检测装置由框架、变速器控制系统、X射线检测系统、可见光探测系统和荧光诱导检测系统等组成。该设备能大大提高禽肉综合质量的判断能力和实现快速、无损检测禽肉的食用品质。
【英文摘要】A detection device was designed to detect the poultry meat edible quality. The detection device is the electromechanical integration equipment which is integrated with x-ray technology, visible light technology and induced fluorescence technology. The device not only can overcome the disadvantages that the conventional measure methods have destructiveness to the samples, and consume the long time of the detection, etc, but also can detect the multiple quality indexes simultaneously. The detection device is composed of the frames, the transmission control system, the X-ray detection system, the visible light detection system and the induced fluorescence detection system, etc. The device can greatly increase the judging ability for comprehensive quality of poultry meat and realize the fast and non-destructive testing to poultry meat edible quality.

【题目】Feasibility study on prediction of springiness of goose meat using laser-induced fluorescence spectroscopy
【中文关键词】激光诱导荧光光谱;鹅肉;弹性
【英文关键词】laser-induced fluorescence (LIF);goose meat;Springiness

【中文摘要】本研究的目的是为了评价激光诱导荧光光谱(LIFS)在预测鹅肉弹性的能力。校正集和预测集的相关系数r,校正集均方根误差RMSEC,预测集均方根误差RMSEP被用来评价模型的好坏。用偏最小二乘法法(PLS)建立了原始值与激光诱导荧光光谱(LIFS)光谱值之间的校正模型。校正集和预测集的相关系数r分别为0.8982和0.8296;RMSEC和RMSEP分别为0.0238和0.0236。这表明了激光诱导荧光可用于鹅肉弹性的预测。

【英文摘要】The present work aimed to evaluate the ability of laser-induced fluorescence spectroscopy (LIFS) in predicting the springiness of goose meat. Correlation coefficient of calibration (r) and validation (r) standard error of calibration (RMSEC) and error of prediction (RMSEP) were used to evaluate the quality of the model The calibration models between original value and LIF spectra were developed using partial least squares (PLS) regression The correlation coefficient (r) of the calibration and prediction sets were 0.8982 and 0.8296, respectively; RMSEC and RMSEP were 0.0238 and 0.0236, respectively. It is confirmed that LIF is feasible to predict the springiness goose meat.

【题目】Preliminary study of laser-induced fluorescence spectroscopy detect chicken meat tenderness

【中文关键词】激光诱导荧光光谱;鸡胸脯肉;嫩度

【英文关键词】laser-induced fluorescence; chicken breast meat;Tenderness

【中文摘要】本研究主要讨论了一种使用激光诱导荧光光谱技术检测鸡肉嫩度的新方法。首先获得了鸡胸肉的荧光光谱。然后,通过对鸡胸肉进行物理化学实验得到鸡肉的嫩度数据。最后,应用PLS法来建立鸡肉嫩度和荧光光谱之间的预测模型。试验结果表面PLS回归模型能够预测鸡肉的嫩度。PLS模型能够定量分析鸡肉嫩度的预测值和实际值之间的关系,试验得到其预测相关系数为 0.8704。这说明了结合激光诱导荧光光谱和PLS的可以用来实现鸡肉嫩度的简便、快速分析。

【英文摘要】A new method of detecting tenderness of the chicken using laser-induced fluorescence (LIF) spectroscopy was discussed in this study First of all the fluorescence spectrum of chicken breast meat was obtained. Than, through the physical and chemical experiments of chicken breast meat to get the chicken tenderness data The PLS algorithm was used to establish the prediction model between meat tenderness and Fluorescence spectrum. PLS regression model was able to predict tenderness of chicken. The relationship between predictive value and actual value of meat tenderness was quantitative predicted by the PLS model and a correlationcoefficient of 0.8704 was found. It is concluded that the combination of LIF and PLS methods can be used to provide a technique of convenient, versatile, and rapid analysis for tenderness of chicken

【题目】稻麦两熟制农田不同土壤耕作方式对稻季CH4 排放的影响
【中文关键词】稻麦两熟;土壤耕作;CH4 排放
【英文关键词】rice-wheat double cropping; soil tillage; CH4 emission
【中文摘要】【目的】研究稻麦两熟制农田不同土壤耕作方式对水稻生长季CH4 排放的影响,为长江下游稻麦两熟制农田温室气体减排提供对策。【方法】采用裂区设计,利用静态暗箱-气相色谱法研究麦季土壤耕作方式(免耕、旋耕和翻耕)和稻季土壤耕作方式(旋耕和翻耕)对水稻生长季CH4 排放的影响。【结果】稻麦两熟制农田不同土壤耕作方式下水稻生长季CH4 排放呈先升高后降低的变化趋势,移栽至有效分蘖临界叶龄期CH4 累积排放量占全生育期排放总量的比例为64.73%—86.84%。水稻生长季CH4 排放总量麦季免耕极显著高于麦季旋耕和麦季翻耕,平均增加53%和24%;稻季翻耕较稻季旋耕平均增加CH4 排放量10%,差异达显著水平。不同土壤耕作处理稻季CH4 排放总量为:麦季免耕+稻季翻耕>麦季免耕+稻季旋耕>麦季翻耕+稻季翻耕>麦季翻耕+稻季旋耕>麦季旋耕+稻季翻耕>麦季旋耕+稻季旋耕,“ 单位产量的CH4 排放量 ”表现趋势相同。水稻生长期内CH4 排放通量的季节变化和土壤Eh呈极显著负相关,CH4 排放总量与0—5 cm 耕层土壤有机质含量呈极显著正相关。【结论】麦季土壤耕作方式和稻季土壤耕作方式对水稻生长季CH4 排放总量有显著或极显著影响,在长江下游稻麦两熟制农田采用周年旋耕措施能有效减少水稻生长季CH4 的排放。

【英文摘要】【Objective】 CH4 emission during paddy season under different soil tillages in a rice-wheat double cropping systemwere investigated for providing scientific instructions to develop rational measures of reducing greenhouse gas emission in the lowerreaches of the Yangtze River. 【Method】 A split plot experiment was conducted to study the effects of soil tillage before wheatsowing and soil tillage before rice transplanting on CH4 emission during paddy season by using the method of static chamber-gaschromatographic techniques. Soil tillage before wheat sowing was designed as no tillage before wheat sowing (NTW), rotary tillagebefore wheat sowing (RTW) and plow tillage before wheat sowing (PTW). Soil tillage before rice transplanting was designed asrotary tillage before rice transplanting (RTR) and plow tillage before rice transplanting (PTR) for each soil tillage before wheatsowing just before rice transplanting. 【Result】 The seasonal variation characteristics of CH4 emission under different soil tillages ina rice-wheat double cropping system were defined, and represented an increasing at the beginning and declining later on. CH4accumulative emissions from transplanting stage to critical stage of productive tillering accounted for 64.73%-86.84% of the totalemission during paddy season. Under NTW, average CH4 emission during paddy season was 53% and 24% higher than under RTWand PTW,

respectively, and they were significantly different. Average CH4 emission during paddy season under PTR wassignificantly higher than under RTR. Total CH4 emissions and total CH4 emissions per unit area yield under different soil tillagefollowed the same order: NTW+PTR>NTW+RTR>PTW+PTR>PTW+RTR>RTW+PTR>RTW+RTR. Correlation analysisshowed that CH4 emission flux under different soil tillages was negatively related to soil Eh during paddy season, and a significantlypositive correlation between total CH4 emissions and soil organic matter content at 0-5 cm soil layer was also found.【Conclusion】Total CH4 emissions during paddy season were significantly influenced by soil tillage before wheat sowing and soil tillage beforerice transplanting. Annual rotary tillage is one of the effective measures to reduce total CH4 emissions during paddy season fromrice-wheat double cropping system in the lower reaches of the Yangtze River.

【题目】稻麦轮作条件下机插水稻CH4和N2O的排放特征及温室效应

【中文关键词】机插水稻;CH4 和N2O 排放;温室效应;稻麦轮作

【英文关键词】mechanical transplanting rice; CH4 and N2O emissions; greenhouse effect; rice-wheat rotation

【中文摘要】于2008 年采用静态暗箱-气相色谱法对人工手插和机插2 种水稻种植方式下CH4和N2O 排放进行田间观测,研究稻麦轮作条件下机插水稻CH4和N2O 的排放特征及其温室效应。结果表明,水稻生长季CH4排放通量人工手插水稻和机插水稻均呈先升高后降低的变化趋势,N2O 仅在水稻搁田期间有明显排放,机插和人工手插水稻CH4平均排放通量分别为4.68、4.39 mg · m-2 · h-1,N2O 平均排放通量为92.80、111.33 μg · m-2 · h-1。与人工手插水稻相比,机插水稻增加CH4 排放总量14%,减少N2O 排放总量11%,使稻季排放CH4 和N2O 所产生的全球增温潜势(GWP)和“单位产量的GWP”分别提高8%和10%。在稻麦轮作条件下采用机插水稻种植方式,水稻生长期间排放的CH4 和N2O 所形成的温室效应有提高的趋势。

【英文摘要】CH4 and N2O play important role in global warming and climate change, the emissions of CH4 and N2O in rice fields are affected bymany factors, such as climate, soil properties, water regime, fertilizers et al. However, the emissions of CH4 and N2O in rice fields under variouscultivation patterns are currently poorly understood. By using the method of static chamber-gas chromatographic techniques, a field experimentwas conducted in 2008 to study the characteristics of CH4 and N2O emissions and greenhouse effects of mechanical transplantingrice in a rice-wheat rotation system. The results showed that, the seasonal variation of CH4 emission in two different rice cultivation patternswas defined, an increasing of CH4 emission at the beginning and declining in later season were observed. A N2O emission peak was observedduring the midseason drainage period. The seasonal CH4 emission averaged at 4.68 mg · m-2 · h-1 in mechanical transplanting rice, and 4.39mg · m-2 · h-1 in manual transplanting rice. Seasonal N2O emission averaged at 92.80 μg · m-2 · h-1 and 111.33 μg · m-2 · h-1 in mechanical transplantingrice and manual transplanting rice, respectively. Compared with manual transplanting rice, total CH4 emissions was 14% higher inmechanical transplanting rice, while total N2O emissions was 12% lower. In contrast with manual transplanting rice, mechanical transplantingrice increased total global warming potential(GWP)of CH4 and N2O emissions during paddy season and GWP per yield by 8% and 10%, respectively.These results indicated that mechanical transplanting rice would mildly intensify the radiative forcing during paddy season inrice-wheat rotation system relative to manual transplanting rice cultivation pattern.

【题目】麦秸还田与土壤耕作对稻季CH4和N2O排放的影响
【中文关键词】麦秸还田;土壤耕作;CH4;N2O;温室效应
【英文关键词】wheat straw returning;soil tillage;CH4;N20;greenh ouse efect
【中文摘要】2008年在大田试验条件下,设置麦秸还田旋耕、麦秸不还田旋耕、麦秸还田翻耕、麦秸不还田翻耕4个处理,采用静态暗箱.气相色谱法田间原位观测稻麦两熟制农田水稻生长季CH4和N20排放通量,研究小麦秸秆全量还田与土壤耕作两项技术措施对稻季CH4和N2O排放的影响及其温室效应,以期为稻麦两熟制农田温室气体减排提供对策。结果表明:麦秸还田对稻季cn4排放总量的影响达极显著水平,麦秸还田与耕作方式的互作效应对CHa排放总量有显著影响,麦秸还田和耕作方式对N:0排放总量的影响均达极显著水平;不同麦秸还田与土壤耕作处理稻季cn4排放总量为:麦秸还田旋耕>麦秸还田翻耕>麦秸不还田翻耕>麦秸不还田旋耕,N20的排放总量为:麦秸不还田翻耕>麦秸不还田旋耕>麦秸还田翻耕>麦秸还田旋耕;与麦秸不还田相比,相同耕作措施下麦秸还田排放cI-h和N2O所产生的全球增温潜势(GWP)明显提高,麦秸还田条件下旋耕处理的GWP高于翻耕处理,而“单位产量的GWP”无明显差异,麦秸不还田条件下采用旋耕措施较翻耕可减轻温室效应。
【英文摘要】A field experiment was conducted in 2008 to investigate the efects of wheat straw returning and soil tillage on CH4 andN20 emissions in paddy season in a wheat-rice double cropping system by using the method of static chamber-gas chromatographictechniques.Four treatments(i.e.wheat straw returning+rotary tillage,SRT;wheat straw returning+conventional tillage,SCT;nowheat straw returning+rotary tillage,RT;no wheat straw returning+conventional tillage,CT)were implemented in this experiment.Results showed total CH4 emissions were significantly influenced by wheat straw returning treatments,the interaction between wheatstraw returning and soil tillage treatments on total CH4 emissions was significant.The total N20 emissions within four treatmentswere significantly diferent.The order of the total CU4 emissions was SRT>SCT>CT>RT.and the order of the total N20 emissions was SCT>SRT>CT>RT.As comparing with no wheat straw returning treatments under the same soil tillage.wheat strawreturning significantly increased the total global wanning potential(GWP)of CH4 and N20 emissions.Relative to SCT,SRT increased GW but there is no obvious diference in GWP per yield between SCT and SRT.In contrast with CT,RT efectively decreased greenhouse efect

【题目】基于激光诱导荧光技术的鹅肉嫩度初步研究
【中文关键词】激光;荧光光谱;嫩度;偏最小二乘法;鹅肉
【英文关键词】Laser;Fluorescence spectra;Tenderness;PLS;Goose
【中文摘要】嫩度是评价禽肉食用品质的一项重要指标。本文研究了采用激光诱导荧光技术检测鹅肉嫩度的无损检测方法。通过激光诱导荧光采集系统获取38 个鹅肉样本荧光光谱图。以模型相关系数(R)、校正均方根误差(RMSEC)、预测均方根误差(RMSEP)和偏差(Bias)为模型精度评价指标,采用偏最小二乘法(PLS)对荧光光谱信息与样品剪切力值进行拟合。结果表明:波长范围在460-999nm 时,搭建的鹅肉嫩度模型精度最高,R 为0.8857,RMSEC 为0.3381,Bias 为0,用该模型对预测组的13个鹅肉样本进行预测,预测值与实测值的相关系数R、RMSEP 和Bias 分别为0.8726、0.4756 和0.1127。研究表明应用激光诱导荧光无损检测技术预测鹅肉嫩度是可行的。
【英文摘要】The tenderness is an important index for evaluating edible quality of poultry.The nondestructive measurement of the goose tenderness by laser induced fluorescence technique was discussed in this study.Fluorescence spectra of 38 goose samples were captured by Laser induced fluorescence acquisition system.Partical least squares(PLS) algorithm was used to build the modelbetween the shear force value of the goose tenderness and fluorescence spectra.Correlation coefficients (R),root mean square error of calibration (RMSEC),root mean square error of prediction (RMSEP),and bias obtained by Correction model were used as evaluation indicators to judge the model accuracy.The result showed that,when the spectral region is from 460nm to 999nm,we can get the highest accuracy for the goose tenderness model whose evaluation indicators were 0.8857(R),0.3381(RMSEC) and 0(BIAS),respectively. Using the model to predict validation group with 13 samples, Correlation ciefficient(R),RMSEP and Bias were 0.8726, 0.4756 and 0.1127.This study suggests that laser induced fluorescence technique is capable of predicting goose tenderness.

【题目】灯光诱集白背飞虱种群发生动态及变化规律研究
【中文关键词】白背飞虱;灯光诱集;发生动态;变化规律
【英文关键词】white-backed planthopper,light trap,trap;population dynamic,change law
【中文摘要】为得出白背飞虱灯下种群在惠水县的动态变化规律,更有效地进行白背飞虱的预报及防治。采用普通白炽灯灯诱法对惠水县白背飞虱进行诱集,根据近五年灯诱数据分析了该县白背飞虱灯下始见日、始盛日、高峰及末见日。结果表明:惠水县白背飞虱始见日为4月中、下旬,始盛日出现在4月下旬至5月上旬,末见日为8月中、下旬或9月下旬。始见日、末见日的早晚与各年气候差异有关;通过对贵州和邻近相关省份始见日、末见日的比较分析认为,惠水县为我国白背飞虱春夏随西南气流向北迁飞及秋末随偏北气流向南回迁的经由地,但回迁途中并不在惠水降落。
【英文摘要】In order to know dynamic change law of white—back planthopper under light.provide effective occurrence and control countermeasure,the white-back planthopper was trapped by using ordinary incandescent from 2006 to 2010 in HuiShui Country to analyze the first and last appearance dates,occurrence peak and initial out break dates of the pest.The results showed that first appearance date was in the middle and late ten days of April and the initial outbreak date was in late April and the first ten days of May.The last appearance date was in the middle and late ten days of August or in the last ten days of September.The first and the last appearance dates of the white-back planthopper could advance or later due to the climate differences in different years.By comparing the first and the last appearance dates with that of related provinces, the result indicated that Huishui might he a key area for white—back pLanthopper migration flora south to north in spring and summer with south-west airstreams and then from north to south in late autumn with northerly airstreams in China, but not a landing area in cause of the latter.

【题目】利用高光谱图像技术检测鸡胴体内部粪便污染物
【中文关键词】高光谱图像; 粪便污染物; 鸡胴体; 检测
【英文关键词】hyperspectral imaging; fecal contaminants; chicken carcasses; detection
【中文摘要】以鸡胴体为研究对象,探讨基于高光谱图像技术的鸡胴体内部粪便污染物检测方法。首先采集400 ~1 000 nm的鸡胴体高光谱图像; 然后应用主成分分析(PCA) 获得主成分图像,由第1 主成分图像得到3 个特征波长518. 59,562. 64,700. 67 nm,并以700. 67 nm 特征波长下的图像作为鸡胴体内部粪便污染物检测特征图像; 最后构建掩膜以消除特征图像背景噪声并将其置为白色,并运用阈值分割和数学形态学完成粪便污染物的提取。试验结果表明,对100 个鸡胴体样本进行检测,检测总正确率为93%。应用高光谱图像技术结合主成分分析等数据处理方法能较好地完成对鸡胴体内部粪便污染物检测,为鸡胴体内部粪便污染物在线快速检测提供重要的理论依据。
【英文摘要】Using chicken carcasses as the research subject,the detection method for internal fecal contaminants of chicken carcasses based on hyperspectral imaging technology was investigated. Firstly,hyperspectral images of chicken carcasses from 400 nm to 1 000 nm were acquired. Secondly,the principal component images were obtained by the principal component analysis (PCA) ,three characteristic wavelengths (518. 59,562. 64 and 700. 67 nm) were found according to the first principal component (PC1) image,and 700. 67 nm wavelength images were selected as the detection images of the internal fecal contaminants of chicken carcasses. Lastly,the masks were constructed to eliminate the the background noise of characteristic images,and the fecal contaminants were extracted by the threshold segmentation and morphological imaging processing. The experimental results showed that the total accurate rate of the detection was 93% using 100 samples of chicken carcasses. The principal component analysis and yperspectral imaging technology can meet the requirement for detecting internal fecal contaminants of chicken carcasses ’ which provides a theoretical basis for the on-line rapid detection of internal fecal contaminants of chicken carcasses.

【题目】稻纵卷叶螟发生期及发生程度预测模型的建立与应用
【中文关键词】稻纵卷叶螟 发生期 发生程度 预测模型
【英文关键词】Cnaphalocrocis medinalis;outbreak period;occurrence degree;prediction model
【中文摘要】为提高稻纵卷叶螟发生期和发生量预测的准确率,减少稻纵卷叶螟发生对水稻生产造成的损失,应用回归分析方法,对贵州省惠水县1993~2006年稻纵卷叶螟第三代及第四代发生期和发生程度进行分析,建立预测模型。结果表明,第三、四代稻纵卷叶螟2~3龄幼虫盛发期预测模型分别为y=30.76-5.185x和y=10.128+0.837x,发生程度模型分别为y=0.02x-0.169和y=0.000 175x1+0.004 393x2+1.494 365。
【英文摘要】In order to enhance the prediction accuracy of outbreak period and occurrence degree of C.medinalis,reduce the 1OSS of rice production caused by C.medinalis,regressive analysis models were used to predict the outbreak period and the occurrence degree of the third larva and fourth 1arva of C.medinalis in Huishui Country during 1993-2006,and the prediction model was established at the same time.The expected regressive models for the outbreak period of the third stage larva and forth stage larva are:Y=130.76-5.185 and y=l0.128+0.837x separately.The expected regression models for the occurrence degree of the third larva and forth larva are:Y=0.02x-0.169 and y=0.000l75x1+0.004393x2+1.494365 respectively.

【题目】贵州省灯诱稻飞虱种类和数量动态变化
【中文关键词】稻飞虱 种类 动态变化 贵州
【英文关键词】rice planthopper,species,population dynamic,Guizhou
【中文摘要】对贵州省稻飞虱主要迁入、迁出地(盘县、锦屏、惠水、三都、道真)稻区的灯诱稻飞虱种类及其种群数量变化进行了分析。结果表明,稻区灯诱稻飞虱主要有白背飞虱(Sogatella furcifera)、褐飞虱(Nila-parvata lugens)、拟褐飞虱(N.bakeri)、伪褐飞虱(N.muiri)、灰飞虱(Laodelphgax striatellus)5种;灯下稻飞虱种群以白背飞虱所占比例最高,为47.86%,其次是褐飞虱,所占比例为43.90%,伪褐飞虱、拟褐飞虱及灰飞虱的数量都较少,分别占7.26%、0.43%和0.55%;在各地的比例也存在差异,伪褐飞虱以盘县较多,而拟褐飞虱较少;灰飞虱以道真最多,比例达到0.99%,比盘县、锦屏多1倍,是三都的20多倍;正确辨别灯下飞虱种类有助于提高稻飞虱预测预报的准确性。
【英文摘要】Species and population dynamics of rice planthopper under light trap from five counties of Guizhou Province,Panxian,Jinping,Huishui,Sandou and Daozhen, where were the main emigrated and immigrated sites of rice planthopper,were studied. The results showed that there were five rice planthoppers species under light trap in those rice regions,

namely Sogatella furcifera, Nilaparvata lugens, N. bakeri,N.muiri and Laodelphgax striatellus.The percentage of the above five rice phanthoppers were 47.86%,43.90%,7.26%,0.43% and 0.55% respectively.The percentage of the last three rice planthoppers was smaller and varied in five counties.The number of N. muir was the highest, but N. baker was the least.It was important to identify exactly planthopper species under light trap for improving the veracity of rice planthopper forecsat.

【题目】Characterization, phylogeny, alternative splicing and expression of Sox30 gene
【中文关键词】Sox30基因;选择性剪切;RACE
【英文关键词】Sox30 gene;alternative splicing;RACE;
【中文摘要】结果:Sox30 cDNA来源于用RT-PCR和RACE方法克隆尼罗罗非鱼基因。经过一系列可用的基因组和EST数据库以及生物信息学分析表明Sox30也存在于非哺乳动物的脊椎动物和非脊椎动物中,相同的观点也由共线性分析可得。此外,从罗非鱼性腺中分离出4种不同的选择性剪切体。用RT—PCR以及原位杂交的方法来研究它们的时间和空间性表达方式在普通以及性别逆转的性腺发育过程。我们的数据说明Sox30同种型的表达与性腺的阶段和表型有关,在雄性精巢细胞以及雌性精巢体细胞均能观察到。结论:我们的生物信息学以及系统发生和共线性分析均支持了Sox30基因不仅存在于哺乳动物中也广泛存在于整个动物门这个观点。Sox30很大可能广泛存在于性腺中。表达分析显示Sox30也可能依靠选择性剪切在雌性和雄性性腺发育不同阶段中起作用。
【英文摘要】Background: Members of the Sox gene family isolated from both vertebrates and invertebrates have been proved to participate in a wide variety of developmental processes, including sex determination and differentiation. Among these members, Sox30 had been considered to exist only in mammals since its discovery, and its exact function remains unclear. Results: Sox30 cDNA was cloned from the Nile tilapia by RT-PCR and RACE. Screening of available genome and EST databases and phylogenetic analysis showed that Sox30 also exists in non-mammalian vertebrates and invertebrates, which was further supported by synteny analyses. Tissue expression in human, mouse and tilapia suggested that Sox30 was probably a gonad-specific gene, which was also supported by the fact that Sox30 EST sequences were obtained from gonads of the animal species. In addition, four alternatively spliced isoforms were isolated from tilapia gonad. Their temporal and spatial expression patterns during normal and sex reversed gonadal development were investigated by RT-PCR and in situ hybridization. Our data suggest that expressions of Sox30 isoforms are related to stage and phenotypic-sex, observed in the germ cells of male gonad and in somatic cells of the female gonad. Conclusions: Sox30 is not a gene only existed in mammals, but exists widely throughout the animal kingdom as supported by our bioinformatic, phylogenetic and syntenic analyses. It is very likely that Sox30 is expressed exclusively in gonads. Expression analyses revealed that Sox30 may be involved in female and male gonadal development at different stages by alternative splicing.

【题目】转录因子GATA-2在脊椎动物发育过程中的作用
【中文关键词】GATA-2;转录调控机制;脊椎动物
【英文关键词】GATA-2; transcription; vertebrates
【中文摘要】GATA-2是对外胚胎层和胚层发育至关重要的转录因子,它属于具有保守锌指结构的GATA转录因子家族。GATA家族包括6个成员:分别命名为GATA-1至GATA-6.最新研究表明,GATA-2不仅存在于胚胎器官,还对成体造血细胞系

、神经系统、垂体和泌尿生殖系统中细胞的功能和维持都必不可少。本文旨在通过对GATA-2的功能研究进展进行综述,探讨GAT-2在生殖系统中的作用机制,以期更广泛地了解GATA-2基因在生物发育过程中的作用及对相关基因的调控机制,从而为攻克人类相关疾病提供理论依据。

【英文摘要】GATA-2 transcription factor plays a critical role in the development of the ectoderm and mesoderm. It belongs to the GATA family, which contains 2conserved zinc finger DNA-binding domains and is composed of six members, termed from GATA-1to FATA-6.GATA-2 is presend in embryonic tissues and organs and is found in hematopoictic lineage cells, the nervous system, pituitary and genitourinary system, and is essential for the maintenance of their function in adults. The present review focuses on the critical roles of GATA-2 during the developmental process in vertebrates and tries to explore the molecular mechanism of its regulation in the reproductive system, so as to provide a theoretical basis for the human diseases related to GATA-2.

【题目】尼罗罗非鱼微阵列Fosmid基因组文库的构建及基因筛选

【中文关键词】尼罗罗非鱼;基因组文库;微阵列;基因筛选

【英文关键词】Oreochromis niloticus; genomic library;Fosmid librarray; gene screening

【中文摘要】以pCC2FOS为载体构建尼罗罗非鱼fosmid基因组文库,共挑选115200个单菌落,保存在300块384孔样品板中,构建4800个行池、7200个列池、300个板池和25个超级池,形成微阵列,并对其进行复制备份。该文库插入片段平均长度约为40kb,覆盖约罗非鱼基因组的3倍。连续传代实验研究表明,文库具有良好的稳定性。由于构建超级池-板池-行、列池三级池系统形成的微阵列,有助于快速、准确、有效地筛选目的基因,仅需77个PCR反应(超级池25+板池12+行池16+列池24)就能筛选到含有目的基因的一个单克隆,解决了普遍存在的文库筛选难题。通过文库尝试筛选18个与性别分化和生长相关基因,均获得2~5个阳性克隆,说明文库具有较好的实用性。

【英文摘要】transferred into individual wells of 384-well plates, each well with 300 mL culture medium. After overnight incubation at 37°C, 100 mL medium was transfered from each of the 24 wells of every row of the of 384-well plates into one well of the 96-well plate to construct row-pools. Totally 16 row-pools were constructed for each 384-well plate. Similarly, 100 mL medium was transfered from each of the 16 wells of every column of the 384 well plate into one well of the 96-well plate to construct column-pools. Totally 24 column-pools were constructed for each 384-well plate. Raw- and column-pools of two 384-well plates were arrayed in one 96-well plate. Plate-pools were constructed by pooling the 16 column-pools and 24 row-pools (200 mL from each column- and row-pool) from the same 384-well plate. The library was further arranged into 25 super-pools, each including a mixture of culture medium from 12 plate-pools (500 mL from each plate-pool). Finally, All 384-well plates, constructed super-, plate-, row- and column-pools were replicated, one copy kept at －80°C for long-term storage, another copy kept at －20°C for routine use. The constructed tilapia Fosmid library encompasses 115200 clones. All clones were arrayed in 300 plates of 384-well plate. For each plate, column-, row- and plate-pools were constructed, and therefore, totally 4 800 column-pools, 7 200 row-pools and 300 plate-pools were constructed and arrayed. Finally, 25 super-pools were made with each covering twelve 384-well plates. Any gene of interest can be screened only by 3 rounds of minimally 77 (25+12+40) colony PCR due to the array of super-, plate-, row- and column-pools. Fosmid stability assays were performed for the constructed library with 9 randomly picked clones by serial culture for 100 generations over a period of 6 days. The electrophoretic patterns of each clone digested with Hind Ⅲ and EcoR Ⅰ were identical from day 1 to day 6. No loss or rearrangement of the inserted DNA fragment was found during the continuous passage, demonstrating that the Nile tilapia Fosmid library was stable. 10 clones were randomly selected from the library and plasmids of these clones were prepared, digested with Not I and visualized by electrophoresis. All the 10 clones contained insert with an average size of around 40 kb, ranging from 38 to 42 kb. Therefore, the coverage rate of this library is about 3 genome equivalents, leading to a 98.7% probability of recovery of any specific sequences of interest. 18 genes related to tilapia sex differentiation and growth genes were screened to test the quality of the library. All of them were successfully isolated from this library, with each having 2-5 positive clones, confirming the 3 genome equivalents coverage rate and the availability of the library. In summary, a high-quality Fosmid library of the Nile tilapia with large insert (~40 kb) was successfully constructed, microarrayed and characterized using the vector pCC2FOS. This Fosmid library provides a useful tool for functional genomics and genetic breeding of the Nile tilapia.

【题目】贵州省稻作植保情况调查
【中文关键词】水稻 植保 农药 调查
【英文关键词】rice; plant protection; pesticide; survey
【中文摘要】为了解贵州省水稻种植中植保农事现状,科学指导农户正确有效地防治水稻病虫害,于2010年在贵州省6县开展了水稻种植植保农事调查。调查以户为单位,调查内容包括水稻品种、播种移栽及收割时间、施肥情况、施药时期、施药方式、防治对象、药剂种类、施药次数等,调查发放问卷300份,回收193份,回收率为64.33%。结果显示:贵州省水稻种植品种多样化;不同地区农业耕作发展水平不一致,施肥水平差异较大;在田间防治时,农户不能准确掌握防治时期,防治目标不明确,在水稻生育时期,施药次数为4~6次,国家禁用农药仍有施用。贵州省水稻种植过程中主要存在从事植保农事人员文化水平较低;农户盲目、滥用农药现象突出;缺乏有效的信息指导技术等问题。
【英文摘要】To understand the status of plant protection in rice of Guizhou Province,so as to provide a reference for the control of rice disease and pests,the plant protection in rice planting period was surveyed for individual household in six counties of Guizhou in 2010,including rice cultivar,time of seeding and harvest,fertilizer use,times and frequency of spraying,controlling target,sorts of pesticides,methods of pesticides application etc. The questionnaires of 300 copies were provided,193 copies were retrieved and the recovery ratio was 64.33% in the survey . The results indicated that cultivars and fertilizers used varied highly,and agriculture development level also diversified among the investigated regions. In the paddy control,the optimal time could not be grasped accurately by the farmers,the control target wasn ’ t explicit. During rice growth period,the spraying times focused on 4-6 times,and illegal pesticides was still used. Additionally,there were some social problems affecting rice cultivation,including low education background,blindfold and abusing of pesticides,the lack of effective information and techniques etc. Some suggestions were also put forward for improvement of plant protection activities.

【题目】贵州省锦屏县近年稻纵卷叶螟发生规律
【中文关键词】稻纵卷叶螟 发生规律 锦屏县
【英文关键词】Cnaphalocrocis medinalis,occurrence regulation; Jinping County
【中文摘要】对贵州省锦屏县2006~2010年稻纵卷叶螟的迁入时期、迁入量、田间成虫及幼虫发生动态进行了分析,以研究该虫在当地的发生规律。结果表明:锦屏县2006~2010年稻纵卷叶螟为害盛期与水稻分蘖期、拔节期、孕穗期吻合,但不同年份稻纵卷叶螟发生程度不同。2006~2010年田间最高蛾量分别达到8 874、1 648、4 367、2 817和1 222头/667m2。高蛾量的发生天数在不同年份间差异明显,2006~2008年田间蛾量≥400头/667m2的天数分别达到27、30和35 d,而2009年和2010年只有7 d。田间蛾量高且高蛾量发生时间长是造成稻纵卷叶螟暴发成灾的原因。
【英文摘要】To summarize the regularities of Cnaphalocrocis medinalis,the time and quantity of immigration as well as the dynamics of adult and larva in rice fields in Jinping County,Guizhou Province were analyzed from 2006 to 2010 in the present work.The results showed that peak of C.medinalis population was in accordance with tillering stage,jointing stage and booting stage,however the damages considerably varied during the past years.The adult peaks in the fields were 8874,1648,4367,2817,and 1222 / 666.7 m2,consecutively during 2006- 2010.Further,the accumulated days of peak adults were significantly different during the investigated

year,and the accumulated days that adult number more than 400 /666.7 m2 were 27 d,30 d and 35 d consecutively from 2006 to 2008,however,only 7 d in both 2009 and 2010.The main reasons caused serious outbreak of C. medinalis were the large number of C.medinalis and its longer time of duration.

【题目】Molecular cloning of two isoforms of 11b-hydroxylase and their expressions in the Nile tilapia, Oreochromis niloticus
【中文关键词】P450(11 b);选择性剪切;精巢; 性类固醇;尼罗罗非鱼;
【英文关键词】P450(11 b); Alternative splicing; Testis; Sex steroids; Nile tilapia;
【中文摘要】 β)-1和P450(11β)-2),通过RT-PCR、Northern blot、原位杂交和免疫组化的方法初步阐明了P450(11)在合成11-KT和cortisol以及精子生成中的作用(张未丽“ 罗非鱼GATA-2和P450(11β)基因克隆、表达及在性腺分化和配子发生中作用的初步研究
【英文摘要】P450 11b-hydroxylase, encoded by P450(11b) gene, is a key mitochondrial enzyme to produce 11bhydroxytestosterone, substrate for the production of 11-ketotestosterone (11-KT), which has beenshown to be potent androgen in several fish species. In the present work, two alternative splicing isoformsi.e. P450(11b)-1 and P450(11b)-2 cDNAs were cloned from the Nile tilapia, Oreochromis niloticus.They were 1614 and 1227 bp in length with open reading frames encoding proteins of 537 and 408 aminoacids, respectively. In contrast to P450(11b)-1, which derived from 9 exons of the P450(11b) gene, the 7thand 8th exons were absent in P450(11b)-2. Tilapia P450(11b)-1 shares the highest homology with that ofmedaka, Oryzias latipes. Expressions of P450(11b)-1 and -2 were detected in the kidney and head kidneyof both sexes, and in the testis but not in the ovary, with P450(11b)-2 lower than P450(11b)-1. Ontogenicexpressions of both isoforms were detected in testis from 50dah onwards. P450(11b)-1 and -2 werestrongly expressed in sex reversed XX testis after fadrozole and tamoxifen treatment, but completelyinhibited in 17b-estradiol induced XY ovary. The existence of two alternatively spliced isoforms andthe sexual dimorphic expression of P450(11b)s were further confirmed by Northern blot. Strong expressionsignals in Leydig cells and weak signals in spermatogonia were detected by in situ hybridization andimmunohistochemistry. Taken together, our data suggest a role for P450(11b) in the spermatogenesis oftilapia through the production of 11-KT in testis, in addition to cortisol production in head kidney.

【题目】Duplication and distinct expression patterns of two thrombospondin-2 isoforms in teleost fishes
【中文关键词】血小板反应蛋白- 1;重复表达式;性分化;卵泡合成;产卵循环;骨骼合成;硬骨鱼
【英文关键词】Thrombospondin-1;Duplication Expression;Sex differentiation;Folliculogenesis;Spawning cycle;Skeletogenesis;Teleost
【中文摘要】本研究从罗非鱼和青鳉卵巢中克隆了由两个不同基因编码的凝血酶敏感素TSP-1a和-1b。对脊椎动物TSP-1进行系统发生分析发现,两种TSP-1仅存在于硬骨鱼类。组织分布显示TSP-1a和TSP-1b在罗非鱼多个组织表达。TSP-1b从孵化后5天就开始在罗非鱼雌雄性腺表达,暗示其在性腺形成过程中起着重要作用。TSP-1a 从孵化后120天开始特异性表达于卵巢的颗粒细胞,这一结果表明TSP-1a可能参与了卵黄发生。在罗非鱼14天产卵周期中,TSP-1a和-1b都在产卵后5天(卵黄发生期)和12天(卵子成熟期)出现两个峰值。原位杂交和RT-PCR结果发现TSP-1a表达于颗粒细胞,而TSP-1b在鞘膜细胞表达。此外,TSP-1a和TSP-1b还在骨骼组织中表达,但具有不同的时空表达模式,仅TSP-1b在肌膈中表达。TSP-1a和TSP-1b都在心脏和脾脏表达,TSP-1a也在脑和肠表达。
【英文摘要】Two types of thrombospondin-1 (named TSP-1a and TSP-1b) were cloned from two species of teleosts, theNile tilapia and medaka. Phylogenetic analysis of these TSP-1 sequences, together with those availablefrom other vertebrates further demonstrated that two types of TSP-1 exist only in teleosts, extendingthe finding in fugu and tetraodon to two additional fish species. The expression of both genes was examinedusing tilapia at various developmental stages. Tilapia TSP-1a and TSP-1b were each expressed in awide range of tissues examined. The early expression of TSP-1b in both XX and XY gonads from 5 dah(day after hatching) onwards suggested an important role in the formation of gonads, while the expressionof TSP-1a only in ovaries during later stages of development (from 120 dah onwards) may suggestthat TSP-1a is involved in oogenesis. During the 14-day spawning cycle, the expression of both typesof TSP-1 exhibited distinct peaks at day 5 (peak of vitellogenesis) and day 12 (oocyte maturation). In situhybridization analyses revealed differential expression, with TSP-1a occurring in granulosa cells and TSP-1b in theca cells. Furthermore, both TSP-1a and -1b were expressed in skeletal tissues but with clear temporaland spatial differences. In contrast, only TSP-1b was found in the myosepta. The positive signals ofboth TSP-1a and TSP-1b were also detected in the heart and spleen, and TSP-1a in brain and intestine byboth RT-PCR and in situ hybridization.

【题目】Discovery of a gonad-specific IGF subtype in teleost
【中文关键词】cDNA 克隆; 基因表达; 新 IGF; 精巢
【英文关键词】cDNA cloning; Gene expression; Novel IGF; Teleost
【中文摘要】本文主要报道了在硬骨鱼类中发现的一个与传统胰岛素样生长因子IGF-1和IGF-2不同,且由不同基因编码的新型IGF——IGF-3。从罗非鱼和斑马鱼中克隆了IGF-3的cDNA序列,并从青鳉的基因组和EST 数据库中预测出青鳉的IGF-3的cDNA序列。尽管IGF-3与IGF-1和IGF-2序列同源性较低,但它们都有B、C、A、D、E 5个结构域和相似的三级蛋白结构。系统进化分析表明IGF-3聚类于不同于IGF-1和IGF-2单独的一支。IGF-3的表达是性腺特异的,且在性腺发育的早期就开始表达。原位杂交表明IGF-3表达于卵巢的体细胞和后期的颗粒细胞以及精巢的间质细胞。这些发现表明IGF-3在硬骨鱼类性腺发育与生殖中有重要作用。
【英文摘要】Distinct from the conventional IGFs (IGF-1 and IGF-2), here we report the identification of a novel IGF (herein called IGF-3)encoded by a separate gene from teleost species. The IGF-3 cDNA sequences were cloned from tilapia and zebrafish, and

predicted fromthe medaka genome and EST databases. Similar to IGF-1 and IGF-2, IGF-3 is also comprised of five domains (B, C, A, D, E) with asimilar tertiary protein structure, despite a low sequence homology among them. Phylogenetic analysis reveals that the IGF-3 sequencesfrom different teleosts cluster to form a distinctive clade separate from IGF-1 and IGF-2. The expression of this novel IGF-3 is gonadspecificand starts early in fish development. In situ hybridization revealed that IGF-3 is expressed in the somatic cells and later in granulosacells of the ovary, and in the interstitial cells of the testis. These findings highlight the importance of this novel IGF in teleost gonadaldevelopment and reproduction.

【题目】nsulin-Like Growth Factor 3 Is Involved in Oocyte Maturation in Zebrafish

【中文关键词】cyclic adenosine monophosphate, follicle, human chorionic gonadotropin, Igf3, oocyte maturation, ovary, regulation of gene expression

【英文关键词】cyclic adenosine monophosphate, follicle, human chorionic gonadotropin, Igf3, oocyte maturation, ovary, regulation of gene expression

【中文摘要】最近在斑马鱼的研究中,我们检测了胰岛素样生长因子3(IGF-3)在卵巢中的基因表达模式和生理作用。在斑马鱼中发现两个IGF-3选择性剪切转录本,转录本1特异表达于性腺,转录本2只表达于发育的早期。IGF-3的前多肽和IGF-3成熟多肽都显著地表达于卵巢中。实时定量PCR和原位杂交表明IGF-3在早期的滤泡细胞中表达相对较低,但在卵黄中期显著上升,而在充分发育的滤泡细胞中有高的表达量。在充分发育的滤泡细胞中,IGF-3主要存在于滤泡细胞中而低水平的表达于卵母细胞。用人绒毛膜促性腺激素对卵巢部分和分离的滤泡处理发现IGF-3都被显著上调。对滤泡细胞进行8-溴腺苷3 ’,5"-环单磷酸钠盐和3-异丁基-1-甲基黄嘌呤的处理发现IGF-3的表达明显上调。用斑马鱼的IGF-3重组蛋白孵育滤泡显著促进了卵母细胞的成熟。这些结果表明IGF-3对斑马鱼卵母细胞的成熟具有重要作用。

【英文摘要】The gonad-specific expression of a recently discovered Igf subtype (Igf3) in teleost has indicated the important role of this novel Igf in the reproductive functions of fish. In the present study using zebrafish as the model organism, we have further examined the gene expression patterns and the physiological role of Igf3 in the ovary. The igf3 gene in zebrafish was found to be alternatively spliced into two transcripts, with transcript variant 1 exclusively expressed in the gonads, and transcript variant 2 only expressed during early development. Using specific antibodies developed for zebrafish Igf3, both the Igf3 prepropeptide and the mature peptide forms of Igf3 were found to be predominantly expressed in the zebrafish ovary. Real-time PCR and in situ hybridization revealed that igf3 mRNA is relatively low in the early follicles, but is significantly increased after the mid-vitellogenic stage (midstage III), and is high in the full-grown follicles. In the full-grown follicles, igf3 mRNA was detected mainly in the somatic follicular cells with a low level of expression in the oocytes. Igf3 immunoreactivity was confined to the follicular cells only. The expression of igf3 was significantly up-regulated in both ovarian fragments and isolated follicles upon treatment with human chorionic gonadotropin in dose- and time-dependent manners. Treatment with 8-bromoadenosine30,50-cyclic monophosphate or 3-isobutyl-1-methylxanthinealso up-regulated the expression of igf3 in full-grownfollicles. Incubation of follicles with recombinant zebrafish Igf3significantly enhanced oocyte maturation in time-, dose-, andstage-dependent manners. The actions of Igf3 could be blockedby cycloheximide, but not by actinomycin D. Taken together,these results support an important role of Igf3 in the ovarianfunctions of zebrafish, especially in oocyte maturation.

【题目】维甲酸和Cyp26 基因家族与生殖细胞分化
【中文关键词】成熟分裂; 维甲酸; Cyp26基因家族; Stra8; 生殖细胞分化
【英文关键词】meiosis; retinoic acid; Cyp26 family gene; Stra8; germ cell differentiation
【中文摘要】在哺乳动物胚胎期, 成熟分裂首先在雌性生殖细胞启动, 雄性生殖细胞则停滞于有丝分裂的G0/G1 阶段。在小鼠的研究发现, 成熟分裂启动时间很可能决定着生殖细胞的分化方向。另一方面, 达到一定阈值浓度的维甲酸(RA)能够启动生殖细胞从有丝分裂到成熟分裂的过渡。体内RA 的水平由其合成和降解速率调节, 而Cyp26 是调节体内RA 水平最关键的酶。因此, 这种由Cyp26调节的RA水平的变化可能从根本上调控着哺乳动物生殖细胞的分化方向(形成精原细胞或卵原细胞), 最终影响性别的分化。本文主要综述RA、Cyp26基因家族在哺乳动物性腺分化过程中的作用, 并探讨了低等脊椎动物特别是鱼类成熟分裂启动及生殖细胞分化的分子机制。
【英文摘要】During mammalian fetal development, meiosis is initiated in female germ cells only, while male germ cells undergoing G0/G1 mitotic cell cycle arrest. Further study reveals that timing of meiotic initiation during embryonic development probably determines the direction of germ cell differentiation in mammals. In addition, the proper concentration of retinoic acid (RA) can initiate the mitosis to meiosis transition in vivo. Homeostasis of the RA level is maintained by regulation of its rate of synthesis (ADHs and RALDHs are the key enzyme for RA synthesis) and by controlling its rate of degradation (Cyp26s are the most effective enzyme for RA degradation), which decides the direction of germ cell differentiation (spermatogonia or oogonia), and affects the sex differentiation of mammals ultimately. This review focuses on the physiological roles of RA and Cyp26s during the process of gonadal differentiation in mammalian and trying to explore the molecular mechanism of meiosis and germ cells ’ differentiation in the lower vertebrate, especially fish.

【题目】oublesex- and Mab-3-Related Transcription Factor-2 Repression of Aromatase Transcription, a Possible Mechanism Favoring the Male Pathway in Tilapia
【中文关键词】Dmrt1;Cyp19a1a;estradiol-17 ;aromatase;
【英文关键词】Dmrt1;Cyp19a1a;estradiol-17 ;aromatase;
【中文摘要】逆转等现象。本研究表明芳香化酶是Dmrt1直接作用的靶基因,Dmrt1通过抑制编码芳香化酶编码基因的转录和雌激素的合成来抑制雌性通路,这种机制也可能存在于其它脊椎动物。
【英文摘要】Doublesex- and Mab-3-related transcription factor-1 (Dmrt1) is an important transcription factor implicated in early testicular differentiation in vertebrates, but its target genes are largely unknown. In the Nile tilapia, estrogen is the natural inducer of ovarian differentiation. Our recent studies haveshownthat Forkhead-l2 up-regulated transcription of the Cyp19a1a gene (aromatase) in the gonads in a female-specific manner. However, the upstream factor(s) down-regulating Cyp19a1a expression during testicular differentiation remains unclear. In the present study, we used in vitro (promoter analysis) and in vivo (transgenesis and in situ hybridization) approaches to examine whether Dmrt1 inhibits Cyp19a1a ’s transcriptional activity. The in vitro analysis using luciferase assays revealed that Dmrt1 repressed basal as well as Ad4BP/SF-1-activated Cyp19a1a transcription in HEK 293 cells. Luciferase assays with various deletions of Dmrt1 also showed that the Doublesex and Mab-3 domain is essential for the repression. In vitro-translated Dmrt1 and the nuclear extract from tilapia testis could directly bind to the palindrome sequence ACATATGT in the Cyp19a1a promoter, as determined by EMSAs. Transgenic overexpression of Dmrt1 in XX fish resulted in decreased aromatase gene expression, reduced serum estradiol-17_ levels, retardation of the ovarian cavity ’s development, varying degrees of follicular degeneration, and even a partial to complete sex reversal. Our results indicate that aromatase is one of the targets of Dmrt1. Dmrt1 suppresses the female pathway by repressing aromatase gene transcription and estrogen production in the gonads of tilapia and possibly other vertebrates.

【题目】尼罗罗非鱼Orexin前体基因的克隆、组织分布及其在摄食调控中的表达
【中文关键词】尼罗罗非鱼; Orexin; 克隆; 表达; 摄食
【英文关键词】Nile tilapia (Oreochromis niloticus); Orexin; Cloning; Expression; Food intake
【中文摘要】该文采用RT-PCR和cDNA末端快速扩增技术(rapid-amplification of cDNA ends, RACE)的方法, 从尼罗罗非鱼(Oreochromis niloticus)下丘脑总RNA中获得了尼罗罗非鱼Orexin前体基因的cDNA全长序列。该 cDNA全长648 bp, 其中开放阅读框的长423 bp,编码Orexin前体蛋白为140个氨基酸, 包括37个氨基酸的信号肽、43个氨基酸的Orexin-A、28个氨基酸的Orexin-B和末尾32个氨基酸组成的功能不详的多肽。采用Real-time PCR 技术对尼罗罗非鱼Orexin 前体基因的组织表达模式以及在摄食前后、饥饿和再投喂状态下的表达量变化进行了研究。 结果显示, 在脑部和外周等18个组织中都检测到了Orexin前体基因的表达, 其中在下丘脑中表达量最高; 在摄食前后, 尼罗罗非鱼Orexin前体基因的表达量显著低于在摄食状态中; 饥饿2、4、6和8 d后, Orexin前体基因在下丘脑中的表达量与正常投喂组相比均显著升高, 饥饿4 d再投喂后,表达量又恢复至正常水平。这些结果表明, Orexin在尼罗罗非鱼摄食中可能有着重要的调节作用。
【英文摘要】We cloned the full length of tilapia prepro-orexin cDNA using RT-PCR and rapid-amplification of cDNA ends (RACE). The full-length of prepro-orexin cDNA was 648 bp containing an open reading frame of 423 bp. The 140 amino acid prepro-orexin protein included a 37 AA signal peptide, a 43 AA Orexin-A and, and 28 AA Orexin-B and the end of the 32 AA peptide of unknown function. The expression of prepro-orexin on tissue distribution, peri-prandial changes, starvation and re-feeding were quantified by real-time PCR. We found that prepro-orexin mRNA was present in all tissues tested and that the highest level was observed in hypothalamus. Expression levels were significantly higher at mealtime (0 h) than before (− 2 h, − 1 h) and after (+1 h, +2 h) mealtime. Fasting for 2, 4, 6 and 8 d caused significant increases in prepro-orexin mRNA expression in the hypothalamus, and after re-feeding, expression levels of prepro-o rexin mRNA returned to the same level compared to that in the fed group.

【题目】冷碱处理条件与龙须菜琼胶强度的关系
【中文关键词】龙须菜;琼胶;凝胶强度
【英文关键词】Gracilaria sjoestedtii Kylin;agar;gel strength
【中文摘要】为研究龙须菜冷碱处理条件与琼胶凝胶强度(Gel strength, GS)的关系,采用均匀设计法,研究了温度T、碱液浓度M和处理时间t三因素与龙须菜琼胶凝胶强度的定量关系。通过多元线性回归拟合出回归模型:GS=27.72×T+19.69×M+2.75×t-488.62,P<0.0001。由回归模型可知,3因素对龙须菜凝胶强度的贡献大小为:T>M>t。在3因素的水平范围内,再经验证试验表明,试验测定值与回归预测值均无显著性差异(P>0.05)。这表明,该回归模型对龙须菜凝胶强度具有较好的预测性,为龙须菜冷碱法处理的最佳工艺条件、提高龙须菜琼胶加工质量、降低生产成本提供了重要科学依据。
【英文摘要】In order to study the relationship between the condition of cold alkali processing on Gracilaria sjoestedtii Kylin and gel strength of agar, it was studied that the quantitative relation between the three factor : temperature (T), alkali concentration (M), processing time (t) and gel strength(GS) of agar from Gracilaria sjoestedtii Kylin by using orthogonal and uniform design. Regression equation,GS=27.72×T+19.69×M+2.75×t-488.62,P<0.0001, was fitted by multiple linear regressing. From the regression equation,

among the three factors, the effect on the GS of agar was T>M>t. The validating test was carried under the three factors level, and the result showed that there was no significant difference between the test-value and the forecasting-value(P>0.05).Therefore, the regression equation could highly forecast the GS of agar from Gracilaria sjoestedtii Kylin, and it could provide scientific basis for optimizing process conditions, improve quality and reducing cost on the agar from Gracilaria sjoestedtii Kylin.

【题目】琼胶中硫酸基的离子色谱法测定
【中文关键词】离子色谱法; 琼胶; 硫酸基
【英文关键词】ion chromatography; agar; sulfate group
【中文摘要】确立离子色谱法检测琼胶中硫酸基含量的样品处理方法和检测条件。样品前处理采用灰化降解琼胶粉中的有机成分,超纯水溶解定容、过膜后测定;检测时利用戴安ICS-3000型离子色谱仪、电导检测器、ASRS 4mm抑制器、IonPac ® AS23型分离柱,淋洗液组成为9.0mmol · L-1 Na2CO3溶液和1.6mmol · L-1 NaHCO3溶液,流速1.0 mL · min-1。此方法硫酸根在1.0~15.0 mg · L-1浓度范围内呈良好的线性关系(R2=0.9995),检出限为0.01mg · L-1,样品加标回收率为89.0%~102.0%,分析快速准确。与传统方法相比,离子色谱法操作快速简便,灵敏度高,重现性好。
【英文摘要】To establish an ion chromatography method for the determination of sulfate content in agar. The ashing method was used in this test to degrade the organic components of agar, and the ash was dissolved in ultrapure water, then the test solution was filtrated by a 0.45 μ m membrane. DIONEX ICS-3000 ion chromatography, conductivity detector,ASRS 4mm suppressor and IonPac

AS23 column were selected with 9.0mmol · L-1 Na2CO3 and 1.6mmol · L-1 NaHCO3 as eluent, the flow rate of eluent was 1.0ml • min-1. The results showed that the detection of sulfate has better linearity in the range of 1.0 to 15.0 mg · L-1 (R2=0.9995). The detection limit of this method is 0.1mg · L-1, the recovery of standard addition is from 89.0%to102.0%. Compared with the traditional methods, ion chromatography is a simple, rapid, accurate and sensitive method.

【题目】改良DEAE- 纤维素法制备龙须菜琼胶糖研究
【中文关键词】琼胶糖; DEAE- 纤维素;DNA 凝胶电泳
【英文关键词】agarose;DEAE-cellulose;DNA gel electrophoresis
【中文摘要】以龙须菜琼胶为原料,分别采用KMnO4-H2C2O4法漂白、乙醇处理和DEAE-纤维素纯化等工艺制备生化级琼胶糖,并对工艺参数进行了正交优化,对琼胶糖的理化指标和电泳性能进行测定。结果表明:漂白试验的最佳工艺条件为:KMnO4浓度0.10%、pH 6.0、漂白时间5min、H2C2O4浓度0.30%,漂白后琼胶白度(HW值)为82.98、凝胶强度为1083 g/cm2;乙醇处理的最佳工艺条件为:料液比1:40,乙醇浓度60%,处理时间6h,处理后琼胶透明度(透光率)为50.2%。制备的琼胶糖灰分含量为0.25%、凝胶强度为1127g/cm2、硫酸基含量为0.24%;结晶紫电泳、电内渗测定和基因组DNA电泳试验表明:改良DEAE-纤维素法制备的琼胶糖具有优异的电泳性能,适用于生物化学和分子生物学的凝胶电泳研究。
【英文摘要】The Gracilaria lemaneiformis agarose was prepared by KMnO4-H2C2O4 bleaching , ethanol immersion and DEAE-cellulose purification , respectively. Orthogonal test was carried out to optimize the process parameters, the physical and chemical index, electrophoretic performance of agarose was determined . The results showed that the optimum conditions of bleaching assay are concentration of KMnO4 0.10%, pH 6.0, bleaching time 5min, concentration of H2C2O4 0.30%, after bleaching assay, the whiteness (HW value) of agar is 82.98, the gel strength is 1083 g/cm2; the optimum conditions of ethanol immersion assay are solid-liquid ratio 1:40, concentration of ethanol 60%, treatment time 6h, after immersion by ethanol, the transparency of 1.0% agar(transmittance value) is 50.2%. The ash content, gel strength and sulfate group content of the agarose prepared by the optimal method are 0.25%, 1127g/cm2, 0.24%, respectively. Gentian violet electrophoresis, electroendosmosis and genome DNA gel electrophoresis are also performed in this study, which is showed that the agarose prepared by modified DEAE-cellulose method was suitable for biochemistry and molecular biology electrophoresis.

【题目】麒麟菜膳食纤维的降血脂功能
【中文关键词】麒麟菜;膳食纤维;降血脂
【英文关键词】Eucheuma ;dietary fi ber ;serum lipid reducing
【中文摘要】以3 种麒麟菜(Eucheuma spp.) 膳食纤维为研究对象,给予SD 大鼠10% 膳食纤维的高脂饲料进行6 周的动物实验,分别于0 周、3 周、6 周末眼底采血、收集实验末期3 d 粪便,通过分析血清总脂(TL)、总胆固醇(TC)、甘油三酯(TG)、低密度脂蛋白胆固醇(LDL-C)、高密度脂蛋白胆固醇(HDL-C)、粪便胆固醇(FC)、粪便胆汁酸(FBA) 和计算动脉硬化指数(AI),研究了麒麟菜膳食纤维降低血脂的功能活性。结果显示:实验至3 周、6 周末,喂饲高脂饲料的阳性对照组和3 个麒麟菜膳食纤维实验组的大鼠血清TL、TC、TG、LDL-C 水平较阴性对照组显著升高(P<0.05),3 种膳食纤维组TL、TC、TG、LDL-C 水平显著低于阳性对照组(P<0.05),HDL-C 水平显著低于阴性对照组而高于阳性对照组(P<0.05)。6 周末,3 种膳食纤

维粪便胆固醇FC 和粪便胆汁酸FBA 含量显著高于阴性和阳性对照组(P<0.05)。结果表明,本实验高脂饲料可成功形成高脂动物模型,3 种膳食纤维具有显著抑制TL、TC、TG、LDL-C 水平升高,促使HDL-C 水平升高和粪便胆固醇、粪便胆汁酸排泄的功能。因此,麒麟菜膳食纤维显示出降低血脂的效果,将有可能在预防高血脂症等疾病方面具有应用价值。

【英文摘要】It was reported that the dietary fiber(DF)had preventive effects on coronary heart diseases. There abundant dietary fi ber in seaweed of Eucheuma,especially soluble dietary fi ber. In this research,the functionaleffect of three kinds of dietary fiber from Eucheuma,which was soluble dietary fiber(SDF),insoluble dietary fiber(IDF)and total dietary fi ber(TDF),on reducing serum lipids was studied by giving SDrats high lipid diets with 10% of DF supplementation. During the test,serum samples from eye socket were analyzed for TL,TG,LDL-C and HDL-C at 0 week,3 rd week and 6 th week,respectively,and the atherosclerosis index (AI) was calculated. In the end of the experiment,faecal matter of the last 3 days was collected continuously and analyzed for the faecal cholesterol and faecal bile acid content. The results showed that :at the end of 3 rd week and 6 th week,the serum TL,TC,TG and LDL-C levels of positive control and DF group were signifi cantly higher than those of the negative control(P<0.05),and the TL,TC,TG and LDL-C levels of DF groups were signifi cantly lower than positive control(P<0.05).However the HDL-C level of DF test group was significantly lower than those of the negative control(P<0.05),and higher than those of the positive control(P<0.05). At the end of the experiment,the DF groups had significantly higher FC and FBA levels compared with negative control and positive control(P<0.05). The results above demonstrate that the test diets with high lipid can form the hyperlipidemia-model rat. The increase of TL,TC,TG and LDL-C levels in rat serum could be restrained by DF from Eucheuma. In addition,DF from Eucheuma had a function of triggering higher HDL-C level and accelerating the excretion of FBA and FC. Therefore,DF from Eucheuma has an effect on reducing lipids and may be applied in preventing hyperlipidaemic diseases.

【中文摘要】琼脂是由红藻类植物提取的亲水性胶体, 是最早应用于食品工业、目前世界上用途最广泛的海藻胶之一。琼脂经过全世界几百年来的应用, 已证明其食用安全性, 联合国世界卫生组织已批准琼脂用于食品工业, 同时也被中、英、美、法等多个国家以规章认可。它在食品工业、医药工业、日用化工、生物工程等许多方面有着广泛的应用。在食品中工业中, 琼脂被用作胶凝剂、增量剂、增稠剂、乳化剂、稳定剂、赋形剂、助悬剂、水分保持剂, 能明显改变食品的品质, 提高食品的档次, 成为一种重要的食品添加剂。本文分别就琼脂的化学结构、提取原料、提取方法、理化性质和在食品中的应用现状及发展前景等方面做了综述。本文旨在为今后进一步开展琼脂在食品中的应用研究提供理论参考。
【英文摘要】Agar is a kind of hydrophile colloid extracted from red alga, and which is the earlist app lied in food industry and one of the mostwidely used alga colloid in the word. of agar have been p roved byworldwide app lication for hundred yeas, app lication of agar in food industry have achieved WHO app roval and been accredited in regulations by some countries, such as china, , america, france, et al. Agar has been app lied in many industries, such as medicine, chemical, biological engineering etc. In food industries, agar, as an important food additive, which can be used as gelling agent, extender, thickener, emulsifier, stabilizer, excip ient, suspending agent, water retention agent, et al, and can imp rove the character and class of food clearly. In this paper, it was summarized that the chemic structure, material, extracting method, physicochemical p roperties, app lication status and development p rospect about agar. This paper aims at p roviding theory reference for the future study of the app lication on agar in the food industry.

【题目】响应曲面法优化琼胶的酸水解条件
【中文关键词】琼胶;酸水解;响应曲面法
【英文关键词】agar;acid hydrolysis;response surface methodology
【中文摘要】采用酸水解法对琼胶进行降解并结合苯酚-硫酸法测定琼胶低聚糖的含量。在单因素试验的基础上,利用响应曲面法优化水解工艺,建立盐酸浓度(X1)、水解时间(X2)和固液比(X3)与水解率(Y)之间的数学模型:Y =81.5933+0.7175X1+1.8938X2+2.7313X3-3.1567X12-3.3042X22-3.3092X32-0.6625X1X2+0.0475X1X3-0.8000X2X3,确定琼胶水解的最佳工艺条件,即盐酸浓度0.105mol/L、水解时间96min、固液比4.5:100(g/mL),在此最佳工艺条件下进行水解,琼胶水解率为81.43%。
【英文摘要】Agar was subjected to acid hydrolysis and the content of agar oligosaccharides was determined by hydrochloric acidand phenol-sulfuric acid method. On the basis of single factor experiments, the hydrolysis procedure was optimized usingresponse surface methodology, and a mathematical regression model (Y= 81.5933+0.7175X1+1.8938X2+2.7313X3-3.1567X12-3.3042X22-3.3092X32-0.6625X1X2+0.0475X1X3-0.8000X2X3) was established for predicting the yield of agaroligosaccharides (Y) at different levels of hydrochloric acid concentration (X1), hydrolysis time (X2), and solid/liquid ratio (X3).The optimal hydrolysis conditions were determined to be hydrochloric acid concentration of 0.105 mol/L, solid/liquid ratio of4.5:100 (g/mL) and hydrolysis time of 96 min. The yield of agar oligosaccharideswas up to 81.43% under the optimal hydrolysisconditions, which was in good agreement with the predicted value.

【题目】栉孔扇贝♀×虾夷扇贝♂单对杂交子一代的ISSR分析
【中文关键词】栉孔扇贝;虾夷扇贝;杂种鉴定;ISSR
【英文关键词】Chlamys farreri;Patinopecten yessoensis;Hybrid Identification;ISSR
【中文摘要】利用ISSR-PCR(Inter Simple Sequence Repeats PCR)技术对栉孔扇贝♀和虾夷扇贝♂及其单对杂交子一代担轮幼虫进行分析,探讨该技术在扇贝杂种鉴定及亲缘关系分析中的应用。从20个ISSR引物中筛选出4个引物对栉孔扇贝♀、虾夷扇贝♂及其单对杂交子一代担轮幼虫进行PCR扩增,共得到153个清晰稳定的扩增位点,其中母本栉孔扇贝的特异位点有38个,父本虾夷扇贝的特异位点有32个。对ISSR扩增图谱的分析结果证实所研究的杂交子代是栉孔扇贝和虾夷扇贝的杂交种。杂交子代与母本栉孔扇贝的平均遗传相似性系数为0.6086,与父本虾夷扇贝的平均遗传相似性系数为0.4402,结果表明杂交子代在遗传上偏向于母本栉孔扇贝。
【英文摘要】ISSR-PCR(Inter Simple Sequence Repeats PCR)technique was used to analyse scallop Chlamys farreri(♀) and Patinopecten yessoensis(♂) and their hybrids in order to probe into the application of this technique in scallop hybrid identification and verifying the sibship between parents and hybrids. Four primers screened out from twenty ISSR primers were employed to amplify the genome DNA of Chlamys farreri(♀) and Patinopecten yessoensis(♂) and their hybrids.153 distinct and highly reproducible ISSR bands were detected, in which 38 bands were the special bands of Chlamys farreri(♀) and 32 bands were the special bands of Patinopecten yessoensis(♂). The results of analyzing the ISSR electrophoretogram confirmed that the filial generation do was the hybrids of Chlamys farreri(♀) and Patinopecten yessoensis(♂). The average genetic similarity coefficient between hybrids and Chlamys farreri(♀) was 0.6086, and the average genetic similarity coefficient between hybrids and Patinopecten yessoensis(♂) was 0.4402, which indicated that the hybrids were genetically closer to their maternal stock Chlamys farreri(♀).

【题目】The quanti fi cation of tomato microRNAs response to viral infection by stem-loop
【中文关键词】番茄
【英文关键词】tomato
【中文摘要】番茄
【英文摘要】MicroRNAs (miRNAs) are RNA molecules consisting of 20 – 24 nucleotides that play important roles inregulating plant's gene expression for growth and development, cell viability and stress responses. Viralinfection often has a noticeable in fl uence on host gene expression, which may result in a range ofdevelopmental abnormalities. To investigate the molecular mechanisms underlying viral infection, miRNApathway and host gene expression, we report herein the application of the novel miRNAs quanti fi cationmethod in tomato, using a stem-loop reverse transcription followed by SYBR Green PCR assay. For the seventested miRNAs of Solanum lycopersicum, which are related to the regulation of plant development, hormoneresponse, and their own biogenesis, this quanti fi cation method showed high sensitivity, speci fi city, and widedynamic range. Precise quanti fi cation could be achieved with as little as 0.01 ng of total RNAs for most cases.Additionally, their target mRNAs could be quanti fi ed from the same RNA sample simultaneously, by theconventional real-time RT-PCR assay. In comparison with mock inoculation, accumulation levels of the testedmiRNAs and target mRNAs were found obviously altered in tomato seedlings, indicating that the miRNApathway was interrupted by Cucumber mosaic virus and Tomato aspermy virus infection

【题目】Identi fi cation of conserved microRNAs and their targets from
【中文关键词】microRNA鉴定
【英文关键词】Identi fi cation of conserved microRNAs
【中文摘要】microRNA鉴定
【英文摘要】MicroRNAs (miRNAs) are a class of highly conserved endogenous non-coding small RNAs crossing kingdomsof organisms. By searching known miRNAs identi fi ed from plant species against tomato nucleotidesequences, 13 pre-miRNAs of the nine mature miRNAs were found, amongst, six had been cloned. To con fi rmour prediction, a miRNA-detecting microarray was designed with probes complementary to all non-redundant mature plant miRNAs documented to date. After hybridizing with small RNAs extracted fromtomato leaf tissue, 78 highly expressed mature miRNAs were detected, including all the miRNAs predictedabove. Conformation of some miRNAs expression by Northern hybridization indicated that they were highlyaccumulated not only in leaf tissues but also in roots and stems. Additional BLAST searches with newlyrecognized miRNAs against tomato mRNAs from NCBI yielded 23 potential targets mainly associated with thephase change from vegetative to generative growth, with fl ower development and with responding to planthormone and virus stress.

【题目】微卫星评价栉孔扇贝雌核发育二倍体纯合性
【中文关键词】栉孔扇贝; 雌核发育;微卫星; 纯合性
【英文关键词】Chlamys farreri; Gynogenesis; Microsatellite marker; Homozygosity
【中文摘要】用5个微卫星座位分别对栉孔扇贝减数分裂雌核发育二倍体家系A和家系B、有丝分裂雌核发育二倍体家系A和家系B的纯合性进行检验。电泳结果表明,5对引物在减数分裂雌核发育和有丝分裂雌核发育个体中均能稳定重复地扩增出相应的序列。随引物不同,各等位基因数为6~13个,大小在125~251bp之间。有丝分裂雌核发育二倍体在所有检测座位全部纯合。减数分裂雌核发育二倍体在部分座位纯合,未发现所有座位全部纯合的个体,在CFMSP007、CFMSP075、CFMSM009、CFMSM014和CFMSM020座位,杂合子比例分别为0.3400、0.3611、0.4884、0.4750和0.7500,平均杂合子比例为0.4829。研究结果显示,栉孔扇贝有丝分裂雌核发育二倍体一代即可形成纯合子;减数分裂雌核发育二倍体由于具有较高的重组率,使其与母本的遗传同质性略高。
【英文摘要】Gynogenesis was thought to be a valuable genetic tool for the rapid production of inbred lines in scallop. In this study, analysis of 5 heterozygous loci in Chlamys farreri was used to measure the increment of homozygosity in meiogynogenetic diploid (Meiotic-A and Meiotic-B) and mitogynogenetic diploid (Mitotic-A and Mitotic-B). Electrophoretic patterns showed that the 5 pairs of microsatellite primers all produced well-identifiable DNA fragments. The number of alleles per marker varied from 6 to 13, and the size of alleles ranged from 125bp to 251bp. The results showed all homozygosity in Mitotic-A and Mitotic-B, while a high percentage of heterozygosity in Meiosis-A and Meiosis-B. The rate of heterozygosity in meiogynogenetic progenies at the locus of CFMSP007, CFMSP075, CFMSM009, CFMSM014 and CFMSM020 were 0.3400, 0.3611, 0.4884, 0.4750 and 0.7500, respectively. The average heterozygous rate of these 5 loci was 0.4829. The high proportion of heterozygosity for 5 loci demonstrates that it is not a practical method for producing homozygous inbred lines in the gynogenetic scallop produced by retention the second polar body; and treatments of suppressing the first cell division were more promising for this purpose.

【题目】Molecular characterization and evolutionary analysis
【中文关键词】大豆花叶病毒
【英文关键词】Soybean mosaic virus
【中文摘要】大豆花叶病毒
【英文摘要】Twenty-nine Pinellia ternata specimens werecollected from representative areas in China, including themajor production provinces of Zhejiang, Henan, Shanxi,Hunan, Shandong and Hubei. Seven isolates related tosoybean mosaic virus (SMV), which could be pathogenicon P. ternata and some soybean [Glycine max (L.) Merr.]cultivars, were detected using double antibody sandwichimmunosorbent assay (DAS-ELISA) and RT-PCR ampli- fi cation performed with degenerate primer of potyviruses.It is revealed that the common potyvirus infecting P. ter-nata is, indeed, only SMVs rather than Dasheen mosaicvirus (DsMV) as previously reported. Further molecularphylogenetic analysis of the coat protein (CP) genes ofthese SMV isolates from P. ternata and G. max, along withsome other potyvirus members, such as DsMV andWatermelon mosaic virus (WMV) reconstructed the evo-lutionary route on both nucleotide and amino acid levels.Similarity and homology of nucleotide sequences for SMVCP genes demonstrated high host correlation and lowpartial habitat correlation, while those of amino acidsequences also showed that the host correlation was morenotable than the habitat correlation. The amino acidsequence of conserved region within CP determines themain function, which shows high homology between spe-cies. This study outspreaded from the viruses themselvesand their relationship to the infected hosts and revealed theevolutionary strategies, especially the rapid variation orrecombination of SMV of P. ternata, in order to adapt itselfnaturally to the special host.

【题目】扇贝精子及卵子的受精生物学特性
【中文关键词】扇贝 精子 卵子 卵水 顶体反应 皮层反应
【英文关键词】scallop sperm egg egg water
acrosome reaction cortical reaction
【中文摘要】采用扫描电子显微镜和普通光学显微镜观察方法,以及全光谱扫描分析方法,对栉孔扇贝和虾夷扇贝的精子及卵子的受精生物学特性进行了详细的观察,包括精卵产出后形态学变化、卵水的特性、精子顶体反应、卵子皮层反应以及精子分级分离组分对卵子的作用等5个方面。结果表明,这两种扇贝精卵生物学特性没有本质的区别,扇贝精子排入海水中10min以内,外形没有太大的变化,但30min以后约有1/4的精子出现头部膨大变成圆球形的现象,受精能力明显下降;扇贝卵子产入海水中1h以内受精能力没有变化,但2h以后,约1/3的卵子出现卵裂现象,未见极体的排放,且卵裂多停止在2细胞期,少数达到4细胞期,基本属于均等卵裂,并失去受精能力;滴入卵水中的精子极易发生自溶解体,未解体的精子发生凝集,10min之后的卵水中基本上检测不到完整的精子,卵水和钙离子载体 A23187 均能诱导精子发生顶体反应;精子分级分离组分分别为精浆、精子头部和精子尾部,这三部分除了少数精子头部能够附着在卵子表面外,其他都不具备激活卵子的作用。对扇贝精子和卵子的生物学特性的研究将为解释不同种扇贝的精卵相互识别并受精的现象提供基础资料。
【英文摘要】By the way of spectrum scanning analysis and insemination, biology characteristic of eggs and sperms in two scallop species Patinopecten yessoensis and Chlamys farreri were observed amply by using both electronic microscopes and optical microscopes, consist of the following five parts: morphological changes of gametes after spawn or spermiation, egg water characteristic,

sperm acrosome reaction, egg cortical reaction and the effect to the eggs of the sperm fractional separation products. The results indicated that: There were no significant biology characteristic difference between Patinopecten yessoensis and Chlamys farreri, and no significant appearances changes in the scallop sperms within 10min after spermiation into the seawater; 30 minutes later, 1/4 of the sperms became head-enlargement going near to sphericity and the fertilization ability declined. While the fertilization ability of scallop eggs had no changes within 1 hour after spawning into the seawater; 2 hours later, about 1/3 of eggs became cleavage but with no polar body appearing. Most of eggs cleavage stoped at 2-cell stage and few to 4-cell stage, which belonged to equal cleavage and had lost the fertilization ability already. Most sperms dropped into the egg water were easy to autolyze, yet the disintegration sperms presented agglutination.There were no complete form individuals after the sperms were dropped into the egg water for 10 minutes, in that both the egg water and calcium ionophone A23187 can induce the sperm acrosome reaction. The sperm fractional separation products, including seminal plasma, sperm head and sperm tail, couldn ' t activate the eggs except of that few sperm heads could adhere itself to the surface of eggs. The research on biology characteristics of eggs and sperms in scallops provided the basic data for explanation why sperms and eggs from different species of scallops can recognize each other and fertilize.

【题目】栉孔扇贝和虾夷扇贝通用微卫星引物的筛选及其在杂种鉴定中的应用
【中文关键词】栉孔扇贝 虾夷扇贝 通用性 SSR 杂种鉴定
【英文关键词】Chlamys farreri;Patinopecten yessoensis;SSR;Universal Primers;Hybrid identification
【中文摘要】将25对在虾夷扇贝中PCR扩增具多态性的微卫星引物对栉孔扇贝基因组DNA上进行PCR扩增,筛选出6对(约占24%)引物获得扩增产物,其中2对(约占8%)表现为多态性。将这6对具有属间通用性的微卫星引物对栉孔扇贝(♀)×虾夷扇贝(♂)进行PCR扩增,均能扩增出特异性条带,其中引物P13F449和KMY134的扩增产物中可以明显的分辨出来自父母本群体的特有条带,从而确定了杂交子代的杂种身份。这些结果表明,虾夷扇贝和栉孔扇贝间通用微卫星标记是存在的,而且部分引物可以直接用于属间杂种的鉴定。
【英文摘要】The study aimed to provide the base for hybrid identification of patinopecten yessoensis×Chlamys farreri population and paternity testing in family in great scale. Twenty-five pairs of reported microsatellite primers from P. yessensis were made for PCR amplification on the genome DNA of C. farreri and hybrid identification of C. farreri(♀)×P. yessoensis(♂) were made by using the selected universal microsatellite primers. Through PCR amplification, six pairs of primers were selected and their amplifying products were obtained, with 2 pairs being polymorphic. when C. farreri(♀)×P. yessoensis(♂) were tested by using 6 pairs of microsatellite primers which could be applied to both the two kinds of scallops, the specific bands could be amplified from each one of the 6 pairs,among which, the specific bands from both agnate and maternal colony could be distinguished obviously in the amplified products of P13F449 and KMY134,and accordingly the hybrid identity of hybrid generations could be affirmed. It was proved that there was certain microsatellite primers that could be applied to both C.farreri and P. yessoensis and some of the primers could be directly used for the identification of intergeneric hybrid.

【题目】虾夷扇贝精子形态结构和超低温冷冻损伤的电镜观察

【中文关键词】虾夷扇贝 精子 冷冻损伤 超微结构
【英文关键词】Patinopecten yessoensis Spermatozoa Cryodamge Ultrastructure
【中文摘要】应用透射电镜和扫描电镜技术,研究了超低温冷冻保存前后虾夷扇贝精子超微结构和形态的变化。结果显示,虾夷扇贝精子由头部、中段和尾部三部分组成,外被光滑质膜;顶体位于头部最前端,呈倒“v”形,细胞核近似圆柱状,电子密度较高;4个线粒体和2个相互垂直的中心粒构成了精子的中段;鞭毛细长,轴丝为典型的“9+2”结构。经超低温冷冻保存后,冷冻损伤的精子表现为:精子被膜肿胀、被膜与核膜分离、丢失;顶体破裂、内容物流出;线粒体解体、线粒体嵴变形;鞭毛被膜肿胀、部分精子鞭毛脱落。可以推测,超低温冷冻保存对精子膜、顶体、线粒体和鞭毛的损伤导致了冻精活力和受精能力的下降。
【英文摘要】Electron microscopy was used to investigate the changes in morphology and ultrastructure of Patinopecten yessoensis (Jay.) sperm after cryopreservation. The fresh sperm covered with the smooth plasma membrane, consists of head, mid-piece and tail. The acrosome takes a shape of upside-down V and locates at the top of the head. Under the acrosome, the nucleus is column-shaped with a high electron density. Four mitochondria and tow upright centrioles form the mid-piece. The flagellum is thin and long with a typical “9+2” microtubular structure. Cryodamages on post-thaw sperm were embodied as follows: the plasma membrane swelled, separated from nuclear membrane, and the acrosome disrupted and its inclusion lost, and some mitochondria lost external membrane, accompanied by the disaggregation of mitochondria or the deformation of mitochondria cristae. Furthermore, flagellum’s absence and its membrane swelling were also observed in post-thaw sperm. Cryodamages on plasma membrane, acrosome, mitochondria and flagellum probably caused the decrease in motility and fertility of the cryopreserved sperm.

【题目】虾夷扇贝精子的主要生理特性与低温保存
【中文关键词】虾夷扇贝 栉孔扇贝 低温保存 杂交
【英文关键词】Patinopecten yessoensis Chlamys farreri short-term storage hybrid
【中文摘要】对虾夷扇贝精子的生理特性和低温保存进行了研究。结果表明,虾夷扇贝精子的最适盐度范围为23.2~32,最适酸碱度范围为pH7.0~8.5。在4℃环境下,未稀释精液样品保存5d后,精子仍有26±4%的活力,而经海水稀释后的精液保存70h后,最高活力仅为11±1.41%,用抗冻液稀释的精液,4℃保存5小时后,得到最高的精子活力仅为24.7±4.16%。添加抗冻剂后在-18℃的保存效果明显低于4℃保存的未稀释样品。用4℃保存的未稀释精液与栉孔扇贝卵子进行杂交试验,保存3d内的精子获得的授精率与对照组相比差异不显著(p>0.05)。杂交组的幼虫可以正常发育至D形幼虫,与自交组没有区别。
【英文摘要】In the present paper ,main physiological characteristics and short-term storage of Patinopectern yessoensis sperm were studied. The results indicated that:the optimum salinity and pH values of spermatozoa wre 23.2~32 and 7.0~8.5 respectivity. The undiluted sperm was extended for 5 days of cold storage, On the contrast, the highest motility of diluted sperm by seawater preserved for 70h at 4°C was only 11±1.41% ;After 5h in 4°C refrigeratory ,the sperm diluted by cryoprotectend-extenders lost all most motily (only 24.7±4.16%).The effect of -18 °C on short-term storage of P. yessoensis sperm were significantly lower than that of 4 °C(undiluted sperm)(p<0.05). In fertilization trails of C. farreri eggs with P. yessoensis sperm preserved for 3 days at 4°C, 59.7±5.1% fertilization rate was obtained, which was similar to controls(71.8±3.4% and 68.1±11%)(p>0.05). No siginificant difference was found between larve of hybridized group and that of controls.

【题目】不同繁育方式蟹苗对1龄蟹种培育效果的影响
【中文关键词】选育亲蟹;蟹苗;蟹种培育
【英文关键词】breeding crab, crab fry, crab seedling, crab seedling rearing
【中文摘要】采用♀亲蟹平均规格分别为158.9g、132.8g,♂亲蟹平均规格为180g、150g两种群体繁育的蟹苗培育的1龄蟹种.其群体规格分别为128只/kg、160只/kg。在面积相同、放养密度相同、饲养条件相同的条件下,采用天然海水土池繁育的蟹苗培育的1龄蟹种成活率为5.1%、亩产蟹种8064只;而采用天然海水工厂化繁育的蟹苗,育种成活率为2.24%、亩产蟹种3609只;在蟹苗来源相同、饲养管理相同,培育池面积为19亩的培育池蟹种产量低于面积5亩的池塘。
【英文摘要】Abstract: The results showed that the average size of seedling grown from fry was 128 and 160 seedlings per kilogram, respectively, when the average body weights of crab parents were 158.9g and 132.8g for female, and 180g and 150g for male. Under the same conditions of area, stocking density and rearing method, survival rate from fry to seedling was 5.1%, which the fry was produced in natural seawater pond, and 8064 seedlings per mu were obtained. And survival rate was 2.24%, which the fry was produced in natural seawater factory, and 3609 seedlings per mu were obtained. Under the same conditions of fry and breeding management the seedling production in 19 mu of culturing pond was lower than that one in 5 mu.

【题目】不同湖泊养殖中华绒螯蟹脂肪酸组成比较分析
【中文关键词】中华绒螯蟹;湖泊养殖品牌;可食部分;脂肪酸组成
【英文关键词】Eriocheir sinensis, Brand crabs produced in lakes, Edible portions, Fatty acid
【中文摘要】为探明在不同生态环境条件下养殖中华绒螯蟹的品质,采用气相色谱法对江苏境内八大湖泊养殖品牌河蟹可食部分脂肪酸组成进行比较分析,结果表明,八大湖泊养殖中华绒螯蟹可食部分含18种脂肪酸,其中饱和脂肪酸(SFA)5种,单烯酸(MUFA)3种,多烯酸(PUFA)10种。雌蟹SFA含量,以大纵湖蟹最高,与阳澄湖蟹、洪泽湖蟹差异达显著水平($p<0.05$);雄蟹SFA含量,以长荡湖蟹最高,与阳澄湖蟹差异达极显著水平($p<0.01$)。MUFA含量,雌蟹以大纵湖蟹最高,与长荡湖蟹、阳澄湖蟹、洪泽湖蟹差异达显著水平($p<0.05$);雄蟹以大纵湖蟹最高,与阳澄湖蟹、洪泽湖蟹差异达显著水平($p<0.05$)。PUFA含量,雌蟹以固城湖蟹最高,与洪泽湖蟹差异达极显著水平($p<0.01$);雄蟹以固城湖蟹最高,与阳澄湖蟹差异达极显著水平($p<0.01$)。
【英文摘要】Abstract: The proximate composition and fatty acid composition of crabs (Eriocheir sinensis) cultured in different ecological conditions were analyzed and compared with capillary gas chromatography. The results showed that 18 kinds of fatty acids were present in the edible part of the crabs cultured in different lakes of Jiangsu Province. Saturated fatty acids (SFA) five, single acid (MUFA)3, Polyunsaturated fatty acids (PUFA)10.SFA content in female, Dazhonghu, crab with the highest, was significantly ($p<0.05$) greater than that of Yangcheng, and Hongze , crab; in male, Changdang, crab with the highest level, was significantly ($p<0.01$) greater than that of Yangcheng, crabs. MUFA content in female, Dazhonghu, crab with the highest, was significantly ($p<0.05$) greater than that of Changdang, crab、 Yangcheng lake crab and Hongze, crab; in male, Dazhonghu, crab with the highest, was significantly ($p<0.05$) greater than that of Yangcheng, and Hongze, crab. PUFA content in female, Guchenghu, crab with the highest level, was significantly ($p<0.01$) greater than that of Hongze, crab; in male, Dazhonghu, crab with the highest, was significantly ($p<0.01$) greater than that of Yangcheng, crab.

【题目】6-DMAP诱导栉孔扇贝二倍体诱导机理研究
【中文关键词】栉孔扇贝;6-DMAP;免疫荧光染色;纺锤体
【英文关键词】Chlamys farreri , 6-DMAP, Immunofluorecence staining,Spindle
【中文摘要】采用多聚甲醛固定、免疫荧光染色的方法,在荧光显微镜下对栉孔扇贝(Chlamys farreri)正常发育受精卵和6-DMAP第二极体抑制型雌核发育卵受精过程中纺锤体变化以及雌雄原核的移动过程进行了观察。结果显示,正常发育受精卵内微管能聚合形成纺锤体并牵引中期染色体移向两极,依次排出第一极体、第二极体,雌雄原核融合为合子核,进行第一次卵裂。雌核发育受精卵内,随6-DMAP处理时间的延长,星体微管消失,纺锤体被拉长变得扁平,最终导致中期纺锤体解散,第二极体的形成被抑制;6-DMAP处理过程中,受精卵中的精核始终处于皮层区域,不能形成雄原核,雌原核和精核几乎不移动,去除6-DMAP后,雌原核和精核恢复移动,但移动速度与对照组相比要慢。
【英文摘要】The effects of 6-DMAP on assembly of microtubules and pronuclear migration between normal and gynogenetic fertilized eggs of Chlamys farreri were studied carefully by direct immunofluorescence with anti-tubulin. According to observation, chromosomes were segregated by spindle, the first and the second polar bodies were emitted and the female and the male pronuclei fused into zygotonuceus in normal eggs. Treatment of eggs at metaphase-anaphase stages caused drastic modifications of the spindle organization. The anti-tubulin staining revealed that soon after addition of 60ug/mL 6-DMAP, outwards astral fibers were no longer detected, whereas the spindle showed elongation and flattening. Finally 6-DMAP induced a significant disorganization of the spindle at the metaphase of meiosis II, the formation of the second polar body was inhibited effectively. The fertilized eggs raised in the presence of 6-DMAP did not show any further pronuclear movements. when the treated eggs were washed and further maintained in fresh water ,migration resumed at a slower rate than in normal eggs.

【题目】2种壳色虾夷扇贝的形态学指标比较分析
【中文关键词】虾夷扇贝; 壳尺寸性状; 壳色; 通径分析; 回归方程
【英文关键词】Patinopecten yessoensis; shell traits; shell colors; path analysis; regression equation
【中文摘要】本文通过测定白/褐两种壳色虾夷扇贝的壳尺寸性状指标:壳长(X1)、壳宽(X2)、壳高(X3)及其和活体重(W),比较了两种壳色之间的壳尺寸性状差异,并分析两者的壳尺寸性状与活体重间的相关关系,从而确定壳性状对活体重的直接影响和间接影响,最后建立了壳性状和活体重的最优多元回归方程。结果表明,白色贝和褐色贝的壳宽之间存在显著差异(P<0.05),活体重之间存在极显著的差异(P<0.01),两者的壳长、壳高、壳宽与活体重均有极显著的相关关系(P<0.01)。白色贝的壳宽对活体重的直接影响最大,褐色贝的壳长对活体重的直接影响最大,白色贝和褐色贝的壳性状对活体重的回归方程分别为:Y= -0.154+0.008X1+0.011X2+0.033X3和Y=-0.190+0.022X1+0.033X3,可为虾夷扇贝的定向选育提供理论依据。
【英文摘要】The shell length(X1),the shell height(X2),the shell width(X3),and the live body weight(W) of two kinds of shell colors of Japanese Scallop Patinopecten yessoensis were measured. The traits between white scallops and brown scallops were compared, the correlation between shell traits and live body weight was calculated, and the direct and indirect effect on the live body weight was analyzed in each group, and the optimum regression equations were established respectively. The results showed that the shell width had significant difference between white scallops and brown scallops(P<0.05), and the live body weight had very significant difference between them(P<0.01). The correlations between shell traits and live body weight were all very significant difference(P<0.01). The shell width gave predominant direct effect on the live body weight in white scallops, the shell length gave predominant direct effect on the live body weight in brown scallops. Finally, the multiple regression equations of white scallops and brown scallops were established to estimate the live body weight by shell traits, Y= -0.154+0.008X1+0.011X2+0.033X3 and Y=-0.190+0.022X1+0.033X3. Those will provide theoretical evidences for further directional selection of Japanese Scallop.

【题目】A reusable method for construction of non-marker large fragment deletion yeast auxotroph strains: A practice in Torulopsis glabrata
【中文关键词】Fusion PCR,Nystatin enrichment,Auxotroph screening,Gene knockout,Candida glabrata
【英文关键词】Fusion PCR,Nystatin enrichment,Auxotroph screening,Gene knockout,Candida glabrata
【中文摘要】A reusable method for construction of yeast auxotrophic mutants with large deletions that do not contain markers was developed and successfully applied to a pyruvate overproducing yeast strain, Torulopsis glabrata CCTCC M202019. A URA3 knockout fragment with a large deletion of the open reading frame and long homologous arms was constructed by fusion PCR and transformed into the parent strain by high-ef fi ciency electroporation. A high concentration of transformed yeast was achieved by subsequently culturing in rich medium for 24 h and in nitrogen-free minimal medium for 4 h. Potential Δura3 auxotrophic mutants were enriched by treatment with nystatin and selection on uracil-limited medium. Mutants were con fi rmed by streaking cultures and colony PCR. Δarg8 and Δura3Δarg8 double auxotroph mutants were also successfully constructed using this method.

【题目】ATP in current biotechnology: Regulation, applications and perspectives
【中文关键词】ATP synthase,Metabolic engineering,Cofactor engineering,Biotechnology process optimization,Energy metabolism
【英文关键词】ATP synthase,Metabolic engineering,Cofactor engineering,Biotechnology process optimization,Energy metabolism
【中文摘要】Adenosine tri-phosphate (ATP), the most important energy source for metabolic reactions and pathways, plays a vital role in the growth of industrial strain and the production of target metabolites. In this review, current advances in manipulating ATP in industrial strains, including altering NADH availability, and regulating NADH oxidation pathway, oxygen supply, proton gradient, the electron transfer chain activity and the F0F1-ATPase activity, are summarized and discussed. By applying these strategies, optimal product concentrations, yields and productivity in industrial biotechnology have been achieved. Furthermore, the mechanisms by which ATP extends the substrate utilization spectra and enhances the ability to challenge harsh environmental stress have been elucidated. Finally, three critical issues related to ATP manipulation have been addressed.

【题目】Enhancement of pyruvate productivity by inducible expression of a F0F1-ATPase inhibitor INH1 in Torulopsis glabrata CCTCC M202019
【中文关键词】ATP synthase inhibitor,Candida glabrata,EGFP,INH1,Glycolytic pathway
【英文关键词】ATP synthase inhibitor,Candida glabrata,EGFP,INH1,Glycolytic pathway
【中文摘要】The aim of this study is to establish a controllable intracellular ATP content regulation system applied to the enhancement of pyruvate production in Torulopsis glabrata. The INH1 gene, which encodes a F0F1-ATPase inhibitor from Saccharomyces cerevisiae, was expressed under a copper ion inducible promoter in the pyruvate producer Torulopsis glabrata CCTCC M202019. The resultant strain was designated as T. glabrata INH1. The induction ef fi ciency was measured by the inducible expression of an enhanced green fl uorescence protein. The copper inducible INH1 gene could control the intracellular ATP content (24 h) in an extensive range between 0.192mmol/mg protein and 0.642mmol/mg protein in a fl ask culture. With T. glabrata INH1, induction with

30 μ M of Cu2+ at 12 h in a 3 L fermentor improved pyruvate yield from glucose on biomass by 29% and its yield by 20%, respectively.

【题目】Improved ATP supply enhances acid tolerance of Candida glabrata during pyruvic acid production
【中文关键词】acid tolerance, citrate, pH gradient, Torulopsis glabrata.
【英文关键词】acid tolerance, citrate, pH gradient, Torulopsis glabrata.
【中文摘要】Aims: A major problem in industrial fermentation of organic acids with microorganisms is to ensure a suitable pH in the culture broth. To circumvent this problem, we investigated the effect of citrate, which is a widely used auxiliary energy co-substrate, on cell growth, organic acid production and pH homeostasis among extracellular environment, cytoplasm and vacuole, in the pyruvic acid production by Candida glabrata CCTCC M202019 under different pH conditions.Methods and Results: Analysis of intracellular ATP regeneration, cytoplasmic and vacuolar pH values under different culture conditions points towards a relief of stress when C. glabrata is exposed to lower pH, if citrate is added. When 50 mmol/L citrate was added to the culture medium, the intracellular ATP concentrations increased by 20.5% (pH 5.5), 20.4% (pH 5.0) and 39.3% (pH 4.5), and higher pH gradients among the culture broth, cell cytoplasm and vacuoles resulted. As a consequence, the cell growth and pyruvic acid production of C. glabrata CCTCC M202019 were signi fi cantly improved under pH 5.0 and 4.5.Conclusions: The acid tolerance of yeast can be improved by enhancing the ATP supply, which helps to maintain higher pH gradients in the system. Signi fi cance and Impact of the Study: The results presented here expand our understanding of the physiological characteristics in eukaryotic micro-organisms under low pH conditions and provide a potential route for the further improvement of organic acids production process by process optimization or metabolic engineering.

【题目】Method to purify mitochondrial DNA directly from yeast total DNA
【中文关键词】Candida glabrata Yeast Mitochondrial DNA Puri fi cation
【英文关键词】Candida glabrata Yeast Mitochondrial DNA Puri fi cation
【中文摘要】During the puri fi cation of total DNA from yeast, both nuclear and mitochondrial DNA (mtDNA) molecules are obtained. Here, we describe a simple enzymatic method using acombination of k exonuclease and RecJf to obtain pure and intact mtDNA by removing linear DNA from total DNA isolated from yeast cells. The combination of the two enzymes ef fi ciently removed linear DNA from the total DNA of Candida (Torulopsis) glabrata, leaving the mtDNA intact. The purity and integrity of mtDNA was assayed by PCR ampli fi cation of ARG1/2/5/8, URA3 and COX1, and by RFLP analysis, respectively. This method can be used to prepare mtDNA for PCR ampli fi cation or RFLP analysis without the need for puri fi cation of mitochondria by gradient ultracentrifugation or fractional precipitation. The method was also successfully applied to the yeast species Saccharomyces cerevisiae, Candida utilis, Pichia pastoris and Yarrowia lypolytica.

【题目】Proline Enhances Torulopsis glabrata Growth during Hyperosmotic Stress
【中文关键词】Torulopsis glabrata, osmotic stress, proline, compatible solute, organic acid
【英文关键词】Torulopsis glabrata, osmotic stress, proline, compatible solute, organic acid
【中文摘要】This study investigated that the importing of compatible solute proline could enhance the growth of the yeast Torulopsis glabrata under hyperosmotic stress. Osmolarity progressively increased from 860 to 2,603 mOsmol/kg by accumulation of sodium pyruvate in the culture broth, leading to a significant decrease in cell growth. When 1.0 g/L of proline as a compatible solute was added to the culture medium, it was imported and enhanced cell growth by 59.0% at 2,603 mOsmol/kg. By addition of proline during pyruvate production, the concentration, productivity, and yield of pyruvate increased 22.1, 38.4, and 14.3%, respectively. These results suggested that T. glabrata can import proline as an osmoprotectant against high osmotic stress, thus enhance pyruvate productivity. The improvement of yeast growth and viability under hyperosmotic stress by the addition of proline provided an alternative approach to enhance the organic acids production by yeast.

【题目】Water-forming NADH oxidase protects Torulopsis glabrata against hyperosmotic stress
【中文关键词】Torulopsis glabrata; hyperosmotic stress; NADH oxidase; intracellular water
【英文关键词】Torulopsis glabrata; hyperosmotic stress; NADH oxidase; intracellular water
【中文摘要】A heterologous water-forming NADH oxidase was introduced into Torulopsis glabrata and the effect on cell growth under hyperosmotic conditions was investigated.Expression of the noxE gene from Lactococcus lactis NZ9000 in T. glabrata resulted in a marked decrease in the NADH:NAD+ ratio and higher activities of key enzymes in water-regenerating pathways, leading to an increase in intracellular water content. NaCl-induced reactive oxygen species production was also decreased by the introduction of NADH oxidase, resulting in a signi fi cant increase in the growth of T. glabrata under hyperosmotic stress conditions (3824 mOsmol/kg). The results indicated that the osmotolerance of cells can be enhanced by manipulating water- production pathways.

【题目】Enhancement of [alpha]-ketoglutarate production in Torulopsis glabrata: Redistribution of carbon flux from pyruvate to [alpha]-ketoglutarate
【中文关键词】α-ketoglutarate; Torulopsis glabrata; pyruvate
【英文关键词】α-ketoglutarate; Torulopsis glabrata; pyruvate
【中文摘要】This manuscript aimed at increasing the production of α-ketoglutarate by the multi-vitamin auxotrophic yeast Torulopsis glabrata CCTCC M202019. The carbon flux was redistributed from pyruvate to α-ketoglutarate node by manipulating the specific activity of pyruvate dehydrogenase complex (PDH), pyruvate carboxylase (PC), pyruvate decarboxylase (PDC), and α-ketoglutarate dehydrogenase complex (KGDH). By proper increase of PDH, PC, and PDC activities, α-ketoglutarate in fermentation broth could be accumulated to the levels of 17.1 g/L, 21.6 g/L, and 31.2 g/L, respectively. In addition, decrease in the specific activity of KGDH also resulted in an enhanced α-ketoglutarate synthesis. With a proposed combinational enzymes regulation strategy, the highest α-ketoglutarate concentration of 37.7 g/L was achieved.

【题目】Mitochondrial DNA Heteroplasmy in Candida glabrata after Mitochondrial Transformation
【中文关键词】Mitochondrial DNA Heteroplasmy; Candida glabrata; α-ketoglutarate
【英文关键词】Mitochondrial DNA Heteroplasmy; Candida glabrata; α-ketoglutarate
【中文摘要】Genetic manipulation of mitochondrial DNA (mtDNA) is the most direct method for investigating mtDNA, but until now, this has been achieved only in the diploid yeast Saccharomyces cerevisiae. In this study, the ATP6 gene on mtDNA of the haploid yeast Candida glabrata (Torulopsis glabrata) was deleted by biolistic transformation of DNA fragments with a recoded ARG8m mitochondrial genetic marker, flanked by homologous arms to the ATP6 gene. Transformants were identified by arginine prototrophy. However, in the transformants, the original mtDNA was not lost spontaneously, even under arginine selective pressure. Moreover, the mtDNA transformants selectively lost the transformed mtDNA under aerobic conditions. The mtDNA heteroplasmy in the transformants was characterized by PCR, quantitative PCR, and Southern blotting, showing that the heteroplasmy was relatively stable in the absence of arginine. Aerobic conditions facilitated the loss of the original mtDNA, and anaerobic conditions favored loss of the transformed mtDNA. Moreover, detailed investigations showed that increases in reactive oxygen species in mitochondria lacking ATP6, along with their equal cell division, played important roles in determining the dynamics of heteroplasmy. Based on our analysis of mtDNA heteroplasmy in C. glabrata, we were able to generate homoplasmic atp6 mtDNA strains.
【英文摘要】Genetic manipulation of mitochondrial DNA (mtDNA) is the most direct method for investigating mtDNA, but until now, this has been achieved only in the diploid yeast Saccharomyces cerevisiae. In this study, the ATP6 gene on mtDNA of the haploid yeast Candida glabrata (Torulopsis glabrata) was deleted by biolistic transformation of DNA fragments with a recoded ARG8m mitochondrial genetic marker, flanked by homologous arms to the ATP6 gene. Transformants were identified by arginine prototrophy. However, in the transformants, the original mtDNA was not lost spontaneously, even under arginine selective pressure. Moreover, the mtDNA transformants selectively lost the transformed mtDNA under aerobic conditions. The mtDNA heteroplasmy in the transformants was characterized by PCR, quantitative PCR, and Southern blotting, showing that the heteroplasmy was relatively stable in the absence of arginine. Aerobic conditions facilitated the loss of the original mtDNA, and anaerobic conditions favored loss of the transformed mtDNA. Moreover, detailed investigations showed that increases in reactive oxygen species in mitochondria lacking ATP6, along with their equal cell division, played important roles in determining the dynamics of heteroplasmy. Based on our analysis of mtDNA heteroplasmy in C. glabrata, we were able to generate homoplasmic atp6 mtDNA strains.

【题目】Enhancement of pyruvate production by osmotic-tolerant mutant of Torulopsis glabrata
【中文关键词】Torulopsis glabrata; pyruvate; NaCl-tolerance
【英文关键词】Torulopsis glabrata; pyruvate; NaCl-tolerance
【中文摘要】Pyruvate production by Torulopsis glabrata was used as a model to study the mechanism of product inhibition and the strategy for enhancing pyruvate production. It was found that the concentration of cell growth and pyruvate deceased with the increase of NaCl and sorbitol concentrations. To enhance the osmotic stress resistance of the strain, an NaCl-tolerant mutant RS23 was screened

and selected through a pH-controlled continuous culture with 70 g/L NaCl as the selective criterion. Compared with the parent strain, mutant RS23 could grow well on the medium containing 70 g/L NaCl or 0.6 mol/L sorbitol. Pyruvate concentration by the mutant strain RS23 reached 94.3 g/L at 82 h (yield on glucose 0.635 g/g) in a 7-l fermentor with 150 g/L glucose as carbon source. Pyruvate concentration and yield of mutant RS23 were 41.1% and 11.1% higher than those of the parent strain, respectively. The strategy for enhancing pyruvate production by increasing osmotic stress resistance may provide an alternative approach to enhance organic acids production with yeast.

【题目】Redistribution of carbon fl ux in Torulopsis glabrata by altering vitamin and calcium level

【中文关键词】Torulopsis glabrata; Carbon flux; Cofactor; α-ketoglutaric acid

【英文关键词】Torulopsis glabrata; Carbon flux; Cofactor; α-ketoglutaric acid

【中文摘要】Manipulation of cofactor (thiamine, biotin and Ca2+) levels as a potential tool to redistribute carbon flux was studied in Torulopsis glabrata. With sub-optimization of vitamin in fermentation medium, the carbon flux was blocked at the key node of pyruvate, and 69 g/L pyruvate was accumulated. Increasing the concentrations of thiamine and biotin could selectively open the valve of carbon flux from pyruvate to pyruvate dehydrogenase complex, the pyruvate carboxylase (PC) pathway and the channel into the TCA cycle, leading to the over-production of α-ketoglutarate. In addition, the activity of PC was enhanced with Ca2+ present in fermentation medium. By combining high concentration's vitamins and CaCO3 as the pH buffer, a batch culture was conducted in a 7-L fermentor, with the pyruvate concentration decreased to 21.8 g/L while α-ketoglutarate concentration increased to 43.7 g/L. Our study indicated that the metabolic flux could be redistributed to overproduce desired metabolites with manipulating the cofactor levels. Furthermore, the manipulation of vitamin level provided an alternative tool to realize metabolic engineering goals.

【题目】Biochemical characterization of GDP-l-fucose de novo synthesis pathway in fungus Mortierella alpine
【中文关键词】Mortierella alpina; GDP-l-fucose; Fucosylation; GDP-d-mannose 4,6-dehydratase; GDP-keto-6-deoxymannose 3,5-epimerase/4-reductase
【英文关键词】Mortierella alpina; GDP-l-fucose; Fucosylation; GDP-d-mannose 4,6-dehydratase; GDP-keto-6-deoxymannose 3,5-epimerase/4-reductase
【中文摘要】Mortierella alpina is a filamentous fungus commonly found in soil, which is able to produce large amount of polyunsaturated fatty acids. l-Fucose is an important sugar found in a diverse range of organisms, playing a variety of biological roles. In this study, we characterized the de novo biosynthetic pathway of GDP-l-fucose (the nucleotide-activated form of l-fucose) in M. alpina. Genes encoding GDP-d-mannose 4,6-dehydratase (GMD) and GDP-keto-6-deoxymannose 3,5-epimerase/4-reductase (GMER) were expressed heterologously in Escherichia coli. The recombinant enzymes were produced as His-tagged fusion proteins. Conversion of GDP-mannose to GDP-4-keto-6-deoxy mannose by GMD and GDP-4-keto-6-deoxy mannose to GDP-l-fucose by GMER were analyzed by capillary electrophoresis, electro-spray ionization-mass spectrometry, and nuclear magnetic resonance spectroscopy. The km values of GMD for GDP-mannose and GMER for GDP-4-keto-6-deoxy mannose were determined to be 0.77 mM and 1.047 mM, respectively. Both NADH and NADPH may be used by GMER as the coenzyme. The optimum temperature and pH were determined to be 37 ° C and pH 9.0 (GMD) or pH 7.0 (GMER). Divalent cations are not required for GMD and GMER activity, and the activities of both enzymes may be enhanced by DTT. To our knowledge this is the first report on the characterization of GDP-l-fucose biosynthetic pathway in fungi.

【题目】Asymmetric biosynthesis of (1S, 2S)-ephedrine by Morganella morganii CMCC(B)49208

【中文关键词】Ephedrine, stereoselective reduction, Morganella morganii, bioconversion

【英文关键词】Ephedrine, stereoselective reduction, Morganella morganii, bioconversion

【中文摘要】(1S, 2S)-Ephedrine, one of the four ephedrine isomers, is a common pharmacological agent; however, it is difficult to synthesize in a stereospecific manner using traditional organic synthesis. In this paper, a novel enzymatic process was developed for the stereoselective synthesis of (1S, 2S)-ephedrine. Morganella morganii CMCC(B)49208 was found to asymmetrically reduce the prochiral carbonyl compound 1-phenyl-1-oxo-2-methylaminopropane (MAK) to optically pure (1S, 2S)-ephedrine which was measured with thin layer chromatography (TLC) and high performance liquid chromatography (HPLC) technologies. In addition, a conversion process using air-dried M. morganii CMCC(B)49208 cells was developed to produce (1S, 2S)-ephedrine at a final concentration of 0.852 gL-1 (>99% ee) and 84.4% molar yield.

【题目】植物乳杆菌ZS2058生物转化产物共辘亚油酸的分析方法的研究
【中文关键词】亚油酸,共辘亚油酸,生物转化,分析方法
【英文关键词】亚油酸,共辘亚油酸,生物转化,分析方法
【中文摘要】研究了紫外分光光度法、G C、Ag+、H P LC 和 G C-MS 四种分析方法对植物乳杆菌ZS2058 生物转化亚油酸(L A)产生的共轭亚油酸(CL A)检测时的异同点。结果表明,这4种分析方法在对CL A 进行检测时各有特色,应用范围也有不同。紫外分光光度法检测成本最低,操作最快速,但检测结果为转化产物中各种CLA异构体的总和,而G C、A g + 、H PLC和G C-MS能将产物中的各类CLA异构体分开,可对复杂的生物转化产物进行分析。其中,GC的最大优点在于可以检测到转化底物LA ,A g+、HPLC可将转化产物中c9,tll-CL A 和 t 8,C 10-CLA很好的分离,而GC-MS可以将各种异构体与其它副产物明确区分开来。总之,在检测生物转化法产生的CLA时,根据不同的实验需求来选择不同的检测方法,并需将这几种方法灵活的结合起来应用。

【题目】植物乳杆菌 ZS2058 生物转化共轭亚油酸的反应动力学
【中文关键词】共轭亚油酸;生物转化; 植物乳杆菌;速度方程;底物抑制
【英文关键词】共轭亚油酸;生物转化; 植物乳杆菌;速度方程;底物抑制
【中文摘要】【目的】对本实验室从泡菜中筛选到的植物乳杆菌ZS2058 完整细胞生物转化共轭亚油酸的反应动力学进行研究。【方法】探讨底物浓度、细胞浓度、反应体系 pH 值等因素对生物转化共轭亚油酸反应速度的影响,并通过双倒数和Hanes -Woolf作图法拟合反应初始阶段的速度方程。 结果 生物转化共轭亚油酸时存在明显的底物抑制现象, 当亚油酸浓度为 0.4 mg/ mL 时产 c9, t11 -共轭亚油酸的反应速度达最大值15.99 μg/(mL.h) ;反应速度随细胞浓度增加而上升,当细胞浓度为5×1010cfu/mL时反应速度达到最高;最适pH值和最适反应温度分别为 6.5 和40oC。利用双倒数和Hanes -Woolf作图法求得米氏常数和最大反应速度,在低底物浓度下, 反应初始阶段的反应规律与经典的米氏方程相符, 而在高底物浓度下,存在明显的底物抑制现象。【结论】通过对植物乳杆菌ZS2058 完整细胞催化合成共轭亚油酸各因素的考察,在得到最佳反应条件的同时建立了不同底物浓度范围内的反应速度方程,这对于实现共轭亚油酸的生产和研究其生理功能具有十分重要的理论价值。

【题目】植物乳杆菌 ZS2058中亚油酸异构酶的定位研究
【中文关键词】共轭亚油酸, 植物乳杆菌, 亚油酸异构酶, 膜结合酶
【英文关键词】共轭亚油酸, 植物乳杆菌, 亚油酸异构酶, 膜结合酶
【中文摘要】植物乳杆菌 ZS2058是本实验室从泡菜中筛选到的一株具有亚油酸异构酶活性的乳酸菌。本文对植物乳杆菌ZS2058中亚油酸异构酶的部分粗酶性质进行了考察, 建立了初酶活性检测方法, 在此基础上对此亚油酸异构酶在细胞中的定位进行了研究,这将为后续分离纯化此亚油酸异构酶提供理论依据与指导。考察的结果是超声波破碎获得亚油酸异构酶初酶液的最佳条件为破碎功率 400W,破碎时间 7.5min(破碎 5s , 间歇 9s)。初酶活性测定时的最适亚油酸底物浓度为 0.08mg/mL; EGTA等金属螯合剂及 Ca2+对亚油酸异构酶活性的影响均不显著; 粗酶液经超高速离心分级沉淀和加入去垢剂 Triton X-100提取的实验结果表明,该亚油酸异构酶为细胞膜结合酶。

【题目】丙酮酸发酵过程中光滑球拟酵母过程功能的强化
【中文关键词】光滑球拟酵母,过程功能,强化策略
【英文关键词】光滑球拟酵母,过程功能,强化策略
【中文摘要】对不同葡萄糖浓度下光滑球拟酵母分批发酵生产丙酮酸的动力学模型分析发现,葡萄糖浓度是影响光滑球拟酵母发酵生产丙酮酸过程功能的关键因素。在发酵初始阶段,低浓度葡萄糖可维持较高的菌体比生长速率;对数生长中前期葡萄糖快速进料使菌体浓度接近最大值,并实现碳流从菌体生长转向丙酮酸积累;对数生长后期葡萄糖浓度控制在33.4g/l以维持高丙酮酸对葡萄糖产率系数(0.71g/g)。采用奇异控制的葡萄糖流加方式,在7L发酵罐上控制不同发酵阶段葡萄糖浓度处于最佳水平以强化光滑球拟酵母过程功能,丙酮酸产量(83.1g/L)、产率(0.621g/g)、生产强度[1.00g/(L.h)]与分批发酵对比,分别提高了21.3%、21.6%和29.9%。

【题目】产共轭亚油酸植物乳杆菌的筛选、鉴定与诱变
【中文关键词】共轭亚油酸;植物乳杆菌;鉴定;诱变;气相色谱
【英文关键词】conjugated linoleic acid (CLA);Lactobacillus plantarum;identification;mutation;gas chromatography(GC)
【中文摘要】:从传统泡菜中筛选得到1株乳酸菌lp15能够合成共轭亚油酸(CLA),经16S rRNA全序列分析法和API系统鉴定法鉴定为植物乳杆菌(Lactobacillus plantarum)。利用人工诱变方法,以lp15 为出发菌株,采用紫外线、硫酸二乙酯(DES)依次诱变处理,经进一步液体发酵复筛获得多株突变菌株,CLA合成能力较出发菌株提高了29.3%~52.2%。其中lp15-2-1突变菌株为CLA生成能力最高菌株,MRS培养液中添加0.2mg/mL LA培养48h,CLA产量达30.13 μg/mL。经气相色谱(GC)检测分析,产物中cis9, trans11-共轭亚油酸(c9, t11-CLA)占76.5%,trans10, cis12-共轭亚油酸(t10,c12-CLA)占23.5%。
【英文摘要】A lactic acid bacterial strain, lp15, having the ability to synthesize conjugated linoleic acid (CLA) was isolated from pickle juice samples. The strain lp15 was identified as Lactobacillus plantarum based on full-length 16S rRNA sequenceanalysis and API system. This strain was treated by ultraviolet and DES to obtain several mutant strains, which exhibited29.3%-52.2% enhancement for

CLA production. The strain lp15-2-1 exhibited the highest CLA productivity, which was upto 30.13 μg/mL after 48 h culture in the MRS medium added with LA at 0.2 mg/mL level. According to gas chromatographic analysis,cis9, trans11-CLA was the predominant compound in the fermentation product, with a relative content of up to 76.5%. trans10,cis12-CLA approximately accounted for 23.5% of the fermentation product.

【中文关键词】共轭亚油酸,癌症,心血管疾病,糖尿病,免疫调节,生物合成
【英文关键词】conjugated linoleic acid (CLA) ,cancer, cardiovascular health, diabetes, immune response, biosynthesis
【中文摘要】主要讨论了共轭亚油酸(CLA) 混合物和单一异构体在癌症、 心血管疾病、 糖尿病以及免疫调节等各种疾病预防方面的一些最新动物或体外试验研究;一些最新临床研究结果也表明CLA 对人体健康有着积极的作用。鉴于食物来源的CLA 含量较低、 化学合成法副产物较多, 微生物合成目前成为获得CLA 的有效途径之一。
【英文摘要】This review comprehensively covers the recent studies on the effect of conjugated linoleic acid (CLA) and its individual isomers on different types of cancer, cardiovascular disease, and mediators of inflammatory response, obtained from both in vitro and animal experiments. Moreover, the latest available information from clinical studies in this field suggests that CLA and i ts two isomers may have positive effect on human health. As there is rather less CLA in food source, microorganism synthesis turns into an important approach of producing CLA from linoleic acid.

【题目】响应面法优化植物乳杆菌lp15-2-1产共轭亚油酸发酵条件
【中文关键词】共轭亚油酸;植物乳杆菌;响应面法
【英文关键词】conjugated linoleic acid (CLA);Lactobacillus plantarum;response surface methodology
【中文摘要】对植物乳杆菌(Lactobacillus plantarum)lp15-2-1转化亚油酸生成共轭亚油酸(CLA)发酵工艺进行研究。通过单因素试验确定最佳接种量、培养温度、初始pH 值、培养时间、亚油酸添加时间、亚油酸质量浓度。采用响应面Box-Benhnken试验设计,建立初始pH值、培养温度和亚油酸质量浓度的二次多项式回归方程模型,所得植物乳杆菌发酵产共轭亚油酸的最佳参数为:温度30℃、亚油酸质量浓度0.21mg/mL、初始pH6.3,此条件下,CLA得率为44.77 μg/mL,CLA理论得率为45.326 μg/mL,转化率为21.32%,与优化前转化率7.78%相比,有了很大提高。
【英文摘要】In this work, the fermentation conditions for converting linoleic acid into conjugated linoleic acid (CLA) by Lactobacillus plantarum lp15-2-1 were studied. Single factor experiments were done to understand the effects of inoculum amount,incubation temperature, pH, incubation time and initial level of linoleic acid on CLA production. Using response surface Box-Benhnken design, a quadratic polynomial regression model was established. The results indicated that the optimal levels of incubation temperature, initial level of linoleic acid and pH were30 ℃, 0.21 mg/mL and 6.3, respectively. Under these optimal fermentation conditions, the yield and conversion rate of CLA were 44.77 μg/mL and 21.32 %, which were higher than the predictedvalues of 45.326 μg/mL and 7.78 %, respectively.

【题目】c9t11-和t10c12-共轭亚油酸抗癌和影响脂质代谢的异同
【中文关键词】c9t11-共轭亚油酸;t1Oc12-共轭亚油酸;抗癌作用;机体构成;脂肪代谢
【英文关键词】c9t11 - CLA;t10c12-CLA;anticancer;body composition;fat metabolism
【中文摘要】共轭亚油酸(CLA)是一组位置和构象异构体的总称,异构体c9tl1 - CLA和tlOcl2- CLA或二者的协同作用赋予了CLA的许多生理功能,比如抗癌、降低体脂含量、预防糖尿病的发生、降低血脂抑制动脉粥样硬化等;异构体c9tl1-CLA和t10c12。CLA在结构及来源上存在一定差别——由于双键位置的不同,tlOcl2-CLA异构体比c9tl1-CLA异构体更容易氧化;而在生理功能上二者也有差异——c9tl1-CLA异构体的主要作用是抗癌,而t10c12-CLA则是降低体脂、血脂等,大量单一异构体的体外实验研究表明二者在抗癌及脂肪代谢的调节上作用机制也不尽相同。
【英文摘要】Conjugated linoleic acid(CLA)is a mixture of positional and geometric isomers, and numerous biological functions such as anticancer,reduction of body fat content,diabetes prevention,lower blood lipids and inhibition of arteriosclerosisare duetoindividualor synergistica ctionofmostisomersincludingc9tll-andt10c12-CLA.Becauseofdifferentpositionsofdouble bounds between c9tl1-and tl0cl2-CLA isomers,high oxidization possibility of c9tl1-CLA isomer was observed. Therefore,c9tl1-CLA isomer exhibited a major responsibility for anticarcinogenic effect,whereas,tl0cl2-CLA isomer exhibitedsongerreduction effectonbodyfatandbloodlipids. Increasing studies suggestedthattheme chanismsofbothisomersoncancerandfat metabolismwere different

【题目】三角褐指藻Δ6脂肪酸脱饱和酶基因克隆及其表达分析
【中文关键词】Δ6脂肪酸脱饱和酶; 三角褐指藻; γ-亚麻酸; 毕赤酵母
【英文关键词】Δ6-fatty acid desaturase ; Phaeodactylum tricornutum; γ-linolenic acid ; Pichia pastoris
【中文摘要】γ-亚麻酸在人类的健康与营养中具有重要的功能,利用基因工程手段提高其产量是满足其需求日益增大的途径之一。Δ6脂肪酸脱饱和酶是γ-亚麻酸合成途径中的关键酶,催化亚油酸(C18:2Δ9,12)到γ-亚麻酸(C18:2Δ6,9,12)的反应。通过克隆三角褐指藻的Δ6脂肪酸脱饱和酶基因,并连入酵母表达载体pPIC3.5K中,在毕赤酵母中进行了表达,结果表明:重组酵母经甲醇诱导后表达转入的外源基因,气-质联用分析显示重组毕赤酵母中含有γ-亚麻酸和SDA(18:4Δ6,9,12,15),其含量分别为2.5%和0.8%。
【英文摘要】γ-linolenic acid plays importan t roles in human nutrition and health . Genetic manipulati on is one o f preferable alternatives to increase production that meets the needs of increasing demand of γ-linolenic acid . Δ6-fatty acid desaturase is the rate limiti ng enzyme of the desaturation from the linoleic aci d (C18:2 Δ9, 12) to γ-linolenic acid . In this study, the Δ6-fatty acid desaturase genein the Phaeodactylum tricornutum was cloned ; the recombinant Pichia pastorisexpressi on vector of pPIC3 5KD6 which contains the cloned genewas constructed and expressed i n P.pastoris strain . The results showed t hat the recombinant P. pastoris was induced by methanol for expression . TheGC-MS analysis indicated tha tintracellular fatty acid composed γ-linolenic acid and stearidonic aci d (SDA, C 18:4Δ6, 9 , 12, 15) in the recombinant y east, the contents were 2 . 5% and 0 . 8%, respectively .

【题目】20种食用辛香料抗氧化性及其与黄酮和多酚的相关性研究
【中文关键词】食用辛香料; 抗氧化; 黄酮; 多酚;
【英文关键词】edible spicy herbs;antioxidant capacity;flavonoid;phenol
【中文摘要】利用DPPH法测定20种食用辛香料的抗氧化活性,结果显示大部分食用辛香料具有一定的抗氧化活性,其中花椒抗氧化性最强,其次是丁香、桂皮、香叶、良姜。分别采用铝盐显色法和福林-酚法测定样品的总黄酮和总酚含量,并与抗氧化性做相关性分析,结果表明辛香料的抗氧化性与黄酮和多酚具有一定的相关性,其中与黄酮的相关性最大(R2=0.8111)。20种辛香料中,花椒的抗氧化性最强,黄酮含量也最高,花椒黄酮有望被开发成为新的抗氧化原料。
【英文摘要】DPPH radical scavenging assay was used to evaluate the antioxidant activities of ethanol extracts from twenty ediblespices, and the results showed that most of them had antioxidant effect and Zanthoxylum bungeanum was the strongestantioxidant among them, followed by clove, cinnamon, bay leaf and lesser galangal.Meanwhile, the contents of total flavonoidsand total phenols in twenty spices were determined by aluminium chloride and Folin-Ciocalteu colorimetric assays, respectively,and their correlations with DPPH radical scavenging effectwere analyzed. Itwas found that DPPH radical scavenging effect wascorrelated with the contents of total flavonoids or total phenols, especially with the content of total flavonoids (R2 = 0.8111).Furthermore, Zanthoxylum bungeanum was found to contain the highest amount of total flavonoids among twenty spices. Hence,the spice is expected to be exploited as a new source of antioxidant.

【题目】苦参总生物碱提取工艺优化及杀蚜虫活性研究
【中文关键词】苦参; 总生物碱; 提取工艺; 正交设计; 杀虫活性
【英文关键词】Sophora f lavescens A i.t ; to tal alka lo id; extract ion process; orthogonal design; b io log ica l activ i ty
【中文摘要】目的:研究苦参总生物碱的提取工艺及杀虫生物活性。方法:以总生物碱含量为指标考察乙醇冷浸、乙醇渗漉、乙醇回流三种提取方法的提取效率差异,同时用正交设计对乙醇回流工艺条件进行优化,并以蚕豆蚜虫为供试靶标,探讨苦参总生物碱的杀虫生物活性。结果:乙醇回流提取效果较好,液料比、乙醇浓度、提取次数对提取效果均有影响,其最佳提取条件为:液料比12?1,乙醇浓度为60%,提取次数3次;苦参总生物碱对蚕豆蚜虫有一定的杀虫活性,其中氯仿直接提取物对蚜虫杀虫活性最好,随着总生物碱浓度降低,杀虫活性有下降。
【英文摘要】To study ex traction process and b io log ica l activ ity of total alka lo ids from SophoraflavescensA i.t to pests. Method: Several extraction processes w ere used, such as co ld maceration, there flux ing method, leakag ing method, and the content of a lkalo id as quantitative est imation standard. Theorthogonal experimental design w as used for the dom inant selection. B io log ica l activ ity of the ex tracts tobean aph id w ere studied. Resu l:t reflux ing method w as the best ex tract ion process. The concentrationand quantity of ethano l and tim e of extraction were the influence factors. The best process w as set as fo l low: Sophora f lavescens A i.t w asm arina ted 3 times w ith 60% ethano,l and the amount o f ethano lw as 12t imes (V /V) ofmed icinalmateria ls. The resu lts ind icated that the a lkalo ids from Sophora f lavescensA i.tw ere efficiency to bean aphid. And the insecticida l act iv ity o f ex tracts in ch loro form w as best than others.The insecticida l activ ity gradua lly decreased as total alka lo id concentration decreased

【题目】不同产地孜然风味物质和黄酮等成分分析
【中文关键词】不同产地;孜然;化学成分;呈味氨基酸;分析
【英文关键词】different areas;Cuminum cyminum L;chemical ingredient;flavor of amino acid;analysis
【中文摘要】对8个不同产地孜然的一些化学成分含量进行分析,精油、粗脂肪和总黄酮含量范围分别为2.608 ~4.062 、14.87 ~23.25 和4.147 ~5.746 。巴依阿瓦提乡孜然品质较好,其精油含量4.062 位居第一,粗脂肪22.84 、总黄酮含量5.372 二者都位居第二,经对其氨基酸的组分分析,其总氨基酸含量为17.54 ,氨基酸种类有17种,含必需氨基酸7种,谷氨酸和天门冬氨酸这两种呈味氨基酸含量特别高,占了总氨基酸的34 ,说明孜然是非常好的增鲜辛香调味料。
【英文摘要】Some chemical compositions of Cumi n seeds from eight different producing areas were analyzed.Scope of essential oils content was 2.608 ~4.062 ,and crude fat content was 14.87 9,6~23.25 ,and totalflavonoid content was 4.147 ~5.746%.Quality of cumin from Bayawat Township was the best withhigher content of these chemi cal ingredients.The results of analysis of amino acid composition showed thattotal amino acid content in cumi n was 17.54 ,containing 17 kinds of amino acids including 7 kinds of essentialamino acids.Content of glutamate and aspartate was particularly high,accounting for 34 of the total a—mino acids,indicating cumi n is a very good spicy seasoning.

【题目】红花椒和青花椒的挥发性化学成分比较研究
【中文关键词】青花椒; 红花椒; 精油; 气质联用
【英文关键词】Zanthox y lum bungeanum max in; Zanthox y lum schini f olium Sieb. et Zucc; essent ial o il;
GC-MS
【中文摘要】研究对两种常见的花椒精油成分进行了分析比较。用水蒸气蒸馏法从红花椒和青花椒中提取精油,红花椒和青花椒的产油率分别为6.8%和10%。用气相色谱-质谱(GC-MS)方法分别对两树种的针叶精油进行了定量和定性分析,从红花椒精油中分离出78种化学成分。鉴定了其中匹配度在80以上的31种成分,占挥发油总量的86.31%;青花椒精油中分离出60种化学成分。鉴定了其中匹配度在80以上的37种成分,占挥发油总量的92.88%。两种花椒精油的主要化学成分也有很大的不同。相同成分含量上也有较大差别。两种精油中,红花椒的主要成分及含量为:柠檬烯22.75%;芳樟醇,21.70%;3,7-二甲基-,3,7-辛三烯(罗勒烯)14.27%。青花椒中的主要成份及含量为:芳樟醇63.33%;D-柠檬烯5.75%;4-甲基-1-异丙基-3-环己烯-1-醇(萜烯醇)3.82%。其中青花椒芳樟醇的含量是红花椒中芳樟醇含量的3倍左右。两种精油中,主要的成分为烯类和醇类。
【英文摘要】In this paper, essent ial oils were abstracted from Zanthox ylumbungeanum Maxin and Zanthox y lumschinif olium Sieb. et Zucc by hydrodistillat ion (HD) extraction. The yield of the essential oil w ere 6. 8%10% respectively Their component s and content s w ere analyzed by g as chromatography-mass spect rometryand compared. The results showed that 78 component s were separated from Zanthox y lum bungeanum Maxinamong w hich 31 compounds were ident if ied w hich account for 86. 31% of the total essential oil. 60 componentswere separated from Zanthox y lum schinif ol ium Sieb. et Zucc among which 37 compounds w ere identified which account for 92. 88% of the total essential oil. The main component s of the Zanthox ylum bungeanumMaxin w ere (+)-

Limonene (22. 75%) ; 1, 6-Octadien-3-ol, 3, 7-dimethy-l (21. 70%) and 1, 3, 7-Octatriene,3, 7-dimethy-l (14. 27%) . Three main components of the Zanthoxy lum schinif ol ium Sieb. et Zuccwere 1, 6- Octadien-3-ol, 3, 7-dimethy-l (63. 33%) , D-Limonene) 5. 75% and 3-Cyclohexen-1-o-l 4-methy-l 1-(1-methylethy-l) , 3. 82%. The content of 1, 6-Octadien-3-ol, 3, 7-dimethy-l of Zanthox y lum schinif oliumSieb. et Zucc w as three t imes of the content of Zanthoxy lum bungeanum Maxin. Among the essential oil ofthese two Zanthoxy lum, the main component s were alkene and alcohol.

【题目】均匀设计法姜油树脂提取工艺的优化研究
【中文关键词】乙醇;姜油树脂;均匀设计;偏最小二乘回归
【英文关键词】ethanol; oleoresin ginger; uniform design; partial least-square regression
【中文摘要】应用超声波辅助乙醇提取姜中的姜油树脂,运用均匀设计方法、偏最小二乘回归分析方法研究优化姜油树脂的提取工艺。结果表明:最佳提取条件为乙醇浓度60%,料液比1∶15,姜粉粒度40目,超声作用波时间50 min,温度45℃,姜油树脂提取率为33.39%。
【英文摘要】The optimal conditions of extracting oleoresin ginger from ginger by ethanol were investigated using uniform design and partial least-squareregression analysis method. The optimum reconditions were as followed: ethanol concentration 60%, the ration of solid and liquid 1∶15, granularity40, ultrasound time 50 min and temperature 45°C. Under these conditions, the yield of extraction reached 33.93%.

【题目】不同种类木瓜样品的总有机酸含量测定
【中文关键词】木瓜;总有机酸;电位滴定
【英文关键词】fructus chaenomelis;total organic acids;potentiometric titration
【中文摘要】建立木瓜中总有机酸含量的测定方法,并测定和比较皱皮木瓜和光皮木瓜共5个不同样品中的总有机酸含量。结果显示:24h内同一样品的测定结果稳定,RSD为1.28%,平均回收率为99.59%(n=6),RSD为1.548%;5个不同木瓜样品的总有机酸含量(以苹果酸酸计)在2.09%~3.47%之间。其中以皱皮木瓜1号的总有机酸含量最高(3.47%),皱皮木瓜4号最低(2.09%)。
【英文摘要】To establish a method for determination the content of total organic acids in fructus chaenomelis, andthen to determine the content of total organic acids in 5 different samples of fructus chaenomelis belonging to twospecies. Using the method of direct potentiometric titration. The content of the same sample was stable within 24 h,RSD was 1.28 %. Moreover, the average recovery was 99.59 %, RSD was 1.548 %(n=6).The values of totalorganic acids content in 5 different samples of fructus chaenomelis were in the range of 2.09 %-3.47 %. Thehighest was No.1 of Chaenomeles speciosa (Sweet)Nakai (3.47 %),and the lowest was No.4 of Chaenomelesspeciosa(Sweet)Nakai(2.09 %).

【题目】花椒总黄酮的抗氧化作用
【中文关键词】花椒;黄酮;抗氧化作用
【英文关键词】Zanthoxylum bungeanum;flavonoids;antioxidant activity
【中文摘要】采用60% 乙醇提取花椒总黄酮并用AB-8 型大孔吸附树脂纯化。通过DPPH 自由基实验、总还原力实验、总抗氧化能力实验和脂质抗氧化实验研究花椒总黄酮的体外抗氧化作用。结果表明:的花椒总黄酮纯化样对DPPH自由基清除效果强于同质量浓度的BHT,略低于VC;花椒总黄酮初提物和纯化样的还原能力都随其质量浓度的增加而明显增大;初提物和纯化样的总抗氧化能力与其质量浓度都呈正相关性,随着质量浓度增大,总抗氧化能力也增加;花椒总黄酮初提物和纯化样对Fe2+ 引发的卵磷脂脂质体过氧化有抑制作用,抑制率随着质量浓度的增加而缓慢增大;另外,纯化后的样品要比初提物的样品抗氧化作用更强。
【英文摘要】The antioxidant effect of crude total flavonoid extract from Zanthoxylum bungeanum seeds obtained by extractionwith 60% ethanol aqueous solution and its purified counterpart obtained by adsorption on type AB-8 macroporous resin wasevaluated by DPPH radical scavenging, total reducing power, total antioxidant capacity and anti-lipoperoxidation assays. Theresults showed that purified total flavonoids from Zanthoxylum bungeanum seeds had stronger antioxidant effect than BHT atthe same concentrations. Crude and purified total flavonoids from Zanthoxylum bungeanum seeds indicated a noticeable increasewith increasing concentration and a positive correlation between their total antioxidant activity and concentration. Crude andpurified total flavonoids from Zanthoxylum bungeanum seeds could inhibit lecithin phospholipid liposome peroxidation inducedby Fe2+ in a concentration-dependent fashion. In addition, crude total flavonoid extract from Zanthoxylum bungeanum seedsshowed higher antioxidant effect than its purified counterpart.

【题目】微波辅助水蒸汽蒸馏法和无溶剂微波萃取法提取孜然精油工艺的研究
【中文关键词】微波;精油;枯茗醛
【英文关键词】microwave;essential oil;cuminaldehyde
【中文摘要】采用微波蒸馏法提取孜然精油,考察微波溶剂提取和无溶剂提取孜然精油工艺中微波提取时间、微波功率、粒度和液料比等因素对孜然精油提取率的影响。同时以枯茗醛含量作为精油品质的评价指标,并通过GC 对孜然精油进行分析。研究结果表明,微波溶剂提取孜然精油的最佳工艺条件为:液料比6:1、微波提取时间90min、微波功率300W,此条件下精油提取率为3.501%,精油中枯茗醛含量为19.121%。微波无溶剂提取孜然精油的最佳工艺条件为:浸泡时间30min、微波提取时间45min、微波功率200W,此条件下精油提取率为2.461%,精油中枯茗醛含量为23.910%。
【英文摘要】The microwave-assisted hydrodistillation (MAHD) and solvent-free microwave extraction (SFME) processes ofessential oil from cumin seed were optimized through orthogonal test respectively, and the quality of essential oil was analyzedby GC with the content of cuminaldehyde as the evaluation index. Results showed that the optimum conditions of MAHDextraction are as follows: extraction time 90 min, microwave power 300W, ratio of solvent to raw material 6:1, and under theseconditions the extraction yield and the content of cuminaldehyde are 3.501% and 19.121%, respectively. The optimumconditions of SFME extraction are as follows: extraction time 45 min, soaking time 30 min, microwave power 200 W, and underthese conditions the extraction yield and the content of cuminaldehyde are 2.461% and 23.910%, respectively.

【题目】反相高效液相色谱法测定花椒的3种黄酮苷元的含量
【中文关键词】反相高效液相色谱法; 花椒; 料皮素; 山李酚; 异鼠李素
【英文关键词】R P一H p L C ; z anth ox ylum b un g ean mu ; Q ueree tin ; K a em p ferol; Iso rh am n etin
【中文摘要】提出了反相高效液相色谱法测定花椒的3种水解黄酮苷元槲皮素、山柰酚、异鼠李素的含量。采用Zorlbax Eclipse C18色谱柱(4.6mm×150mm,5μm),以甲醇-0.4%(体积分数)磷酸溶液(1+1)混合溶液为流动相,在360nm波长处进行测定。槲皮素的质量浓度在2.19~109.6mg·L-1,山柰酚的质量浓度在2.28~114.0mg·L-1,异鼠李素的质量浓度在2.80~140.0mg·L-1时分别与其峰面积呈线性关系。槲皮素、山柰酚和异鼠李素的加标回收率分别为95.6%,104.4%,103.8%,相对标准偏差(n=5)分别为2.98%,3.97%,4.30%。

【题目】洋葱多糖不同提取工艺的提取效果研究
【中文关键词】洋葱 微波 超声波 紫外分光光度法 总黄酮
【英文关键词】onion microwave uv-spectrophotometry ultrasonic wave
total flavones
【中文摘要】本文采取热水浸提法、微波辅助冻融法、超声波法及乙醇溶液浸提法从新鲜洋葱和洋葱皮干粉中提取总黄酮,用紫外分光光度法进行含量测定和比较。结果表明:不管是新鲜洋葱还是洋葱皮干粉,其热水浸提法所提黄酮量最多,而超声波提取法黄酮得率最低。本实验用热水浸提法提得新鲜洋葱中总黄酮含量为0.376%(干计),洋葱皮干粉中总黄酮含量为3.965%(干计)。
【英文摘要】In this paper, we extract onion total flavones with hot water extraction, microwave assisted freeze-thaw extraction, ultrasonic extraction and ethanol extraction. Compared these methods with the flavones content of UV detection. The result show that: whether no matter the fresh onion or the dry powder of onion skin, the hot water extraction method have the highest content, and the microwave extraction method have the lowest content. In this study, the hot water extraction method is the best way to extract onion flavones. The total flavones content in fresh onion is 0.376%, and in dry onion skin is 3.965%.

【题目】大孔吸附树脂分离纯化花椒总黄酮的研究
【中文关键词】花椒;黄酮;大孔吸附树脂;纯化
【英文关键词】Zanthoxylum bungeanum;flavonoid;macroporous resin;purification
【中文摘要】通过比较了6种大孔吸附树脂D4006、NKA-9、X-5、HPD450、HPD600和AB-8对花椒总黄酮的吸附及脱附性能,筛选出最佳树脂进行动态实验研究,得到优化的纯化条件。结果表明:AB-8型大孔树脂纯化效果最好,其最佳工艺为:上样浓度3.0~4.0mg/mL,上柱pH4.5左右,上柱速度2.5mL/min,洗脱剂最适宜体积分数与洗脱剂用量分别为70%和3BV(柱体积bed volume)。经AB-8型大孔吸附树脂纯化后,花椒黄酮的纯度由51.46%提高到90.25%,总黄酮回收率81.65%。对经AB-8大孔树脂纯化后的花椒黄酮进行高效液相色谱(HPLC)分析发现,黄酮纯度显著提高,其中芦丁含量较高。
【英文摘要】With the aim to improve the purity of total flavonoids of Zanthoxylum bungeanum, the suitable resin for separating and purifying total flavonoids of Zanthoxylum bungeanum and the optimum parameters of purification were studied. The optimal techniques of separation and purification of flavonoid were obtained by static adsorption and elution tests, and the separation techniques were evaluated by measuring the concent ration of total flavonoids of Zanthoxylum bungeanum with ultraviolet spectrophotometer. The results showed that the AB-8 macroporous resin gave the best effect of separation with concent ration 3.0-4.0mg/mL; the feed solutionpH 4.5 and the sampling rate 2.5mL/min, respectively , and the concent ration of elution was 70% alcohol , with eluant volume 3 BV. By this technology the flavonoid content was increased from 51.46 % of the crude extract to 90.25% of the purified product and the yield was 81.65 %. In conclusion, AB-8 resin could be applied to purify total flavonoids of Zanthoxylum bungeanum.

【题目】利用抑制消减杂交技术分离辣椒细胞质雄性不育育性恢复相关 EST
【中文关键词】辣椒; 细胞质雄性不育; 恢复基因; 抑制消减杂交; 差异表达
【英文关键词】pepper; cytoplasm ic male ster ility; restorer gene; suppression subtractive hybr idizat ion; d ifferent ia l expression
【中文摘要】以辣椒(Capsicum annuum L.)细胞质雄性不育系23A、121A,和其相应的近等基因恢复系23C、121C为试验材料,利用抑制消减杂交(SSH)技术成功构建了CMS恢复基因诱导表达的消减cDNA文库。结合高密度点阵膜杂交差异筛选,获得了282个阳性克隆。通过测序,除去重复序列共得到175个Unique ESTs。在GenBank上进行BLAST分析,55个EST片段未找到对应的同源序列,可能代表了新基因;120个EST片段找到了对应的同源序列,包括103个已知功能基因和17个未知功能基因。按照MIPS功能分类法,将其分为14个功能组,涉及代谢、胁迫应答、蛋白活性、转录因子、信号转导等多方面的功能。
【英文摘要】To iso late fert ility restoration re lated genes in pepper cytop lasm ic ma le sterility (CMS) lines, a fo rw ard subtracted cDNA libraryw as constructed using suppression subtractive hybrid ization (SSH) .The cDNA of pepper CMS line 23A and 121A w ere used as driver and near isogenic restorer line 23C and 121C as tester. Genes differentially expressed w ere screened using do t b lo t hybrid ization. A to tal of 175 non redundant expressed sequence tags (ESTs) w ere iden tified. The genes potential function ana lysis show ed that 103 o f these genes w ere homo logous to known genes, and 55 cou ld be new genes. The ESTs w ere sorted into 14 funct iona l categories according to theMunich In format ion Center for Prote in Sequences (M IPS) method

【题目】利用雄性不育系育成大果型甜椒新品种“ 冀13号 ”
【中文关键词】甜椒;雄性不育两用系;品种
【英文关键词】sweet pepper;male sterile line;cultivar
【中文摘要】‘ 冀研13号 ’是利用甜椒雄性不育两用系AB91-ZH4-7-2为母本,以优良自交系DL-1-1-4H为父本配制成的大果型一代杂种。植株生长势较强,中熟,果实灯笼形,深绿色,果大肉厚,果长11~12cm,宽9~10cm,果肉厚0.65~0.75cm,单果质量220~350g,商品性好,抗CMV,耐TMV和疫病,适宜保护地栽培,一般产量60000kg·hm-2。
【英文摘要】Jiyan 13 ’ is a hybrid of sweet pepper selected from the crossing the genic male sterile lineJiyan 13 ’ is a hybrid of sweet pepper selected from the crossing the genic male sterile line AB91-ZH4-7-2 with inbred line DL-1-1-4H. The mid-maturity cultivar has healthy growth. It is resistant to CMV,tolerant to TMV and phytophthora blight. It has large fruit size and good quality. The fruit is lantern-like with green,and is 11 – 12 cm in length,9 – 10 cm in width,and 0.65 – 0.75 cm in flesh thickness. The single fruit weight is 220 – 350 g. The cultivar is suitable for protected field cultivation. The yield is about 60 000 kg·hm-2

【题目】辣椒抗黄瓜花叶病毒 (CMV) 基因的 ISSR 标记
【中文关键词】辣椒, 黄瓜花叶病毒, ISSR 标记, 遗传距离
【英文关键词】Hot pepper (Capicum annuum L.), CMV, ISSR marker, Genetic distance
【中文摘要】辣椒(Capicum annuumL.)抗黄瓜花叶病毒(CMV)一直是辣椒育种的主攻目标之一。本研究以辣椒抗CMV品种VC16a和感CMV品种SS69杂交的F2群体60个单株材料,通过人工接种鉴定,采用高抗单株和高感单株分别构建抗、感基因池,利用BSA法筛选了40条ISSR引物,其中引物I-34在抗感病池中扩增出450bp多态性片段,通过F2单株验证后证明I-34450与抗CMV基因紧密连锁,其遗传距离为27.3cM,为辣椒抗CMV分子标记辅助育种奠定了基础。
【英文摘要】Resistance to cucumber mosaic virus (CMV) is an important objective in pepper breeding program. ISSR analysis was conducted using BSA (bulked segregant analysis) of a segregating F2 population which has 60 individuals from a cross between VC16a (resistant) and SS69 (susceptible). After performing in ISSR-PCR analysis with 40 primers and PAGE, only one ISSR marker I-34450 was identified to be linked to the resistant gene and was determined to be 27.3 cM from the resistant gene. In present research it would provide the basis for the resistant to CMV gene tagging in modern pepper breeding.

【题目】辣椒细胞质雄性不育基因的 AFLP 分析
【中文关键词】辣椒; 细胞质雄性不育(CMS); 扩增片段长度多态性(AFLP); 序列分析
【英文关键词】Hot pepper (L.), Cytoplasmic male sterility (CMS), Amplified fragment length polymorphism(AFLP), Sequence analysis
【中文摘要】本文采用AFLP(amplified fragment length polymorphism)技术对辣椒(Capsicum annuum L.)细胞质雄性不育系21A及其相应的保持系21B基因组DNA进行多态性比较,筛选了64对AFLP选择性引物Pst Ⅰ-NNN+Mse Ⅰ-NNN组合,有60对引物组合均在两系间扩增出5447条带,多态性位点为4个,其中在不育系材料中仅有2个多态性片段AGC/CGC378和ATC/GAG446,对特异片段进行克隆、测序,其序列全长分别为340bp和408bp,它们编码的氨基酸序列与烟草基因组线粒体DNA序列同源性达94%和96%。
【英文摘要】AFLP technique with 64 pairs of primer combinations Ⅰ-NNN Ⅰ-NNN were employed to find the polymorphisms between the genomic DNAs of cytoplasm male sterile line 21A and its maintainer line 21B in hot pepper. It was shown that 5 447 bands were amplified in two lines with 60 pairs of primer combinations. There were 4 polymorphic loci in two lines and only 2 polymorphic fragments AGC/CGC378 and ATC/GAG446 were found in cytoplasm male sterile line. These specific AFLP fragments were cloned and sequenced. Sequencing analysis indicated that the length of the sequence were 340 bp and 408 bp, with 94% and 96% identities of its amino acid sequence with a part of the mitochondrial DNA genome.

【题目】辣椒雄性不育材料 H9A 小孢子败育机理
【中文关键词】生化特性;细胞形态学;雄性不育;小孢子;辣椒
【英文关键词】biochemical characteristics, cytomorphology, male sterile, microspore, pepper
【中文摘要】运用光学、电子显微技术及生化指标测定法,对辣椒(Capsicum annuum)雄性不育材料H9A及其保持系H9B小孢子不同发育时期进行细胞形态学观察及生化特性分析。结果表明,雄性不育材料H9A的小孢子败育发生在单核前期,由于绒毡层细胞极度膨胀,四分体受挤压后破裂并降解,无法形成正常的单核花粉粒,属于孢子体败育。不育材料花蕾中的过氧化物酶活性从四分体时期开始明显高于保持系,保持系游离脯氨酸含量从单核小孢子期开始明显高于不育材料;不育材料小孢子发育各时期的可溶性蛋白含量都明显低于保持系,但丙二醛含量均高于保持系。
【英文摘要】The study involved cell morphological observation and comparison of biochemical characteristics of the newmale sterile materials H9A and its maintainer H9B by means of optical and electron microscopy and measurement ofbiochemical indexes. Microspore abortion of H9A occurred in the early uninucleate stage. The tapetum cells were in extremehypertrophy so that tetrads were extruded to crack and break down and could not form normal uninucleate pollengrains; the abortion type was sporophyte. During this period, the buds were 0.526 – 0.572 cm long and 0.318 – 0.372 cm indiameter; the corolla was about one quarter the length of the calyx. The peroxidase activities in the flower buds of H9Awere significantly greater than that in the maintainer line beginning at the tetrad stage, and the content of free proline inthe flower bud of the maintainer line H9B was significantly higher than that of H9A in the mononuclear microspore stage.The soluble protein content during the stages of microspore development in H9A was significantly lower than that in H9B,but malonaldehyde (MDA) content was higher than that in the maintainer line.

【题目】色素辣椒品种资源色价评估及育种潜力分析
【中文关键词】色素辣椒; 色价; 品种资源; 育种
【英文关键词】paprika red chilli, color value unite, variety resources, breeding potential
【中文摘要】为了对现有色素辣椒品种资源进行色价的评估,以便于为其专用品种育种提供参考依据,采用类平均法对109份色素辣椒的色价聚类分析,依据遗传距离将其可划分为5类群:极高型、优型、较高型、普通型和极低型;109份辣椒的色价介于4.72~33.34,当前主栽品种的色价均值近12;不同遗传型色价极差为5~23.95,变异系数13%~29%,表明品种资源中色价存在着丰富的差异性和多样性;甜色素椒是高色价育种的优势类群;杂优利用中须重视筛选高特殊配合力的组合。
【英文摘要】In order to assess the color value unite of the Paprika red chilli resources, and provide a reference for its special varieties of breeding grounds, by using group average method the hierarchical cluster was made on 109 dry chilli materials based on the color value unite. The results showed that the 109 materials could be divided into five categories: the extreme high content group(G1), the excellent group(G2), the high content group (G3), the normal group(G4) and the low content group(G5). The color value unite of 109 materials was between 4.72-33.34, the range of different gene types was 5-23.95 and the variation coefficient was 13%-29%. It showed that variety resources that exist in the rich color value differences and diversity; sweet pepper were important materials for breeding high color value unite chilli variety; heterosis utilization of screening must pay attention to a combination of high specific combining ability.

【题目】干旱胁迫下不同茸毛性状辣椒植株抗旱性比较
【中文关键词】干旱胁迫; 辣椒; 茸毛; 抗旱性
【英文关键词】drought stress; pepper; hairs; drought resistance
【中文摘要】干制辣椒种子经60Co γ射线辐照后种植,获得一株茸毛变异株。以多年自交的多茸毛系及其姊妹系无茸毛系和少茸毛系为试验材料,研究干旱胁迫条件下辣椒体表不同茸毛状态与抗旱性的关系。结果表明:在干旱胁迫下多茸毛系植株抗萎蔫的能力显著优于无茸毛系和少茸毛系;干旱胁迫前期主要表现为抑制植株生长,多茸毛系的株高,茎粗和节间数分别比对照降低3.38%,7.25%和2.7%,降低幅度显著低于其他系;持续到结果期,多茸毛系的抗旱能力优势表现在产量降低量较少,为22.94%,而无茸毛系降低69.91%,少茸毛系降低42.94%,表明辣椒体表茸毛性状在干旱胁迫下能有效降低辣椒经济产量的损失率,耐旱能力与茸毛多少有关。
【英文摘要】Dry pepper seeds was irradiated by 60 Co - rays,a hairiness mutant was selected. After many years self- cross,the numberous hair line,glabrous line and less hair line were developed and used to study the relationship between different hairiness character and drought- resistance under drought stress. The results showed,the wilting resistance ability of numberous hair line was significantly higher than that of glabrous line and less hair line under drought stress.The major influence of earlier period of drought stress was to inhibit the plant height,stem diameter and number of joint,which of the numberous hair line was decreased 3. 38%, 7. 25% and 2. 7%,respectively,the decrease range was obviously lower than other two lines. When drought stress applied at fruiting stage,the numberous hair line showed drought- resistance and its yield decreased only 22. 94%,the yield of glabrous line and the less hair line decreased 69. 91% and 72. 94% . It is indicated that the ability of drought resistance was associated to the density of the hairs and hairiness character of pepper could decrease the loss rate of pepper economic yield effectively.

【题目】长江江苏段中华绒螯蟹资源现状及保护对策初探
【中文关键词】长江;中华绒螯蟹;资源;保护对策
【英文关键词】Yangtze River; Chinese mitten-handed crab; resource; countermeasure for protection
【中文摘要】根据2004年7月~2006年3月间对长江江苏段靖江江段渔获中中华绒螯蟹的比例分析,结果显示:江段中中华绒螯蟹在渔获中比例的数量峰值主要集中在上半年度,以3月份为最高,达到渔获数量的14.38%。重量比例峰值主要集中在05年的3月份和9月。11月份,以05年10月份最高,达27.17%,11月份次之。在04年秋季至05年冬季间,05年渔获中中华绒螯蟹的数量比例和重量比例都比04年同季节的值要高,江段中华绒螯蟹资源正处于恢复阶段。
【英文摘要】Abstract: According to the analysis on the proportion of Chinese mitten-handed crab by fishing in the Jingjiang section of the Yangtze River in Jiangsu province between July 2004 to February 2006,the results showed that the volume peak of Chinese mitten-handed crab in fishing is mainly concentrated in the first half of every year, the maximum volume for Chinese mitten-handed crab fishing is in March, reaching 14.38%in total fishing volume. The Weight peakis mainly concentrated in March and September to November in 2005, the maximum Weight for Chinese mitten-handed crab fishing is in October 2005, reaching 27.17%, it's slightly lessin September 2005. Between summer in 2004 to winter in 2005, the volume and weight or Chinese mitten-handed crab fishing in 2005 ale more than the same period in 2004. showing the resource of Chinese mitten-handed crab is in a stage of restoration.

【题目】池塘养殖的中华绒螯蟹与长江野生中华绒螯蟹生物学特性比较
【中文关键词】中华绒螯蟹;可食部分;生物学特性;池塘养殖;野生
【英文关键词】Eriocheir sinensis;edible part;biological characteristic;pond culture;wild
【中文摘要】通过分析池塘养殖与长江野生中华绒螯蟹的生物学指数、可食部分比例、营养成分组成,以比较两者的品质。结果表明:与长江野生中华绒螯蟹相比,池塘养殖的中华绒螯蟹的肌肉指数、肝脏指数、可食部分总和无显著变化(P>0.05);雌性的性腺指数、性肝指数高于野生中华绒螯蟹,差异显著(P<0.05),但雄性群体差异不显著(P>0.05);雄性的粗蛋白质含量显著高于野生的雄性中华绒螯蟹(P<0.05),但雌性群体差异不显著(P>0.05);粗脂肪含量、无氮浸出物高于野生中华绒螯蟹,但雌雄群体之间差异不显著(P>0.05);氨基酸总量高于野生中华绒螯蟹,差异达显著水平(P<0.05);鲜味氨基酸总含量显著大于野生中华绒螯蟹(P<0.05);饱和脂肪酸含量、单烯酸含量与野生中华绒螯蟹差异不显著(P>0.05);多不饱和脂肪酸含量低于野生中华绒螯蟹,其中雌性群体之间差异显著(P<0.05),雄性群体之间差异不显著(P>0.05)。
【英文摘要】Abstract:The composition, the proportion of edible part, and thea minoacidcontent, the fatty acid content and Mineral contentin theediblepartofcrab (Eriocheir sinensis) were analyzed andc ompared between pond cultured type and Wild typefound in the Yangtze river.The differences in the muscle index (muscle weight/body weight), liver index (liver Weight/body weight) and the proportion of edible part between the two crab types were not significant (P>0.05).The gonad index (gonad weigh/body weight) and weresignificantly higher (P<0.05) in female cultured crab than those in female wild type crab. Higher crube protein content was observed in the male pond cultured crab. Crude lipidcontent, extract without N, anino acid content were singificantly higher in cultured crab.

【题目】养殖中华绒螯蟹风味品质比较研究
【中文关键词】养殖品牌;中华绒整蟹;可食部分;氨基酸组成
【英文关键词】Eriocheir sinensis; Brand crabs; Edible part; Amino acid composition
【中文摘要】通过对江苏太湖、阳澄湖、漏湖、长荡湖、固城湖、洪泽湖、高宝湖、大纵湖八大养殖品牌河蟹测试分析。结果表明:平均体重120.2009的商品蟹,可食部分总指数>30%,最高的太湖蟹达35.71%,最低的漏湖蟹为30.01%,各品牌河蟹之间差异不显著(p>0.05)。肥满度以漏淘蟹最高,阳澄湖蟹最低,各品牌河蟹之间差异不显著(p>0.05)。固城湖蟹的粗蛋白含量显著高于阳澄湖蟹(p<0.05),虽高于其它品牌河蟹,但差异不显著(p>O.05)。可食部分17种氨基酸总量依次为:17.48、15.90、17.31、18.21、19.42、16.62、17.85、17.25;固城湖蟹与阳澄湖蟹的差异达极显著水平(p<O.01),与洪泽湖蟹的差异达显著水平(p<0.05)。长荡湖蟹与阳澄湖蟹的差异迭显著水平(p<O.05),其它品牌河蟹之间的差异不显著(p>0.05)。固城湖蟹鲜味氨基酸含量显著高于阳澄湖蟹(p<0.05),其它品牌河蟹差异不显著(p>0.05)。必需氨基酸指数依次为:77.29,75.80,83.12,78.73,77.33,70.55,75.91,73.93。必需氨基酸含量分另q占总氨基酸的47.99%、47.80%、48.01%、43.95%、47.35%、48.23%、47.81%、49.47%。低于全鸡蛋白质模式,但均明显高于FAO/WHO模式。
【英文摘要】Abstract: The eight brand crabs produced in Taihu lake, Yangchenghu lake, Gehu lake, Changdonghulake, Guchenghu lake, Hongzhehu lake, Gaobaohu lake, Dazhonghu lake of Jiangsu Province, were analysed. The results showed that the average weight:120-200 g crab products, the edible part of the overall average, made up 30%of body weight, the highest in Taihu crabs reached 35. 71%, the lowest Gehu crabs 30. 01%. no significant difference between various brands of crabs (p>0.05). Fatness high in Gehu crabs highest minimum Yangcheng lake crabs, crab brand difference between not significant (p>0.05). the crude protein content of Guchenghu crabs, was significantly (p<0.05)greater than that of Yangcheng, crabs, though higher than other brands crab, but the difference was not significant (p>0.05). Total quality of 17 kinds of amino acids and essential amino acids indices(EAAI)were in turn 17.48, 15.90, 17.3 1, 18.2l, 19.42, 16.62, 17.85, 17.25 and 77.29, 75.80, 83.12, 78.73, 77.33, 70.55, 75.91, 73.93, respectively, Guchenghu crab was significantly (p<0.01) greater than that of Yangchenghu crabs, significant difference with the level of Hongzhehu crab (p<0.05), Changdanghu crab was significantly (p<0. 05) greater than that of Yangcheng crabs, no significant difference with other brands (p>0.05). Flavor amino acids of Guchenghu crab was significantly (p<0.05) greater than that of Yangcheng crabs, no significant

difference with other brands (p>0.05). The quality of essential amino acids were 47. 99%, 47. 80%, 48. 01%, 43. 95%, 47. 35%, 48. 23%, 47. 81%, 49. 47%, lower than chickdn or protein patterns, but were significantly higher than international model.

【题目】中华绒螯蟹Eriocheir sinensis两个地理种群的微卫星DNA多态性分析
【中文关键词】中华绒螯蟹Eriocheir sinensis;微卫星DNA;遗传多态性
【英文关键词】Chinese mitten crab, Eriocheir sinensis, microsatellite DNA, genetic polymorphism
【中文摘要】为了获取中华绒螯蟹群体遗传多态性的基本数据,寻找合适的遗传标记区分不同种类及不同水系的河蟹种群,采用微卫星DNA分型技术,对江苏地区两个地理种群(本地种与荷兰种)的中华绒螯蟹共计140个样本,通过DNA提取、PCR扩增、聚丙烯酰胺凝胶电泳、银染检测的方法,进行了两个微卫星基因座(Esin 67和Esin 87)的遗传多态性分析.结果表明:中华绒螯蟹本地种与荷兰种的两个微卫星基因座均有较好的多态性;在Esin 67基因座中,本地种和荷兰种绒螯蟹均有8个等位基因,两组的最高频率等位基因均为8重复序列;在Esin 87基因座中,本地种绒螯蟹有9个等位基因,荷兰种有7个等位基因,两组的最高频率等位基因均为9重复序列.同时中华绒螯蟹荷兰种这两个基因座的杂合度和多态性信息含量均高于本地种.这些结果提示了江苏本地的绒螯蟹可能受到其它地区河蟹的种质污染,基因多态性下降,因此需要加强对种质资源遗传变异的深入研究,以便采取措施对河蟹资源进行合理的管理、保护和开发利用.
【英文摘要】Abstract: To obtain the data of genetic polymorphism in Chinese mitten crab Eriocheir sinensis and find suitablegenetic markers to distinguish different varieties of crab, the genetic polyrnorphism comparison of Chinese mittencrabs from Jiangsu, China and Holland was made.After extracting genomic DNA, allele and genotype frequenciesfor two microsatellite loci (Esin 67 and Esin 87) were established by using locus-specific prime polymerase chainreactions, followed by electrophoresis of the PCR products in denaturing polyacrylamide gels and subsequentdetection by silver staining.Both Esin 67 and Esin 87 loci exhibited a good degree of polymorphism in Chinesemitten crabs from Jiangsu and Hollan&In locus Esin 67, Chinese mitten crabs both from Jiangsu and Holland hadeight alleles.The highest frequency allele in the two groups was the eight-repeat sequence.In locus Esin 87, Chinese mitten crabs from Jiangsu province had nine alleles. Chinese mitten crabs from Holland had seven alleles. The highest frequency of allele in the two groups was the nine-repeated sequence. The heterozygosities of both loci Esin 67 and Esin 87 of crabs from Holland were higher than those of crabs from Jiangsu. These results indicated that Chinese mitten crabs in Jiangsu might be intermixed by crabs from other geography. It is necessary tO protectthe Chinese mitten crab germ plasm resource in Jiangsu province.

【题目】中华绒螯蟹人工选育群体的遗传多样性
【中文关键词】中华绒螯蟹;人工选育;遗传多样性;微卫星
【英文关键词】Eriocheir sinensis, selective breeding, genetic diversity, microsatellite
【中文摘要】利用10 对微卫星引物对中华绒螯蟹(Eriocheir sinensis)长江水系天然群体、人工选育F4A 级群体、F4B 级群体以及江苏射阳群体共95 个体进行遗传多样性分析。F4A、F4B 选育起始群体均来源于固城湖国家级长江水系中华绒螯蟹原种场,射阳群体为江苏省河蟹养殖普遍采用的苗种,其亲本为当地养殖河蟹。结果表明,中华绒螯蟹4 个群体的平均观察杂合度(Ho)分别为0.805 3、0.819 7、0.810 5、0.810 0,平均期望杂合度(He)分别为0.714 9、0.716 1、0.726 2 、0.728 6。其中,人工选育F4A 级以及B 级群体的遗传多样性指数均高于天然群体,但是无显著性差异(P>0.05)。总体而言,本研究中4 个群

体的遗传多样性均处在较高水平,其中射阳群体的平均期望杂合度最高,天然群体最低,各群体间遗传多样性亦无显著性差异(P>0.05)。聚类分析结果发现,天然群体、F4A 级和F4B 级选育群体聚为一支,而射阳群体单独聚为一支,表明人工选育中华绒螯蟹群体与长江水系天然群体间没有发生显著性遗传分化。

【英文摘要】Abstract: Genetic diversity of Chinese mitten crabs (Eriocheir sinensis) were analyzed using 10 pairs of microsatellite primers. Ninety-five samples were collected from wild stock in the Yangtze River, selective breeding stocks (F4A, F4B) and Sheyang cultured stock in Jiangsu Province. F4A and F4B stocks were originated from the animals of national original stock farm of E. sinensis in Gucheng Lake, Jiangsu. Sheyang cultured stock were offspring of local culturedcrabs. The results showed that the average observed heterozygosities (Ho) of four stocks were 0.8053, 0.8197, 0.8105 and 0.8100 respectively, and the average expected heterozygosities (He) were 0.714 9, 0.716 1, 0.726 2 and 0.728 6respectively. The genetic diversities of selective breeding stocks (F4A and F4B) were higher than that of the wild stock, but there were no significant difference among them (P>0.05). Furthermore, the four stocks in the present study hadrelatively higher genetic diversities, Sheyang cultured stock had the highest He, while the wild stock from Yangtze Riverhad the lowest value, but there were no significant difference among the four stocks (P>0.05). Cluster analysis showed that the wild, F4A and F4B stocks were allocated in the same cluster, and Sheyang cultured stock was allocated in another cluster. It revealed that there was no significant difference in genetic differentiation among selective breeding stocks and wild stock..

【题目】中华绒螯蟹家系定向构建与定向育苗技术研究
【中文关键词】中华绒螯蟹,家系构建,坑配,笼配
【英文关键词】Eriocheir sinensis, family construction, selective breeding community
【中文摘要】利用中华绒螯蟹3个群体:“苏蟹一号”F4代选育群体、长江野生群体和沿海河口野生群体及其4大类杂交组合,通过笼式和坑式定向交配设计,实现了规模化定向构建中华绒螯蟹全同胞家系和父系半同胞家系。坑式交配采用亲蟹l雌l雄,共定向构建9个全同胞交配土坑;笼式交配采用亲蟹3雌l雄,共设置交配网笼17个。至2009年4月,经过越冬暂养,其中坑配亲蟹的抱卵率及越冬成活率达100%,笼配49只雌蟹获抱卵蟹亲蟹为45只,越冬成活30只。为尽量减少由于繁育条件不一致造成的各家系间的环境偏差,使每个家系幼体培育阶段的条件尽量保持一致,共选择抱卵蟹26只进行育苗。采用面积2×667㎡室外土池6只,选择6只坑配抱卵蟹,按照一池一只设计,进行室外天然海水土池生态定向育苗;采用3 m×2 m×l.5 m聚乙烯网箱20只,选择20只笼配抱卵蟹按照一箱一只设计,进行室外土池网箱定向育苗。通过规模化培育,最终成功构建20个中华绒螯蟹家系,其中父系半同胞6个,共培育家系蟹苗280万只。
【英文摘要】Abstract: The experiment on large-scale family construction of Eriocheir sinensis was done for the fourgroups derived from “Su Xie 1” the F4 generation of selective breeding community, the Yangtze River wild population, the coastal river mouth wild

population and 4 broad heading hybrid combination. The Long pei matingand the Keng pei mating design were used to construct full-sib families and paternal haf-sib families. The kengpei were used to mate the crab 1 female to 1 male, altogether the direction detection constructs 9 entire sib mating pit;The long pei were used to mate the crab 3 female to 1 male, altogether establishes copulation net cage 30. To April, 2009, the process was survived the winter raises temporarily, the pit matches the crab to hold the egg rate and survives the winter the survival rate to reach 100%, the cage matches 49 female crabs to attainhugs the egg crab to mate the crab respectively was 45, overwintering survival percentage was 30. To reduce environment deviation, as far as possible, breeding condition during each stage of cultivation were standardized. Adopt outside local 6 area 2×667㎡ pool the pit choosing 6 mates oogenesis crab, pool one Was designed that according to one, pool organism ′ s habits orientation carrying out outside natural sea natural environment and climate grow seedlings. Adopting 20 3m×2m×1.5m polyethylene net cages the crab choosing 20 single steamers matching oogenesis was designed that according to a box of one, carrying out outside countrified pool net cageorientation growing seedlings. Through the formalization cultivation, finally 20 families were established, inchding 6 paternal haf-sib families;the seedling 2,500,000 were obtained. The results of this study set up a foundation for selective breeding E. sinensis form the Yangtze River especially the material and provided the technical support.

【题目】辣椒新型质核互作雄性不育材料H9A不育机理 研究

【中文关键词】辣椒; 小孢子; 雄性不育; DDRT-PCR

【英文关键词】pepper ; microspore ; male sterility; DDRT-PCR

【中文摘要】为研究辣椒雄性不育的机理,在花期,采用常规的石蜡切片法,对新型辣椒雄性不育材料H9A及其保持系H9B小孢子不同发育时期进行细胞形态学观察;采用DDRT-PCR技术对H9A与H9B小孢子发育过程进行mRNA差异显示,筛选差异表达的基因。切片观察发现:供试雄性不育材料的小孢子败育发生在单核前期,此时花蕾纵径0.526~0.572 cm,横径0.318~0.372 cm,花冠和花萼之比约为1∶4;通过DDRT-PCR,共获得27条差异表达的cDNA片段,其中在H9A中获得12条,在H9B中获得15条。结果说明新型辣椒雄性不育材料H9A的小孢子败育发生在单核前期,败育原因可能是绒毡层细胞程序性死亡异常并极度液泡化膨胀,四分体受挤压后破裂降解,不能形成正常的单核花粉粒。败育时期与花蕾外部形态相关。在败育期表达的27条差异cDNA片段为研究辣椒雄性不育机理的候选基因奠定了基础。

【英文摘要】To observe the abortio n proc ess dur ing the dev elo pment o f micros po re a nd to isola te the g ene s re lated to ma le sterility in the new cy to pla smic nucle ar male ste r ile material H9A, to further reve al the male sterile me chanism in pe ppe r . The ce ll mo rpholo gic al obse rv ation betwe en the new male sterile material H9A and its ma intaine r H9B was conduc te d by means of no rmal pa ra ffin sectio n me tho d. The DDRT PCR w as us ed to isola te the differentia lly ex pres sed ge nes during the dev elo pment of micro spore be twee n H9A and H9B. The re sults s howe d that the microspore a bo r tion of H9A occ urre d in the e arly uninuc lea te sta ge , dur ing this period, the buds we re 0. 526- 0. 572 cm in he ight and 0. 318-0. 372 cm in diameter, the le ngth wa s approxima te ly in the ra tio of 1 4 betwe en co ro lla a nd c alyx; Twenty se ve n differe ntia lly e xpre ssed cDNA fragme nts we re iso lated by DDRT PCR, including 12 cDNA fra gments in H9A and 15 in H9B. 【题目】辣椒AFLP技术体系的建立与优化
【中文关键词】辣椒; AFLP; 优化
【英文关键词】Pepper ; AFLP ; Opti m izati on
【中文摘要】以辣椒细胞质雄性不育系21A及其相应的保持系21B为材料,通过对影响辣椒AFLP技术体系的若干关键因素,如提取DNA的方法、酶切与连接、预扩增和选择性扩增以及电泳和染色条件等的研究,建立了经优化的适合于辣椒的AFLP分子标记技术体系。采用该体系,对辣椒进行AFLP分析,能够得到清晰稳定的分子标记图谱,为今后利用AFLP技术进行辣椒细胞质雄性不育基因的定位奠定了技术基础。
【英文摘要】An optimized AFLP technological syste m was established with pepper cytop l asm icmale steril e li ne “ 21A ” and its corresponding maintainer “ 21B ” by optimizing severa lm ai n factors a ffecti ng t he res u lts of AFLP fingerpr i nts , wh ich included the method of genom ic DNA extracti on , enzy m e d i gesti on and ligati on , pre- amplifi cation and se l ective- amplifi cati on , electrophoresi s , dyeing cond itions etc . By mean o f this opti m ized system, a c l ear and cred i bleAFLP fi nge rpri nt coul d be obta i ned for gene l o cation of pepper cytop l asm icm a l e ster ility .

【题目】不同浓度聚乙二醇处理对辣椒幼苗形态的影响
【中文关键词】辣椒幼苗; 干旱胁迫; PEG-6000
【英文关键词】Dry pepper seedl i ngs ; Drought stress ; PEG 6000
【中文摘要】[目的]研究聚乙二醇(PEG-6000)对辣椒幼苗株高和叶面积的影响。[方法]以干制辣椒杂种一代种子为试材,PEG-6000按重量比(W/V)设0%(CK)、5%、10%和15%4个水平模拟干旱环境,对辣椒幼苗进行处理。[结果]随PEG-6000浓度增加,辣椒幼苗株高呈现出先增加后降低的趋势:与对照相比,5%和10%浓度胁迫下株高分别增加了13.8%和8.8%,15%浓度胁迫下株高则降低了17.4%。辣椒幼苗叶面积随着PEG-6000浓度的递增而递减:与对照相比,5%、10%和15%PEG-6000胁迫下叶面积分别降低了33.8%、58.7%和78.5%。[结论]5%PEG-6000胁迫对辣椒幼苗株高有促进作用;大于10%PEG-6000胁迫对幼苗植株高度有抑制作用;各种PEG-6000浓度均抑制辣椒幼苗叶面积的提高。
【英文摘要】[Obj ect i ve] T he am i w as t o research the effects of polyet hy lene g l ycol(PEG-6000) on t he plant hei ght and leaf area of ho t pepper seedl i ngs . 【题目】辣椒胞质雄性不育系和保持系内源激素含量的比较
【中文关键词】辣椒; 雄性不育; 内源激素
【英文关键词】pepper(Cap si cum annuum L.) ; male ster i lity; endo geno us hormones
【中文摘要】以2 个辣椒品系(199807、199803) 的胞质雄性不育系和相应保持系为实验材料, 采用酶联免疫吸附法(ELISA) 测定IAA、(Z+ ZR) 、GA3 和ABA 等内源激素含量, 用气相色谱分析仪测定乙烯(ETH) 释放量, 对辣椒胞质雄性不育系和相应保持系内源激素含量变化规律进行研究. 实验结果表明: 在四分小孢子之前, 花药中的IAA 含量不育系显著高于保持系, 在四分小孢子时期花药和花蕾中的IAA 含量出现转折, 到花粉粒成熟期的花蕾和花药以及开花期叶片中的IAA 含量均是不育系显著低于保持系; 小孢子各发育时期花药以及花期叶片中GA3 含量均是不育系高于保持系, 但花粉粒成熟期花蕾中GA3 含量为不育系低于保持系; 小孢子不同发育时期的花药以及花期叶片中ABA 含量始终是不育系显著高于保持系, 而花粉粒成熟期花蕾中ABA 含量不育系与保持系没有显著差异; 花粉粒成熟期的花蕾和花期叶片中ET H 释放量表现

为不育系显著高于保持系. 同时, 花粉粒成熟期的花蕾、花药和叶片中IAA/ ABA、(Z+ ZR) / ABA、GA3 / ABA、IAA/ GA3、(Z+ ZR) / GA3 等5 个激素的比值均有不育系低于保持系的趋势. 本实验结果说明辣椒的育性表现与花器和叶片等组织中内源激素的含量变化有关, 花药和花期叶片中IAA 亏缺、GA3 和ABA 增加以及花蕾和叶片中ETH 过度产生, 都有可能导致辣椒雄性不育。

【英文摘要】In this paper, the cytoplasmic male ster ile lines and their maintainer lines w ere cho sen as experimental material to study the chang e o f endog enous hormo nes in pepper. T he contents of endog enous hormones, including IAA, (Z+ ZR) , GA3 and ABA w ere measured by ELISA and the Ethylene product ion w as studied using gas chromato graphy . Before the stage o f micr osporog enesis, the content o f IAA in anthers is great ly higher in male ster i le lines than that in the maintainer lines. But at the stag e of micr osporog enesis,the content of IAA is chang ed in f low er buds and anther s. A t the maturing stag e o f po llen gr ain, the concent rat io n of IAA is rev er sed, and IAA in the male ster ile lines are r emar kably low er than that of the maintainer lines at f low er ing stage. At the every development stage of microspo rogenesis, the concentrat ions of GA3 in anthers and in leaves are higher in male sterile lines than that in the maintainer lines. How ever, at the maturing stage o f pollen grain, the GA3 content is o n the cont rary. The concent rat ion of ABA is alw ays hig her in male sterile lines than that in the maintainer lines at each development stage of microsporo genesis of anther s and at the f low ering stag e of leav es. While there is no markable difference of po llen grain in the flower buds at the maturing stag e. The productions of ethy lene in po llen g rain o f f low er buds at the matur ing stag e and leaves at the f low ering stag e are g reat ly higher in the ster i le lines than that in the maintainer lines. The rat ios of IAA/ ABA, (Z+ ZR) / ABA, GA3 / ABA, IAA/ GA3 and(Z+ ZR) / GA3 all have the tr ends that are low er in male sterile lines than that in the maintainer lines in the f low er buds, nthers and leaves at the maturing stag e of pollen g rain. In co nclusion, the results indicate that there is a relat ivity betw een ster ili ty and content veriety of endog enous hormones in leaves and f loral organs. The deficiency o f IAA , the increase of GA3 and ABA in anthers and leaves at the f low ering stage, and ov er product io n of ethylene in flower buds and leav es all w o uld lead to cytoplasmic male ster i lity.

【题目】Sowing Date, Plant Density, Fruits per Plant and Harvest Time Influenced Yield and Quality of Hybrid Seed of Bitter Gourd (Momordica charantia)
【中文关键词】无
【英文关键词】seed production, 1000-seed weight, sowing date, plant spacing, fruit set
【中文摘要】无
【英文摘要】Seed yield of bitter gourd (Momordica charantia L.) is influenced by many factors. This study was conducted to explain hybrid seed yield variation induced by either environmental conditions or cultivation practices. The parental seeds were sown five times with a 15-days interval from February 22 to April 22; plant spacing was 100×30 cm, 100×40 cm and 100×50 cm; fruits per plant were kept as 3-fruit, 6-fruit and no limited. Plant density was the controlling factor of seed yield; higher plant density produced remarkably higher seed yield than those with low density. Sowing date had significant effects on seed yield, the highest seed yield (551.42 g plot-1) was obtained when seeds were sown on March 23, which was 155.44% higher than the lowest seed yield produced by sowing on April 22 (215.87 g plot-1). Seed yield per plot were closely correlated to fruit yield per plot (r=0.9428) and plant number per plot (r=0.6072). Although no variation on germination percentage among seeds harvested in different harvest phase were observed, the 1-15 d harvested seeds shown significantly greater in 1000-seed weight than those harvested in the 16-45 d period of the harvest phase. These results suggest the optimum sowing date (late February to late March), plant density (30,000-35,000 plants ha-1) and fruit set per plant (3 fruits) for seed production of bitter gourd in spring season. Moreover, seed harvest should be scheduled in the early harvest stage to achieve large seed size.

【题目】不同加速老化条件对苦瓜种子发芽的影响
【中文关键词】加速老化;苦瓜种子;发芽
【英文关键词】accelerated aging ; Momordica charantia seed ; germination
【中文摘要】以苦瓜种子为对象,研究不同的老化温度和时间条件对种子发芽的影响,旨在筛选出适宜苦瓜种子的加速老化处理条件,探讨建立用加速老化法测定苦瓜种子活力及耐贮性的操作标准。结果表明,随着老化温度的提高和老化时间的延长,苦瓜种子的发芽率呈下降趋势,与 CK(100%)相比,45°C处理效果最为显著,处理 144h 后发芽率下降到 53%,41°C处理效果最差,处理 144h 后发芽率仍达到 85%;发芽速度和整齐度随着老化温度和时间的增加而降低。本试验结果表明,45°C处理 144h 为苦瓜种子加速老化的适宜处理条件。
【英文摘要】Seeds of Momordica charantia were subjected to accelerate aging test (AA test) under different conditions to verify the optimal AA test condition. The result demonstrated that the germination rate declined associated with the increase of aging temperature and duration. After aging under 45°C for 144 h, the germination rate decreased to 53%, while those of the control was 100%. However, seeds aged under 41°C for 144h remained relatively high germination rate of 85%. Both germination rate and uniformity were reduced after aging. This experiment indicated that 45°C and 144 h could be the optimal AA test condition for M. charantia seeds.

【题目】苦瓜新品种桂农科一号和桂农科二号的选育
【中文关键词】苦瓜; 桂农科一号; 桂农科二号; 选育; 栽培;
【英文关键词】bitter gourd; Guinongke 1; Guinongke 2; selective breeding; cultivation technique
【中文摘要】根据华南地区对苦瓜春提早和秋延后栽培的需求选育出2个早熟、耐冷凉气候的苦瓜新品种,分别命名为桂农科一号和桂农科二号。2个品种表现为早熟,强雌性,第1雌花节位低,连续结瓜能力强,主侧蔓均可结瓜;在气温为12~23℃条件下,能正常开花结果;瓜皮油绿色;瓜型圆筒形,肩平蒂圆,大直瘤,商品性好。桂农科一号瓜长约35.0cm,横径8.0~9.0cm,肉厚1.2~1.4cm,平均单瓜重380g,产量约49500kg.ha-1;桂农科二号瓜长约30.0cm,横径8.0~10.0cm,肉厚1.3~1.5cm,平均单瓜重450g,味甘微苦,产量约52500kg.ha-1。2个品种均适宜在华南地区春秋露地和大棚种植。
【英文摘要】Two new early-maturing and cold tolerant bitter gourd varieties, viz., Guinongke 1 and Guinongke 2, were bred to meet the requirement of cultivation in cold season of late autumn and early spring in south China. Both the varieties possessed similar characteristics such as early maturity, low first female flower node, strong gynoecious species, well flowering and fruiting at lower temperatures ranged from 12°C to 23°C, and consecutive fruit setting. The fruit was cylindrical in shape, flat in pedicle side, big and straight wart with glossy green skin and good merchandise. Guinongke 1 was about 35.0cm in length, 8.0-9.0 cm in diameter, 1.2-1.4 cm in flesh thickness and 380 g per melon in average weight, its yield was about 49500 kg · ha-1. The variety Guinongke 2 was about 30.0 cm in length, 8.0-10.0 cm in diameter, 1.3-1.5 cm in flesh thickness and 450 g per melon in average weight, its yield was about 52500 kg · ha-1. Both varieties were suitable for cultivation in open field or greenhouse in south China in spring and autumn periods.

【题目】苦瓜遗传多样性的形态学性状聚类分析
【中文关键词】苦瓜; 种质资源; 遗传多样性; 形态学性状; 聚类分析;
【英文关键词】Momordica char antia; germplasm; genetic diversity; mor pho logical trait; cluster analysis
【中文摘要】对苦瓜的33个种质资源的植株、果实和种子等28类形态学性状进行聚类分析,结果表明:供试资源可划分为3个组群,即野生型组群(组群I)、密瘤小果型组群(组群II)及长大果型组群(组群III);其中组群III又可以进一步分为3个亚组群。各组群间存在明显的地域性差异,野生型及密瘤小果型主要分布于东南亚及印度、孟加拉、斯里兰卡等地区,长大果型则主要分布在中国大陆及泰国。各地域范围内的种质遗传距离较近,而地域间的种质遗传距离较远,特别是中国大陆的苦瓜种质与发源地印度的热带区域和东南亚热带地区的种质资源间有很远的遗传距离,因此,通过从东南亚及印度、孟加拉等区域引进苦瓜种质资源是拓宽我国苦瓜资源遗传背景,在育种工作上获取突破性进展的快捷有效途径。
【英文摘要】Cluster analysis based on morpholog ical 28 tr aits w as carried out on 33 Momor dica charantia g ermplasm accessions. T he results indicated that these 33 accessions could be g rouped into three major clusters, namely wild type (cluster I) , small fruit type (cluster I I) and larg e fruit type (cluster I II) and cluster II could be further separated into thr ee subclusters. Diversity differ ences based on eco logical zones w ere observed among three clusters, w ild type and small fr uit type M . char antia mostly distr ibuted in the tropical r eg ion of Southeast Asia, India, Bangladesh and Sri Lanca, whereas largefruit type M . char antia mainly distr ibuted in mainland China and Thailand. The genetic distances among the accessions obtained from t he same ecological zone ar e small, w hile wide genetic distances could be observed among the germplasm from differ ent ecolog ical zones, especially among the g ermplasm from mainland China and those from India and Sout heast Asia,w hich indicated that introducing germplasm from I ndia and Southeast Asia could be an efficient method for broadening the genetic base o f M . char antia in China.

【题目】利用cDNA-AFLP技术分析苦瓜纯雌系统AgNO3诱导分化完全花的基因差异表达
【中文关键词】苦瓜;纯雌系;完全花;AgNO3;cDNA-AFLP
【英文关键词】Bitter melon; gynoecious line; complete flower; AgNO3; cDNA-AFLP
【中文摘要】本研究以苦瓜纯雌系X-黑-d-d为材料,于三叶一心期用300mg/L AgNO3诱导其分化完全花,并利用cDNA-AFLP技术研究AgNO3 处理后72h内花蕾基因差异表达情况。结果表明:300mg/L AgNO3能成功诱导苦瓜纯雌系连续性转化为完全花,平均为11.83朵/株;以128对选择性扩增引物扩增对照和处理后不同时期花蕾的cDNA,其中8对引物可获得较多分布均匀的清晰条带,这些条带大部分是组成型表达,少部分是抑制表达或诱导表达的差异条带。对这些差异条带的研究,将可揭示AgNO3诱导苦瓜纯雌系分化完全花的分子机理。
【英文摘要】The transition of flower was observed after 300mg/L AgNO3 application on bitter melon gynoecious line X-Hei-d-d at three-leaf-one-apices stage, and the differential gene expression during bud development after the treatment in 72h was studied by using cDNA-AFLP technology. The results indicated that 300mg/L AgNO3 could continuously induce complete flower, in average 11.83 flowers per plant. Eight of 128 pairs of AFLP primer combinations could get evenly distributed and distinct fragments in the amplification of cDNA of the control and treatment at different time, and most of these fragments were constitutive expression and some were depressive and up-regulatedly differential. Further study on the differential fragments could reveal the male-induction mechanism of gynoecious bitter melon treatd with AgNO3.

【题目】纯雌系苦瓜花经AgNO3诱雄后的雄蕊发育和基因表达

【中文关键词】苦瓜; 纯雌系; 诱雄处理; cDNA-AFLP; 差异基因表达
【英文关键词】bitter melon; gynoecious line; male-induced treatment; cDNA-AFLP; differential gene expression
【中文摘要】为了研究AgNO3诱导下纯雌系苦瓜花蕾发育过程中的差异基因表达,本文运用形态学观察、cDNA-AFLP、RT-PCR和反向Northern杂交等技术在形态学和转录组学水平上对花蕾转雄进行了研究。结果显示:(1)花蕾在AgNO3处理后第6天出现雄蕊,第14天形成两性花,而且两性花中的花粉具有完全生活力,第22天后恢复全雌花;(2)从128对引物组合中筛选出可获得丰富清晰条带的引物组合36对,它们从AgNO3处理的花蕾中分离到11个高度表达的差异片段,经克隆、测序和在线比对,有2个未知基因,9个已知基因,其中1个与植物性别分化有关的CYP450家族基因有高度同源性,命名为McCYP72A1;(3)McCYP72A1在AgNO3处理后2~12h内的花蕾中表达,而且在第8h时表达丰度最高,但在处理的根、茎和叶以及对照的各个器官中不表达。结果表明,AgNO3处理可诱导纯雌系苦瓜花蕾中与雄性分化相关基因表达,进而可能导致处理后14天内雌花发育为两性花。
【英文摘要】To elucidate the differential gene expression during the development of stamens in female flower buds of bitter melon gynoecious line induced with AgNO3, in the present study, it was studied at the levels of morphology and transcription genomics using morphologic observations, cDNA-AFLP, RT-PCR and reverse-Northern hybridization. The results showed as follows: (1) After treated with AgNO3, stamens were generated at the 6th day,and bisexual flowers with viable pollen grains were observed at the 14th day, and gynoecious flowers were recovered since the 22th day. (2) Thirty-six primer combinations could amplify many distinct bands, among them, 11 bands which were strongly expressed only in the AgNO3-treated buds were cloned, sequenced and aligned on line,resulting in discovery of 2 unknown genes and 9 known genes. The sequence showing high similarity with CYP450 gene super family which related to plant sex differentiation was named as McCYP72A1. (3) McCYP72A1 was expressed in the flower buds during the period of 2 12 h after treated with AgNO3, and expressed most strongly at 8 h, but not expressed in the roots, stems, leaves of treatment and the mixed samples of buds, roots, stems, leaves of the control. It suggested that genes related to male differentiation in the flower buds of bitter melon gynoecious line were expressed after treated with AgNO3, which might make female flowers develop into bisexual flowers within 14 days.

【题目】AgNO3诱导的苦瓜纯雌系完全花分化与幼叶和花蕾中内源激素的关系
【中文关键词】苦瓜; 纯雌系; 完全花; 内源激素; AgNO3;
【英文关键词】bitter melon (Momordica charantia); gynoecious; complete flower; endogenous hormone; AgNO3
【中文摘要】本文用酶联免疫检测(ELISA)技术研究三叶一心期喷施AgNO3诱导苦瓜纯雌系完全花分化过程中花蕾与幼叶中内源激素含量变化。结果显示:喷施AgNO3后幼叶中IAA、GA3、ZR和ABA含量与喷水的相比,都是先下降后增加。AgNO3处理的花蕾中这4种激素含量在72h内没有一致变化规律,但变化幅度大于幼叶的,表明生殖器官的内源激素对苦瓜性别分化影响比营养器官的大。AgNO3处理后24~48h内,花蕾中这4种激素的含量明显低于喷水的,而其余时间则高于喷水的。此外,AgNO3处理的花蕾中ABA/IAA、ZR/IAA和GA3/IAA比值也在24~48h发生剧烈的变化,48h之后这些激素比值与喷水的相差不大。这些结果说明了AgNO3处理后24~48h是苦瓜纯雌系性别分化的关键时期,IAA可能是诱导纯雌系苦瓜雄性分化的关键激素。
【英文摘要】Four endogenous hormones in flower buds and young leaves of gynoecious bitter melon (Momordica charantia) were measured by enzyme-linked immunosorbent assay (ELISA) during differentiation of complete flower induced by AgNO3 at three-leaf-one-apical stage. The results showed that contents of ABA, IAA, GA3 and ZR in young leaves decreased firstly then increased after being sprayed with 300 mg · L-1 AgNO3. Contents of the 4 endogenous hormones in flower buds treated with AgNO3 didn ’ t show the same change in 72 h, but which changed more greatly than those in young leaves, indicating that the endogenous hormones in reproductive organs had greater influence on sex differentiation than those in vegetative organs. Contents of the 4 endogenous hormones in flower buds during 24 – 48 h after treatment with AgNO3 were significantly lower than those of the control, but higher in the rest time. Furthermore, the ratios of ABA/IAA, ZR/IAA and GA3/IAA in flower buds treated with AgNO3 changed intensively in 24 – 48 h, but they were similar with the control after 48 h. It suggested that 24 – 48 h after AgNO3 treatment was the important period for the sex differentiation in gynoecious bitter melon induced by AgNO3 , and IAA may be the leading hormone for male

differentiation in gynoecious bitter melon induced by AgNO3.

【题目】苦瓜种子发育过程中果实形态学性状变化与种子质量演进的关系
【中文关键词】苦瓜; 种子发育; 形态学性状; 种子成熟度
【英文关键词】Momordica char a tia ; seed development ; morphological trait; seed maturation
【中文摘要】以12个不同类型苦瓜资源为研究对象,对其种子发育进程中的果实及种子的形态学性状变化及种子生活力、干重及含水量的变化进行调查,研究发现苦瓜种子发育过程可分为3个时期:快速膨大阶段、干物质积累阶段及成熟脱水阶段。苦瓜种子在12DAA(Date after anthesis)后开始具备生活力,充实成熟期在花后22DAA左右,此时具有最高的发芽率,而在此后的时期却略有下降。果皮颜色在22DAA左右从浅绿色转为黄色,假种皮颜色也在22DAA转红色,种壳完全转为褐色,种子达到充实成熟期和果实外部形态性状的明显变化基本同步。因此,可通过果实的外部形态特征、假种皮的颜色变化来确定种子的最佳采收时间,从而获得高质量的种子。
【英文摘要】Twelve germplasm accessions of Momor dica char antia were used in this experiment to study the r elationship between the changes of fruit morphological traits and the stages of seed maturity1 Germination per centage, seed dry weight and seed moisture content at different seed developing stages were determined1 The results indicated that seed development of Momordica char atia could be classified into three stages: the rapid enlarging, the dr y matter accumulation and the dehy2 dration1 Seeds start showing viability in 12 days after ant hesis (DAA) , and the filling matures in approximate 22 DAA when the highest viability is observed1 T he fruit color changed from light green to yellow and aril color changed into red in approx1 22 DAA, which indicated that these two morphological traits could be used as t he indicators of seed maturation1

【题目】种植季节对超甜玉米产量及主要农艺性状的影响
【中文关键词】季节影响; 超甜玉米; 产量; 农艺性状
【英文关键词】sweet corn; season; yield; agronomic trait
【中文摘要】研究6个超甜玉米品种在春季和秋季种植的产量和主要农艺性状的表现。结果表明:不同种植季节对产量、生育期及株高、穗位、单穗重、行粒数、穗粗、籽粒可溶性固形物含量等性状产生显著影响。其中,秋季种植的产量、单穗重、穗粗、籽粒可溶性固形物含量显著或极显著高于春季种植的,而生育期、株高、穗位则显著低于春季种植的;穗位比例、穗长、秃顶等性状则较少受到种植季节因素的影响,能够稳定显示出品种的特征;多数超甜玉米品种秋季种植产量高且品质优良。
【英文摘要】Six varieties of sweet corn were planted in spring and autumn to observe their yield and several agronomic traits. The results showed that planting season had significant effects on agronomic traits such as yield, growth stage, plant height, ear height, weight per ear, grain number per row, ear diameter, grain soluble solid content,etc. The yield, ear weight, ear diameter, grain soluble solid content of the sweet corn planted in autumn were significantly or highly significantly higher than those in spring, whereas the growth stage or the days from sowing to harvest,plant height and ear height of the sweet corn planted in autumn were significantly lower than those in spring. Ear height/plant height, ear length and barren tip/ear were less affected by planting season, indicating these traits are stable in the varieties. Most of the sweet corn varieties planted in autumn yielded higher with better quality.

【题目】Genetic diversity analysis and transferability of cereal EST-SSR markers to orchardgrass (Dactylis glomerata L.)
【中文关键词】Dactylis glomerata L.;Genetic diversity;SSR;AMOVA;Transferability
【英文关键词】Dactylis glomerata L.;Genetic diversity;SSR;AMOVA;Transferability
【中文摘要】The diversity and genetic relationships among 74 orchardgrass accessions were analyzed using cereal EST-SSRs and orchardgrass SSR markers in order to estimate genetic variability and compare the level of diversity. In total, 190 polymorphic bands were detected with an average of 6.3 alleles per SSR loci. The average polymorphic rate (P) for the species was 84.63%, suggesting a high degree of genetic diversity. The molecular variance analysis(AMOVA) showed that the proportion of variance explained by within and among geographical groups diversity was74.87% and 25.13%, respectively. The distinct geographical divergence of orchardgrass was

revealed between Americas and Oceania. The ecogeographical conditions such as climate and soil, genetic drift and mating system could be the crucial factors for genetic divergence. Furthermore, the study also indicated that northern Africa, Europe and temperate Asia might be the diversity differentiation center of orchardgrass. The result will facilitate the breeding program and germplasm collection and conservation.

【题目】紫花苜蓿建植期四种刈割频次下的产量、品质及再生性研究

【中文关键词】紫花苜蓿 ;刈割频次;再生性;持久性

【英文关键词】:Medicago sativa;cut frequen y;regrowth;persistence

【中文摘要】收获制度是苜蓿生产管理的关键环节。为明确不同刈割制度下建植期苜蓿生长规律,本研究利用盆栽试验,通过人工控制苜蓿生长温度、水肥条件,完善测定指标体系,进行苜蓿刈割频次的研究,分析连续生产情况下不同收获制度对不同类型苜蓿建植期产量、品质、再生能力及持续生产力的影响。研究结果表明,高频刈割会显著降低苜蓿的生产力和持久性。连续高频刈割后延长收获间隔可以恢复苜蓿茎密度和再生能力,但不能恢复到适宜刈割频次的水平。不同品种间生育期、耐刈性与再生性、产量分布以及营养价值存在显著差异,并导致相同收获频次下饲草产量、饲草品质以及持续生产力的差异。在建植期及低龄草地,维克多(Vector)和得龙(Durango)2个国外引进品种适于间隔为25~35d高频度刈割;我国东北地区育成低休眠级苜蓿品种公农1号适于间隔为35~45d的刈割频度

【英文摘要】

Harvest schedule is the key point of Medicago sativa production management. This study measured the r esponse of M. sativa yield, hay quality, regrowth, and persistence to four harvest schedules of three cult ivars potted in an appropriate growth environment. A high cutting frequency (20 days) reduced M. sativ a pro-

ductivity and persistence but stem densities and regrowth ability recovered after a prolonged cutting inte rval, although they did not reach the same level as those under a proper cutting schedule. There were considerable differences in M. sativa growth stage, cut resistance, regrowth, yield distribution, and feed v alue of the three cultivars, which resulted in differences of yield, quality and persistence under the same cut frequency. Two foreign M. sativa cultivars, 'Vector' and 'Durango', which have high fall dormancy grades, should be cut at intervals of 25--

35 days for establishing stands, while M. sativa ‘ Gongnong No. 1' (which was bred in the North-East of China) was best suited to a cut schedule of 35--45 days.

【题目】遮荫条件下9个紫花苜蓿品种苗期形态及生长响应
【中文关键词】紫花苜蓿;苗期;遮荫;形态;生长响应
【英文关键词】Medicago sativa; seedling;shading;morphology; growth response
【中文摘要】采用遮荫试验,研究了光对9个苜蓿品种苗期形态特征及生长动态的影响。结果表明,不同遮荫处理下苜蓿品种间株高变化有较大的差异,游客表现出最弱的耐阴性;随光照减弱,各品种根颈分枝数、主根粗、二级侧根数、根瘤数、叶片厚度和叶片数均显著下降,表现出较强光环境下更强的形态可塑性;各品种主根长无显著变化,总叶面积动态中新疆大叶、苜蓿王和德宝变化不显著,其他品种显著下降。各品种生物量随遮荫强度增加而显著下降,弱光下各品种生物量对根系的分配明显下降,对茎和叶的分配增加,叶面积比随光强减弱明显增大,相对生长速率随光强减弱显著下降。不同品种同一器官对光环境变化的反应程度不一致,反映了苜蓿各品种耐阴机制的差异。
【英文摘要】
The seedling morphological characteristics and growth dynamics of nine Medicago sativa varieties under shade were studied.The height of Eureka showed significantly less plasticity than other varieties under different levels of shading.All varieties showed a larger morphological plasticity at lower light intensities than at higher intensities:They developed distinctly fewer crown ramus,root nodes,leaves and secondary lateral roots,thinner leaves and taproots at lower intensities.Light intensity had little effect on the taproot length of all varieties.The leaf area of Xinjiangdaye,Alfaking,and Derby showed no obvious difference when other varieties significantly decreased.With decreasing light intensity,both the gross and root biomass allocation significantly decreased while stem and leaf biomass allocation increased.The leaf area ratio significantly increased but the relative growth ratio was significantly reduced with an increase in shading.The different sensitivity to shading of the same organ of different varieties indicated that there were different mechanisms for shade-tolerance among M.sativa varieties.

【题目】鸭茅杂交种SRAP分子标记鉴定及遗传分析
【中文关键词】鸭茅;SRAP标记;杂交种鉴定;遗传多样性分析
【英文关键词】orchardgrass (Dactylis glomerata L.); SRAP markers; hybrid identification; genetic diversity analysis
【中文摘要】【目的】利用分子标记技术对鸭茅杂交种进行快速鉴定和遗传分析,建立鸭茅杂交种的快速鉴定体系,揭示鸭茅杂交种群体遗传信息,为鸭茅资源保护利用及新品种选育提供科学依据。【方法】利用SRAP标记技术对140个鸭茅杂交种单株及其亲本(01996、YA02-103)DNA进行扩增,分析杂交种与其亲本间扩增谱带的多态性,以鉴别真假杂交种,并结合形态标记对杂交后代的遗传变异进行分析。【结果】从192对SRAP引物中筛选出64对引物在杂交种和双亲间存在扩增多态性,多态性百分比为33.33%。利用能扩增出父本特征带的引物鉴定了140个杂交种,其中106个具有父本的特征带,可鉴定为真杂交种。选择16对多态性引物对亲本和106个真杂交种进行扩增,获得151条条带,其中多态性条带71条,平均每对引物扩增出4条多态性条带,多态性位点百分比为47.24%。【结论】SRAP用于鸭茅杂交种鉴定及多态性分析是可行的
【英文摘要】【Objective】
Molecular markers were used to identify orchardgrass hybrids and analyze genetic diversity for forming orchardgrass hybrid identification system,detecting genetic information and conservation and utilization of orch ardgrass germplasm resources. 【Method】 The sequence-
related amplified polymorphism (SRAP) were assessed to analyze 140 orchardgrass hybrid individuals and th eir parental lines (01996,YA02-
103) for detecting true or false hybrids according to polymorphism,and the genetic variation among hybrid individuals were detected using molecular markers and morphological markers. 【Result】 Sixty-
four pairs of primers that generated clear,reproducible and polymorphic bands were selected from 192 pair s of SRAP primers with an average of 33.33%. 106 progenies with the special male bands compared w ith the female bands were identified from 140 progenies,which were therefore recognized as true hybrids. Sixteen primer pairs produced a total of 151 bands,of which 71 bands were polymorphic bands and the average polymorphic bands was four per primer pair. The average percentage of polymorphic bands was 47.24%. 【Conclusion】
These results suggested that SRAP technique has wide prospective in hybrid identification and diversity analysis of orchardgrass.

【题目】水分胁迫下扁穗牛鞭草根系保护酶活性变化
【中文关键词】扁穗牛鞭草; 保护酶 ; 根系; 抗旱性

【英文关键词】Hemarthria compressa ; protective enzyme ; root ; drought resistance
【中文摘要】在水分胁迫下,以国审扁穗牛鞭草品种广益和重高为材料,研究2种牧草根系超氧化物歧化酶(SOD)、过氧化物酶(POD)、过氧化氢酶(cAT)活性和丙二醛(MDA)含量变化情况。结果表明,在水分胁迫期间,广益和重高扁穗牛鞭草根系MDA含量和SOD、POD、CAT活性迅速升高,在14d时达到最大值,之后MDA含量和3种保护酶活性均出现大幅度下降。研究还表明,初期MDA含量上升主要是由水分胁迫引起的,而3种保护酶活性的上升则主要是MDA含量上升所致。14d后MDA含量和3种保护酶活性的下降可能是由于2种扁穗牛鞭草在渡过干旱阈值期后,表现出一定耐受性和适应性。在研究期间,重高扁穗牛鞭草根系MDA含量始终高于广益,综合2种扁穗牛鞭草萎蔫和枯萎状况,表明广益扁穗牛鞭草抗旱能力大于重高扁穗牛鞭草
【英文摘要】
Two national varieties "Guangyi" and "Chonggao" were used to study the changes of superoxide dismutase (SOD), peroxidase isoenzyme (POD), catalase (CAT) and malondialdehyde (MDA) in roots. The results showed that the MDA content and the activities of superoxide dismutase, peroxidase isoenzyme, and catalase in the roots increased during water stress, with a peak at 14 days. After that, the content of malondi-
aldehyde and the activities of the three kinds of protective enzymes declined significantly. The study also showed that the initial rise in the content of malondialdehyde was mainly caused by drought stress. However, the rises in the three kinds of protective enzymes activities may result from the rise of malondialdehyde. After 14 days of drought stress, the reduction in content of the three protective enzymes may due to their tolerance and adaptability after experiencing the droughtthreshold period. During the study, the roots of "Chonggao" always had a higher MDA than "Guangyi". Based on the drooping and wilting status of the two grasses, we conclude that "Guangyi" has a greater drought resistance than "Chonggao"

【题目】野生新麦草种质醇溶蛋白遗传变异分析
【中文关键词】新麦草; 种质;醇溶蛋白;遗传变异;资源保护
【英文关键词】Psathyrostachys juncea;germplasm;gliadin;genetic variation;resources conservation
【中文摘要】采用酸性聚丙烯酰胺凝胶电泳技术(A-PAGE)对来自中国新疆、俄罗斯西伯利亚及蒙古等地的35份野生新麦草种质进行醇溶蛋白的遗传变异分析,获得如下结果,1)电泳共检测到37条醇溶蛋白条带,多态性条带比率高达100%;2)种质间遗传相似系数变幅为0~0.827 6,平均值为0.450 9,表明供试材料具有丰富的醇溶蛋白遗传多样性;3)聚类分析将供试材料分成5类,相同或者相似生态地理来源的材料能够聚在一起,表明醇溶蛋白带谱与其地理分布具有一定的相关性;4)种质间的Shannon多样性指数Ht=0.579 6,类群平均多样性指数Hgroup=0.483 5,其中类群内和类群间的遗传变异分别为83.42%和16.58%,这可能与新麦草异花授粉的繁育方式有关。本研究结果将为新麦草种质资源的保护和利用提供理论依据
【英文摘要】
Acid polyacrylamide gel electrophoresis(APAGE) was used to analyse the gliadin genetic variation among thirty
five wild accessions of Psathyrostachys juncea collected from Xinjiang in China,the Siberia region in Russia,and from Mongolia.1) A total of 37 bands were obtained from the accessions and all were polymorphic;2) The Dice genetic similarity coefficient of the tested materials ranged from 0-
0.827 6,with a mean of 0.450 9.There was rich genetic polymorphism among the tested wild materials of P.juncea;3) The 35 wild accessions can be divided into five groups and can be clustered with the same or similar eco-
geographical origins.Results also showed some relationship between the patterns of gliadin bands and geographical distribution;4) Genetic differentiations between and within groups were estimated by Shannon's diversit

y index.The results showed Ht=0.579 6 and Hgroup=0.483 5,which indicated that 83.42% genetic variance existed within groups,and 16.58% genetic variance was between the groups.This might be related to the cross-
pollinated breeding system of P.juncea.The results of the study will supply more information for germplasm resources,conservation and breeding of P.juncea.

【题目】不同产地白三叶种质遗传多样性的SRAP分析
【中文关键词】白三 叶;S RAP;遗传多样性
【英文关键词】white clover(Trifolium repens); SRAP; genetic diversity
【中文摘要】采用SRAP分子标记技术,对不同产地的41份白三叶材料进行遗传多样性分析,筛选出20对随机引物组合,获得以下结果:1)20对随机引物组合共扩增出479条清晰可辨的条带,每对引物组合PCR扩增出13~44条带纹,平均为23.95条,多态性条带411条,多态性位点百分率(PPB)占85.16%,多态性信息含量(PIC)范围为0.182~0.334,平均为0.268,表明供试白三叶种质具有丰富的遗传多样性;2)材料间遗传相似系数(GS)范围为0.5866~0.9896,平均GS值为0.7307;表明供试白三叶种质在分子水平具有相对较远的亲缘关系;3)对所有材料进行聚类分析和主成分分析发现,在GS=0.71的水平上,可将41份白三叶材料分成3大类,大部分来自相同或相似生态地理环境的材料能聚为一类,呈现出一定的生态地理环境分布规律
【英文摘要】SRAP(sequence-
related amplified polymorphismmarkers were used to analyze genetic diversity of 41 white clover(Trifolium repens)accessions using 20 pairs of random primers.The results were:1)The primer pairs amplified 479clear bands,including 411 polymorphic bands,which ranged from 13 to 44 bands per primer pair with an average of 23.95 bands.The percent of polymorphic loci was 85.16%,and the polymorphism information content ranged from 0.182to 0.334 with an average of 0.268,which showed that the tested white clover had a rich genetic diversity of germplasm.2)Genetic similarity ranged from 0.586 6to 0.989 6 among all accessions with an average of 0.730 7,which also suggested that there was a rich genetic variation among the white clover germplasms.3)Cluster analysis and principal component analysis of 41white clover accessions divided them into 3 groups on the genetic similarity of 0.71 and most of the accessions from the same or similar ecologic geographical environment clustered in one group,showing a certain degree of eco-
geographical distribution.

【题目】转柠檬酸合成酶基因苜蓿耐铝性研究
【中文关键词】苜蓿;转基因;柠檬酸合成酶;耐铝性
【英文关键词】Medicago sativa L. ; transgenic ; citrate synthase ; aluminum tolerance
【中文摘要】【目的】通过对渝苜 1号转柠檬酸合成酶 (C S) 基因和对照株的根尖进行耐铝性试验,旨在找到转基 因苜蓿耐铝性的适宜条件,明确转基 因株较对照株表现出来的耐铝效果。【 方法】以对照株和转 C S基因 4号苜蓿 为材料,设计 0、5 、15、30和 50umol.L-1个氯化铝浓度梯度,每个处理3个重复,测量前3d根尖的伸长情况。 【结果】在 5个氯化铝浓度

下,对照株和转基因株在第1天的根尖伸长都显著的高于第2天和第3天;转基因株第2天在15、30和50umol.L-1 3个氯化铝浓度下的根尖伸长显著高于第3天,而对照株的根尖在第2天和第3天基本停止伸长。随着铝浓度升高,根尖伸长受阻越严重。对照株在15umo1.L-1铝处理的第1天根尖还能基本正常伸长,但在第2天即使5umo1.L-1铝处理,根尖伸长已严重受阻,这说明对照株耐铝浓度低于15umo1·L-1。而转基因株当氯化铝浓度达到30umo1.L-1时,根尖伸长才开始明显受阻(P<0.05)。【结论】渝苜1号CS转基因苜蓿的耐铝条件为氯化铝浓度15-30umo1.L-1,处理2d;转基因苜蓿相对于对照株表现出明显的耐铝性。

【英文摘要】【Objective】 An experiment on root tip tolerance of non-transgenic control (CK) and citrate synthase (CS) transgenic plants from Medicago sativa L. cv. Yumu No.1 was conducted to find out the suitable conditions for Al-tolerance and to examine the Al-tolerance of the transgenic plants relative to the control plants. 【Method】 Using CS transgenic alfalfa No.4 and the control plant as materials,five AlCl3 concentration gradients were designed which were 0,5,15,30,and 50 μmol·L-1,each with three replicates,the root tip elongation in the first three days was measured. 【Result】 The root tip elongation of transgenic and control plants on the first day was significantly higher than on the second and the third day in all five AlCl3 concentrations. The root tip elongation of transgenic plants at 15,30,and 50 μmol·L-1 AlCl3 concentrations on second day was significantly higher than on the third day,while the root tip of control plant almost stopped elongating on the second and third day. With increased Al concentrations,the root tip elongation was inhibited seriously. The root tip of control plants in 15 μmol·L-1 Al treatment could elongate normally on the first day,while the elongation was seriously suppressed even if in 5 μmol·L-1 Al treatment on second day,indicating that the Al concentration the control plants could be tolerant of was less than 15 μmol·L-1. When the AlCl3 concentration increased to 30 μmol·L-1,the root tip elongation of transgenic plants was significantly suppressed (P0.05). 【Conclusion】 Al-tolerance conditions of transgenic alfalfa in Medicago sativa L. cv. Yumu No.1 were 15-30 μmol·L-1 AlCl3 concentrations for 2 days. Compared to the control,the transgenic alfalfa showed a significant resistance to Al.

【题目】Dynamics of the Evolution of the Genus of Agrostis Revealed by GISH/FISH

【中文关键词】BSA, bovine serum albumin; FISH, l uorescence in situ hybridization; FITC, l uorescent isothiocyanate; GISH, genomic in situ hybridization.

【英文关键词】BSA, bovine serum albumin; FISH, l uorescence in situ hybridization; FITC, l uorescent isothiocyanate; GISH, genomic in situ hybridization.

【中文摘要】Genomic changes in related species undergoing human-driven and natural selection are important and biologically interesting. The genus Agrostis is an ideal model for studying the evolution of plants since it has not undergone artii cial selection for the past thousands of years. Fluorescence in situ hybridization (FISH) or genomic in situ hybridization (GISH) technology is an effective method for analyzing genome homology and organization, detecting genomic rearrangements, and karyotyping based on visual features. In this study, GISH was performed on two tetraploid species, A. capillaris (2n = 4x = 28, A1A1 A2A2) and A. stolonifera (2n = 4x = 28, A2A2 A3A3), using genomic DNA from a putative ancestral diploid species A. canina (2n = 2x = 14, A1A1) as a probe. Genomic in situ hybridization results revealed that the two tetraploid species underwent intergenomic translocations and genomic rearrangements and demonstrated that the A1 genome is highly homologous to the A2 genome. We discovered the phenomenon of concentric parental genome separation in the nucleus of A. stolonifera in which the two parental genomes (A2 and A3) were spatially separated with limited intermixing and were of concentric arrangements. The FISH results showed that the

distribution of 45S rDNA loci varied among the three species. The results of our study suggest that substantial genomic alterations occurred during the evolution of the genus of Agrostis.

【题目】Visualization by atomic force microscopy and FISH of the 45S rDNA gaps in mitotic chromosomes of Lolium perenne

【中文关键词】Lolium, 45S rDNA, Chromosome gap and break, Chromatin decondensation, AFM, Fluorescence in situ hybridization
【英文关键词】Lolium, 45S rDNA, Chromosome gap and break, Chromatin decondensation, AFM, Fluorescence in situ hybridization

【中文摘要】The mitotic chromosome structure of 45S rDNA site gaps in Lolium perenne was studied by atomic force microscope (AFM) combining with fluorescence in situ hybridization (FISH) analysis in the present study. FISH on the mitotic chromosomes showed that 45S rDNA gaps were completely broken or local despiralizations of the chromatid which had the appearance of one or a few thin DNA fiber threads. Topography imaging using AFM confirmed these observations. In addition, AFM imaging showed that the broken end of the chromosome fragment lacking the 45S rDNA was sharper, suggesting high condensation. In contrast, the broken ends containing the 45S rDNA or thin 45S rDNA fibers exhibited lower density and were uncompacted. Higher magnification visualization by AFM of the terminals of decondensed 45S rDNA chromatin indicated that both ends containing the 45S rDNA alsoexhibited lower density zones. The measured height of a decondensed 45S rDNA chromatin as obtained from the AFM image was about 55 – 65 nm, composed of just two 30-nm single fibers of chromatin. FISH in flow-sorted G2 interphase nuclei showed that 45S rDNA was highly decondensed in more than 90% of the G2/M nuclei. Our results suggested that a failure of the complex folding of the chromatin fibers occurred at 45S rDNA sites, resulting in gap formation or break.

【题目】苜蓿总皂甙含量的遗传变异及其与农艺性状的相关分析
【中文关键词】苜蓿;总皂甙;遗传力;农艺性状;相关分析
【英文关键词】Medicago sativa L.; saponins; heritability; agronomic characters; correlation analysis
【中文摘要】【目的】通过对苜蓿总皂甙含量与农艺性状的相关分析找出一个能快速标记总皂甙含量高低的性状,探索总皂甙含量的遗传变异规律。【方法】以耐湿热苜蓿新品种渝苜一号为材料,测定100个苜蓿单株,从中选出5个高皂甙植株和5个低皂甙植株。【结果】通过各单株后代系的试验确定了这10个植株的总皂甙遗传力在0.118到0.745之间变化,后代系的变异系数在15.54%到28.81%之间变化,高低皂甙群体的遗传力分别为0.636和0.208,高皂甙群体的遗传力明显高于低皂甙群体。苜蓿总皂甙含量与株高、叶色、虫害程度、干重和干物质率的相关分析及通径分析的结果表明:叶色与总皂甙含量呈极显著负相关(r=-0.405**),且叶色与总皂甙含量的的相关关系主要是直接效应(P=-0.422**);干重与总皂甙含量的相关主要是通过株高、叶色和干物质率的间接作用。【结论】通过常规育种方法要育成低皂甙苜蓿品种较为困难,而一些高皂甙含量的后代系可作为高皂甙苜蓿品种的育种材料;苜蓿的叶色可以作为快速识别苜蓿总皂甙含量高低的标记。
【英文摘要】
[Objective] Through correlation analysis between saponins content and agronomic characters in alfalfa, the authors try to find out one trait which can sign saponins content quickly and explore the rule about heritability and variation of saponins content. [Method] A new cultivar of Hotwet alfalfa named Yumu No. 1 was used as materials in this research, one hundred alfalfa plants were determined, five high saponin plants and five low saponin plants were selected. [Result] Saponins heritability of these 10 alfalfa plants changed from 0.118 to 0.745 through experiments on the lines of offsprings of every plant, and variation coefficient of the lines of offsprings changed from 15.54% to 28.81%, the heritability of high and low saponin groups was 0.636 and 0.208, respectively, and the heritability of high saponin group was obviously higher than low saponin group. The result of correlation and path analysis between the saponins content and plant height, leaf color, pest extent, dry weight as well as the dry matter content showed that there was an extremely significant relationship (r=-0.405**) between leaf color and saponins content, and the saponins content was affected by leaf color directly (P=-0.422**). The correlation between dry weight and saponins content was affected by plant height, leaf color and dry matter indirectly. [Conclusion] It is difficult to breed low saponin cultivar in alfalfa through general breeding method, but some lines of offsprings with high saponin content can be used as materials for breeding of high saponin content alfalfa cultivar. Leaf color of alfalfa can be used as a marker to identify saponins content in alfalfa quickly.

【题目】象草产量及生物学性状的品系间差异及聚类分析

【中文关键词】象草;产量;生物学性状;聚类分析
【英文关键词】Pennisetum purpureum;Yield;Biological characters;Cluster analysis
【中文摘要】以17个象草实生苗株系以及杂交狼尾草共18份材料为研究对象,对产量、叶/茎比、株高、分蘖数、叶长、叶宽以及茎粗等生物学性状进行了方差分析、相关分析和聚类分析。结果表明:所有调查性状品系间存在显著差异,两次刈割时第二次刈割产量显著高于第一次刈割,一次性刈割产量 极显著高于两次刈割之和。根据产量、株高 以及叶/茎比等生物学性状将供试材料分为矮生多蘖、较高中蘖、较高少蘖以及高大少蘖共四种类型。
【英文摘要】
Variance analysis, correlation analysis and cluster analysis of some important biological characters including yield, leaf/stem ratio, plant height, tillering number, leaf length, leaf width, stem diameter of seventeen lines of Penniseturn purpureum and hybrid pennisetum were conducted. The results showed that the differences were significant in investigated characters among these lines and cultivars; dry yields of the second harvest were significantly higher (P〈
0.01) than that of the first harvest, dry yields of one harvest per season were significantly higher than the sum of two harvest per season. The napier grass lines and hybrid pennisetum were divided into four types by cluster analysis based on dry yield, leaf/stem ratio, plant height etc. : dwarf and numerous tillers type, semi-
dwarf and more tillers type, intermediate height and less tillers type, tall and less tillers type.

【题目】干旱胁迫下两种钝叶草的生长和生理响应差异
【中文关键词】钝叶草;干旱胁迫;SOD;叶片含水量;叶绿素含量
【英文关键词】augustinegrass;drought stress;SOD activity;leaf water content;chlorophyll concentration
【中文摘要】采用盆栽法,研究了2个来源不同的钝叶草在干旱胁迫条件下的生长和生理响应差异。结果表明:① 持续干旱30 d后,两个材料均出现表征死亡现象,但复水3 d后仍有部分钝叶草返青;②不同干旱处理显著抑制了钝叶草的生长,但宫崎钝叶草能保持较强的匍匐茎生长势;③持续干旱胁迫下,钝叶草的叶片含水量和叶绿素含量显著下降,但宫崎钝叶草能维持较高且稳定的叶片含水量和叶绿素含量;④轻度干旱和中度干旱处理能提高钝叶草的叶片SOD活性;⑤宫崎钝叶草具有较强的旱后恢复能力,抗旱性强于匈容钝叶草。
【英文摘要】
A greenhouse experiment was designed to investigate the effects of drought stress on augustinegrass (Stenot aphrum secundatum) and to determine the drought tolerance through four water treatments, well-watered (control) slight water deficit (rewatered 400 ml everyday) , moderate water deficit (rewatered 250 ml everyday) , and severe water deficit (well-rewatered after 30 d of water holding). The leaf water content, whole chlorophyll content, stolon growth rate and single stolon biomass declined remarkably, however, leaf SOD activity rose under drought stres s. The results also revealed variety Miyazaki had higher leaf water content, whole chlorophyll content, an d stolon growth rate than those of augustine grass from Jurong. Miyazaki had higher SOD activity und er severe drought stress and recovered more quickly than Jurong augustinegrass after rewatering. As a res ult, Miyazaki was more drought tolerant than augustine grass from Jurong.

【题目】南京地区冬闲田播种紫花苜蓿生产性能的品种间差异
【中文关键词】紫花苜蓿;冬闲田;速生栽培;产量影响因子;干物质积累
【英文关键词】lfalfa ;winter2 fallow farmland; seasonal utilization;yield component; dry mat ter accumulation
【中文摘要】为了筛选适宜我国南方农区冬闲田种植的高产速生紫花苜蓿 Medicago sat i va 品种 ,试验在南京冬闲田播种条件下对 8 个半秋眠和非秋眠型紫花苜蓿品种的产量影响因子与干物质积累特性进行了比较。结果表明:在春季收获两茬的短期栽培利用时 ,紫花苜蓿干物质产量可达 730. 26~1 460. 25 g/ m2。植株生长性状中 ,株高、 一级分枝数和干物质生长速率对两茬草干物质产量的贡献率均较大。其中 ,第 1 茬草的干物质产量与株高、 主茎节数、 一级分枝数和干物质生长速率呈显著正相关(P < 0. 05) ,再生草的干物质产量依次与干物质生长速率、 单株叶面积、 单茎茎粗、 一级分枝数、 株高、 株高生长速度和单茎分枝数呈显著正相关(P<0.05) 。WL2414、 WL2525HQ、 四季旺和德宝 4 个品种因在株高、 一级分枝数和干物质生长速率方面表现优异 ,产量较高 ,在南方农区冬闲田有较大的栽培利用潜力。
【英文摘要】
In order to select high yield and quick growth of alfalfa cultivars used in south China, the yield co mponents and dry matter of 8 weak fall dormancy alfalfa cultivars were studied in a winter-fallow farmland in Nanjing. Dry matter yields of 8 alfalfa cultivars were 730.26-1 460.25 g/m^2 determined by harvesting 2 times in next spring. Plant height,primary shoot number and crop growth rate are ted important factors in dry matter yield. At the first significantly with plant h eight, internode growth rate. At the plant leaf area, stem second cutting, dry matter number per yield was po diameter, primary shoot number, plan g,dry matter yield was positively correlacaulis, primary shoot number and crop sitively correlated with crop growth rate, t height, growth rate of plant height and branch number. Four cultivars including WL-414, WL-525HQ, Siriver and Derby had high potential that would to be used in south China as higher dry matter yield resulted from more plant height, pri- mary shoot number and crop growth rate.

【题目】紫花苜蓿抗菌核病基础材料筛选的研究
【中文关键词】苜蓿;菌核病;离体叶片分离法
【英文关键词】苜蓿;菌核病;离体叶片分离法
【中文摘要】苜蓿(Medicagos alivaL) 是我国重要的牧草, 其营养价值和蛋白质含量非常高, 被称为“ 牧草之王 ”。苜蓿菌核病在世界各主产发生非常广泛, 尤其是在南方高湿地区, 且有危害加重之势, 造成非常严重的经济损失, 给牧畜生产带来了巨大的损失, 严重威胁着苜蓿的种植业和畜牧业的发展。 为了选育出优良的抗菌核病的品种, 采用离体叶片分离法对西南大学牧草实验地的苜蓿接种实验, 在人工培养箱内2 2℃条件下培养7 天, 观察接种叶片每天的感染情况, 得出 1 2 0、 1 2 5、 1 2 6、 1 3 4、 1 3 7 具有较强的抗病性。
【英文摘要】
The alfalfa (Medicagos aliva L.clover is an important herding grass of our country, its nourishment value and the protein content are very high, was become king who herd the grass.The Sclerotinia sclerotiorum disease to produce the occurrence in each lord of world very, is in the southern and high and wet region particularly, and have endanger to aggravate it power, result in very serious economy lose, give herding beast to produce to bring the huge great damage, threaten the clover to plant seriously and livestock farming also of development.For choosing to use to compare good of to the species that the germ checks the disease anti-
disease to like, the adoption leaves the body leaf the slice separate the method experiments the ground to the southwest university herding grass of clover inoculate the experiment, develop 7 days under the condition that artificial develops the box inside 20°C, observe to infect with the circumstance everyday, of 120,125,126,134 and 137 have the stronger resistance to the disease.

【题目】18个三叶草品种耐热性综合评价
【中文关键词】三叶草; 耐热性; 综合评价
【英文关键词】trifolium;heat tolerance;comprehensive appraisal
【中文摘要】对18个三叶草品种耐热性进行了比较.并结合芽期和成苗试验,综合评价了各品种的耐热性强弱。结果表明:发芽率、发芽指数随温度的升高而降低,在40℃时种子不发芽;叶片灼伤率、植株存活率和叶片相对含水量在各品种之间差异较大。对耐热性综合评价表明.18个品种中特特里红三叶属强耐热品种;新西兰白三叶耐热性较强;海法白三叶、胡依阿白三叶、Gl8白三叶、戈伦红三叶、雷托白三叶、巴东红三叶、帕韦拉红三叶、鄂牧1号白三叶、罗汤地红三叶、新西兰杂三叶、2—2—1杂三叶为中等耐热品种;克劳白三叶、皮陶白三叶、奥罗拉杂三叶和蒂特拉杂三叶品种耐热性较弱,耐热性最弱的是路易斯安娜白三叶。建议在长江流域及长江以南地区选择耐热性较强的几个品种进行推广示范。
【英文摘要】
The heat tolerance of 18 trefoil varieties were compared and evaluated comprehensively combined with germination and seedling field experiment. The results showed that the germination rate and the germination index declined with the temperature increasing. The seeds from all trefoil varieative water content were different cated that the variety' Tetri' was tolerant, and the varieties ' Haifa' greatly in all varieties. the highest tolerant to ,' Huia', 'G18', 'Goll The results of comprehensive appraisal indiheat, the variety 'New Zealand' was higher um',' Retor', ' Badong', ' Pawera', 'Emu No 1 ' and so on were mid-tolerant to heat, ' Crau', ' Pitau', ' Aurora', ' Tetra' were the varieties with lower tolerance to heat, while the tolerance to heat of variety 'Louisiana' was the lowest. It was suggested that the varieties with higher heat tolerance should be planted in Yangtze River and its south region of China.

【题目】双穗雀稗对猪场污水的净化效果
【中文关键词】双穗雀稗;污水净化;氮;磷
【英文关键词】Paspalum distichum L.;Wastewater purification;Nitrogen;Phosphor US
【中文摘要】于2009年5月以双穗雀稗(Paspalum distichum L.)为供试材料、河砂为基质开展其为期30 d的静态水培试验,研究在25%、50%、75%、100%共4种猪场养殖污水浓度下,双穗雀稗的生长状况及对污水的净化效果,选择适宜的猪场养殖污水浓度以提高双穗雀稗的净化效率和生产效率。结果表明,污水浓度增加对双穗雀稗的株高影响不显著,但对生物量具有显著影响(P<O.05),高浓度污水对根长的生长具有明显阻碍作用;与不栽种植株的静置组相比,双穗雀稗水培对污水中的总氮(TN)、总磷(TP)具有较好的去除效果,TN的去除率为98.75-99.3l,TP的去除率为96.54-99.79。100污水时,TN、TP的去除量最大,分别为507mg·L-1和32 mg·L-1;而对C0D和NH4+-N的去除效果并不显著。
【英文摘要】
Nutrient removal is essential for swine wastewater treatment to protect receiving waters from eutrophication and for potential reuse of the treated water.The study was conducted to examine the growth status of

knotgrass(Paspalum distichum L.) and the wastewater purification effects under various swine wastewater concentration(25%,50%,75%,and 100%) in order to choose the proper swine wastewater concentration for enhanced purification efficiency and productivity.The results show that knotgrass biomass increased significantly and root length decreased significantly with swine wastwater concentration increasing(P0.05).But there was no significant difference in plant height of knotgrass.Knotgrass had excellent nitrogen and phosphorus removal efficiencies with removal percentage of 98.75 to 99.31 % for TN and 96.54 to 99.79 % for TP.The highest nitrogen and phosphorus removal amounts were achieved for 100% concentration of swine wastewater at the rate of 507 mg · L-1 for TN and 32 mg · L-1 for TP,respectively.Knotgrass had no significant removal effects on COD and NH+4-N.

【题目】夏季黄海南部沿海表层流刺网渔获组成分析
【中文关键词】三层表层流刺网 渔获物 灰鲳(Stomateoides nozawae Ishikawa) 银鲳(Stromatecoides argenteus)
【英文关键词】float-trammel net Catches Stomateoides nozawae Ishikawa Stromatecoides argenteus
【中文摘要】结合银鲳和小黄鱼流刺网网目选择性试验,对夏季黄海南部沿海三层表层流刺网渔获物组成进行了调查分析。总共鉴定出渔获品种25种,其中优势种为梭子蟹(Portunus triuberbuculatus)、灰鲳(Stomateoides nozawae Ishikawa)和银鲳(Stromatecoides argenteus),分别占总渔获量的59.2%,21.5%和11%,灰鲳体长分布范围为17~30cm,优势体长范围为21~24cm,占71.6%;银鲳体长分布范围为13~23cm,优势体长范围为15~21cm,占95.8%。数据分析表明,三重流刺网作业网具选择性较差,渔具兼捕种类多,捕获量大,占总渔获量的66.5%;渔获的灰鲳和银鲳处于生长型捕捞期,不利于资源的可持续利用,建议适当改良渔具,避免对其资源造成过度破坏。
【英文摘要】Combining with the selectivity research of gill—net,the authors investigated the catches ’ components of floated—trammel net used by gill—net fishery in the south region of the Yellow Sea,and discriminated 25 species from catches,the dominant species is swim ming crab,silver butter—fish and Silvery pomfret ,the weights of the three species take account for 59.2 ,21.5 and 11 of the total production respectively.The length ranges of silver butter-fish are among 17~ 30 cm 。 the dominant ranges are 21~ 24 cm and take account for 71.6 of all the sample;the length range of silver butter—fish are 13~ 23 cm ,the dominant range is 15~21 cm

and takes account for 95.8% of all the sample.Based on the datebase,the selectivity of the tramme1 net fishery is poorver,the species number and the am ount of by—catch are too lager.It was suggested to take some feasible modification on fishery nets for protecting fishery resource.

【题目】桁杆虾拖网捕捞脊腹褐虾网囊网目选择性试验
【中文关键词】桁杆虾拖网 网囊网目 脊腹褐虾 套网 选择性
【英文关键词】Beamshrimptrawl Cod-endmesh Crangonaffinis Cover net Selectivity
【中文摘要】采用套网试验法在长江口渔场对25 mm桁杆虾拖网网囊网目的选择性进行了试验。结果表明:当网囊网目内径为25 mm时,网囊与套网内脊腹褐虾的体长范围在30~80 mm之间,其中网囊内虾的优势体长在46~70 mm之间,套网内虾的优势体长在41~60 mm之间;50%选择体长L0.5为50.53 mm,选择范围SR为9.86 mm;逃逸虾的平均存活率为96.25%。
【英文摘要】Bymeans of using thecovernet experiment method, the selectivity of cod-end mesh with 25mm of beam shrimp trawl has been tested on the Yangtze Estuary fishing ground. It came to the conclusions that when the cod-end mesh size is25mm, the range of body length of Japaneses and shrimp (Crangonaffinis deHaan) is30-80 mm between covernet and cod-end, in which the dominant body length was ranged from 46 mm to 70 mm in cod-end and from 41 mm to 60 mm incoverne.t The fifty percent of selective length was 50. 33mm and the selectivity range(SR) was9. 86mm. The average survival ratio of escaped shrimp was 96. 25%.

【题目】3种网箱用网片的阻力性能与运动变化比较
【中文关键词】网片阻力 缩结系数 水平位移 垂直位移
【英文关键词】Netting resistance Hanging ratio Horizontal displacement Vertical displacement
【中文摘要】采 用 模 型 试 验,3种不同网片分别为六角形目经编网片RHN、菱形目无结经编网片KRNDM、菱形目有结绞捻网片KTNDM,规格均为1.7 mm(水平缩结长度)×1.7 mm(垂直缩结高度)。在不同流速下,通过改变网片的水平缩结系数(Et,分别为0.65、0.707、0.60),对网片的阻力性能和运动变化(水平位移和垂直位移)进行研究。结果如下: (1)网片固定时,菱形目网片的阻力在水平缩结范围(Et=0.60 ~ 0.707)内,随着缩结增大而逐渐减小。六角形目网片阻力在3 者中最大,有结绞捻网片阻力最小,六角形目网片阻力与缩结关系不明显。3种网片之间的阻力差值随流速的增加而增大。(2)缩 结 系 数 对 于水平位移和垂直位移的影响随网片的结构差异而不同。缩结系数相同时,六角形目网片的水平和垂直位移均为最大,有结绞捻网片均最小。(3)网片的阻力与水平垂直位移受迎流面积的影响。在缩结系数范围内(Et=0.60 ~ 0.707)设计网片时首先应考虑网片结构和网线粗度,其次考虑结节,最后考虑缩结系数。
【英文摘要】 The Raschel Hexagonal Net(RHN), the Knotless Raschel Netting in Diamond Mesh(KRNDM)and the Knotted Twisting Netting in Diamond Mesh(KTNDM), with each of horizontal length of hanging and vertical length of hanging being 1.7 m, were studied by the model test in the flume tank. Based on the comparison through change of hanging ratios under different velocity of flow (Et as 0.65, 0.707,0.60 respectively), the results of netting resistance characteristics and motion change (horizontal displacement and vertical displacement)were obtained: (1)T h e resistance of Netting in Diamond Mesh was inversely proportiona l to the hanging ratio between the range 0.60 and 0.707 during fixation. The netting res istance of RHN was the highest of the three under the test conditions. The RHN was not well correlated with the hanging ratio. The difference value be tween every two nets increased with the velocity of flow. (2)The variation of Horizontal Displacement(HD)and Vertical Displacement(VD)influenced by hanging ratios differs with kinds of net. The HD and VD was inversely proportional to the hanging ratio between the range 0.60 and 0.707 during fixation. Under the same hanging ratios, the HD and VD of RHN was the highest, the next was for KRNDM, and the lowest was for KTNDM. The netting resistance, HD and VD were correlated with the line area. Within the range of 0.60 to 0.707 during the net designing

process, the net structure and line thickness should be paid the most a ttention, the next is for net node, and the last is for hanging ratio.

【题目】混凝土人工渔礁选型的初步分析
【中文关键词】人工鱼礁 礁体材料 性能参数
【英文关键词】Artificial reef Reef material Capability paramete
【中文摘要】人工鱼礁的选型优化包括对礁体材料和礁体构造的选择。参考目前现有人工鱼礁结构类型,选取混凝土为设计礁体材料,计算各礁体实体体积、空方体积、表面积及其重量,通过计算找出礁体各性能参数之间的关系。引入礁体每体积混凝土产生的空方体积(s)和表面积( )两个优化参数,来衡量礁体的性能。结果表明:框架形礁s值相对较高,而异体形或组合鱼礁叼值相对较高,说明框架形礁体单位体积混凝土产生流态效应最好,异体形或组合结构礁体单位混凝土附着面积较多。同时引入有效空方体积概念,进一步说明礁体结构与流态的关系。
【英文摘要】The model selection of artificial reefs includes the selection of reef materials and reef structure.Basea on the present structures of artificial reefs,concrete is chosen as the representative material for designing.This paper computes reef parameters,including reef physical volume,side air volume,surface area and reef weight,and then analyzes the relations between each capability parameter,Two optimized values ε and η are brought forward to demonstrate the reef capability, ε denoting the side air volume per unit concrete physical volnme,and η meaning the surface area produced by per unit concrete physical volume.Results show that the value of frame reef is higher,which means the flow efect made by unit volume concrete frame reef is the best.While the value η of variant or combination reef is relatively higher,demonstrating that it produce more attachment area per unit concrete.The concept of effective side air volume is introduced to further clarify the relation between reef structure and flow capacity.

【题目】编线工艺对渔用高强度聚乙烯编织线拉伸性能的影响
【中文关键词】编线工艺 编织线 高强度聚乙烯 拉伸性能 渔用材料
【英文关键词】Nittingtechnology Braided nettingtwine High-strength polyethylene(HSPE) Tensileproperty Fishing materials
【中文摘要】2007年3月~2008年12月在东海水产研究所开展了编线工艺对渔用高强度聚乙烯(HSPE)编织线拉伸性能的影响研究。结果表明,在试验捻距范围(公称直径3.0mm和3.9mm编织线的试验捻距范围分别为11.1~29.2mm、16.4~48.5 mml)内,若其它条件(包括线股结构、线芯用丝数量和线芯结构等)相同,则以不同捻距编织的相同公称直径渔用HSPE编织线的断裂强力及单线结强力均随捻距的增加而增加,而断裂伸长率及线密度则随捻距的增加而减小;多项式回归方程显示,断裂强力与捻距、单线结强力与捻距均显示较好的相关性(R2≥O.9877)。在线芯用丝数量范围(公称直径3.0mm和3.9mm编织线的试验用线芯用丝数量范围分别为0~36、0~64)内,若其它条件(包括线股结构、捻距和线芯结构等)相同,则以不同线芯用丝数量编织的相同公称直径渔用HSPE编织线的断裂强力、单线结强力及线密度均随线芯用丝数量的增多而增加,而断裂伸长率则随线芯用丝数量的增加而减小;多项式回归方程显示,断裂强力与线芯用丝数量、单线结强力与线芯用丝数量均显示较好的相关性(R2≥0.9695)。若其它条件(包括线股结构、捻距和线芯用丝数量等)相同,则将线芯结构由不加捻的平行丝束改为捻度为32T/m的线股后,公称直径2.5 mm渔用HSPE编织线的断裂强力、单线结强力、断裂伸长率和线密度均有一定的增加。捻距、线芯用丝数量及线芯结构对渔用HSPE编织线拉伸性能的影响较大。
【英文摘要】The effects of knitting technology on the tensile properties of braided hig}I-strength polyethylene neaing twine(braided HSPE netting twine) for fishing have been studied in East China Sea Fisheries Research Institute from March 2007 to December 2008.The results showed that within the testing pitch of twist.Whose range of the braided 3.0mm and 3.9 mm HSPE netting twines were 11.1—29.2 mm and 16.4—48.5mm respectively,if other conditions (including the structure of strand,the amount of monofilaments used in twine core and the structure of twine core,et al.) being the same,breaking strength and overhand knot strength of the braided HSPE netting twines increased with the pitch of twist,while linear density and percentage of breaking elongation of braided netting twines decreased with testing pitch of twist.Within the testing pitch of twist mentioned above,polynomial regression showed that there were positive correlations between the breaking strength and the pitch of twist,or between the overhand knot strength and the pitch of twist,the correlation R2≥0.987 7.Withinthe amountofmonofilaments used in twine core,whose range of the braided3.0 mm and 3.9 mm HSPE netting twines ere0—36 and0—64 respectively.If other conditions (including the structure of strand,the pitch of twist and the structure of twine core,et a1.) being the same, breaking strength,overhand knot strength and linear density of the braided HSPE netting twines increased with the amount of monofilaments used in twine core,while percentage of breaking elongation of braided netting twines decreased with the amount of monofilaments used in twine core.Within the amount of monofilaments used in twine core mentioned above,polynomial regression equation showed that there were positive correlations betweenthe breaking strength and the amount of monofilaments used in twine core,or between the overhand knot strength and the amount of monofilaments used in twine core,the correlation R2≥0.9695.If other conditions(including the structure of strand,the pitch of twist used in twine.The amountmonofilaments used in twine core,etc) being the same,breaking strength,overhand knot strength, percentage of breaking elongation and linear density of the braided 2.5 mm HSPE netting twines call be improved bychange of the structure of twine core,which is from a parallel thread without twining to a netting twinestrand whoseamountoftwist is 32T/m.We cometothe conclusion that the pitch of twist,the amount ofmonofilaments used in twine core and the structure oft wine core have a very positive influence on the tensile properties of braided HSPE netting twine.

【题目】浙江舟山灯光敷网渔用利用资源的调查分析
【中文关键词】灯光敷网 渔场 渔期 渔获组成 资源状况;
【英文关键词】Light-lift net Fishing ground Fishing period Catch composition Resources status;
【中文摘要】根据2007-2008年的调查监测资料,对浙江省舟山市灯光敷网渔业利用资源状况进行了分析,结果表明:灯光敷网渔业的作业渔场范围为27°~32°30'N、123°~128°E之间海域,渔获量较高的海区集中在舟外渔场、鱼外渔场和鱼山渔场;渔期一般为每年的4-12月,盛渔期为5月、6月和9月;渔获组成以鲹鳀、头足类、鲐鱼、带鱼与单角革鲀为主,合计占总渔获量的93.58%;针对灯光敷网作业实际情况提出了休渔时间调整的建议。
【英文摘要】The fishery resources status was analyzed according to the investigative data of light-lift net fishing vessel in Zhoushan of zhejiang province during 2007-2008.The results showed that the fishing ground distributed in 27°-31°N,124°-128°E,The major distributing area were Zhouwai,Yuwai and Yushan fishing grounds.Fishing period was usually April to December,best fishing period was May-June and September.Catch composition were Auxis Cuvier,Loliginidae,Scomber Linnaeus,Trichiurus haumela,Aluterus monoceros,accounting for 93.58% of total catch. And suggestion of reasonable closed fishing period were bring forward.

【题目】东海区底拖网方形目与菱形目网囊对小黄鱼的选择性研究
【中文关键词】东海 底拖网 小黄鱼 选择性 方形网目 菱形网目
【英文关键词】East China Sea Bottom trawl
【中文摘要】通过东海区底拖网方形目和菱形目(网目尺寸40,50,60,65mm)网囊对小黄鱼等东海区主捕鱼类的套网法选择性实验,对不同结构、不同尺寸的网目网囊选择性进行了比较分析。结果表明:1.网囊网目尺寸小于50mm,小黄鱼的逃逸率极低,网目结构没有选择性。大于50mm时,方形目网囊逃逸率均较高。方形目与菱形目逃逸率差异并不显著(P>0.05),两种结构网囊的鱼获效益并无差别。2. 网目尺寸为40,50,60,65mm时,方形目结构网囊的50%选择体长(L0.5)比相应的菱形目网囊的大2.2%,3.5%,10.1%,11.8%;而选择范围(SR)和选择尖锐系数均小于菱形目网囊,方形目网囊对于小黄鱼具有较好的选择性。3.根据小黄鱼的50%选择体长(L0.5),结合现行可捕标准以及渔业生产,确定小黄鱼底拖网网囊应调整为方形目结构,网目大小为60mm。
【英文摘要】The covered net method was used to compare the selectivity of diamond- and square-mesh cod-ends (mesh size 40,50,60,65;mm) on Larimichthys polyactis in the bottom-trawl fishery of East China Sea Region.The results were obtained based on the experiment for the selectivity of different mesh sizes and mesh configurations.1. The escapement ratio with 40- and 50-mm mesh size on P.polyactis were both slow for diamond and square mesh. For 60- and 65-mm mesh size,the escapement ration with square mesh were higher than with diamond mesh,but the difference were not significant(P>0.05), and the capture efficiency was no different between them.2. For the mesh size 40,50,60,65mm,the square-shaped mesh displayed the higher 50% Retention lengths(L0.5) compared to diamond mesh(2.2%,3.5%,10.1%,11.8% respectively), while selection range(SR),selection index of square mesh were lower than that of diamond mesh.Square mesh was more selective than diamond for similar size P.polyactis.3. Based on the L0.5,lengths at the first capture and fisheries investigation,the square mesh size cod-end were recommended,and the optimum mesh size of cod-end should be between 60-65mm.

【题目】基于同步荧光光谱法的鸭肉中西维因残留含量检测研究
【中文关键词】西维因;同步荧光光谱;遗传算法　支持向量回归;鸭肉
【英文关键词】Carbaryl;Synchronousfluorescencespectroscopy;GA　SVR;Duckmea
【中文摘要】为了快速测定鸭肉中西维因残留含量,提出应用同步荧光光谱法检测鸭肉中西维因残留含量,同时运用遗传算法　支持向量回归(GA　SVR)建立了鸭肉中西维因残留含量的回归预测模型。首先,通过荧光分光光度计分别采集了西维因水解物和含有西维因的鸭肉的三维同步荧光光谱图,经过分析确定了最佳波长差Δλ都为140nm;其次,分析了鸭肉中西维因的浓度猝灭现象;最后采用GA进行同步荧光光谱的优化和选择,根据交互验证均方根误差(RMSECV)选择出了21个特征波长,并分别用全波长和21个特征波长作为SVR回归预测模型的输入特征变量,发现通过GA选择的特征波长可以得到更好的预测效果,并且其预测集的相关系数(r2)达到0.9764,均方根误差(RMSECP)为12.2322。试验结果表明利用同步荧光技术结合GA　SVR方法能有效、快速的检测鸭肉中西维因残留含量。
【英文摘要】For the rapid detection of carbaryl residue in duck meat, synchronous fluorescence spectroscopy was used, and GA combined with SVR was used to establish regression forecasting mode for the application of forecasting carbaryl residue in duck meat . Firstly, fluorescence spectrophotometer was used to get the 3D synchronous fluorescence spectra of carbaryl hydrolysate and duck solution containing carbaryl, and 140 nm was selected as the optimum wavelength difference Δλ; Secondly, some concentration quenching was analysed. Finally, GA was used to optimize and choose the 3D synchronous fluorescence spectra. According to the root mean square error of cross-validation (RMSECV) 21 characteristic wavelengths were chosen, then the full wavelength and 21 characteristic wavelengths were used as input characteristic variables of SVR regression forecasting model respectively. At last the results showed that characteristic wavelengths chosen by GA can get better forecasting results, and the correlation coefficient of the prediction samples set and the root mean squared error (RMSEP) were 0.9764 and 12.2322, respectively. The results of experiments showed that the synchronous fluorescence spectroscopy could be used to detect carbaryl residue in duck meat efficiently and rapidly when combined with GA-SVR.

【题目】内生拮抗细菌BEB2的分子鉴定及其对香蕉枯萎病菌的抑制作用
【中文关键词】内生芽孢杆菌 16S rDNA 香蕉枯萎病菌 抑制作用
【英文关键词】endophytic Bacillus; 16S rDNA; banana wilting disease; inhibition reacti
【中文摘要】利用聚合酶链式反应(PCR)方法对细菌 BEB2 做进一步的分子鉴定,并研究不同温度、pH 值和培养基下BEB2发酵液对香蕉枯萎病菌生长的抑制能力,以及应用BEB2对香蕉枯萎病进行防治测试,结果发现,香蕉内生拮抗细菌BEB2为枯草芽孢杆菌;不同温度pH值和培养基下的BEB2发酵液对香蕉枯萎病菌生长的抑制能力具显著差异。在 King B2培养基上抑菌作用最强 最适抑菌温度为32,最适抑菌pH值为9.0。香蕉枯萎病盆栽防治实验结果发现,菌株接种离体叶片和植株均表现出一定的抑制活性,防治效果良好。该菌株连续 20 次转接培养,遗传稳定性高,抑菌谱较宽,具一定的生防应用价值
【英文摘要】The strain BEB2 of endophytic Bacillus isolated from banana was identified as Bacillus subtilis according to its homology analysis of 16S rDNA sequence. The temperature, pH and medium had a significant impact to the inhibition of BEB2 to the banana wilt disease. The inhibitory effect was strongest in King B2 medium, the optimum temperature for the highest antimicrobial

activity was 33 , and the optimal pH9.0. In the antagonistic test of BEB2 to the banana wilt disease, the inhibition was obvious with different in vitro methods, and the control effect of pot experiment was good. The inhibition of BEB2 to the banana wilt disease did not change obviously even if the BEB2 was cultured 20 times in artificial medium. The BEB2 has a wide antibacterial spectrum to plant pathogens, and hence has a potential application value for biocontrol of other crop diseases as well as the banana wilt disease.

【题目】甜辣椒花药培养胚状体诱导与植株再生
【中文关键词】甜(辣)椒;花药培养;胚状体;植株再生
【英文关键词】pepper(Capsicum annuum L.);anther culture; embryoid; plant regeneration
【中文摘要】以10份不同基因型甜(辣)椒为试材进行花药培养,通过对基因型、取蕾时期、低温预处理、热激处理、碳源及外源激素浓度配比等因素的研究,建立有效的甜(辣)椒花药培养胚状体发生体系。结果表明:基因型是限制甜(辣)椒花药培养胚状体诱导的关键因素,不同品种间出胚率差异显著,其中品种003出胚率最高,为10. 8%;处于盛花期的花蕾最适于甜(辣)椒花药培养;4℃低温预处理1一3d有利于胚状体的诱导,以处理2d的胚状体产率最高;以2%的麦芽糖代替3%的蔗糖能显著提高出胚率和子叶形胚的比率,筛选出适于甜(辣)椒花药培养胚状体诱导的最佳培养基为MS+0.5 mg/ L NAA+1.0 mg/ L KT十2%麦芽糖,能有效地提高出胚率并促进植株再生;获得了6个基因型的了叶形胚和再生植株。
【英文摘要】Ten varieties of pepper were used to study the effects of genotype,flower buds harvest time,cold-pretreatment,hot-shock treatment, carbon source and combination of hormones on the anther culture in Capsicum annuum L. Through these tests,an effective system of emhryoid production was established. Cotyledonary emhryoids and plantlels were obtained from six genotypes. The results showed that genotype was the key factor in embryoid induction, The embryoid for-mation frequency was different significantly among different genotypes. The variety 003 had the highest embryoid formation frequency which was 10.8%.The flower buds at full-bloom stage were found to optimum for anther cuhure in pepper. Cold-loretreatment (4℃)for I一3 d also promoted embryoid induction,while the highest embryoid formation frequency was obtained from author pretreatrd at 4℃for 2 d .Emhryoid and cotyledonary enrbryoid formation frequency could be more remarkably improved by 2% maltose than 3% sucrose. The optimal culture medium which could effectively improve embryoid and regenerated plantlets formation was MS+0. 5 mg/ L NAA+1.0 mg/ L KT+2%

maltose.

【题目】香蕉嗜铁内生细菌 BEB99的分离鉴定及其抗病促生能力评价
【中文关键词】香蕉;内生细菌;铁载体;抗病促生能力
【英文关键词】Banana; Endophytic bacteria; Siderophore; Growth-promoting ability
【中文摘要】从健康的香蕉根组织内分离获得一株对香蕉枯萎病菌(Fusarium oxysporum f.sp. cubense)有拮抗作用的内生细菌菌株BEB99。经形态学、生理生化特征及 16S rDNA 序列同源性分析等方面的研究,鉴定该菌为劳尔氏菌渊Ralstonia sp.。铁载体检测结果发现,该菌株属于极高产铁载体菌株。盆栽试验结果发现,该菌株对香蕉枯萎病的防治效果达 62.52%,并对香蕉植株具有显著的促生作用。
【英文摘要】Strain BEB99, an endophytic bacterium exhibited strong inhibitory activity in vitro against banana wilt fungus, was isolated from the root of Musa AAA, cv. Baxi. This strain was identified as Ralstonia sp. based on its morphological, physiological and biochemical characteristics and its 16S rDNA sequences analysis. Strain BEB99 could produce siderophore and significantly promoted the growth of banana. Pot experiments indicated that thestrain could suppress Fusarium wilt disease , with an inhibitory rate of 62.52%.

【题目】香蕉内生细菌分离、 活性评价及数量分布

【中文关键词】香蕉 内生细菌 活性评价 数量分布

【英文关键词】banana endophytic bacteria; activity evaluation; quantity distribution

【中文摘要】从香蕉健康植株的根、假茎、叶柄、叶片等组织中分离获得386份内生细菌分离物 。通过体外活性评价筛选出对9种常见的植物病原真菌具有一定抗性的内生细菌分离物 2 8份,占总分离物的7.25%,其中对香蕉枯萎病菌抑制率达到 8 O%~ 100%的分离物有9份。初步测定结果表明,这些分离物的基础生物学特性的分 类地位初步归属为不动杆菌属(Acinetobacter)、芽孢杆菌属(Bacillus)、短杆菌属(Brevibacteriu m) 、产碱杆菌属(Alcaligefte8) 和伯克霍尔德菌属(Burkholderia)细菌。9份分离物与病原真菌菌丝体对峙培养镜检结果表明,供试的9种病原真菌菌丝体均出现不同程度的肿胀与断裂。内生细菌在香蕉植株体内的数量分布分析发现,内生细菌在根、假茎、叶柄、叶片等组织中的数量分布呈递减趋势。

【英文摘要】There were 386 isolates of endophytic bacteria obtained from the tissues of healthy banana,such as roots, pseudo-stems,petioles and leaves.Among them 28 isolates were screened out and found to show an antagonistic ability against 9 common fungus pathogens tested.And,among the antagonistic isolates 9 isolates were observed to inhibit the growth of Fusarium oxysporium,a causal agent of banana wilt,and the inhibition rates were from 80% to 100%.According to the fundamental biological characteristics,the 9 endophytic bacteria belong to The genera,Acinetobacter,Bacillus,Brevibacterium,Alcaligenes and Burkholderia.The tests showed that the hyphae of pathogen had different degrees of tumefaction and rupture.The analysis of the quantity distribution of endophytic bacteria in banana demonstrated a decreasing trend in the tissues from roots,pseudostems,petioles,and leaves,respectively.

【题目】Effects of nitrogen forms on carbon and nitrogen accumulation in tomato seedling

【中文关键词】番茄,无机氮,有机氮,C和N的积累,增长

【英文关键词】tomato (Solanum lycopersicum), inorganic nitrogen, organic nitrogen, C and N accumulation, growth
【中文摘要】植物氮同化和利用的有机氮(N)是一个重要的方面,在农业可持续发展中具有潜在的应用。本研究的目的是研究植物的生长,C和N的积累番茄幼苗叶片和根无机(NH4-N,NO3 - N)和有机氮(甘氨酸-N)。两个番茄品种(Shenfen918和虎英932)采用水培系统提供了不同形式的氮(NH4-N,NO3 - N,甘氨酸-N)。在种植植物生物量,叶绿素含量,根系活力,测定总碳和氮的含量在根和叶,总氮素的吸收,等。我们的研究结果表明,三种治疗没有显著差异在株高,生物量干重和全氮含量被发现在第16天,但显着差异,24天,32天的治疗,观察,和顺序为NO3--N>甘氨酸-N> NH4-N。也观察到两个番茄品种之间的显着差异。在这两个品种的叶绿素含量显着增加的Gly-N处理,根系活力表现出显着的下降,NH4-N处理。番茄叶总碳含量略有不同形态氮素的影响,但在根和叶根和总氮,总碳推动在施N形式的无机和有机氮,NH4-N处理日益增加的影响显着均大于的Gly-N。总之,不同的N个资源导致西红柿中的不同的生理效应。有机氮(例如,甘氨酸-N)是植物氮营养适当的资源。番茄不同基因型有不同的反应,在有机氮(如甘氨酸-N)用品。
【英文摘要】Utilization of organic nitrogen (N) is an important aspect of plant N assimilation and has potential application in sustainable agriculture. The aim of this study was to investigate the plant growth, C and N accumulation in leaves and roots of tomato seedlings in response to inorganic (NH4+-N, NO3--N) and organic nitrogen (Gly-N). Different forms of nitrogen (NH4+-N,NO3--N, Gly-N) were supplied to two tomato cultivars (Shenfen 918 and Huying 932) using a hydroponics system. The plant dry biomass, chlorophyll content, root activity, total carbon and nitrogen content in roots and leaves, and total N absorption, etc. were assayed during the cultivation. Our results showed that no significant differences in plant height, dry biomass, and total N content were found within the first 16 d among three treatments; however, significant differences in treatments on 24 d and 32 d were observed, and the order was NO3--N > Gly-N > NH4+-N. Significant differences were also observed between the two tomato cultivars. Chlorophyll contents in the two cultivars were significantly increased by the Gly-N treatment, and root activity showed a significant decrease in NH4+-N treatment. Tomato leaf total carbon content was slightly affected by different N forms; however, total carbon in root and total nitrogen in root and leaf were promoted significantly by inorganic and organic N. Among the applied N forms, the increasing effects of the NH4+-N treatment were larger than that of the Gly-N. In a word, different N resources resulted in different physiological effects in tomatoes. Organic nitrogen (e.g., Gly-N) can be a proper resource of plant N nutrition. Tomatoes of different genotypes had different responses under organic nitrogen (e.g., Gly-N) supplies.

【题目】CO2 emission in a subtropical red paddy soil (Ultisol) as affected by straw and N-fertilizer applications-A case study in Southern China
【中文关键词】CO2通量,水稻,红壤,根际土壤诱导呼吸,施氮肥,N-诱导呼吸
【英文关键词】CO2 fluxes; Paddy; Red soil; Rhizosphere-induced respiration; N fertilization; N-induced respiration
【中文摘要】作为一项战略,以抵消大气中的二氧化碳的浓度的增加,土壤封存大气CO2通过无机氮化肥以及有机残留物的的土地应用程序的可能产生有益的影响。进行的实地研究的施用氮,磷的效果进行评估肥料和油菜(甘蓝型油菜)稻草在水田。为了理解水稻,根际和N-诱导的CO2通量,CO2通量被测水稻水稻(Oryza sativa L)的生长阶段期间从行,列间和裸土在贺胜桥,在曼宁,湖北,中国实验站的。
【英文摘要】Soil Sequestration Of atmospheric CO2 through land application of inorganic N fertilizer along with organic residues may have beneficial effects as a strategy to offset the increase in the concentration of CO2 in the atmosphere. A field Study was conducted to assess the effect of application of N fertilizer and rapeseed (Brassica napus L.) straw in a paddy field. To understand rice-, rhizosphere- and N-induced CO2 flux, CO2 flux Was measured during the growth stages of rice (Oryza sativa L) from row, inter-row and bare soil at the experimental station of Heshengqiao at Manning, Hubei, China. The study included seven treatments: (CK) control, (NO) fertilizer PK, (N1) fertilizer NPK (50% N). (N2) fertilizer NPK (100% N). (M) fertilizer NPK (200% N), (NO + S) fertilizer NP + traw, (N2 + S) fertilizer NPK (100% N) + straw. There was a distinct variation ill Soil CO2 fluxes, With the higher Values being observed during the reproductive stage of crop growth while the lower fluxes were observed during the Maturity stage. Soil CO2 fluxes from row (797-1214 g C m(-2) season(-1)) were significantly higher than front inter-row (289-403 g C m(-2) season(-1)) and bare soil (148-241 g C m(-2) season(-1)), due to the contribution of rhizosphere respiration. Among different treatments, N

fertilization significantly increased the CO2 flux from row with the highest being observed from N2 + S and lowest from NO + S treatment. No significant differences among different treatments were observed from inter-row and bare soil. From bare soil, soil CO2 flux was decreased in response to N fertilizer application; this suggested Suppression in microbial activity in response to increased N fertilizer application. Soil temperature accounted for 68 and 38% of CO2 flux variability from row and inter-row, respectively, while no significant correlation was found from bare soil. Soil temperature explained 69% of N-induced CO2 flux variability from row, while no effect was observed from inter-row and bare soil. Soil temperature was also significantly correlated with rice- and rhizosphere-induced CO2 flux accounting for 42 and 31% Of CO2 flux Variability, respectively. The amount Of soil carbon sequestration was estimated by taking the difference between net primary Production (NPP) and the amount of carbon in harvested rice. The values ranged from -176 to 89 g C m(-2) season(-1) with the highest value observed from N2 + S treatment: this suggested that N fertilizer application with straw his the potential to mitigate the global carbon budget. The current findings indicate that N addition increases the CO2 flux. However, integrated use of N fertilizer along with rapeseed straw may be a preferred strategy in Sequestering C in red soil. 【题目】Carbon dioxide emissions from Ultisol under different land uses in mid – subtropical China
【中文关键词】CO2通量,土地利用,红壤,有机碳库,土壤温度,土壤孔隙
【英文关键词】CO2 fluxes; Land use; Red soil; Organic pools; Soil temperature; Soil moisture
【中文摘要】土壤有机碳(SOC)库和周转时间到现场变量和土地利用变化是高度敏感的。以确定的土地利用类型评估碳矿化和不同的土壤性质之间的关系,一个62天的实验室培养下的不同水分(20%至100%的持水能力)和温度范围(5-45摄氏度)的有机碳库的质量进行测量CO2的演变过程,从4个土地利用类型和从培养试验的数据进行了拟合,三库一阶模型的土壤有机碳的矿化。结果表明:(1)活性碳库包括1.2-3.5%的SOC平均停留时间为49-65天,(2)缓慢碳库包括25.3-60%的SOC平均停留时间为2-27年,(3)耐库的SOC占36.5-73.9%,在4个土地利用类型。林地碳库具有最高和最低耐性,这表明它比其他的土地利用类型更稳定。土壤碳衍生呼吸与所有的有机碳库以及C:N比率和土壤衍生的呼吸。 SOC与慢,耐碳库和土壤的衍生呼吸呈正相关,。 CO2排放量增加(R(2)= 0.273-0.544,P <0.0001),随着温度的升高(40 ° C),在最低和最高的土壤水分含量减少的排放量。 Q(10)值(10 ° C增加温度,呼吸速率增加的因素)(5 ° C至45 ° C,60%的持水能力)为1.9 + / - 0.2,2.2 + / - 0.3。 2.3 + / - 0.3。和3.2 + / - 0.5稻田,果园,林地和山地,分别下降,降低水分含量,土壤含水量小于其最佳值,但相反的趋势表明,当土壤保持水的含量高于最佳含水量。包含在多个多项式模型的湿度和温度导致更好地预测CO2排放比预测得到(R(2)= 0.70-0.78,P <0.0001)使用温度(R(2)= 0.27-0.54,P < 0.01)或:水分(R(2)= 0.29-0.45,P <0.01)。我们的研究表明,植被类型/管理做法,控制土壤生物和生物化学特性,是重要的碳交换的预测,在这个短期的实验。
【英文摘要】Soil organic carbon (SOC) pools and turnover time are highly sensitive to site variables and land-use change. In order to ascertain mass distributions of different SOC pools influenced by land use and evaluate their relationships with carbon mineralization and different soil properties, a 62-day laboratory incubation under a range of moisture (20 to 100% of water-holding capacity) and temperature conditions (5-45 degrees C) was conducted to measure CO2 evolution from four land-use types, and data from the incubation study were fitted to a three-pool first-order model that separated mineralizable soil organic carbon into active, slow and resistant carbon pools. The results indicate that: (1) The active carbon pool comprised 1.2-3.5% of SOC with a mean residence time of 49-65 days, (2) The slow carbon pool comprised 25.3-60% of SOC with a mean residence time of 2-27 yr, (3) The resistant pool accounted for 36.5-73.9% of SOC in four land-use types. The woodland had the highest resistant carbon pool and lowest active carbon pool, which indicates it to be more stable than other land-use types. Soil carbon derived respiration was well correlated with all the organic carbon pools as well as C:N ratio and soil derived respiration. SOC was positively correlated with slow and resistant carbon pool, and soil derived respiration. CO2 emissions increased (r(2) = 0.273-0.544, P < 0.0001) with increasing temperature (up to 40 degrees C), with emissions reduced at the lowest and highest soil moisture contents. The Q(10) values (the factor by which respiration rate increase for a 10 degrees C increase in temperature) (from 5 degrees C to 45 degrees C, at 60% of water-holding capacity) of 1.9 +/- 0.2, 2.2 +/- 0.3. 2.3 +/- 0.3. and 3.2 +/- 0.5 were observed for paddy, orchard, woodland and upland, respectively, and decreased with decreasing moisture content when soil water content was less than its optimum value, but an opposite trend was shown when soil

retained water at contents higher than the optimum water content. Inclusion of both moisture and temperature in our multiple polynomial models resulted in much better predictions of CO2 (r(2)=0.70-0.78, P<0.0001) emissions than predictions obtained using temperature (r(2)=0.27-0.54, P<0.01) or moisture (r(2)=0.29-0.45, P<0.01) alone. Our study indicates that vegetation type and/or management practices which control soil biological and biochemical properties, were important predictors of C fluxes in this short-term experiment. 【题目】Temporal variability of soil-atmospheric CO2 and CH4 fluxes from different land uses in mid-subtropical China
【中文关键词】土地利用,季节变化,土壤C通量,土壤无机氮,亚热带
【英文关键词】Land use; Seasonal difference; Soil C fluxes; Soil inorganic N; Subtropical
【中文摘要】这项研究包括7个处理:(CK)的控制,(NO)化肥PK,NPK复合肥(50%N)(N1)。 (N2),NPK化肥(100%N)。(M)NPK化肥(200%N),(NO + S)化肥NP + traw,(N2 + S)化肥NPK(100%N)+稻草。有一个明显变化不良土壤CO2通量,使用过程中观察到生殖生长阶段的作物生长过程中观察到成熟阶段,而低通量更高的价值。土壤CO2通量的行(797-1214克C M(-2),季节(-1))均显着高于前行间(289-403克C M(-2),季节(-1))和裸土(148-241克C M(-2),季节(-1)),由于根际呼吸的贡献。在不同的治疗方法,施用氮肥显着增加了CO2排放通量行被观察到N2 + S的最高和最低的NO + S处理。无显着差异,不同的治疗方法,观察从行间和裸露的土壤。裸土,土壤CO2通量下降氮肥施用此建议应增加氮肥施用抑制微生物的活动。
【英文摘要】Different land uses in subtropics play an important role in regulating the global environmental changes. To reduce uncertainties of greenhouse gas (GHG) emissions of agricultural soils in subtropical ecosystem, a four years campaign was started to determine the temporal GHG (CO2 and CH4) fluxes from seven sites of four land use types (1 vegetable field, 3 uplands, 2 orchards, I pine forest). The mean annual budgets of CO2, and CH4 were 6.5 similar to 10.5 Mg CO2 ha(-1) yr(-1), and +0.47 similar to -2.37 kg CH4 ha(-1) yr(-1), respectively. Pine forest had significantly lower CO2 emission and higher CH4 uptake than agriculture land uses. Tilled orchard emitted more CO2 and oxidized less CH4 than non-tilled orchard. Upland crops had higher CO2 emissions than orchards, while abrupt differences of CH4 uptake were observed between upland crops and orchards. Every year, the climate was warm and wet from April to September (the hot-humid season) and became cool and dry from October to March (the cool-dry season). Driven by seasonality of temperature and WFPS, CO2 fluxes were significantly higher in the hot-humid season than in cool-dry season. Soil temperature, WFPS, NO3--N and NH4+-N contents interactively explained CH4 uptake which was significantly higher in cool-dry season than in hot-humid season. We conclude that soil C fluxes from different land uses are strongly under control of different climatic predictors along with soil nutrient status, which interact in conjunction with each other to supply the readily available substrates.

【题目】Quantitative structure-retention relationship for polychlorinated dibenzofurans based on molecular interaction field analysis
【中文关键词】多氯代二苯并呋喃,分子间的相互作用场,定量结构 - 保留关系;保留指数
【英文关键词】polychlorinated dibenzofurans; molecular interaction field; quantitative structure-retention relationship; retention index

【中文摘要】一种新的定量结构 - 保留的关系(OSRR)模型的建立多氯二苯并呋喃(PCDFs)分子间的相互作用场(MIF)分析的基础上。 MIF的所有135多氯二苯并呋喃的计算采用干法,C1和C3探头特征的疏水性和stric的的多氯二苯并呋喃和固定相的不同群体之间的互动。 QSRR模型构建多嵌段偏最小二乘的正方形(MBPLS),并评价每个块的块在的预测(MBPLS)方法的重要性的意义。用于预测的模型,在统计学上显着的,校准和交叉验证的相关系数分别为0.9990和0.9980,相对误差小于1.0%。和BIP MBPLS的结果表明,具有支配性影响上的保留行为多氯代二苯并呋喃,然后的疏水性的效果的立体属性。

【英文摘要】A new quantitative structure-retention relationship (OSRR) model is developed for polychlorinated dibenzofurans (PCDFs) based on molecular interaction field (MIF) analysis. The MIF of all 135 PCDFs is calculated using DRY, C1= and C3 probe, characterizing the hydrophobic and stric interaction between PCDFs and different groups of stationary phase. Then QSRR model is constructed by multiblock partial least squares (MBPLS), and the significance of each block is evaluated by the block importance in the prediction (MBPLS) method. The model used for prediction is statistically significant, with calibration and cross-validation correlation coefficients 0.9990 and 0.9980 respectively, and relative error less than 1.0%. The results of MBPLS and BIP show that the steric properties have dominant influence on the retention behavior of PCDFs, and then the hydrophobic effects.

【题目】Separation, purification and characterization of three endo-polygalacturonases from a newly Isolated penicillum oxalicum

【中文关键词】分离,表征,草酸青霉,内切多聚半乳糖醛酸酶

【英文关键词】separation;characterization;Penicillum oxalicum; endo-polygalacturonase

【中文摘要】土壤温度,分别占68和38%的CO2通量行与行间的变化,而没有显着的相关性,发现从裸露的土壤。土壤温度解释的69%的N-诱导的CO2通量变异从行从行间和裸土,而没有观察到效果。水稻根际引起的CO2通量占42和31%的CO2通量变异,土壤温度也显着相关。

【英文摘要】Three endo-polygalacturonases (endoPGs) from a newly isolated Penicillum oxalicum (CGMCC 0907) capable of utilizing waste biomass as growth substrate were separated and purified to homogeneity by ultra-filtration, affinity adsorption chromatography, CM-cellulose column chromatography, and Sephadex G-100 gel filtration chromatography with the overall yield of 64.5% from the crude enzyme. The specific activities and recovery rates of endoPG-1, endoPG-2 and endoPG-3 were 1120 U/mg and 21.6%, 1350 U/mg and 25.9%, and 1 560 U/mg and 17.0%, respectively. The three purified endoPGs had a close molecular weight to 41 kDa as estimated by SDS-PAGE. The optimum temperature and pH for the function of them were 65°C and 5.0, 55°C and 5.0, 50°C and 5.5, respectively. Their pI and Km values were 5.9 and 0.78 mg/mL, 6.0 and 1.2 mg/mL, and 6.1 and 2.0 mg/mL, respectively.

【题目】Contamination and congener profiles of polychlorinated biphenyls from different agricultural top soils in a county of the Tailake Region, China

【中文关键词】多氯联苯;农业土壤,不同土地利用类型

【英文关键词】PCBs; Agricultural soils; Different land use types

【中文摘要】从太湖区域的一个县采集了在不同土地利用类型下数百个表层土壤(0-20厘米)样品,分析了18多氯联苯(PCBs),包括5类二恶英多氯联苯。所有样品的总PCBs的平均含量为 1.071亩克公斤(-1),干重(DW)的范围是0.016亩克/公斤到4.050亩克/公斤,总的二恶英类多氯联苯的浓度为0.352亩克/公斤包含大约33%的Sigma PCBs。稻田土壤中Sigma PCBs平均

含量为1.637微克/公斤高于菜地土壤中平均浓度0.882微克/公斤, 而稻田土壤中二恶英含量低于菜园土的。
【英文摘要】Hundred topsoil (0-20 cm) samples under different land use types were collected from a county in the Tailake Region, China and analyzed for 18 polychlorinated biphenyls (PCBs) including five dioxin-like PCBs. The mean concentration of total PCBs (Sigma PCBs) for all sites was 1.071 mu g kg(-1) dry weight (dw) with a range of 0.016 mu g kg(-1) to 4.050 mu g kg(-1), and the concentration of total Dioxin-like PCBs (Sigma Dioxin-like PCBs) was 0.352 mu g kg(-1) about 33% of Sigma PCBs. The concentration of Sigma PCBs in paddy field (PF) soils with a mean of 1.637 mu g kg(-1) was higher than that in vegetable soil with a mean of 0.882 mu g kg(-1), but the concentration of Dioxin-like PCBs in PF soil was lower than that in commercial vegetable production soil. The concentration of heavier weighted molecular PCB congeners (>= penta-PCBs) in vegetable soil accounted for 98% of EPCBs, while that in Paddy field soil for 65% of Sigma PCBs.

【题目】Improving fertility and productivity of a highly-weathered upland soil in subtropical China by incorporating rice straw
【中文关键词】高度风化的土壤,水稻秸秆还田,土壤有机质,氮,磷,土壤微生物生物量,作物产量
【英文关键词】Highly-weathered soil; Rice straw incorporation; Soil organic matter; Nitrogen; Phosphorus; Microbial biomass; Crop yield
【中文摘要】土壤固碳量的估计净初级生产力(NPP)和收获的大米中的碳含量之间的差异。值的范围从-176到89克C M(-2)的季节(-1),观察到N2 + S处理的最高值,这表明,施用氮肥,必先利其潜力,以缓解全球碳预算。目前的研究结果表明,施氮增加的CO2通量。然而,氮肥与油菜秸秆,综合运用螯合C的红色土壤中可能是首选的策略。 (C)2009爱思唯尔B.V.保留所有权利。“
【英文摘要】The transfer of rice straw from paddy fields to upland areas was proposed in our study as an innovative practice to improve the fertility of the highly-weathered and poor upland soils, as well as to mitigate environmental impacts from rice production system (e.g., the large application of chemical fertilizers, straw burning, CH(4) emission from decomposed straw) in the subtropical China. Data from an 8-year field experiment with sweet potato and rapeseed show that, the contents of organic matter and total nitrogen (N) in the surface soil (0-20 cm) with rice straw incorporation were increased by 13%, and the amounts of soil microbial biomass carbon (C), N, and phosphorus (P) by 18-43%, compared with the values when chemical fertilizers (NPK) were applied alone. Physical conditions and crop productivity of the test soil were effectively promoted with the straw incorporation, as indicated in significant changes in soil field water-holding capacity, total porosity, and bulk density in the 10-15 cm soil layer, and the rise (about 10% and 20%, respectively) of sweet potato and rapeseed yields. In conclusion, these results suggest that the practice shift from conventional rice straw management ('on the spot' incorporation) to upland incorporation is effective in improvement in fertility and productivity of the upland soil, which has potentials to reduce the amounts of chemical fertilizers applied and to increase soil C storage in farmlands in the region.

【题目】Microbial biomass, and dissolved organic carbon and nitrogen strongly affect soil respiration in different land uses-A case study at Three Gorges Reservoir Area, South China

【中文关键词】CO2通量; 溶解有机碳和氮; 土地利用; 微生物生物量; 亚热带; 三峡库区
【英文关键词】CO(2) fluxes; Dissolved organic carbon and nitrogen; Land use; Microbial biomass; Subtropical; Three Gorges Reservoir Area
【中文摘要】为了更好地理解影响土壤CO2通量的限制因素和机制,我们测定了三峡库区四种土地利用类型(1菜地,3个高地,2个果园,松树林1)下七种土壤总有机碳(TOC),微生物量碳(MBC),微生物生物量氮(MBN),溶解有机碳(DOC)和溶解有机氮(DON)的含量。目的是:(1)评价TOC,MBC,MBN,DOC,DON与土壤CO2通量的独立性和关联性以及环境变量(土壤温度和水分)的关系,2)调查不同的土地利用方式的季度和年度的CO2通量。每年CO2通量为5.4至9.5毫克CO2/公顷.年。菜地最高,而松树林显着低于耕地。不同土地利用方式的CO2通量随着不同量的 MBC和MBN显着相关,与DOC相关,与DON不相关。然而,在一个变化模型中,全部的土地利用方式下的CO2通量的波动受MBC,MBN,DOC和DON的影响显著。但是,当把所有的变量用多元逐步回归分析,可以观察到有不同的主导趋势土壤温度(两个点),MBC(一个点),MBN(一个点),DOC(两个点)和DON(1个点)。我们的研究结果表明:(1)土壤微生物生物量随着土地利用改变有明显的变化,这反过来又造成CO通量变化.(2)除了土壤温度,微生物生物量和溶解有机物质也是解释土壤CO通量时空变化的重要组成部分。
【英文摘要】In order to better understand the limiting factors and substrate affecting soil CO(2) flux, we measured total organic carbon (TOC), microbial biomass carbon (MBC), microbial biomass nitrogen (MBN), dissolved organic carbon (DOC), and dissolved organic nitrogen (DON) from seven sites of four land-use types (1 vegetable field, 3 uplands, 2 orchards, 1 pine forest) of subtropical soils in Three Gorges Reservoir Area, China. Objectives were to (1) evaluate the separate and interactive relationship of TOC, MBC, MBN, DOC, and DON with soil CO(2) flux, in addition to the relationship obtained by environmental variables (soil temperature and moisture), and (2) investigate the seasonal and annual CO(2) fluxes from different land uses. Annual CO(2) fluxes ranged from 5.4 to 9.5 Mg CO(2) ha(-1) year(-1). Vegetable field had the highest CO(2) emission, while pine forest had significantly lower CO(2) emission than cultivated land uses. Different quantities of MBC and MBN significantly regulated the CO(2) emission among different land uses, relatively weakly correlated with DOC, while not being correlated with DON. However, temporal fluctuations of CO(2) flux were significantly regulated by MBC, MBN, DOC and DON, in one model of variation, in all land uses. But, when all the variables were included in the multiple stepwise regression analysis, different trend of dominancy was observed for soil temperature (two sites), MBC (one site), MBN (one site), DOC (two sites) and DON (one site). Our results indicate that (1) there can be a significant shift of microbial biomass with land-use change, which in turn, caused to shift in CO(2) flux, and (2) apart from the soil temperature, microbial biomass and dissolved organic substances must be considered in a warming future as these can explain a major part of temporal variation of soil CO(2) fluxes.

【题目】N2O emissions from different land uses in mid-subtropical China
【中文关键词】土地利用,N2O排放通量,季节性差异,土壤无机氮,亚热带;三峡库区
【英文关键词】Land use; N2O fluxes; Seasonal difference; Soil inorganic N; Subtropical; Three Gorges Reservoir Area
【中文摘要】由于过度使用氮肥农业土壤成为全球一氧化二氮(N2O)排放量的重要源头。随着化肥施用,它也表现出明显的季节性降水分布在我国南方的季风气候。估计三峡大坝周围的亚热带生态系统的本地和农业土壤中的N2O排放量,对4种土地利用类型的七种土地(菜地,三个高地,两个果园和一个松森林)的氧化亚氮排放进行了4年的观测。N2O的排放量平均每年为0.13-5.27公斤N2O-N公顷(-1)的年(-1)。松树林N2O排放量显着低于农田土壤的,耕种果园的显着低于非耕种果园。一般情况下,农业土地利用方式下,N2O排放量顺序是菜地>果园>旱地。在所有的土地利用方式下,N2O排放量与氮肥施用量都呈显着相关。每年,气候变得温暖湿润,从四月到九月(湿热的季节里),并变得凉爽和干燥,从10月至3月(凉爽的旱季)。N2O排放通量和环境变量(土壤温度,充水孔隙空间(WFPS),土壤NO3 - N和NH4 +-N含量)有显着的季节变化。由于土壤温度,WFPS,,土壤NO3 - N和NH4 +-N含量的季节性,N2O排放通量在湿热的季节显著高于在阴凉干燥的季节。N2O排放通量和所有的环境变量之间的关系,提出了一个线性模型,解释了在不同的土地利用方式系下72-97%的N2O排放通量的变化。我们的结论是不同的土地利用方式下的N2O排放通量被不同的气候和土壤性质主导,亚热带土壤的N2O排放通量与土壤养分状况相互影响。

【英文摘要】Agricultural soils are primarily responsible for the global anthropogenic nitrous oxide (N2O) emissions due to excessive use of N fertilizers. Along with fertilizer, it may also be excelled by the seasonal precipitation pattern of monsoon climate in Southern China. To estimate N2O emissions of native and agricultural soils in subtropical ecosystem surrounding Three Gorges Dam, a 4 years campaign was started to determine the temporal N2O fluxes from seven sites of four land use types (one vegetable field, three uplands, two orchards and one pine forest). The mean annual budget of N2O emissions was 0.13-5.27 kg N2O-N ha(-1) year(-1). Pine forest had significantly lower N2O emissions than agriculture land uses. Tilled orchard had significantly lower N2O emissions than non-tilled orchard. Generally, among agriculture land uses, maximum N2O emissions were observed from vegetable field followed by orchards and uplands. Among all land uses, N2O emissions were significantly correlated with amount of N fertilizer applied. Every year, the climate was warm and wet from April through September (the hot-humid season) and became cool and dry from October through March (the cool-dry season). N2O fluxes and environmental variables (soil temperature, water-filled pore space (WFPS), soil NO3--N and NH4+-N contents) had significant seasonal variabilities. Driven by seasonality of soil temperature, WFPS, soil NO3--N and NH4+-N contents, N2O fluxes were significantly higher in the hot-humid season than in the cool-dry season. The relationship between N2O fluxes and all the environmental variables were presented in one linear model of variation which explained 72-97% of N2O flux variability among different land uses. We conclude that N2O fluxes from different land uses are strongly under control of different climatic predictors along with soil nutrient status, which interact in conjunction with each other to supply the readily available substrates for the N2O flux from the subtropical soils.

【题目】Assessing the impact of fungicide enostroburin application on bacterial community in wheat phyllosphere
【中文关键词】杀菌剂; 叶面;微生物群落;16S rDNA克隆文库,PCR-DGGE;
【英文关键词】fungicide;phyllosphere; microbial community; 16S rDNA clone library; PCR-DGGE;
【中文摘要】杀真菌剂已被广泛使用,用于控制植物病原真菌。然而,很少有人知道有关的影响,杀菌剂在植物叶面后,土著细菌群落。本研究的目的是评估后细菌群落的小麦叶面的杀菌剂enostroburin的影响。文化独立的方法,16S rDNA克隆库和16S rDNA的指示聚合酶链反应 - 变性梯度凝胶电泳(PCR-DGGE),用于监测细菌群落的变化。 16S rDNA克隆文库和PCR-DGGE分析均证实小麦植株叶面微生物群落,主要由γ -变形菌门中的。 PCR-DGGE分析结果表明:叶面内的细菌群落结构的一个显着变化,后,杀菌剂enostroburin应用。内部控制文化带测序主要是假单胞菌属,但这些频段主要是处理后的样品进行测序的Pantoea属,假单胞菌属的菌株。感兴趣的是杀真菌剂处理之后的2 DGGE的频带,其中之一的序列相似性(98%)的外观的Pantoea属。这可能是植物病原真菌的竞争对手。这项研究表明小麦叶面细菌群落组成和转变中的细菌群落杀菌剂enostroburin应用。
【英文摘要】Fungicides have been used extensively for controlling fungal pathogens of plants. However, little is known regarding the effects that fungicides upon the indigenous bacterial communities within the plant phyllosphere. The aims of this study were to assess the impact of fungicide enostroburin upon bacterial communities in wheat phyllosphere. Culture-independent methodologies of 16S rDNA clone library and 16S rDNA directed polymerase chain reaction with denaturing gradient gel electrophoresis (PCR-DGGE) were used for monitoring the change of bacterial community. The 16S rDNA clone library and PCR-DGGE analysis both confirmed the microbial community of wheat plant phyllosphere were predominantly of the gamma-Proteobacteria phyla. Results from PCR-DGGE analysis indicated a significant change in bacterial community structure within the phyllosphere following fungicide enostroburin application. Bands sequenced within control cultures were predominantly of Pseudomonas genus, but those bands sequenced in the treated samples were predominantly strains of Pantoea genus and Pseudomonas genus. Of interest was the appearance of two DGGE bands following fungicide treatment, one of which had sequence similarities (98%) to Pantoea sp. which might be a competitor of plant pathogens. This study revealed the wheat phyllosphere bacterial community composition and a shift in the bacterial community following fungicide enostroburin application.

【题目】Influence of land use on nitrate concentrations in baseflow in a rural watershed of Three Gorges Reservoir Area, China
【中文关键词】硝酸盐的浓度;土地利用;基流,农村小流域,三峡库区
【英文关键词】Nitrate concentration; land use; baseflow; rural watershed; Three Gorges Reservoir Area
【中文摘要】在本文中,我们与2004年至2006年对三峡库区流域硝酸盐(NO3--N)浓度和土地利用之间的关系进行了研究。结果表明,NO(3)(-)-N浓度为0.4～14.6毫克的L(-1),秋,冬显著较高。方差分析表明,NO(3)(-)-N浓度随季节和采样点有显着性差异。此外,有明显的年际增长趋势。此外,回归分析表明,NO(3)(-)-N浓度与水田和果园在流域中所占的比例呈显著相关,而林地有积极防止NO(3)(-)-N损失的作用。水田比其他土地利用类型对NO(3)(-)-N的浓度有更大的贡献。结果表明,基流是NO(3)(-)-N损失的主要途径之一,在三峡库区农业流域,农业土地利用方式对NO(3 -)-N浓度有强烈地影响。 因此,在三峡库区,调整土地利用结构和农业活动对水源保护是不可或缺的。
【英文摘要】In this paper, the relationships between nitrate (NO(3)(-)-N) concentrations in baseflow and land use were studied in a rural watershed of Three Gorges Reservoir Area from 2004 to 2006. The results indicated that NO(3)(-)-N concentrations ranged from 0.4 to 14.6 mg L(-1) and were significantly higher in autumn and winter. Analysis of variance indicated that there was significant difference in NO(3)(-)-N concentrations among seasons and sampling points. In addition, an interannual increasing trend was found in the study period. Moreover, regression analysis revealed that NO(3)(-)-N concentrations significantly correlated with the proportions of paddy field and orchard in the subwatersheds, while woodland had positive effect for preventing NO(3)(-)-N loss. Paddy field has more contribution to NO(3)(-)-N concentrations compared to other land use types. The results indicted that the baseflow is one of major pathways of NO(3)(-)-N losses, and agricultural land use strongly influences NO(3-)-N concentration in stream water in rural watersheds of Three Gorges Area. Therefore, it is indispensable to adjust land use structure and agricultural activities for water source protection in Three Gorges Reservoir Area, China.

【题目】Production of a newly isolated Paenibacillus polymyxa biocontrol agent using monosodium glutamate wastewater and potato wastewater.
【中文关键词】叶面;多粘类芽孢杆菌;废水;磷脂脂肪酸;生物控制剂
【英文关键词】phyllosphere; Paenibacillus polymyxa; wastewater; phospholipid fatty acids; biocontrol agent
【中文摘要】一个叶面EBL-06菌株是从小麦叶片中　　分离。的形态,培养特性,磷脂脂肪酸,生理和拮抗菌的活动,这株进行了调查。与已公布的有关细菌的16S rDNA序列的系统发育树的构建。结果表明,分离EBL-06是多粘芽孢杆菌的菌株,该菌株的拮抗真菌活性进行了高水平朝向一种广谱植物病原菌,如灰葡萄孢,黑星病,镰刀菌。隔离EBL-06可以使用味精废水(MGW)和马铃薯废水(PW)为培养基,生长良好。培养15小时,在28°C,pH值6.0-7.5的最高产量达到6.5×10(9)CFU/ mL的隔离EBL-06抗真菌生物控制剂,使用混合的MGW和PW(1:9)。
【英文摘要】A phyllosphere bacterial strain EBL-06 was isolated from wheat leaves. The morphology, cultural characteristics, phospholipid fatty acids, physiological and antagonistic fungus activities of this strain were investigated. A phylogenetic tree was constructed by comparing with the published 16S rDNA sequences of the relevant bacteria. The results showed that the isolate EBL-06 was a strain of Paenibacillus polymyxa; this strain performed a high level of antagonistic fungus activity toward a broad spectrum of phytopathogens, such as Botrytis cinerea, Cladosporium cucumerinum, Fusarium spp. The isolate EBL-06 can grow well using monosodium glutamate wastewater (MGW) and potato wastewater (PW) as culture medium. The maximum yield of 6.5 x 10(9)

CFU/mL of the isolate EBL-06 anti-fungus biocontrol agent was reached in 15 hr cultivation at 28 degrees C, pH 6.0-7.5 using the mixture of MGW and PW (1:9).

【题目】The effect of the first heavy rainfall events on soil and nitrogen losses in different slope gradient new ploughed fields
【中文关键词】强降雨,坡度,领域,土壤流失,氮的损失
【英文关键词】Heavy rainfall; slope gradient; newploughed field; soil losses; nitrogen losses
【中文摘要】三峡库区为主的山区或丘陵。因为水和肥料的土壤保持能力已遭到严重破坏,大量的土壤和养分的暴雨事件将是不可避免的。在本文中,我们研究的特点,土壤和氮的损失,在第一次强降雨事件后拨,在5个试验田进行实验。结果表明,土壤径流中氮的浓度变化与降雨过程中不同的治疗方法,发现重大损失和坡度的对数之间的关系,提出了随坡度的损失;沉积物氮的损失和总可溶性氮的损失几乎平等,占到总损失的40%左右,可溶性氮,硝酸盐氮为优势种,达到了60%以上。休耕没有耕作的大坡度相比,这是很好理解的表面覆盖率和农民活动有明显的影响,对土壤和氮的损失。于是,它是非常重要的,选择合理的种植结构和耕作时间,在三峡库区的土壤和养分转化。
【英文摘要】Three Gorges Reservoir Area is dominated by mountains or hills. Because the retention capability of soil for water and fertilizer has been seriously damaged, huge amount of soil and nutrients will be inevitable at the heavy rainfall events. In this paper, we studied the characteristics of soil and nitrogen losses at the first heavy rainfall event after ploughed; experiment was carried in five experimental plots. The results indicated that soil and nitrogen concentration in runoff varied with different treatments in the process of rainfall, significant logarithmic relationships between losses and slope gradient were found, and the losses increased with slope gradient raised; Sediment nitrogen losses and total dissoluble nitrogen losses were almost equal, accounted for approximately 40% of total losses, nitrate nitrogen was the dominated species of dissoluble nitrogen, reached more than 60%. Compared to large slope gradient fallow without tillage, it is well understood that surface coverage and farmer activities have distinct effect on soil and nitrogen losses. Thereupon, it is very important to select reasonable planting structure and farming time for soil and nutrients conversion in Three Gorges Reservoir Area.

【题目】Variation of soil respiration from different land uses in Subtropical agricultural soils, Central China
【中文关键词】CO2通量,溶解有机碳和氮;土地利用微生物生物量;亚热带
【英文关键词】CO2 fluxes; dissolved organic carbon and nitrogen;
land use ; microbial biomass; subtropical
【中文摘要】为了更好地理解影响土壤CO2通量的限制因素和机制,我们测定了三峡库区四种土地利用类型(1菜地,3个高地,2个果园,松树林1)下七种土壤总有机碳(TOC),微生物量碳(MBC),微生物生物量氮,溶解有机碳和溶解有机氮的含量。目的是:(1)评价TOC,MBC,MBN,DOC,DON与土壤CO2通量的独立性和关联性以及环境变量(土壤温度和水分)的关系,2)调查不同的土地利用方式的季度和年度的CO2通量。每年CO2通量为5.4至9.5毫克CO2/公顷.年。菜地最高,而松树林显着低于耕地。不同土地利用方式的CO2通量随着不同量的 MBC和MBN显着相关,与DOC相关,与DON不相关。然而,在一个变化模型中,全部的土地利用方式下的CO2通量的波动受MBC,MBN,DOC和DON的影响显著。但是,当把所有的变量用多元逐步回归分析,可以观察到有不同的主导趋势土壤温度,MBC,MBN,DOC和DON。我们的研究结果表明:(1)土壤微生物生物量

随着土地利用改变有明显的变化,这反过来又造成CO通量变化.(2)除了土壤温度,微生物生物量和溶解有机物质也是解释土壤CO通量时空变化的重要组成部分。
【英文摘要】In order to better understand the limiting factors and substrate affecting soil CO2 flux, we measured total organic carbon, microbial biomass carbon, microbial biomass nitrogen, dissolved organic carbon, and dissolved organic nitrogen from seven sites of four land use types of subtropical agriculture soils. Objectives were to (1) evaluate the relationship of MBC, MBN, DOC, and DON with soil CO2 flux, in addition to the relationship obtained by usually used environmental variables (soil temperature and moisture), and (2) investigate the seasonal and annual CO2 fluxes from different land uses. Annual CO2 fluxes ranged from 5.4 to 9.5 Mg CO2 ha-1 yr-1. Vegetable field had the highest CO2 emission, while pine forest had significantly lower CO2 emission than cultivated land uses. Different quantities of MBC, MBN and DOC significantly regulated the CO2 emission among different land uses. Our results indicate that microbial biomass and dissolve organic substances must be considered in a warming future as these can explain a major part of temporal variation of soil CO2 fluxes.

【题目】Species Sensitive Distribution for Aquatic Biota Exposed to DDT
【中文关键词】SSD; DDT; HC5; PAF.
【英文关键词】SSD; DDT; HC5; PAF.
【中文摘要】暴露于DDT的水生生物的物种敏感性分布(SSD)的开发使用对数转换L(E)C50值的98种水生一个物流配送的基础上。危险的浓度的5%的物种(HC5),是基于对SSD。 HC5 DDT0.5494微克/升。可能受影响的部分(PAF)暴露于DDT在1995年和2008年在珠江口的地表水的种类分别为0.36%和0.06%。潜在生态风险依然存在,但不断下降。
【英文摘要】A species sensitivity distributions (SSD) for aquatic life exposed to DDT is developed using a logistic distribution based on the log-transformed L(E)C50 values of 98 aquatic species. The hazardous concentration for 5% of species (HC5) is derived based on the SSD. The HC5 for DDT is 0.5494 μg/L. The potentially affected fraction (PAF) of species exposed to DDT in the surface water of the Pearl River Estuary in 1995 and 2008 are 0.36% and 0.06% respectively. The potential ecological risks still exist, but decline continuously.

【题目】Wet Nitrogen Deposition in the Three Gorges Reservior Area, China
【中文关键词】氮沉降;三峡库区;小流域
【英文关键词】nitrogen deposition; Three Gorges Reservoir Area; small watershed
【中文摘要】在本文中,湿沉降氮在一个小流域,三峡库区(TGRA)研究了2004至2008年。这些结果表明,平均TN雨水中的浓度为2.02毫克L-1,超过阈值的富营养化。TN浓度较高,在干燥的季节,在潮湿的季节,但在雨季氮沉降的关键时期。每年的平均湿沉降的TN是14.36千克的HA-1 YR-1,其中NO3 - N占约50%,而NH4+-N和DON约25%。 TN沉积脆弱的陆地生态系统达到临界负载值。预计占主导地位氮沉降的来源,在这方面的农业活动。此外,这些结果还暗示,过量的氮沉降的TGRA豆状核变性引起的水质,以及对生态环境的严重影响。因此,它有必要采取一些措施对氮沉降的控制和生态保护。
【英文摘要】In this paper, wet deposition of nitrogen in a small watershed of the Three Gorges Reservoir Area (TGRA) was investigated from 2004 to 2008. These results indicated that average TN concentration in rainwater was 2.02 mg L-1, which exceeded

the threshold of eutrophication. TN concentrations were higher in the dry season than that in the wet season, but the wet season was the key period for N deposition. The annualaverage wet deposition of TN was 14.36 kg ha-1 yr-1, among which NO3--N accounted for approximately 50%, while NH4+-N and DON were about 25%. TN deposition reached the critical load value for vulnerable terrestrial ecosystems. Expected dominantsources for nitrogen deposition were the agricultural activities in this area. In addition, these results also implied that excessive N deposition could induce the water quality of TGRA degeneration as well as severely effect on ecological environment. Therefore, itis necessary to take some measures for nitrogen deposition control and ecosystems protection.

【题目】用水平土柱和修正的Green-Ampt模型确定土壤的入渗性能
【中文关键词】入渗; 模型; 误差分析; 估计; 土壤; 修正Green-Ampt模型; 水平土柱;
【英文关键词】infiltration,models, error analysis, estimation, soils,modifiedGreen-Ampt model, horizontal soil column
【中文摘要】土壤入渗能力和降雨产流过程及地下水密切相关。土壤入渗过程决定了灌溉/降雨过程中水分进入土壤的过程,影响了化肥、农药及其他污染物随水分迁移过程以及坡面水文与土壤侵蚀过程等。该研究根据水流在水平土柱中运动的能量要求以及实际测量得到的土壤水分分布,对Green-Ampt模型中含水率分布呈活塞运动推进(即湿润锋内部土壤水分为恒定值)的假定进行了修正。采用更符合实际的呈线性分布的土壤水分分布模型,基于水量平衡和土壤水动力学原理,提出了对应的土壤入渗性能的计算模型。给出了利用修正模型估计土壤入渗性能的方法,计算模型以及计算过程。结果表明,利用修正模型估算得到的土壤入渗性能回归的入渗水量与实际供水量的相对误差为0.66%,说明该修正模型和计算方法具有很高的精度。该文提出的修正模型很好地描述了水分在土壤中的分布,较Green-Ampt入渗模型中的活塞模型更符合土壤水动力学中关于土壤水分运动的分析。将该修正模型与水平土柱试验结合,可以大大地提高土壤入渗性能计算的精度,为以后的土壤水分运动,地表产流计算以及土壤侵蚀等方面的研究提供非常有效的工具。 更多还原
【英文摘要】The soil infiltrability has a close relationship withoverland flow and groundwater, determining the fraction of theirrigation or rain water entering the soil, the transportation of chemicals such as fertilizers, herbicides/pesticides as well asotherpollutants,and,thus, affecting the amount of runoff responsible for subsequent soil erosion. Based on the energyprinciple ofwater movement in saturated/unsaturated soils and the measured soil water distribution in horizontal soil column,modifications weremade to thepistonassumptionof the soil water distributionin theGreen-Ampt infiltration model. The soilwater distribution was described bya more realistic linear distributionmodel.Based on the water/mass balance and the soilwater dynamics, amodifiedmathematic model for soil infiltrability estimation was advanced. The measurement method,algorithm models and procedures were given for estimating soil infiltrability with measured data from horizontal soil column.Comparisons of the cumulative infiltrationcomputedfrom the estimated infiltrability with the modified method and the totalsupplied water indicated that the relative error was 0.66%, which demonstrateda very high accuracy of the model and thecomputational method.The modified model can describe the distribution of the soil water very well which is more suitable tothe analyzationsin the soil water dynamics than the piston assumption in the Green-Ampt infiltration model.The accuracy canbe greatly improved by applying the modified model to the horizontal soil column experiment. This can supply a veryusefultool to the relative studies such as the soil water movement analysis, overland flow estimation and soil erosion analysis.

【题目】无机氮和氨基酸态氮处理对番茄幼苗木质部和韧皮部汁液中矿质养分的影响
【中文关键词】番茄; 无机氮; 氨基酸态氮; 木质部; 韧皮部; 养分运输;
【英文关键词】tomato; Solanum lycopersicum; inorganic N; amino acid-N; xylem sap; phloem sap; nutrient translocation
【中文摘要】溶液培养条件下研究了番茄幼苗木质部和韧皮部汁液中氮及其它矿质养分运输对无机氮(NH4+-N、NO3--N)和氨基酸态氮(Gly-N)处理的不同响应。结果表明,不同氮素处理8d后,‘申粉918’和‘沪樱932’番茄木质部和韧皮部汁液中全氮含量表现为NH4+-N>Gly-N>NO3--N处理,而氮溢出量则以Gly-N处理的最多,其次为NH4+-N或NO3--N处理。两个品种木质部汁液中K、Ca、Mg以及‘沪樱932’木质部汁液中Cu含量表现为NO3--N>Gly-N>NH4+-N处理,而‘申粉918’中的Cu含量则表现为NO3--N>NH4+-N>Gly-N处理。两个品种木质部汁液中K、Ca、Mg、Cu、Zn、Mn溢出量均表现为NO3--N>Gly-N>NH4+-N处理;韧皮部汁液中K、Ca、Cu、Mn溢出量表现为Gly-N>NO3--N>NH4+-N处理;而其Mg、Zn溢出量则表现为NO3--N>Gly-N>NH4+-N处理,且‘沪樱932’的变化幅度较‘申粉918’的小。NH4+-N处理抑制番茄木质部养分向上运输的能力远大于Gly-N,‘申粉918’受抑制的程度更为明显
【英文摘要】Utilization of organic nitrogen (N) is an important aspect of plant N assimilation and has potential application in sustainable agriculture. In this study, contents and exudation rates of mineral nutrients in Xylem and phloem sap were compared between two tomato cultivars (‘Shenfen918’ and ’Huying932’) treated with nitrate (NO3--N), ammonium (NH4+-N) or glycine(Gly-N) for 8 days. For both cultivars, the N content in the xylem and phloem sap was in the order of NH4+-N> Gly-N> NO3--N, while the N exudation rate ranked with the highest in the Gly-N and followed by the NO3—N or NH4+-N treatment In the xylem sap, the highest contents of potassium(K), calcium(Ca), and magnesium(Mg) for both cultivars and the highest copper (Cu) content in ’Huying932’ cultivar were found in the NO3--N, and followed by the Gly-N and NH4+-N treatments. Although the highest Cu content in ’Shenfen918’ cultivar was also recorded in the NO3--N, the Cu content in the NH4+-N was higher than that in the Gly-N treatment On the other hand, the highest zinc(Zn) and manganese (Mn) contents were found in the NH4+-N, and followed by the NO3—N and Gly-N treatments, for both cultivars. The exudation rates of K, Ca, Mg, Cu, Zn and Mn in the xylem sap ranked with the highest in the NO3--N, the lowest in the NH4+-N, and the Gly-N treatment in between, for both cultivars. The degree of decline in the exudation rates was larger in the NH4+-N than in the Gly-N treatment, and it was greater in ’Shenfen918’ than in ’Huying932’ cultivar. The highest exudation rates of K, Ca, Cu, and Mn in phloem sap were found in the Gly-N and followed by the NO3—N and NH4+-N treatments. The order for exudation rates of Mg and Zn in phloem sap and the degrees of decline in their exudation rates were similar to the results on the xylem sap. Our results suggested that the different responses of nutrient translocation in the xylem and phloem sap to organic N supply might relate to genotypes of tomato plants

【题目】1株类球红细菌及其降解敌敌畏的特性
【中文关键词】类球红细菌; 敌敌畏; 降解; 16SrDNA; 白菜;
【英文关键词】Rhodobacter sphaeroides; dichlorvos; degradation; 16SrDNA; Chinese cabbage
【中文摘要】类球红细菌具有广泛的代谢方式,它能够发酵生产5-氨基乙酰丙酸、辅酶Q10、类胡萝卜素、氢气等,已经成为一种非常有工业化开发潜力的微生物.从土壤中分离、筛选了1株类球红细菌(编号为EBL0706),分析了它的培养和遗传特性,测定了水溶液的pH、温度、敌敌畏浓度、类球红细菌浓度对其降解敌敌畏速率的影响,结果表明,该菌株在水溶液中能够快速矿化敌敌畏,在pH 6.9~7.5、温度20~50℃条件下,在5×108CFU/mL的类球红细菌稀释液中,400 mg/L的敌敌畏在12 h内降解率达到98%以上.该菌株发酵液的稀释液喷洒到幼苗期的白菜叶片上,能够显著加快残留敌敌畏降解速度,显示出其在无公害农产品生产中的应用潜力. 更多还原
【英文摘要】Rhodobacter sphaeroides possesses an extensive range of energy acquiring mechanisms including photosynthesis, lithotrophy, aerobic and anaerobic respiration. It can produce 5-aminolevulinic acid, CoQ10, carotenoids, hydrogen, etc. by fermentation. A Rhodobacter sphaeroides strain was isolated, designated as EBL0706, from soil. The degradation of dichlorvos(DDVP) by the Rhodobacter sphaeroides was investigated. 98% of DDVP could be degraded in water solution in 12h when 5*108 CFU/mL Rhodobacter sphaeroides was added to 400mg/L DDVP solution under pH6.9-7.5 and 20-50 ° C. This strain could also

degrade the DDVP residues on Chinese cabbage leaves effectively.

【题目】长期不同施肥对稻田土壤微生物群落功能多样性的影响
【中文关键词】长期施肥;稻田土壤;微生物功能多样性;BIOLOG
【英文关键词】long-term fertilization; paddy soil; functional diversity; BIOLOG
【中文摘要】微生物群落功能多样性对土壤管理具有重要指示作用,施肥措施对土壤微生物群落功能多样性产生重要的影响,从而影响土壤有机质的含量,引起土地碳贮量变化,进而影响到陆地生态系统的碳汇。以位于湖南省桃江县国家级稻田肥力长期定位试验点的土样为研究对象,采用BIOLOG测试板对不同施肥处理下土壤微生物功能多样性进行了研究。研究结果显示,土壤微生物的碳源利用率因长期不同的施肥处理而发生分异。Shannon和Simpson指数的结果显示所有施肥处理均有利于维持微生物群落多样性,但秸秆还田和习惯施肥使群落均匀度(McIntosh指数)降低。主成分分析表明,试验点土壤微生物群落利用的主要碳源为氨基酸类和糖类,但不同施肥处理碳源利用类型有差异。结果可以得出,不同的施肥对土壤微生物功能多样性产生了不同影响,从而影响土壤有机质中碳、氮含量。这些信息可以为深入研究施肥对全球碳氮循环以及全球气候变迁提供依据。 更多还原
【英文摘要】Microbial community functional diversity is a sensitive indicator of soil management, such as fertilization, especially long-term fertilization. In this paper, the functional diversity of soil microbial community was detected by BIOLOG system. The Average Well Color Development (AWCD) in BIOLOG plates indicated the ability of carbon Utilization of microbial community. The indices of Shannon, Smipson and McIntosh were calculated to show the richness, dominance and evenness of the functional diversity, while the principal component analysis of substrate reactions reflected the main carbon sources utilized by microbial community. The results showed that all the treatments exhibited the elevation of AWCD during the first 72 hours of incubation, but the differences among the treatments were obvious. Both applications of organic manure mixed with chemical fertilizer and chemical fertilizer caused high increase of the AWCD while applying straw-incorporation and local traditional fertilization had less affection on the AWCD, which was even lower than the treatment without fertilizer. It was miplicated that long-termfertilization resulted in the variation of the carbon utilization efficiency of soil microbial communities. The microbial community diversity indices were calculated based on the AWCD data at 72h and the differences among the treatments were significant. The treatments of organicm anuremixed w ith chem ical fertilizer and chem ical fertilizer rem arkably mi proved the richness, dom inance and evenness of so ilm icrob ial comm unity in comparison w ith the other treatm ents. Both treatm ents ofstraw- incorporation and local trad itional fertilizat ion induced increase of the richness and the dom inance except the evenness wh ich decreased compared to the treatm ent w ithout fertilization. The nine principal com ponents w ere extracted from the principal component ana lysis and their cum ulat ive contribution of variance accounted to 85. 73 percent. The variance contribution rate of PC1 and PC2 were 34. 21% and 13. 73%, respectively. T he correlation coefficients between ma in substrates and PC1 or PC2 indicated that them ain carbon sources for soilm icrobesw ere carbohydrates and am ino acids in all treatments and there w ere significant differences of carbon substrate ut ilization patterns in different treatm ents.T herefore, long- term fertilization had significant affect ions on the functional diversity of so ilm icrob ial community, wh ich, in turn, could induce variations of carbon and nitrogen com pos ition of soil organicm atter.

【题目】敌敌畏对鲫鱼的急性毒性及类球红细菌的解毒作用
【中文关键词】敌敌畏; 鲫鱼; 急性毒性; 类球红细菌; 解毒作用;
【英文关键词】dichlorvos;Carassius auratus;acute toxicity;Rhodobacter sphaeroides;detoxification
【中文摘要】敌敌畏是使用最为广泛的有机磷农药之一,具有较高的水溶性,对水生动物的危害较大.为初步探讨水体中敌敌畏降解菌对中毒鱼类的解毒作用,测定了敌敌畏对鲫鱼(Carassius auratus)幼鱼的急性毒性,调查了一株敌敌畏高效降解菌——类球红细菌(Rhodobacter sphaeroides)的解毒作用.结果表明:敌敌畏对鲫鱼幼鱼48、72、96h的LC50分别为45.1、30.4、23.3mg·L-1,安全浓度为2.3mg·L-1,属低毒农药.在不同敌敌畏暴露浓度的养鱼水中添加类球红细菌(5×107CFU·mL-1)可以显著降低鲫鱼的死亡率,20mg·L-1和35mg·L-1敌敌畏暴露浓度下,鲫鱼96h死亡率分别由40%和100%降低至0和15%;利用液相色谱检测了敌敌畏在添加和不添加类球红细菌的养鱼水中的降解规律,发现类球红细菌的解毒作用主要是对水中敌敌畏的快速降解,降解过程中没有积累有毒代谢产物. 更多还原
【英文摘要】Dichlorvos(DDVP)is one of the most widely used organophosphate insecticides, with high water -solubility andhigh risk to aquatic animals. In order to explore the detoxification of DDVP by degrading strain to poisoned fish, theacute toxicity of DDVP to Carassius auratus was determined, and the detoxifcation by a strain of Rhodobactersphaeroides, which has high degradation capability to DDVP was investigated. Results showed that the half lethalconcentration (LC50)of DDVP to C. auratus at 48, 72 and 96h were 45.1, 30.4 and 23.3mg · L-1, respectively. The safeconcentration was 2.3mg · L -1. R. sphaeroides (5 ×107CFU · mL -1)could reduce the mortality of C. auratus significantly.Adding R. sphaeroides (5 ×107CFU · mL -1)to 20mg · L -1 and 35mg · L -1 DDVP treatments reduced C. auratus mortalitysignificantly from 40% and 100% to 0 and 15%, respectively at 96h. The degradation of DDVP was detected by HPLCin fish water with and without R. sphaeroides, respectively. The result showed that the detoxification by R. sphaeroideswas mainly due to the rapid degradation of DDVP by R. sphaeroides. There were no toxic degradation products indegradation process.

【题目】长期施肥对水稻土活性有机碳的影响
【中文关键词】长期施肥;水稻土;易氧化有机碳;微生物生物量碳;水溶性有机碳
【英文关键词】Long- term fertilization; Paddy soil; Easy oxidation organic carbon; Microbial biomass carbon; Water- soluble organic carbon
【中文摘要】以湖南省3 个国家级稻田肥力变化长期定位监测点的土壤作为研究材料,测定了不施肥、单施化肥、化肥配施有机肥等施肥处理的土壤总有机碳、水溶性有机碳、易氧化有机碳及微生物量碳的含量及其相互关系。结果显示,3 个监测点化肥配施有机肥处理土壤总有机碳、易氧化有机碳、微生物量碳和水溶性有机碳的含量均显著高于不施肥的对照处理,增幅分别为12.59%~82.84%、15.33%~103.95%、35.33%~97.54%、15.89%~73.73%;易氧化有机碳、微生物量碳和水溶性有机碳占总有机碳比中的变化范围分别为49.02%~58.31%、1.93%~3.46%和0.10%~0.15%,处理间差异性不太显著,其中桃江点的微生物量碳和水溶性有机碳占总有机碳的比率显著低于其它两监测点;总有机碳、易氧化有机碳、微生物量碳及水溶性有机碳之间相关性均达到极显著水平。
【英文摘要】Soil samples from 3 long- term experiments in Xinhua, Ningxiang and Taojiang counties of Hunan Provincewere analyzed to investigate the effect of different fertilization treatments on the contents of soil total organic carbon(TOC), easy oxidation organic carbon (EOOC), microbial biomass carbon (MBC), water- soluble organic carbon (WSOC)and the relationship among TOC, EOOC, MBC and WSOC. The results showed that: Compared to CK, NPK plusmanure or straw significantly increased the contents of TOC, EOOC, MBC and DOC by 12.59% - 82.84% , 15.33%- 103.95%, 35.33%- 97.54% and 15.89%- 73.73%, respectively; The percentages of WSOC、 MBC and EOOC in totalorganic carbon (TOC) were 49.02%- 58.31%, 1.93%- 3.46% and 0.10%- 0.15%, respectively. There was no significantdifference among the above percentages in different treatments. The proportions of MBC and WSOC in soil TOC forTaojiang site were much lower than those for Ningxiang and Xinhua sites. There were highly significant correlationsamong TOC, EOOC, MBC and WSOC.

【题目】水分控制下的湿地沉积物氧化还原电位及其对有机碳矿化的影响
【中文关键词】水分; 氧化还原电位; 有机碳矿化; 湿地
【英文关键词】water content; redox potential; organic C mineralization; wetland
【中文摘要】为探讨水分与氧化还原电位之间的内在关系及其对沼泽湿地有机碳分解矿化的影响, 采用室内培养(25 e , 155 d) 实验研究了不同水分条件(24%~ 232% WHC) 下三江平原3 类湿地(泥炭沼泽、腐殖质沼泽和沼泽化草甸) 沉积物氧化还原电位(Eh) 变化以及有机碳的矿化特征. 结果表明, 不同水分条件对湿地沉积物氧化还原电位的影响有较大差异, 在低于100% WHC(最大持水量) 水分范围时, 氧化还原电位随着水分的增加而降低, > 100% WHC(至积水2 cm) 时, 水分含量变化对泥炭沼泽和腐殖质沼泽沉积物氧化还原电位影响作用降低. 泥炭沼泽、腐殖质沼泽和沼泽化草甸沉积物有机碳矿化最适宜水分含量存在较大差异, 分别为32%、48%和76%~ 100% WHC. 湿地沉积物有机碳矿化速率与氧化还原电位之间存在二次函数关系(p <0105) , 在还原态下(Eh 值< 300 mV) , 有机碳矿化速率和矿化量随氧化还原电位的升高而升高, 在氧化态(Eh 值> 300 mV) 下则逐渐降低. 较低的氧化还原电位是三江平原湿地有机碳得以积累的重要原因.
【英文摘要】To better understand the effect of soil water contents on redox potential (Eh) , and their impacts on C mineralization in naturalwetland, sediment samples from 3 types of wetlands (fen, humus marsh and marshy meadow) in the San- jiang Plate region of North China wereincubated (25e) for 155 d under a range of reducing and oxidizing conditions by controlling water contents (varied from 24% to 232% ofwater holding capacity) (WHC) . CO2-C evolved during incubation was measured at different time intervals. Results showed that Eh ofsediments decreased significantly as water content increased from 24% WHC (lighted moisturized) to about 100% WHC, then decreasedslightly as water content increased further to a level of submersed (about 2 cm water- depths) . The accumulative amount of CO2-C evolved fromthe sediments indicated that the optimum water contents for mineralization of organic C are 32%, 48% and 76%- 100% WHC for sediments offen, humus marsh, and marshy meadow, respectively. The relationship between mineralization rates and redox potentials (Eh) were well fittedwith second order parabola equations (p< 0105) . Mineralization rates

and accumulative amount of organic C displayed a positive correlationwith Eh up to 300 mV. However, a significant negative correlation was observed when Eh increased above 300 mV. Results demonstrated thatlow redox potential is the controlling factor of carbon accumulation of wetland in San- jiang Plate reg ion.

【题目】不同温度对黑碳表面官能团的影响
【中文关键词】黑碳;温度;表面官能团;种类;数量
【英文关键词】black carbon; pyrolytic temperature; surface functional group; types; quantities
【中文摘要】在200~800 ℃热解水稻秸秆制备BC,以Boehm 滴定和FTIR 表征BC 表面官能团种类和数量,研究了不同温度对BC表面官能团的影响。结果表明:温度对BC 表面官能团种类和数量都将产生影响。秸秆碳化后官能团会发生一定变化,表现为醚键(C-O-C)、羰基(C-O)、甲基(-CH3)和亚甲基(-CH2)消失,仍存有羟基(-OH)和芳香族化合物。BC 有相同的化学结构,都以芳环骨架为主,但所含官能团种类有一定差异,同种官能团振动形式也不同。酸性和碱性官能团数量都随温度升高先升高后降低,高温和低温不利于官能团的形成,300~600 ℃对应的碱性官能团含量高于酸性官能团含量。
【英文摘要】Black carbon (BC) is a product of weathering of graphitic carbon in rocks and of incomplete combustion of fossil fuelsand vegetation. BC adsorption has been paid great attention. Pyrolyzing rice straw in the range of 200~800 °C, the effects of differenttemperature on BC surface functional groups were studied by Boehm titration and Fourier transform infrared spectroscopy (FTIR).The results showed that temperature had an effect on the types and quantities of the BC surface functional groups. The change offunctional groups of rice straw after the carbonization was that the ether(C-O-C), carbonyl(C-O), methyl(-CH3) and methylene(-CH2)groups disappeared, but the hydroxyl(-OH), alkene(C-C) and aromatic compounds still existed. BC had same chemical structure, wasmainly of aromatic ring skeleton-based, but the types of BC functional groups and the vibrations of same functional group were different.The numbers of acidic and basic functional groups firstly increased and then decreased with increasing temperature, to a

greatextent this implied that higher temperature and lower temperature was not conducive to the formation of functional groups. Thenumbers of basic functional groups at 300~600 °C were higher than the acidity.

【题目】长期施肥对稻田土壤有机氮、微生物生物量及功能多样性的影响
【中文关键词】长期施肥;稻田土壤;有机氮;微生物生物量;功能多样性
【英文关键词】long-term fertilization; paddy soil; organic nitrogen; microbial biomass; functional diversity
【中文摘要】以位于湖南省新化和宁乡县两个稻田肥力长期定位试验点的土样为材料,研究了不同施肥处理对稻田土壤有机氮组分、微生物生物量及功能多样性的影响. 结果表明:与不施肥处理(CK)相比,化肥配施有机肥处理提高了稻田土壤酸解总氮(TAHN)及其组分中氨基糖氮(ASN)、氨基酸氮(AAN) 和酸解氨态氮(AN) 的含量,不同施肥处理对组分中酸解未知氮(HUN)的影响不尽相同. 与CK 相比,单施化肥处理对土壤微生物生物量碳、氮(MBC、MBN)含量的影响较小,化肥配施有机肥处理则显著提高了土壤MBC 和MBN 的含量. 采用BIOLOG法对土壤微生物群落功能多样性进行测定,结果表明:中、高量有机肥处理提高了稻田土壤微生物的碳源利用率和微生物群落功能多样性;土壤微生物碳源利用的类型因长期不同施肥处理而产生差异.
【英文摘要】Soil samples were collected from the plow layers at two long-term experiment sites inXinhua and Ningxiang counties of Hunan Province, China to study the effects of long-term fertilization on organic nitrogen, microbial biomass, and microbial functional diversity of paddy soils. Longterm fertilization showed great effects on the soil N content. Compared with CK, treatments NPKplus manure or straw increased the contents of soil total acid鄄hydrolysable N and its fractions aminosugar N, amino acid N, and ammonium N. Treatment NPK had no significant effects on soil micro鄄bial biomass C and N, but treatments NPK plus manure increased the contents of soil microbial bio鄄mass C and N significantly. BIOLOG test showed that treatments NPK plus manure enhanced thecarbon utilization efficiency of soil microbes, and improved the functional diversity of soil microbialcommunities, compared with CK. Long-term different fertilizer treatments resulted in the differencesof carbon substrate utilization patterns of soil microbial communities

【题目】土壤入渗性能线源测量方法的近似算法研究

【中文关键词】入渗性能;线源;数值方法;平均值

【英文关键词】infiltrability; linear source; numerical method; average

【中文摘要】土壤入渗性能的确定对于水文过程模拟,如地表产流、土壤侵蚀以及降雨向土壤水和地下水的转换等均具有十分重要的意义。本文提出了一种土壤入渗性能线源入流测量方法的快速近似算法。该方法在水量平衡原理的基础上,将各时刻的土壤入渗率在湿润地表的空间范围内进行平均,确定土壤入渗性能随时间的变化过程;所提出的新的计算模型可以简单地计算土壤入渗性能。文中利用3 组土壤入渗性能线源入流测量方法得到的试验数据,将该近似算法得到的结果与之前提出的数值解法计算得到的结果进行比较,并基于水量平衡原理估计了数值方法和该近似算法的误差。结果表明,该近似算法得到的结果比数值解法得到的结果偏大,比实际供水量偏大25. 3% ;该近似算法的计算结果稳定,可以作为试验过程中数值计算得到的土壤入渗性能的参照值。

【英文摘要】The determination of soil infiltration capacity is of great importance for modeling hydrologicalprocesses such as overland flow,soil erosion and the transformation of rainfall into soil water or groundwater. A new method is proposed for the fast approximation of soil infiltrability. The new method wasderived using the mass balance when the soil infiltration rates at different locations within the wetted areawere averaged to quantify the temporal infiltration process. The proposed new mathematic model providesa simple but useful method for determining infiltrability. Data from three linear source experiments wereused to compare the results from this new approximation method with those estimated with the numericalmethod. The errors of the infiltrated water as computed with the numerical method and this new approachwere estimated with water balance method. The results indicate that the soil infiltration rates estimatedwith the approximation method are very stable though to some extend it is higher than those estimated withthe numerical method,with an estimate error of 25. 3% higher than the supplied water. This new method can also be used as a necessary reference for the results estimated with numerical method in the linearsource experiments.

【题目】小青菜对不同施肥模式的响应及其生态化学计量学特征
【中文关键词】小青菜; 有机无机肥配施模式; 氨基酸; 生长; 品质; 生态化学计量学
【英文关键词】greengrocery; organic fertilizer p lus inorganic fertilizer; amino acid; growth; quality; ecological stoichi2ometry
【中文摘要】在大田小区试验条件下,研究了小青菜(3茬)对不同施肥模式的响应及其生态化学计量学特征。试验共设5个处理:不施肥对照、有机无机肥配施模式1 (含氨基酸肥料) 、有机肥施肥模式、无机肥施肥模式和有机无机肥配施模式2。结果表明,与其他处理相比,有机无机肥配施模式1能够提高小青菜产量,光合速率,可溶性总糖、蔗糖、维生素C和游离氨基酸含量,且这些指标与其地上部C /N和C /P比值之间存在显著正相关关系,而与施肥模式所提供肥料中C /N和C /P比值之间存在正相关趋势,但相关性未达显著水平。此外,有机无机肥配施模式1能够降低小青菜地上部硝酸盐含量,且该指标与其地上部和施肥模式所提供肥料中N /P、C/N、C /P和P /K比值之间均不存在相关关系。可见,在田间试验条件下,有机无机肥配施模式1能够促进小青菜地上部生长,改善小青菜品质;合理搭配肥料可提高小青菜的光合固碳能力,进而提高小青菜体内C/N、C /P比值,有利于提高小青菜的产量和品质。
【英文摘要】A field experimentwas carried out on response of greengrocery to fertilization patterns and its ecological stoichi2ometry. The experimentwas designed to have five treatments, i. e. CK, Pattern 1 (organic manure p lus inorganic fertiliz2ers including amino acid fertilizer) , Pattern 2 (organic manure p lus inorganic fertilizers) , organic manure, and inorganicfertilizers. Results show that compared with all the other treatments, Pattern 1 got better responses from the crop in yield,photosynthetic rate, soluble sugar, sucrose, vitamin C and free amino acids. And significant positive relationship s of theseindexes were observed with the C/N and C /P ratios in the shoots of the p lant, and a similar trend was found too with theC /N and C /P ratios in the fertilizer app lied, but not significant. Moreover, the treatment lowered nitrate content in green2grocery and the effect had nothing to do with the N /P, C /N, C /P and P /K ratios in shoots orwith the fertilizer app lied.In conclusion, Pattern 1 imp roved the growth and quality of greengrocery under field conditions. Furthermore, the reasona2ble combination fertilizer could imp rove the photosynthetic carbon on fixation, the C/N and C /P ratios and the yield andquality in the shoots of greengrocery.

【题目】A CBR Based Prediction Method for Web Aquatic Products Prices
【中文关键词】水产品价格,预测,面向属性的归纳,基于案例推理
【英文关键词】Aquatic products prices, Forecasting,
Attribute-oriented induction, Case-based reasoning
【中文摘要】能够科学地预测价格在水产品养殖业健康持续发展中起着重要的作用。本文介绍的方法预测水基于实例推理的产品价格。
【英文摘要】The ability to scientifically forecast the price of aquatic products plays an important role in the healthy and sustainable development of aquaculture. This paper presents a method for forecasting aquatic product prices using Case-Based Reasoning. Some key processes include automatic extraction of web data, attribute-oriented induction based on concept hierarchy, generation and representation of cases, cases matching and similarity calculation, case evaluation and revision. An application has been implemented using these processes. Experiments have shown that the system can automatically extract web data from multiple websites with information on aquatic product prices and can effectively analyze and forecast prices accordingly.

【题目】A Web Based Product Price Forecast Using Fuzzy CBR
【中文关键词】产品价格
【英文关键词】CBR
【中文摘要】养殖业健康持续发展,本文介绍的方法是一种预测水基于CBR的产品价格。
【英文摘要】A healthy and sustainable development of aquaculture requires an accurate forecast of aquatic product prices. This paper presents an experiment with a web-based application to perform product price prediction. It integrates three key technologies: automatic data extraction algorithms to retrieve aquatic product prices from various related websites, attribute-oriented induction algorithms to capture varied time granularity data and Case-Based Reasoning (CBR) as its reasoning logic to deal with a focus on fuzzy matching. Test results of the experiment have shown that the application can successfully extract the web-based data as designed and effectively analyze the data leading to a reliable forecast of aquatic product prices.

【题目】An Expert System for Fish Disease Tele-Diagnosis Based on 3I Fuzzy Reasoning Mechanism
【中文关键词】专家系统,鱼病诊断
【英文关键词】Expert system. Fish disease diagnosis. 3I fuzzy
reasoning. XF6.2.
【中文摘要】模糊推理的专家系统可用于描述和过程的模糊性鱼病诊断症状。编码模型的模糊推理知识库,结合了专家系统和模糊技术的鱼疾病诊断
【英文摘要】Fuzzy reasoning in expert systems is a recurrent issue on which little research has been done or reported. This paper proposes a fuzzy reasoning model of characteristic expansion based on 3I method which can be applied to describe and process the fuzziness of diagnosed symptoms of fish diseases. This strategy to code the model of fuzzy reasoning in the knowledge base rather than the inference engine largely increases the flexibility of reasoning. This is also the first research that combines an expert system and the fuzzy technology for fish disease diagnosis. An expert system for fish disease tele-diagnosis has been implemented using XF6.2, an expert system development tool.

【题目】GRASS COVER CHANGE MODEL BASED ON CELLULAR AUTOMATA
【中文关键词】元胞自动机,草覆盖变化
【英文关键词】cellular automata
grass cover change
【中文摘要】本研究试图建立一个草覆盖变化的元胞自动机模型。
【英文摘要】This research attempt to establish a grass cover change model based on cellular automata. It took the relationship between elevation, slope, aspect, settlement, road, water system and grass cover change as the foundation of the model, the dynamic progress of grass cover change was expressed by using cellular automata, the grass cover change model based on the basic geographical control condition which has been mentioned in above paragraph was constructed. The grass cover state of Madoi County in 2003 was simulated, and has been compared with the actual state of Madoi County in 2003. It was found that the grass cover change model has a high precision. The value of kappa index has reach 0.8801.

【题目】Spatial Variability of Soil Nutrient in Chongming of ShangHai,China by Using GIS and Kriging Method
【中文关键词】统计学,地理信息系统,崇明岛,土壤重金属
【英文关键词】geostatistics GIS Chongming Island soil heavy metal Kriging

【中文摘要】空间变异性和分布的土壤重金属元素包括,镉,铬,锌,铜,汞,铅和镍在表土估计在崇明岛(上海)的基础上结合地统计学和地理信息系统(地理信息系统)

【英文摘要】The spatial variability and distributions of the soil heavy metal elements including As, Cd, Cr, Zn, Cu, Hg, Pb and Ni in the topsoil were estimated in Chongming Island (Shanghai) based on the combination of Geostatistics and Geographic Information System (GIS). The spatial sampling site with the extra-bigger (smaller) measuring value of heavy metal elements were specially considered and treated in this study because these data of the sampling sites can reflect the status of contamination of the local regions, meanwhile may unfortunately be impractive to the estimation of statistic parameters and the spatial variability. In addition, Probability Kriging was performed for predicting the possibility of polluted area. The results indicate that Cd is extremely high on the whole island, while other heavy metals are distributed acceptably. The most probably as well as the most seriously polluted extensions are discerned in the following four regions: nearby Xinhe Dock and Liuyao River, the east of Qianjin Farm and the northwest part of the island.

【题目】上海崇明农田土壤微量元素空间变异特征
【中文关键词】地统计学;空闻变异;Kriging;微量元素;GIS
【英文关键词】eostatistics;spatialvariability;Kriging;micro-element;GIS
【中文摘要】采用地统计学与地理信息系统(GIs)相结合的方法,研究了上海崇明岛表层土壤有效铜、有效硼、有效铁、有效钼、有效锰、有效锌等微量元素的空间变异特征及分布规律。根据研究区土地利用背景的区域性差异及数据的各向异性.针对每个指标分别进行详细的试验分析取得空间相关性最强的步长和分析尺度,并由此选择不同的拟合模型对各因子进行泛克里格插值.获得相关微量元素的空间变异分布图。结果表明,6个指标均表现出强变异性。研究区农田土壤有效铜、有效铁含量过高,有效硼含量基本属于正常范围,有效锌含量偏低,有效锰、有效钼的含量过低。较高的铜含量位于研究区的西北部。主要集中在三星镇及其边缘地区。研究区两端的西北部、东南部地区有效铁含量相对较高,中部含量较低。详细的探索性空间数据分析、合适步长的试验分析,对获得准确描述各指标空间变化的插值理论模型,进而保证所选模型的插值精度具有重要的意义。

【题目】鱼病远程诊断模糊专家系统
【中文关键词】专家系统;鱼病诊断;模糊推理;XF6.2
【英文关键词】expert system; fish disease diagnosis; fuzzy reasoning; XF6.2
【中文摘要】在结合鱼病诊断学和鱼病专家的知识与经验基础上,提出采用基于三 I(Triple Implication)机制的特征展开糊推理模型,并用特征系数与规则支持度作为不精确性的描述和传递参量,对鱼病诊断过程中存在的模糊性进行描述和处理,最后利用XF6.2专家系统开发工具,研制开发了鱼病远程诊治专家系统。结果表明,将专家系统与模糊技术相结合应用于鱼病远程诊断能解决鱼病症状的模糊性问题,同时将模糊推理模型在知识库而非推理机中实现,推理过程具有更大的灵活性,更符合人类专家的推理思想。

【英文摘要】On the basis of fish disease diagnostics and domain experts ’ knowledge and experience, the fuzzy reasoning model of characteristic expansion based on triple I method is proposed to describe and process the fuzziness of diagnosed symptoms by using two parameters, characteristic coefficient and rule support. An Expert System for Fish Disease Tele-Diagnosis based on the model has been implemented by using an expert system development tool—XF6.2. The results show that this model can deal with the fuzzy information, and also prove that the strategy that the model of fuzzy reasoning is coded in knowledge base instead of inference engine can increase the flexibility of reasoning and is more suitable to simulate expert thinking.

【题目】上海崇明岛土壤重金属含量空间变异特征研究
【中文关键词】地统计学;GIS;崇明岛;土壤重金属:Kriging
【英文关键词】geostatistics; GIS; Chongming Island; soil heavy metal; Kriging
【中文摘要】采用地统计学与GIS相结合的方法,研究分析了上海崇明岛土壤重金属砷(As)、镉(Cd)、铬(Cr)、锌(Zn)、铜(Cu)、汞(Hg)、铅(Pb)、镍(Ni)的空间变异特征并比对国家标准分析了各元素超标概率分布状况。样本数据中的离群值是反应区域局部污染状况的重要信息,但同时离群值又对样本统计量的估计或空间插值造成一定的影响。本文尝试采用去离群值样本的插值模型与包含离群值样本数据进行插值的方式对重金属空间分布特征进行分析。另外,采用概率克立格法对研究区各元素超标概率状况进行了预测。结果表明:基于对离群值特殊处理的重金属含量的空间插值精度明显提高。研究区重金属分布特征为:崇明岛部分区域Cd含量较高;分布相对均匀,但空间向异性较大;新河码头附近、前进农场东、六滧港附近、崇明岛西北角这四大区域大部分重金属元素含量较高、且超标概率也较高。
【英文摘要】The spatial variability and distributions of the soil heavy metal elements including As, Cd, Cr, Zn, Cu, Hg, Pb and Ni in thetopsoil were estimated in Chongming Island (Shanghai) based on the combination of Geostatistics and Geographic Information System(GIS). The spatial sampling site with the extra-bigger (smaller) measuring value of heavy metal elements were specially considered andtreated in this study because these data of the sampling sites can reflect the status of contamination of the local regions, meanwhile mayunfortunately be impractive to the estimation of statistic parameters and the spatial variability. In addition, Probability Kriging was per-formed for predicting the possibility of polluted area. The results indicate that Cd is extremely high on the whole island, while otherheavy metals are distributed acceptably. The most probably as well as the most seriously polluted extensions are discerned in the follow-ing four regions: nearby Xinhe Dock and Liuyao River, the east of Qianjin Farm and the northwest part of the island.

【题目】Population genetic structure of the tiger prawn (Penaeus monodon) in the coastal waters of South China, based on mitochondrial DNA control region sequences
【中文关键词】对虾,太平洋群体,多样性,野生型
【英文关键词】SHRIMP PENAEUS; PACIFIC POPULATIONS; DIVERSITY; WILD;
【中文摘要】利用线粒体DNA控制区序列检测中国南方沿海水域斑节对虾的遗传变异和群体结构;收集三亚,深圳,湛江、北海的80个条对虾,157个多态性位点显示有69种单倍型。样品的核苷酸多样性(pi)为6.16 +/- 3.01%,高于中国海域的其他物种,如日本对虾,三疣梭子蟹,黑鲷。北海与三亚间的种群差异为 (pairwise F(ST) = 0.09836, P < 0.05),北海和深圳的差异为 (pairwise F(ST) = 0.12153, P < 0.05)。所有的种群间的遗传距离显著 (F(ST) = 0.053, P = 0.037 < 0.05)。利用UPGMA聚类分析四个种群间的遗传距离,显示三亚和深圳的最接近,北海最远。因此在斑节对虾增殖养殖过程中应避免近亲繁殖或杂交。根据本研究显示北海的斑节对虾为一个资源群体,三亚和深圳是另一个资源群体。
【英文摘要】Genetic variation and population structure of Penaeus monodon in the coastal waters of South China were detected using mitochondrial DNA control region sequences. Eighty individuals were collected at Sanya, Shenzhen, Zhanjiang and Beihai; 69 haplotypes with 157 polymorphic sites were detected. Nucleotide diversity (pi) of the combined samples (6.16 +/- 3.01%) was much higher than many other species in Chinese seas, such as Penaeus japonicus, Portunus trituberculatus, and Acanthopagrus schlegeli. Genetic differentiation was significant between Beihai and Sanya (pairwise F(ST) = 0.09836, P < 0.05), and between Beihai and Shenzhen (pairwise F(ST) = 0.12153, P < 0.05). Significant genetic differentiation among all populations was found by analysis of molecular variance (amova) (F(ST) = 0.053, P = 0.037 < 0.05). The upgma dendrogram of the four populations showed Sanya and Shenzhen as the closest to each other, with Beihai having the greatest genetic distance from Sanya and Shenzhen. The tiger prawn of the coastal waters of South China should therefore be bred as two separated stocks, avoiding inbreeding or outbreeding selection of P. monodon in the captive breeding program. According to our results one source population is Beihai, and the others are from Sanya and Shenzhen.

【题目】Molecular cloning and mRNA expression of cyclophilin A gene in black tiger shrimp (Penaeus monodon)
【中文关键词】分子克隆,亲环素A,实时定量,斑节对虾
【英文关键词】Cloning; Cyclophilin A; RT expression; Black tiger shrimp (Penaeus monodon)
【中文摘要】利用同源克隆技术和RACE方法克隆获得斑节对虾亲环素A(CypA)基因。全长基因包含81bp的5'非编码区,495bp开放阅读框编码164个氨基酸序列,分子量为17.68KDa,3'非编码区为308bp。推测氨基酸序列与其他物种的亲环素A一致性高。实时定量PCR实验显示亲环素A在不同组织的表达分布,主要在肝胰腺和血淋巴中表达;LPS诱导后肝胰腺的亲环素A表达上调。表明亲环素A是一种组成型和诱导性表达的蛋白。
【英文摘要】The techniques of homology cloning and anchored PCR were used to clone the cyclophilin A (CypA) gene from black tiger shrimp (Penaeus monodon). The full-length cDNA of black tiger shrimp CypA (btsCypA) contained a 51 untranslated region (UTR) of 81 bp, an ORF (open reading frame) of 495 bp encoding a polypeptide of 164 amino acids with an estimated molecular mass of 17.68 kDa and a 3' UTR of 308 bp. The predicted amino acid sequence of btsCypA shared high identity with CypA in other organisms. A quantitative reverse transcriptase Real-Time PCR (qRT-PCR) assay was developed to assess the mRNA expression of

btsCypA in different tissues and the temporal expression of btsCypA in the hepatopancreas challenged by lipopolyssacharide (LPS). Higher-level mRNA expression of btsCypA was detected in the tissues of hepatopancreas and blood. The expression of btsCypA in the hepatopancreas was up regulated after stimulated by LPS. The results indicated. that btsCypA was a constitutive and inducible expressed protein and could be induced by LPS. (C) 2008 Elsevier Ltd. All rights reserved.

【题目】1. A SCAR marker linked to the N gene for resistance to root knot nematodes (Meloidogyne spp.) in pepper (Capsicum annuum L.)
【中文关键词】未
【英文关键词】Pepper;Capsicum annuum L.;Disease resistance;Root-knot nematode;Meloidogyne spp.;SCAR;N gene;Marker assisted selection
【中文摘要】未
【英文摘要】The root-knot nematodes (Meloidogyne spp.) are important nematode pests and cause serious diseases in pepper in the world. No molecular markers linked to the nematodes resistance N gene have been reported. In this paper, ‘ Carolina Wonder ’ (Capsicum annuum L.), a sweet pepper line resistant to root-knot nematode with N gene, ‘ 20080-5-29 ’ (C. annuum L.), an inbred line susceptible to root-knot nematode with good horticultural characteristics, and their F2 progeny with 320 individuals were used as materials. Evaluation of resistance and susceptibility of parental lines, F1 and F2 progeny inoculated with root-knot nematodes (Meloidogyne incognita) were carried out. ‘ Bulked segregant analysis ’ method was used to search for polymorphicmarkers from512 pairs of AFLP primers. Based on the assessment ofresistance and susceptibility and polymorphismof the AFLPmarker in F2 population, the genetic linkage distance between the AFLP marker and the N gene was estimated. One AFLP marker E39/M41-339 was obtained and transferred to a SCAR marker amplifying a 315 bp DNA fragment linked to the N resistant allele and a 331 bp fragment linked to the N+susceptible allele. The distance between the molecular marker and the nematodes resistance N gene is 6.3 cM. This research delivered a valuable tool for the marker assisted selection of nematodes resistance in pepper.

【题目】Expression, purification and antibacterial activity of bovine lactoferrampin- lactoferricin in Pichia pastoris
【中文关键词】Agriculture
【英文关键词】Bovine lactoferricin . Bovine lactoferampin . Antimicrobial peptides . Antibacterial activity . Pichia pastoris . Pigs . Nutrition . Amino acids
【中文摘要】Amino Acid
【英文摘要】Bovine lactoferrampin (LFA) and bovine lactoferricin (LFC) are two antimicrobial peptides located in the N(1) domain of bovine lactoferrin. The bactericidal activity of the fused peptide LFA-LFC is stronger than that of either LFA or LFC. The high cost of peptide production from either native digestion or chemical synthesis limits the clinical application of antimicrobial peptides. The expression of recombinant peptides in yeast may be an effective alternative. In the current study, the expression, purification, and antibacterial activity of LFA-LFC using the Pichia pastoris expression system are reported. The linearized expression vector pPICZaA-LFA-LFC was transformed into P. pastoris KM71 by electroporation, and positive colonies harboring the target genes were screened out and used for fermentation. The recombinant LFA-LFC peptide was purified via two-step column chromatography and identified by tricine-sodium dodecyl sulfate-polyacrylamide gel electrophoresis and matrix-assisted laser desorption/ionization time-of-flight mass spectrometry. The results indicate that P. pastoris is a suitable system for secreting LFA-LFC. The fermentation supernate and the purified LFA-LFC show high antimicrobial activities. The current study is the first to report on the expression and purification of LFA-LFC in P. pastoris and may have potential practical applications in microbial peptide production.

【题目】Dietary bovine lactoferricin improved gut microflora, benefited intestinal mucosal morphology and inhibited circular cytokines delivery in 21-day weaned piglets
【中文关键词】Agriculture
【英文关键词】Nutrition
【中文摘要】Amino Acid
【英文摘要】To study the effect of feeding pharmacological level of bovine lactoferricin (LFcin), 20 weaned piglets (5.29±0.19 kg) were randomly assigned to four treatment groups and fed a maize-soyabean meal diet containing either no addition (C), 100 mg/kg of cipB (C + B), 100 mg/kg of cipB-LFcin (C + L) or 100 mg/kg of colistin sulphate (C + CS) for 3 weeks. Compared with C and C + B, dietary LFcin reduced faecal score ($P < 0.05$), decreased the concentration of Escherichia coli in the duodenum, jejunum and ileum ($P < 0.05$), increased the concentration of lactobacillus and bifidobacterium in the duodenum, jejunum and ileum ($P < 0.05$), and promoted development of the villus-crypt architecture of the jejunum and ileum. Dietary supplementation with LFcin decreased serum levels of cytokines (interleukin-1,6 [IL-1,6], tumour necrosis factor-α [TNF-α]) ($P<0.05$) and glucagon ($P<0.05$), and increased growth hormone ($P<0.05$). Thus LFcin could relieve the weanling stress in 21-day weaned piglets.

【题目】Tryptophan metabolism in animals: important roles in nutrition and health
【中文关键词】Agriculture
【英文关键词】Nutrition
【中文摘要】Amino Acid
【英文摘要】L-Tryptophan is a nutritionally essential amino acid for monogastric animals and preweaning ruminants because it cannot be synthesized in the body. Besides serving as a building block for proteins, tryptophan is a critical nutrient for the functions of nervous and immune systems. Over the past decades, much attention has been directed to study the role of tryptophan as a limiting amino acid in mammalian and avian nutrition. However, emerging evidence from recent studies shows that tryptophan and its metabolites (e.g., serotonin (5-hydroxytryptamine, 5-HT) and melatonin)) can regulate feed intake, reproduction, immunity, neurological function, and anti-stress responses. Additionally, tryptophan may modulate gene expression and nutrient metabolism to impact whole-body homeostasis in organisms. Thus, adequate intake of this amino acid from the diet is crucial for growth, development, and health of animals and humans.

【题目】Dietary protein, energy and arginine affect LAT1 expression in forebrain white matter differently. Animal
【中文关键词】Agriculture
【英文关键词】L-type amino acid transporter 1, dietary protein, energy, arginine, brain
【中文摘要】Amino Acid
【英文摘要】L-type amino acid transporter-1 (LAT1) transports large, branched-chain, aromatic and neutral amino acids. About 64Duroc3Landrace3Yorkshire pigs were used to study the effects of dietary crude protein (CP), energy and arginine on LAT1expression in forebrain. The results showed that LAT1 expression in forebrain was sensitive to different levels of CP, energy andarginine. On the basis of Western blot analysis, a lower level of LAT1 presented in the brain tissues of pigs fed the low dietary CPdiet (P,0.05), a higher level were found in pigs fed the higher CP diet, with moderate to intense staining seen in pigs fed thediet plus 1% arginine. In contrast, pigs fed the control-energy diet had weak LAT1 expression, and those fed the dietsupplemented with 1% arginine showed lowest LAT1 expression (P,0.05). These results showed that LAT1 was highly expressedin the forebrain, and expression of LAT1 was affected by dietary protein, energy and arginine differently.

【题目】Dietary supplementation with L-arginine or N-carbamylglutamate enhances intestinal growth and heat shock protein-70 expression in weanling pigs fed a corn- and soybean meal-based diet.
【中文关键词】Agriculture
【英文关键词】L-Arginine N-carbamylglutamate
Growth performance Diarrhea Intestinal morphology

Weaned pigs
【中文摘要】Amino Acid
【英文摘要】This study determined effects of dietary supplementation with L-arginine (Arg) or N-carbamylglutamate (NCG) on intestinal health and growth in early-weaned pigs. Eighty-four Landrace x Yorkshire pigs (average body weight of 5.56+/-0.07 kg; weaned at 21 days of age) were fed for 7 days one of the three isonitrogenous diets: (1) a corn- and soybean meal-based diet (CSM), (2) CSM+0.08% NCG (0.08%), and (3) CSM+0.6% Arg. There were four pens of pigs per diet (7 pigs/pen). At the end of a 7-day feeding period, six piglets were randomly selected from each treatment for tissue collections. Compared with the control group, Arg or NCG supplementation increased (P<0.05): (1) Arg concentrations in plasma, (2) small-intestinal growth, (3) villus height in duodenum, jejunum and ileum, (4) crypt depth in jejunum and ileum, (5) goblet cell counts in intestinal mucosae, and (6) whole-body weight gain in pigs. Real-time polymerase chain reaction and western blotting analyses revealed that both mRNA and protein levels for heat shock protein-70 (HSP70) were higher (P<0.05) in the intestinal mucosae of Arg- or NCG-supplemented pigs than in the control group. Furthermore, the incidence of diarrhea in the NCG group was 18% lower (P<0.01) than that in the control group. Collectively, these results indicate that dietary supplementation with 0.6% Arg or 0.08% NCG enhances intestinal HSP70 gene expression, intestinal growth and integrity, and the availability of dietary nutrients for whole-body weight gain in postweaning pigs fed a CSM-based diet. Thus, Arg or NCG is a functional ingredient in the weaning diet to improve nutrition, health, and growth performance of these neonates.

【题目】Functions of microbiota in monogastric gastrointestinal tract and new practices in animal production
【中文关键词】Agriculture
【英文关键词】Nutrition
【中文摘要】Amino Acid
【英文摘要】The mammalian gastrointestinal (GI) tract harbors a complex micro-ecosystem consisting of countless bacteria. As an essential 'organ', the gut microbiota plays an important role in host nutrition and health by promoting supply, digestion and absorption of nutrient, preventing pathogen's colonization, and shaping and maintaining normal mucosal immunity. Antibiotics used as dietary additive not only interrupt the commensal microbiota in animal GI tract, but also lead to microbial resistance and antibiotics residues in animal products, which has become a worldwide problem to the health of human being and animals. So antibiotics have been banned as feed additives in many countries. Therefore, animal nutritionists and feed manufacturers are becoming increasingly interested in the topic. This paper mainly focuses on the development and important functions of microbes in monogastric GI tract as well as the factors affecting them. Applications of some novel alternatives in practice to keep GI tract ecosystem healthy, such as probiotics, prebiotics, Chinese herbal additives and exogenous enzymes, and their mechanisms were also introduced. The new alternatives to keep health of GI tract have great ecological, environmental issues and economic social effects. It may lead to the rational design of supplementation for animal production to study the functions of the microbiota, which has profound implications to support continuous development in livestock production in the future

【题目】High-level expression, purification and antibacterial activity of bovine lactoferricin and lactoferrampin in Photorhabdus luminescens.
【中文关键词】Agriculture
【英文关键词】Bovine lactoferricin; Bovine lactoferampin; Photorhabdus luminescens TZR001; ET recombination; Anti-microbial peptides
【中文摘要】Amino Acid
【英文摘要】Bovine lactoferricin (LFC) and bovine lactoferrampin (LFA) are two active fragments located in the N1-domain of bovine lactoferrin. Recent studies suggested that LFC and LFA have broad-spectrum activity against Gram-positive and Gram-negative bacteria. To date, LFC and LFA have usually been produced from milk. We report here the high-level expression, purification and characterization of LFC and LFA using the Photorhabdus luminescens expression system. After the cipA and cipB genes were deleted by ET recombination, the expression host P. luminescens TZR001 was constructed. A synthetic LFC-LFA gene containing LFC and LFA was fused with the cipB gene to form a cipB-LFC-LFA gene. To obtain the expression vector pBAD-cipB-LFC-LFA, the cipB-LFC-LFA gene was cloned on the L-arabinose-inducible expression vector pBAD24. pBAD-cipB-LFC-LFA was transformed into P. luminescens TZR001. The cipB-LFC-LFA fusion protein was expressed under the induction of L-arabinose and its yield reached 12 mg L^{-1} bacterial culture. Recombinant LFC-LFA was released from cipB by pepsin. The MIC of recombinant LFC-LFA toward E. coli 0149, 0141 and 020 was 6.25, 12.5 and 3.175 $\mu g\ ml^{-1}$, respectively.

【题目】Dietary supplementation with Chinese herbal powder enhances ileal digestibilities and serum concentrations of amino acids in young pigs
【中文关键词】Agriculture
【英文关键词】Ultra-fine Chinese herbal powder
Amino acids Digestion Piglets
【中文摘要】Amino Acid
【英文摘要】This study was designed to determine the effect of ultra-fine Chinese herbal powder as a dietary additive on serum concentrations and apparent ileal digestibilities (AID) of amino acids (AA) in young pigs. In Experiment 1, 60 Duroc x Landrace x Yorkshire piglets weaned at 21 days of age were randomly assigned to one of three treatments, representing supplementation with 0 or 2 g/kg of the powder, or 0.2 g/kg of colistin (an antibiotic) to corn- and soybean meal-based diets (n = 20 per group). Blood samples from five piglets per group were collected on days 7, 14, and 28 to determine serum AA concentrations. In Experiment 2, 12 barrows with an average initial body weight of 7.64 kg were randomly assigned to one of the three dietary treatments, followed by surgical placement of a simple T-cannula at the terminal ileum. All of the diets contained 0.1% titanium oxide as a digestibility marker. The samples of terminal ileal digesta were collected on day 7 for determining AID of AA. Results show that dietary supplementation with the herbal powder increased ($P < 0.05$) serum concentrations and AID of most AA by 10-50% and 10-16%, respectively. As an indicator of improved intestinal function, AID values of calcium were also enhanced in piglets supplemented with the herbal powder. Dietary supplementation of colistin increased serum concentrations and AID values of some AA by 8-44% and 10-15%, respectively, in comparison with the non-supplemented group. These novel findings demonstrate that the herbal powder can enhance the digestibility of dietary protein and the intestinal absorption of AA into the systemic circulation in post-weaning pigs, therefore providing a new mechanism for its growth- and immunity-promoting efficacy.

【题目】Molecular cloning, tissue distribution and ontogenetic expression of the amino acid transporter b0,+ cDNA in the small intestine of Tibetan suckling piglets
【中文关键词】Agriculture
【英文关键词】Chemerin Xiang pig Expression Akt
ERK1/2
【中文摘要】Amino Acid
【英文摘要】Chemerin, as a new member of adipokinesfamily, is highly expressed in adipose tissue in rodent andits expression increases with obesity. Moreover, chemerinhas been reported to have significant relationship withmetabolic syndrome and insulin sensitivity. Here, the geneencoding chemerin from Xiang pig was cloned. The openreading frame of this cDNA encodes 163 deduced aminoacid residues. The putative protein has a N-terminal signalingpeptide and a nuclear localization signal profilewhich are highly conserved among the vertebrate orthologs.Both chemerin and chemerinR are highly expressed inlung, kidney and small intestine in adult Xiang pig. Besidesthese tissues, chemerin is abundant in liver and backfat,and chemerinR is abundant in spleen and skeletal muscle.We also investigated the age-dependent expression ofchemerin in suckling Xiang piglets in various tissues,which showed an interaction between age and segments inabundance of chemerin and chemerinR from day 1 to day21. For chemerinR, it was abundant in skeletal muscle ofboth adult and fetal Xiang pig. Further, we treated differentiatedC2C12 cells with chemerin. The result showed thatchemerin regulated energy metabolism partly through Aktand ERK1/2 signaling pathway. Taken together, our findingsprovide basic molecular information for the deeperinvestigation on the function of chemerin.

【题目】Effect of dietary supplementation of chitosan and galacto-mannan-oligosaccharide on serum parameters and the insulin-like growth factor-I mRNA expression in early-weaned
【中文关键词】Agriculture
【英文关键词】Oligosaccharides; Insulin-like growth factor-I; Growth hormone; mRNA expression level; Early-weaned piglets
【中文摘要】Amino Acid
【英文摘要】The study was to determine effects of dietary supplementation of chitosan (COS) and galacto-mannan-oligosaccharides (GMOS) on some serum biochemical indices, serum growth hormone (GH) and insulin-like growth factor-I (IGF-I) levels, and hepatic and long gissimus muscle IGF-I mRNA expression in early-weaned piglets. Twenty six Duroc x Landrace x Yorkshire piglets at the age of 15 days were used. The piglets had access to creep feed during the suckling. Six piglets were sacrificed for sampling at the beginning of the study. The other 20 piglets were individually housed in metabolic cages and randomly allotted to four corn and soybean meal-based diets including the control group, the antibiotic group with 110 mg lincomycin/kg diet, the COS group containing 0.025% COS, and the GMOS group with 0.20% GMOS, respectively, in a 2-week feeding experiment. Blood urea nitrogen (BUN) level was reduced whereas serum total protein concentration was increased ($P<0.05$) in responses to the COS and GMOS supplementation. Dietary supplementation of COS and GMOS also increased ($P<0.05$) the serum GH and IGF-I levels along with enhanced hepatic and the muscle IGF-I mRNA abundance. Dietary supplementation of oligosaccharides such as COS and GMOS may improve growth and feed conversion efficiency by increasing plasma GH and IGF-I levels, in the early-weaned piglets.

【题目】Metabolomic analysis of the response of growing pigs to dietary l-arginine supplementation
【中文关键词】Agriculture
【英文关键词】Arginine　Metabolomics　Serum
Pigs　Nuclear magnetic resonance spectroscopy
【中文摘要】Amino Acid
【英文摘要】Arginine plays an important role regulating nutrient metabolism, but the underlying mechanisms are largely unknown. This study was conducted to determine the effect of dietary arginine supplementation on the metabolome in serum of growing pigs using (1)H nuclear magnetic resonance spectroscopy. Sixteen 120-day-old pigs (48 +/- 1 kg) were randomly assigned to one of two groups, representing supplementation with 0 or 1.0% L: -arginine to corn- and soybean meal-based diets. Serum was collected after a 46-day period of treatment. Dietary arginine supplementation decreased fat deposition and increased protein accretion in the body. Principal component analysis showed that serum concentrations of low density lipoprotein, very low density lipoprotein, and urea were lower, but concentrations of creatinine, tricarboxylic acid cycle metabolites, ornithine, lysine and tyrosine were greater in arginine-supplemented than in control pigs. Additionally, the arginine treatment affected serum concentrations of nitrogenous and lipid signaling molecules (glycerophosphorylcholine and myo-inositol) and intestinal bacterial metabolites (formate, ethanol, methylamine, dimethylamine, acetate, and propionate). These novel findings suggest that dietary arginine supplementation alters the catabolism of fat and amino acids in the whole body, enhances protein synthesis in skeletal muscle, and modulates intestinal microbial metabolism in growing pigs.

【题目】Effects of 2-hydroxy-4methylthiobutyrate on portal plasma flow and net portal appearance of amino acids in piglets
【中文关键词】无
【英文关键词】Amino acids;Portal plasma flow;Proglucagon _ Short-chain fatty acids;2-Hydroxy-4-methylthiobutyrate
【中文摘要】无
【英文摘要】To determine whether portal plasma flow (PPF) and net portal appearance of amino acids (AA) could be affected by 2-hydroxy-4-methylthiobutyrate (HMB), six barrows (35-day-old, 8.6 ± 1.4 kg), implanted with arterial, portal and mesenteric catheters, were fed a DL-methionine (as the control) or HMB-supplemented diet once hourly and infused intramesenterically with 1% p-amino hippurate. PPF was numerically 9% higher (P = 0.09) in HMBfed pigs than in controls over a 4 – 6 h period. Compared with controls, pigs fed the HMB diet had increased (P\ 0.05) net portal balance and/or appearance of leucine, isoleucine, histidine, arginine and alanine, but had decreased (P\0.05) portal appearance of glutamate over a 6-h period. The concentration of acetate in the lumen of the distal small intestine was higher (P = 0.01) in HMB-fed pigs than in controls (25.14 vs. 7.64 mmol/kg). mRNA levels for proglucagon and endothelial nitric-oxide synthase (eNOS) in stomach and proximal small intestine, and mRNA levels for GLP-2 receptor (GLP-2R) in stomach were higher (P\0.05) in HMB-fed pigs compared with those in controls. Collectively, HMB supplementation increased concentrations of short-chain fatty acids in intestinal lumen, expression of proglucagon, GLP-2R, and eNOS genes, and net portal absorption of AA. These novel findings from the study with pigs may also have important implications for

intestinal nutrition and health in humans.

【题目】Effects of DL-2-hydroxy-4-methylthiobutyrate on the first-pass intestinal metabolism of dietary methionine and its extra-intestinal availability
【中文关键词】无
【英文关键词】DL-2-Hydroxy-4-methylthiobutyrate: First-pass intestinal metabolism: Extra-intestinal availability
【中文摘要】无
【英文摘要】The present study was conducted in a one-factorial arrangement to determine the effects of dl-2-hydroxy-4-methylthiobutyrate (dl-HMTB) on the first-pass intestinal metabolism of dietary methionine and its extra-intestinal availability. Barrows (n 6; aged 35 d; weight 8.6 kg), implanted with arterial, portal, mesenteric and gastric catheters, were fed a diet containing dl-methionine (dl-MET) or dl-HMTB once hourly and infused intramesenterically with 1 % p-aminohippurate and intragastrically with [1-13C]methionine at 7.0 mumol/kg body weight per h. Arterial and portal blood samples were taken at hourly intervals until 6 h of tracer infusion and pigs was then killed for collection of muscle, intestine, liver and kidney samples. The net portal appearance of methionine, expressed as the fraction of ingested directly available l-methionine, was higher ($P < 0.05$) in the dl-HMTB than in the dl-MET diet, and there was no difference ($P = 0.26$) in the fractional portal balance of [1-13C]methionine between the diets. [1-13C]methionine enrichment (tracer:tracee ratio; mol/100 mol amino acid) in the jejunum, arterial and portal plasma, liver, kidney and muscle was also not different ($P>0.05$) between the groups. Over the 6 h period after the start of feeding, the average concentration of citrulline both in the arterial and portal plasma was higher ($P < 0.05$) in the dl-HMTB than in the dl-MET group, and arterial plasma ornithine and taurine concentration was also higher ($P < 0.05$) in the dl-HMTB than in the dl-MET group. However, plasma urea concentration both in the arterial and portal vein was lower ($P < 0.05$) in the dl-HMTB than in the dl-MET group. These results suggested that the potential difference in the first-pass use of methionine by the intestine between the dl-HMTB and dl-MET diets might affect intestinal and systemic metabolism of other amino acids, which may provide new important insights into nutritional efficiency of different methionine sources.

【题目】Duration of dietary linseed feeding affects the intramuscular fat, muscle mass and fatty acid composition in pig muscle
【中文关键词】无
【英文关键词】Barrows; Intramuscular fat; Linseed; Muscle mass; n-3 PUFA
【中文摘要】无
【英文摘要】The aim of the study was to investigate the effect of duration of dietary linseed feeding on subcutaneous fat, intramuscular fat depot and muscle mass of growing – finishing barrows. Two isoenergetic and isonitrogenous diets were formulated, and one of which was the basal diet and another one was the linseed diet including linseed at the level of 10%. Twenty-four Landrace × Yorkshire barrows weighing 35 ± 3.7 kg were randomly assigned to four treatments with six replications per treatment. Pigs in treatment 1 (T1) fed the control diet throughout the experimental period, while pigs in T2, T3, and T4 fed the control diet except for 30, 60, and 90 d prior to slaughter when the linseed diet were fed. The experiment was conducted for 90 d. Carcass

quality and meat quality data were collected and analyzed. The longissimus muscle mass, posas minor mass and each muscle mass in the hind leg were weighted. Additionally, fatty acid composition (%) of the diet, the longissimus dorsi muscle and the backfat were analyzed by gas chromatography method. No significant difference (P > 0.05) was observed for average backfat thickness, lean meat percentage, loin muscle area, whereas the intramuscular fat content increased linearly (P < 0.01) as prolonged the time of feeding linseed diet. As prolonged the time of feeding linseed diet, the longissimus dorsi muscle mass, quadriceps femoris muscle mass and semitendinosus muscle mass increased linearly (P < 0.01). Duration of feeding linseed diet linearly increased (P < 0.01) the C18:3n-3, C20:5n-3 and C22:5n-3 concentrations in the longissimus muscle and backfat. There was significant quadratic relation between the intramuscular fat content and the n-3 polyunsaturated fatty acids (PUFA) enrichment (R2 = 0.87, P < 0.01), or C18:3n-3 enrichment (R2 = 0.91, P < 0.01) in the longissimus dorsi muscle. Likewise, the longissimus dorsi muscle mass was also quadratically related to the n-3 PUFA enrichment (R2 = 0.89, P < 0.01), or C18:3n-3 enrichment (R2 = 0.86, P < 0.01) in the longissimus dorsi muscle. These results indicated that duration of feeding linseed diet may stimulate intramuscular fat accumulation, and promote the hypertrophy of the longissimus dorsi muscle, quadriceps femoris muscle mass and semitendinosus muscle by increasing the n-3 PUFA enrichment, especially C18:3n-3 enrichment in the longissimus dorsi muscle

【题目】Duration of feeding linseed diet influences peroxisome proliferator-activated receptor γ and tumor necrosis factor gene expression, and muscle mass of growing-finishing barrows
【中文关键词】无
【英文关键词】Linseed; Muscle mass; Pig; PPARγ; TNF-α
【中文摘要】无
【英文摘要】The aim of the study was to investigate the effect of duration of feeding linseed (rich in n-3 PUFA) on peroxisome proliferator-activated receptor γ (PPARγ) and tumor necrosis factor (TNF-α) gene expression, and muscle mass of growing – finishing barrows. Two isoenergetic and isonitrogenous diets were formulated, and one of which was the basal diet and another one was the linseed diet including linseed at the level of 10%. Twenty-four Landrace × Yorkshire barrows weighing 35 ± 3.7 kg were randomly assigned to four treatments with six individuals per treatment. Pigs in treatment 1 (T1) fed the control diet throughout the experimental period, while pigs in T2, T3 and T4 fed the control diet except for 30, 60, and 90 d prior to slaughter when the linseed diet were fed. The experiment was conducted for 90 days. The longissimus muscle mass and each muscle mass in the hind leg were weighted. PPARγ and TNF-α mRNA expression levels in muscle, spleen and adipose tissue, and plasma concentrations of TNF-α data were measured and analyzed. The results showed that the longissimus muscle mass, quadriceps femoris muscle mass and semitendinosus muscle mass increased linearly (P < 0.01) as prolonged the time of feeding linseed diet. The expression of PPARγ in longissimus muscle and spleen increased (P < 0.01) linearly as prolonged the time of feeding linseed diet, while the expression of PPARγ in adipose tissue were not affected (P = 0.095). Duration of linseed addition linearly decreased (P < 0.01) TNF-α gene expression levels in the longissimus dorsi muscle, adipose and spleen, and serum concentration of TNF-α as well. The expression levels of PPARγ negatively correlated with the expression of TNF-α in muscle (R2 = 0.70, P < 0.001) and spleen (R2R2 = 0.77, P < 0.001) respectively. Likewise, PPARγ expression level in spleen (R2R2 = 0.59, P < 0.01) or muscle (R2R2 = 0.52, P < 0.05) negative correlated with serum TNF-α concentration, while there were significant quadratic relation between muscular PPARγ (R2R2 = 0.80, P < 0.01) or muscular TNF-α (R2R2 = 0.87, P < 0.01) expression and the longissimus dorsi muscle mass. These data suggested that duration of feeding linseed diet lead to a linear decrease of TNF-α gene expression, which may increase the muscle mass in growing – finishing barrows, at least in part, through a PPARγ-dependent mechanism.

【题目】Acavthopanax senticosus extract as a dietary additive enhances the apparent ileal digestibility of amino acids in weaned piglets
【中文关键词】无
【英文关键词】Acanthopanax senticosus extract; Weaned piglets; Amino acids; Apparent ileal digestibility
【中文摘要】无
【英文摘要】The present study was conducted to determine the effects of Acanthopanax senticosus (AS) extract as a dietary additive on serum contents and apparent ileal digestibility (AID) of amino acids (AA) in weaned piglets. In Exp. 1, 60 piglets with an average body weight (BW) of 5.64 kg were randomly assigned into 3 treatment groups who received maize-soybean-based diets supplemented with 0 or 1 g/kg of AS extract or 0.2 g/kg of colistin (n = 20 in each group). Blood samples were randomly collected from 5 piglets per group on days 7, 14 and 28 after the initiation of supplementation to determine the serum contents of free AA. In Exp. 2, 12 barrows with an average initial BW of 7.64 kg were also randomly assigned into 3 dietary treatment groups after being surgically fitted with a simple T-cannula at the terminal ileum. Samples of terminal ileal digesta were collected on day 7 for analysis of the AID of AA. The data showed that the serum contents and AID of most AA in the AS extract-supplemented group gradually increased by 15.3 – 80.8% and 4.1 – 30.8%, respectively, as the experiment proceeded in comparison with the colistin-supplemented group and/or control group. In conclusion, these findings indicated that AS extract could enhance the digestion and absorption of AA, which may be a potential mechanism of growth promotion.

【题目】Molecular cloning, tissue distribution and ontogenetic expression of the amino acid transporter b(0,+) cDNA in the small intestine of Tibetan suckling piglets
【中文关键词】无
【英文关键词】Amino acid transporter; b(0,) AT; Tibetan piglet; Tissue Expression;
【中文摘要】无
【英文摘要】The small intestine is the main absorption place of peptides and free amino acids in mammals. The amino acid transporter system b(0,+) mediates apical uptake of basic amino acids, especially lysine, arginine and cysteine. The aim of the current study was to clone Tibetan porcine amino acid transporter b(0,+)AT (SLC7A9) for comparing the sequences of Tibetan and common (Sus scrofa) pigs, and investigating the tissue distribution and ontogenetic expression in the small intestine of Tibetan suckling piglets. The Tibetan porcine SLC7A9 gene was first cloned from the porcine small intestine and found to encode the amino acid transporter b(0,+)AT. The entire open reading frame (ORF) of the SLC7A9 is 1464 bp and codes for 487 amino acid residues, with a higher degree of sequence similarity with common pig (99.59%) and horse counterparts (91.2%) than with monkey (89.5%) or human (88.7%). The deduced protein has 12 putative transmembrane domains. In this study, SLC7A9 mRNA was detected in brain, kidney, duodenum, jejunum, ileum, heart, liver, lung and muscle from Tibetan pigs at 7 and 21 days by PCR. We also investigated the age-dependent expression of b(0,+)AT in Tibetan suckling piglets in duodenum, anterior jejunum, posterior jejunum, ileum and kidney from day 1 to 35. The abundance of SLC7A9 mRNA in duodenum and jejunum was highest and lowest, respectively. Expression patterns were similar in duodenum and anterior jejunum, where the mRNA level was decreased before the suckling period and increased until day 35. Posterior jejunum expression was increasing steadily with age, except on day 7. The ileum has the highest expression at day 14 and became steady after day 28. The mRNA abundance in the kidney is opposite to duodenum, increasing until day 14 and reducing thereafter. Our results showed the pattern of b(0,+)AT expressed in small intestine of Tibetan pig and lay the foundation for in depth

investigations of the regulation of b(0,+)AT in vivo.

【题目】Molecular cloning, distributiob and ontogenetic expression of the oligopeptide transporter PepT1 Mrna in Tibetan suckling piglets
【中文关键词】无
【英文关键词】Amino acid transporter;PepT1;Tibetan pig;Expression
【中文摘要】无
【英文摘要】The gene encoding the oligopeptide transporter PepT1 (HGMW-approved gene symbol SLC15A1) from Tibetan porcine intestine was cloned. The open reading frame of this cDNA encodes 708 deduced amino acid residues that show high sequence similarity with its ovine and bovine counterparts. The putative protein has 12 putative transmembrane domains, including many structural features that are highly conserved among the vertebrate orthologs. PepT1 mRNA expression can be detected in duodenum, jejunum and ileum from Tibetan pigs at 28 days by RT-PCR. Real-time PCR analysis indicated that the jejunum had the highest expression of PepT1 when compared with the duodenum and ileum. PepT1 mRNA expression in the duodenum and proximal jejunum increases continuously from day 1 to day 14: expression was highest at day14 ($P < 0.01$) and then decreased gradually from day 21 to day 35. Our findings show that PepT1 mRNA expression in the distal jejunum increased gradually with age in suckling Tibetan piglet, and this may have important implications for amino acid and protein nutrition in young animals.

【题目】A method for obtaining DNA from compost
【中文关键词】无
【英文关键词】Compost;Cell lysis;DNA extraction;16S rRNA
【中文摘要】无
【英文摘要】An effective cell lysis method for extraction of bacterial genomic DNA from compost was developed in this study. Enzymatic disruption method, physical – chemical combination method, and commercial kit method were used to extract DNA from compost samples and were compared by analyzing DNA yield and efficient cell lysis. The results showed that all the three methods can be used to extract high-quality DNA from compost, but the enzymatic method had better cell lysis efficiency and DNA yields than others without the use of special equipment and expensive spending. Comparison of different methods for lysing gram-positive bacteria Bacillus subtilis indicated that the enzymatic cell lysis is superior for destroying the gram-positive cell wall. Spin-bind DNA column was used for DNA purification, and the purity of the purified sample was checked by polymerase chain reaction to amplify a region of the 16S rRNA. Results indicated that the part of 16S rRNA were amplified from all the purified DNA samples, and all the amplification products could be digested by the restriction enzyme HhaI

【题目】Comparison of different methods for determination of the duodenal and ileal flows of endogenous nitrogen and amino acids in growing goats
【中文关键词】无
【英文关键词】isotope dilution, methodology, comparison, endogenous protein, amino acids, goats
【中文摘要】无
【英文摘要】The objective of the present study was to compare the isotope dilution, the difference and the amino acid profile (AAP) methods for the quantification of duodenal and ileal flows of endogenous nitrogen (N) and amino acids (AA) in growing goats. Nine growing goats were fed the same diet containing maize stover, ground corn and soybean meal. The duodenal flow of endogenous N determined by the isotope dilution method was significantly ($p < 0.01$) higher than that determined by the difference and AAP methods, while there was no difference between the difference and the AAP methods. The duodenal flows of individual endogenous AA determined by the isotope dilution method exceed those determined by the difference and the AAP method by 10 to 106%. The endogenous flow at the ileum determined by the isotope dilution method was not significantly different to those determined by the water-soluble method, but tended to be lower for N and all amino acids. It is concluded that the difference method and AAP method underestimate the duodenal flow of endogenous N and AA compared to the isotope dilution method.

【题目】Dietary starch source influences in growing goats: the intestinal losses of endogenous nitrogen and amino acids
【中文关键词】无
【英文关键词】Starch urce: Endogenous nitrogen: Endogenous amino acids: Goats
【中文摘要】无
【英文摘要】Four goats (20 (SD 2.5) kg) fitted with ruminal, duodenal and ileal cannulae were used in a 4 x 4 Latin square design to estimate the effects of a dietary starch source on the duodenal and ileal flows of endogenous N (EN) and endogenous amino acids (EAA) in growing goats. Goats were fed total mixed rations containing four starch sources (mainly from maize (MR), wheat (WR), paddy (PR) and sorghum (SR) treatments). There were no significant ($P>0.05$) effects of the dietary starch source on the intestinal flows of EN and EAA. The duodenal flows of EN were 2.40, 2.39, 2.18 and 1.56 g/d for the MR, WR, PR and SR treatments, respectively, as determined by the difference method, and the duodenal flows of EAA were 10.76, 11.29, 10.95 and 10.96 g/d by estimation with the amino acid profile method. The flows of EN and EAA at the ileum were 1.17, 1.12, 1.01, 0.70 and 4.87, 4.95, 4.94, 4.99 g/d, respectively, as estimated by the water-soluble method. The average intestinal reabsorption of EN and EAA was 57.5 %, and the endogenous Leu by the MR treatment was significantly ($P < 0.05$) lower than that of the other three treatments. The present results indicate that losses of endogenous protein in the intestine were not affected by the dietary starch source.

【题目】产肠毒素大肠杆菌987P菌毛fasG亚单位的优化表达
【中文关键词】肠毒素大肠杆菌; 987P fasG; 克隆; 优化表达
【英文关键词】enterotoxigenic E.coli(ETEC);987P;fasG;cloning;optimizing expression
【中文摘要】选用两种对稀有密码子效应不同的表达宿主菌大肠杆菌(Escherichia coli)BL21(DE3)和Rossetta(DE3),和两种不同的表达载体pET28a(+)和pGEX-KG,构建出4种重组表达菌(pET-fas GBL21(DE3)、pET-fas GRossetta(DE3)、pKG-fasGBL21(DE3)和pKG-fas GRossetta(DE3))来考查稀有密码子对fasG基因表达的影响。对重组表达菌进行诱导表达的结果表明,不管是pET-fasG质粒还是pKG-fasG质粒,目的蛋白在Rossetta(DE3)中的表达量都要比在BL21(DE3)中的高。使用补充了额外的稀有密码子tRNA的表达菌Rossetta(DE3),提高了目的蛋白的表达量。
【英文摘要】Four bioengineered bacteria of fasG gene were constructed using Two Escherichia coli expression sn~ams(BL2 1(DE31 and Rossetta (DE3))with diferent tRNA profiles and two E.coli expression vectors(pET28a(+)and pGEX-KG)to examine the influence of the rare codons on the expression of fasG gene.The result of inducing expression of the bioengineered bacteria showed that the expression levels oftarget proteins in Rossetta(DE3)were higher than that in BL21(DE3),either using pET-fasG or pKG-fasG.And the expression levels of target proteins were enhanced using the expression strain Rossetta 09E3)which conmined the tRNA of rare codons.

【题目】β-1,3-葡聚糖对感染沙门菌鸡免疫功能和肠道菌群数量的影响
【中文关键词】肉鸡; β-1,3-葡聚糖; 鸡白痢沙门菌; 免疫机能; 肠道微生物;
【英文关键词】broilers; β-1,3-glucan;Salmonella pullorum;immune function;intestinal microflora
【中文摘要】为探讨β-1,3-葡聚糖对感染鸡白痢沙门菌鸡免疫机能和肠道微生物菌群的影响。选择120只1日龄AA肉公鸡,随机分成4个处理组,每个处理组30只鸡。处理组C1和C2饲喂基础日粮;处理组T1和T2饲喂基础日粮+0.01%β-1,3-葡聚糖。在10日龄,处理组C2和T2鸡口服感染0.5 mL鸡白痢沙门菌(浓度为1×109CFU/mL),试验到21日龄结束。结果表明,与对照组相比,日粮添加β-1,3-葡聚糖有促进肉鸡生长,阻止沙门菌感染引起的肉鸡死亡率升高的趋势;日粮添加β-1,3-葡聚糖对沙门菌感染鸡(T2组)可显著下降外周血T淋巴细胞增殖活性(P<0.05)和小肠sIgA分泌量(P<0.05),显著降低回肠和盲肠沙门菌和大肠杆菌数量(P<0.05)。
【英文摘要】One hundred and twenty 1 -day -age male commercial AA broilers were randomly distributed into four treatments with thirty broilers per treatment to evaluate the efficacy of dietary β-1,3-glucan against Salmonella pullorum (SP) in broilers. Each treatment was respectively reared in an environmentally controlled isolator. Treatments were:C1 (negative control,no SP challenge,basal diet),C2(positive control,SP challenge,basal diet),T1(no SP challenge+basal diet supplemented with 100 mg/kg β-1,3-glucan)and T2 (SP challenge+basal diet supplemented with 100 mg/kg β-1,3-glucan). The broilers in treatment 2 and 4 were challenged SP at 10-day-age. The results showed that dietary β-1,3-glucan could hold back the trend of body reducing and mortality increasement due to the challengement of SP. Significantly lower peripheral blood T lympocytes proliferation index and intestinal sIgA levels were detected in T2(P<0.05). In addition,T2 had lower Salmonella and E.coli levels in ileum and caecum compared to C2(P<0.05).

【题目】蛋氨酸对山羊十二指肠内源氮和氨基酸流量的影响
【中文关键词】蛋氨酸;内源氮;内源氨基酸;流量;同位素稀释法;山羊
【英文关键词】Methionine; Endogenous nitrogen; Endogenous amino acids; Flows; Isotope dilution method; Goats
【中文摘要】本试验研究了日粮添加蛋氨酸(Met)对山羊十二指肠内源氮(EN)和内源氨基酸(ENAA)流量的影响。采用3X3拉丁方试验设计,选用3头安装有永久性瘤胃、十二指肠近端瘘管和颈静脉插管、平均体重为(20±2.5)kg的健康湘东黑山羊为试验动物,饲喂3种Met水平分别为0.15%、0.25%和0.35%的试验Et粮,采用同位素方法测定Met水平对山羊EN和ENAA流量的影响。结果显示:当Met添加水平为0.15%时,十二指肠EN和ENAA流量均最低,但是无显著性差异(P〉0.05)。以上结果表明:日粮直接添加蛋氨酸对山羊十二指肠EN和ENAA流量没有显著影响作用(P〉0.05),同位素稀释法测定反刍动物EN流量较为稳定。
【英文摘要】The experiment was designed to study the effect of dietary methionine (Met) levels on duodenal flows of endogenous nitrogen (EN) and endogenous amino acids (ENAA) in growing goats fed normal protein-containing diets. Three goats with an average body weight of (20 ± 2.5) kg were fitted with ruminal, duodenal cannulae and jugular veins polyvinyl catheters, and allocated to three dietary treatments in a 3 × 3 Latin square design. The dietary treatments consisted of a total mixed diet containing three levels of Met which were 0.15%, 0.25% and 0.35%, respectively. EN and ENAA were determined using isotope dilution method. The results showed that the duodenal flows of EN and ENAA were the lowest when the dietary Met level was supplemented at 0.15%, and there were no significant differences on duodenal flows of EN and ENAA (P〈0.05). In conclusion, the duodenal flows of EN and ENAA were not significantly affected by the dietary direct supplementation of Met (P〈0.05), and the isotope dilution method was relatively stable in determination of EN flow.[

【题目】海南槟榔黄化病病原物的分子鉴定
【中文关键词】槟榔黄化病 植原体 16S rDNA 分子鉴定
【英文关键词】arecanut yellow leaf disease phytoplasma 16S rDNA Molecular identification
【中文摘要】槟榔黄化病是槟榔上的一种重要病害,本研究利用植原体16S rDNA通用引物对海南感染黄化病的槟榔花苞总DNA进行巢式PCR扩增,获得约1.2 kb的特异片段,并对扩增产物进行核苷酸序列测定。通过BLAST程序比较、系统进化树构建及iPhyClassifier分析表明,引起海南槟榔黄化病病原植原体属于翠菊黄化植原体组(16Sr Ⅰ组),且为该组中的一个新的亚组,即G亚组,现将其暂命名槟榔黄化植原体(Arecanut yellow leaf phytoplasma,AYL)。
【英文摘要】Arecanut yellow leaf disease was an important disease. A PCR product (about 1.2 kb) was amplified by using nested-PCR assay employing phytoplasma universal 16S rRNA gene primers and total DNA sample extracted from diseased arecanut inflorescence as the amplified template.Then the amplified fragments were cloned and sequenced, The results of sequences comparison of Blast program in GenBank, construction of phylogenetic tree and analysis of iPhyClassifier indicated that the phytoplasma caused arecanut yellow leaf disease in Hainan belonged to Aster yellows group (16Sr Ⅰ group) and was a new subgroup, G. subgroup. The phytoplasma was temporarily named Arecanut yellow leaf (AYL).Key words arecanut yellow leaf disease phytoplasma 16S rDNA Molecular identification

【题目】3种熏蒸剂对椰心叶甲的熏蒸效果及寄主切叶的影响
【中文关键词】熏蒸; 椰心叶甲; 效果; 散尾葵
【英文关键词】fumigation; Brontispa longissima; effect; Chrysalidocarpus lutesceus.
【中文摘要】分别利用磷化钙、 3%高效氯氰菊酯烟雾剂 (烟魁)和溴甲烷 3 种熏蒸剂熏蒸处理椰心叶甲[Brontispalongissima(Gestro)]各虫态及散尾葵切叶, 观察椰心叶甲各虫态的死亡情况和对散尾葵叶片的影响。 结果表明: 烟

魁使用时灼伤散尾葵切叶, 不适合处理散尾葵切叶。 其他 2 种熏蒸剂对切叶没有明显影响, 影响熏蒸剂对椰心叶甲各虫态致死的主要因素是熏蒸剂的浓度和熏蒸时间。 磷化钙处理而言, 其分解为磷化氢气体需要时间, 需要熏蒸 24 h, 使用 0.3 mg/m3,即可达到完全杀死椰心叶甲的目的; 而对于溴甲烷处理而言, 用量相对较大, 但熏蒸时间较短, 20 g/m3的浓度 2 h 才可以满足生产上对椰心叶甲除害的需要。 研究结果对处理棕榈植物鲜切叶或苗木有重要的借鉴意义。

【英文摘要】Three fumigants, embafume, calcium phosphide and 3% Beta cypermethrin aerosol “ Yankui ”,were used to fumigate cut leaves of Chrysalidocarpus lutesceus and the coconut leaf beetle Brontispa longissima of various stages at different doses for different durations of time. The 3% Beta cypermethrin aerosol injured all the cut leaves of C. lutesceus as well as B. longissima , and is hence not suitable for the control of the beetle, and the other 2 fumigants, embafume and calcium phosphide, killed the beetle and had no effect on the cut leaves. The mortality rate of B. longissima depended on the application rate of the fumigants and the fumigation duration. It takes quiet a long time for calcium phosphide to decompose into H3P, and B. longissima of various stages was killed only when fumigated with the calciumphosphide at a rate of 0.3 mg/m3 for 24 h, whereas the same result was achieved when embafume was applied at a higher rate (20 mg/m3) for a shorter time (2 h). These results might be of good use fortreatment of cut leaves of palm plants and production of nursery palm plants

【题目】不同椰子品种对椰心叶甲生长发育和繁殖力的影响

【中文关键词】椰心叶甲;椰子品种;生长发育;繁殖力;生命表

【英文关键词】Brontispa longissima (Gestro) ; coconut cultivar, growth and development, fecundity, life table.

【中文摘要】研究椰心叶甲在海南高种椰子(Hainan Tall)、黄矮椰子(Yellow Dwarf)、红矮椰子(Red Dwarf) 78F1y椰子(78F1)、香水椰子(Aromatica Green Dwarf)和马哇椰子(Mawa)6个椰子品种未展开心叶上的发育、存活和繁殖情况。结果表明,在取食不同椰子品种的情况下,椰心叶甲完成1个世代所需的时间差异显著,其中取食红矮椰子所需的时间最长,为(79.06±3.65)d,取食海南高种椰子所需的时间最短,(72.06±1.14)d,取食海南高种椰子的椰心叶甲平均产卵量最高,为(250.75±3.57)粒,而取食马哇椰子的最少,为(144.42±1.14)粒,取食78F1椰子的椰心叶甲成虫寿命最长,为(235.84±2.62)d,取食香水椰子的最短,为(142.15±8.25 d),椰心叶甲在6个椰子品种上的实验种群趋势指数从高到低为78F1椰子96.07、海南高种椰子82.34、黄矮椰子73.93、马哇椰子60.16、红矮椰子60.07和香水椰子55.26。

【英文摘要】The development, survivorship and reproduction of Brontispa longissima (Gestro) on six coconutcultivars were studied in laboratory. The results showed that the development duration of one generation B.longissima fed on different coconut varied significantly, with the longest (79.06 days) on Red Dwarf andthe shortest (72.06d ays) on Hainan Tall. The female B. longissima had the highest fecundity (250.75ova) on Hainan Tall while the lowest one (144.42 ova) on Mawa. The longevity of B. longissima adults fed on 78F1 was 235.84days, being significantly longer than that on the other coconut cultivars. The trendindex of experimental population of B. longissima fed on the six coconut cultivars was 96.07, 82.34, 73.93,60.07, 60.16 and 55.26 respectively.

【题目】寒流对椰心叶甲及其寄生蜂的影响

【中文关键词】寒流; 椰心叶甲; 寄生蜂

【英文关键词】Cold snap; Brontispa longissima; parasitoid
【中文摘要】经实地调查和室内解剖观察, 分析研究了2008年1月下旬至2月上旬寒流对海南、 广东椰心叶甲及其寄生蜂的影响。 研究结果表明: 椰心叶甲成虫在海南冻死率为0, 在广东冻死率为68.25% ~ 98.00%; 在海南随纬度升高椰心叶甲啮小蜂寄生率从39.88%下降为12.16%, 椰甲截脉姬小蜂随纬度升高寄生率从4.61%提高到18.42%; 在广东仅徐闻、 雷州有两种寄生蜂分布, 其中椰甲截脉姬小蜂的寄生率为2.50%和50%, 椰心叶甲啮小蜂的寄生率为34.37%和50%; 椰心叶甲啮小蜂和椰甲截脉姬小蜂在寄主体内的存活率随纬度升高而下降, 分别从89.50%下降到76.11%和46.90%下降到11.23%。
【英文摘要】The effect of cold snap on Brontispa longissima and its parasitoids in Hainan and Guangdong was researched by field survey and indoor dissection in January and February of 2008.The research showed that the rate of winterkilling of B. longissima adults in Hainan was 0 and in Guangdong it ’ s 68.25% ~ 98.00%.The parasitic rate of Tetrastichus brontispae in Hainan decreased from 39.88% to 12.16% with the ascending of latitude and Asecodes hispinarum ’ s parasitic rate increased from 4.61% to 18.42% with the ascending of latitude.In Guangdong two kinds of parasites distributed only in Xuwen and Leizhou city. The parasitic rate of A. hispinarum was 2.50% and 50% separately and B. longissima ’ s parasitic rate was 34.37% and 50% separately in Xuwen and Leizhou.The livability of T. brontispae and A. hispinarum inside the host ’ s body descended with the ascending of latitude. T. brontispae ’ s livability decreased from 89.50 to 76.11% and Asecodes hispinarum ’ s decreased from 46.90% to 11.23%.

【题目】温度对椰心叶甲啮小蜂控制寄主能力的影响
【中文关键词】椰心叶甲啮小蜂;温度;贮藏时间; 寄生力
【英文关键词】T. brontispae ; Te mperature ; Storage time ; Parasitic ability
【中文摘要】在室内研究不同温度下对不同日龄的椰心叶甲啮小蜂处理不同时间对其寄生力的影响。结果表明,温度对椰心叶甲啮小蜂的雌雄性比并无明显影响。24-28 ℃ 时,椰心叶甲啮小蜂对椰心叶甲蛹的寄生力影响不明显随着温度的降低,啮小蜂的寄生率、 寄生蛹出蜂量明显下降。在一定温度范围内,较高的温度对椰心叶甲啮小蜂的寄生力有利。椰心叶甲啮小蜂在羽化交配后的 1~ 4 d内寄生力没有明显变化, 但随着日龄的增加, 椰心叶甲啮小蜂的寄生力逐渐下降。椰心叶甲啮小蜂成蜂在不同温度下贮藏 1~ 3 d时对其品质影响不大,贮藏 4 d后其寄生力急剧下降.
【英文摘要】The influences of temperature on the parasitic ability of Tetrastichus brontispae Ferrire with vari us ages were studiedin the laboratory . The results showed that temperature had no significant infuence on the sex ratio of T. brontispae . The parasitic ability of T. brontispae to the pupae of coconut leaf beetle Brontispa longissima (Gestro) was no t markedly effected by the tempe rature of24~ 28 ℃ , while when the temperature decreased further , the parasitic rate of T. brontispae and the quantity o f T. brontispae comingfrom the pupae were significantly decreased . Slightly high temperature was favorable for the parasitic ability of T. brontispae . Wihi n 1~ 4 days after emergence and m ati ng of T. brontispae , there w ere no si gnificant changes in its parasitic abilit y . However , along with the increase of age , the parasitic ability o fT. brontispae dropped gradually . The sto rage o f T. brontispae at different temperatures for 1~ 3 days had little effect on its quality , but its parasitic ability would decline sharply after 4 days storage.

【题目】影响椰心叶甲啮小蜂寄主接受行为因子的探讨
【中文关键词】椰心叶甲啮小蜂; 视觉; 嗅觉; 寄主接受
【英文关键词】Tetrastichus brontispae Ferri è re; vision; olfaction; host-acceptance
【中文摘要】对椰心叶甲啮小蜂的复眼和触角分别用水溶性黑色素和液体石蜡处理以探讨其视觉、 嗅觉在其寄主接受行为过程中的作用; 分别用椰子心叶、 A4 白纸、 黑色薄膜 3 种不同方式包裹椰心叶甲蛹以探讨小蜂视觉在其寄主接受行为过程中的作用; 把椰心叶甲蛹在-81 ℃超低温冰箱下冰冻 10 min 后以探讨寄主蛹动对椰心叶甲啮小蜂寄生行为的影响。 结果表明, 椰心叶甲啮小蜂寻找寄主时嗅觉起主要作用, 视觉仅起辅助作用, 而寄主蛹动对该蜂接受寄主行为的影响不大。
【英文摘要】Compound eyes and antennae of parasitoid Tetrastichus brontispae Ferri è re were smeared withwater-soluble melanin pigment and liquid paraffin respectively to investigate the role of vision and olfactionof the parasitoid in its host acceptance behavior. Spear leaf, A4 virgin paper and black belt were used to wrap up the pupae of Brontispa longissima Gestro respectively for the purpose of investigating the effect of the parasitoid vision on its host acceptance behavior. Pupae of Brontispa longissima Gestro were cryopreserved at -81 ℃ for 10 minutes to explore the role of motion of host pupae in host acceptance behavior of the parasitoid. The results showed that the olfaction of the parasitoid played a main role whenthe parasitoid searched its host, and that the vision of the parasitoid just played an auxiliary role, whereasthe motion of pupae had little influence on acceptance of the parasitoid.

【题目】椰心叶甲啮小蜂复眼和触角在交配中的作用及其超微结构的扫描电镜观察
【中文关键词】椰心叶甲啮小蜂;交配行为;复眼;触角;超微结构;扫描电镜
【英文关键词】Tetrastichus bron tispae; copulation behavior; compound eye; antenna; ultrastructure; scanning electron m icroscope (SEM)
【中文摘要】对寄生蜂交配行为的了解将有助于发展对其行为调控的技术,提高寄生蜂对害虫控制的效能。为探讨椰心叶甲啮小蜂Tetrastichus bron tispae Ferri è re的复眼和触角在交配中的作用,用水溶性黑色素和液体石蜡分别涂抹该蜂复眼和触角后观察其交配行为,并利用扫描电镜 (SEM)观察其复眼和触角的超微结构分析雌、雄蜂触角感器的分布与数量差异。

结果表明:椰心叶甲啮小蜂雄蜂的复眼在交配过程中起重要作用,雌蜂复眼作用不显著。在椰心叶甲啮小蜂求偶识别和接受过程中,雄蜂触角柄节部位起主要作用,其次是棒节部位,再次是鞭节的索亚节部位,而雌蜂触角鞭节索亚节部位起主要作用,然后是棒节部位,最后是柄节部位。扫描电镜观察表明椰心叶甲啮小蜂触角上共有8种感器,其中毛形感器和板形感器是主要感器,触角有明显的性二型现象,表现为触角大小不同及触角感器类型、大小、数量、分布不同。

【英文摘要】Understanding copulation behavior of chalcids can help the development of techniques formanipulating chalcid behavior, and thereby increase the efficacy of chalcids as biological control agents in insect pest management 1The effect of compound eyes and antennae on copulation behavior of Tetrastichus brontispae Ferri è re was studied by smearing its compound eyes and antennae w ith water 2soluble melanin p igment and liquid paraffin, respectively 1The ultrastructure of compound eye and sensilla on antenna of T1bronispae was observed with scanning electron m icroscope (SEM) , and the differences of distribution and quantity of sensilla on antenna of two sexes were analyzed 1The results showed that there was asignificantdifference in the role of the compound eye of the chalcid in copulation behavior between two sexes 1 The importance of every segm ent to copulation of male chalcid decreased in the order of antennal scape,antennal club, and antennal flagellum , but for the female the order was antennal flagellum , antennal club,and antennal scape1Eight distinct types of the sensilla were found on antenna w ith scanning electronm icroscope1A s the m ajo r sensilla, both sensillum trichodeum and sensillum p lacodeum were distributed widely on the antenna 1Moreover, there was an obvious sexual dimorphism of antenna of the chalcid as shown by different size of the antenna and different shape, size, num ber and distribution of the sensilla 1Key words: Tetrastichus bron tispae; copulation behavior; compound eye; antenna; ultrastructure; scanningelectron m icroscope (SEM)

【中文关键词】椰心叶甲啮小蜂; 扫描电镜; 复眼; 形态; 感觉毛

【英文关键词】Tetrastichus brontispae ; SEM; compound eyes ; morphology ; sense hair

【中文摘要】椰心叶甲啮小蜂 Tetrastichus brontispae 是椰心叶甲Brontispa longissima 的寄生性天敌。研究该小蜂的行为发现 ,雄蜂复眼在交配过程中起重要作用 ,为此利用扫描电镜对其复眼进行观察。结果表明: 雌蜂复眼长椭圆形 ,外凸 ,小眼约 267 个; 雄蜂复眼近椭圆形 ,略外凸 ,小眼约285个。雌、 雄蜂复眼中心区域小眼排列较紧密 ,多为较规则的六边形 ,边缘区域小眼排列不紧密 ,多为不规则四至六边形 ,且少量相邻小眼的间距较大。雌、 雄蜂复眼小眼面积分别为124193、 119190 μm2。雌、 雄蜂复眼中心区域近背区小眼间着生少量感觉毛。

【英文摘要】Tetrastichus brontispae Ferri è re is an important parasitoid of the coconut leaf beetle , Brontispa longissima (G estro) at pupal stage. I t was found that the compound eyes of male chalcid of T. brontispae played an important role in copulation behavior. The compound eyes of T. brontispae were observed by scanning electron microscopy in this study. Results showed that the compound eyes of femalechalcid were long oval and outward convex , composed of about 267 ommatidia. The compound eyes of male chalcid were oval and slightly outward convex , composed of approximate 285 ommatidia. The ommatidia in the central region were in regular hexag on and lined closely , while those in the rim were in irregular quadrangle , pentag on or hexag on and not close , the space between the individual ommitidium was very big. The areas of ommatidium of female and male chalcid were 124193 μm2and 119190 μm2, respectively. There were s ome sense hairs between the ommatidia near dorsal area in the central region ofcompound eye of male and female

【题目】一种Post-WIMP界面:PGIS的实现
【中文关键词】Post-WIMP;PGlS;笔式用户界面
【英文关键词】Post-WIMP; PGIS; pen-based user interface
【中文摘要】笔式用户界面作为Post—WIMP界面的一种重要形式,成为当前研究的热点之一。基于笔交互的应用程序通常有如下需求:自然统一的风格、个性化界面定制的支持,以及各种终端设备上的移植。为了支持笔交互应用程序快速稳定的开发,提出了一种新的笔交互范式PGIS,以及基于PGIS的应用程序开发平台。PGIS交互范式包含了纸、小工具等交互组件,定义了各种组件的显示及交互形式。PGIS平台采用模型驱动构架的设计方法,主要包括3个部分:界面的设计工具,PGIS交互引擎,PGIS底层核心库。目前,已经在PGIS平台上开发了几款优秀的笔式交互软件,完全满足上述笔式交互应用程序的需求。PGIS的可行性也因此得到了很好的验证。
【英文摘要】The pen-based user interface now plays an important role as a main type of Post-WIMP.It renders efficient and natural interaction between human and computer,and it is well suited to people ’s daily working habits.Applications incorporating a pen-based user interface should meet the following requirements:a uniform and natural display style;a customizable user interface;and high portability.To meet these requirements,this article describes a new paradigm:PGIS and a software development platform to implement the PGIS.The PGIS paradigm,which describes some interactive objects,such as Paper,Gadget and so,is based on the pen-paper metaphor which is analogous to the real working environment.Adopting the model driven architecture design method,the PGIS software platform has a portable core,uniform management and description of the interactive objects,and a customizable user interface design tool.Currently,under the PGIS software platform,several applications using pen-based interaction have been developed quickly and successfully.The feasibility of PGIS and the software platform therefore is well verified.

【题目】笔式界面软件快速开发工具
【中文关键词】笔式用户界面;基于场景的设计;形式化文档;UI编辑;代码生成
【英文关键词】pen-based user interface,scenario-based design,formal documentation,UI editor,code generating

【中文摘要】笔式界面软件快速开发工具Visual PBAP(pen—based application)Creator可以根据用户的个性化需求快速设计和开发相应软件,缩短开发周期。一方面,Visual PBAP Creator通过场景和UI编辑方便开发人员和用户确定需求;另一方面,自动生成代码可以缩短开发周期。Visual PBAP Creator以笔式操作平台为软件平台,采用基于场景设计的开发方法,设计结果形成XML格式的文档,通过解析这些XML文档最终生成C代码。实践表明,Visual PBAP Creator可以提高笔式界面软件的开发效率。

【英文摘要】Visual PBAP(Pen—based Application)Creator is a rapid development tool,which can be used to design and develop Pen-based Application according to end user ’ s specific requirement and can shorten the development cycle.On one hand,Visual PBAP Creator introduces scenario—based method and UI editor to facilitate the definition of requirement.On the other hand,it can automatically generate code to accelerate the development speed.Visual PBAP Creator is based on PBOP(Pen-based Operating Platform)and scenario-based method.The design results are saved as XML specification,and these XML files will be parsed to generator C code,which can be compiled and run on PBOP.The results of practices have shown that Visual PBAP Creator can improve the efficiency of development of Pen-based Application.

【题目】一种基于模型驱动的笔式界面开发框架研究

【中文关键词】模型驱动;笔式界面;软件开发方法;人机交互

【英文关键词】model driven;pen-based user interface;software development model;human-computer; interaction

【中文摘要】本文针对笔式用户界面开发的需求个性化、平台多样化和开发难度大的问题,提出了一种基于模型驱动的笔式界面开发框架.首先,提出了一种笔式用户界面开发架构,对笔式用户界面的特点进行抽象与描述;然后基于模型驱动开发方法提出了笔式界面的平台无关模型PIPIM以及笔式界面的平台相关模型PIPSM,并建立了PIPIM与PIPSM之间的转换方法;最后,给出了一个基于模型驱动的笔式界面开发工具Iris,并使用Iris开发了一个笔式个人信息管理系统.应用实例表明:该基于模型驱动的笔式界面开发框架能够有效支持笔式界面开发、降低开发复杂性。

【英文摘要】In order to make the pen-based user interface easy to develop with personalized requirements and diverse devices, we propose a model driven development framework. For a pen-based user interface, firstly we present a general development framework, then build a platform independent model and a platform specific model based on the model driven architecture.Furthermore, we introduce the transformation way from the former model to the latter one.At last, a toolkit named “ Iris ” is provided to support the development.The example application built by “ Iris ” shows that the model driven development framework can benefit the development of a pen-based interface and reduce the complexity of the development efficiently.

【题目】60Co γ辐射对秀珍菇子实体蛋白质营养水平的影响
【中文关键词】Co γ辐射;秀珍菇;营养价值;蛋白质营养
【英文关键词】Co γ radiation;Pleurotus geesteranus;nutritional value;protein nutrition
【中文摘要】采用国际上通用的非牛物评价方法,研究了不同剂量60Co γ辐射对秀珍菇子实体蛋白质营养价值的影响,以期为秀珍菇辐射育种研究提供科学依据。结果表明:在相同培养料以辐射剂量为1.00处理的栽培的秀珍菇子实体蛋白质营养价值评价的六项指标中氨基酸评分、化学评分、必需氨基酸指数、氨基酸比值系数分和生物价分别为74.3、58.5、78.3、66.9和73.6,均居5种剂量处理之首,营养指数为25.8,均居第2位。综合评价的结果显示,以辐射剂量为1.00 kGy处理的相同培养料栽培秀珍菇子实体其蛋白质营养价值最高。
【英文摘要】By using current international method of non-biological evaluation。 the effects of 60Co γ radiation with different doses on the nutritional value of protein in the fruit bodies of Pleurotus geesteranus were studied in order to provide a scientific basis for its breeding research.The results showed that,under the condition of same culture medium,the nil—tritional value of protein in the fruit bodies of Pleurotus geesteranus in the treatment with 1.00 kGy dose were at the top position among the treatments with five radiation doses.For the six indexes for evaluating the nutritional value of protein,the amino acid score(AAS)chemical SCOre(cs),essential amino acid index(EAAI),SCOre of ratio coefficient of aminoacid(SBCAA)and biological valence(BV)in t11e protein of Pleurotus geesteranus ’ s fruit bodies were 74.3、58.5、78.3、66.9 and 73.6 respectively.The nutritional index(NI)was 25.8,at second position.The comprehensive evaluation revealed that,under the same culture medium,the nutritional valRe of protein in the fruit bodies of Pleurotus geesteranus in treatment with 1.00 kGy dose Wag the highest.

【题目】60Co γ射线辐射大杯香菇诱变效应的主成分分析
【中文关键词】食用菌;育种;农艺性状;超氧化物歧化酶;丙二醛
【英文关键词】edible fuji;crossbreeding;agronomic traits;suproxide dismutase;malonaldehyole
【中文摘要】采用主成分分析法对60Co γ射线辐射大杯香菇的诱变效应进行了研究。从10项性状指标中提取出5个诱变效应主成分,累积方差贡献率为91.85%。根据主成分对原性状的综合能力,进行生物学意义分析,5个主成分可分别解释为农艺性状与酶学效应因子,增重效应因子,盖增大效应因子,粗壮效应因子和盖厚度效应因子,并建立了主成分方程,结合辐射育种实际情况,认为第1主成分较全面反应了辐射育种目标,为期望诱变效应,是大杯香菇诱变育种的主要参考性状组合。各处理组的第l、2、3、4、5主成分值计算结果表明,1.25 kGy处理组的第l主成分最大为3.18,远高于其它处理组,为较适宜的辐射剂量。
【英文摘要】The main—component analyzing method was adopted to investigate the radio—mutation effciency of Lentinus gigantes by 60Co γ ray.5 main components with radio-mutation efficiency.which contributed the accumulative varlance by 91.85%has been picked out from 10 character indexes.According to the comprehensive function of each main component in original characters of Lentinus giganteus,their biological significance has been analyzed.The 5 main components could he explained respectively as the factor of agronomic character and enzymologie effect,the factor of weight increase,the factor of pileus—eraarging effect, the factor of thickset effect and factor of pileus-thickening effect.And the equation of main components was established.Combining the real situation in radiation breeding,it is considered that, the 1st main component(the factor of agronomic character and enzymologic effect)reflected in all around the radiation breeding target,it is a desired induction effect and the main reference character for the radiation breeding of Lentinus giganteus.The calculation of山e values of main components from 1st to 5th factors in different treatments showed that.the value of 1st main component in the treatment of 1.25 KGy dosage wag the biggest which is 3.1 8,and much bigger than other treatments.It is a relatively suitable radiation dosage.

【题目】食用菌菌渣循环利用对农田生态环境的影响与评价指标
【中文关键词】用菌渣;农田生态环境;循环利用;影响:评价指标
【英文关键词】edible fungus dregs;farmland ecology environment;recycling use;effect;aaseasnmnt index
【中文摘要】我国是食用菌第一生产大国,拥有大量的食用菌废弃物资源,但当前食用菌菌渣利用率较低,造成乡村污染的现象依然存在。因此。有必要开展菌渣等废弃物循环利用技术与合理开发模式研发,尤其要建立并完善农田秸秆菌业循环

生产体系,通过菌渣还田、有机与无机肥的科学施肥等技术提高农田生态系统生产力,是实现资源高效循环利用的有效途径之一。该文主要论述食用菌渣循环利用技术方式以及对农田生态环境影响的主要评价指标。以深入探讨菌渣回田对农田生态环境影响及实施成效。

【英文摘要】China is the largest producer of edible fungi and has alarge number of waste resouPce$.but low utilization ratio of edible fungus dregs which polluted villages.So it is necessary to early out the researches on recycling technology and reasonable development modes of edible fungi residue and establish and improve the farmland straw—edible fungi recycle production system to improve the productivity of farmland ecological system by returning residue to farmland and scientific application of organic—inorganic fertilizer, which is the effective way to realize officient resources utihzation. This paper mainly discussed the cyclic utilization technology of edible fungus dregs and the main assessment indices of farmland ecological environment in order to explore the effects and achievements of returning residue to farmland eco-environment.

【题目】“奶牛-沼气-牧草”循环型农业系统的能值分析

【中文关键词】循环型农业;能值分析;可持续发展

【英文关键词】circular agriculture;emergy analysis;sustainable development

【中文摘要】为探讨“奶牛一沼气一牧草”循环型农业模式(模式I)的结构功能和生态经济效益,应用能值分析方法对其进行研究,并与单一奶牛养殖模式(模式Ⅱ)进行比较。结果表明:模式I的净能值产出率(4.06)比模式Ⅱ(4.13)低;模式I能值可持续发展指标值为1O.27,模式Ⅱ为9.57,模式I具有更高的可持续发展能力;模式I的环境负载率(0.11)低于模式Ⅱ(0.12),并且模式Ⅱ能值废弃率为21.72%,模式I为0,因此模式I对环境的压力小;模式I产出能值反馈率达到30.63%,系统自组织能力强。模式I的净效益是模式Ⅱ的1.13倍,但产投比是模式Ⅱ的97.64%。以能值~货币价值计算的生态经济效益分析结果与实际经济效益分析结果基本一致。因此,模式I具有环境压力小、自组织能力强、可持续发展能力较强的特征,但仍需进一步优化系统内部结构,提高生产效率。

【英文摘要】To study and compare the circular agriculture system of “dairy cattle—biogas—forage” (Mode I)with the conventional dairy farm system (Mode Ⅱ)in ecological and economic benefit,emergy analysis method is used.Results show that the net energy yield ratio in Mode 1 was 4.06,lower than that(4.1 3)in Mode lI.The emergy sustainable development index was 10.27 in Mode I and 9.57 in Mode 1I,suggesting Mode I is more capable of sustaining development than Mode lI.The environmental loading ratio of Mode 1 was 0.1 1,lower than that(0.12)of Mode Ⅱ,and the emergy waste ratio was 21.72% in Mode lI but 0 in Mode I,suggesting that Mode I creates less pressure on the environment than Mode Ⅱ does.The feedback ratio of yielded emergy was 30.63% in Mode I but 0 in Mode II.suggesting that Mode I is higher in self-organizing ability.The net income of Mode 1 was 1.1 3 times that of Mode II,but the output—input ratio of Mode 1 was 97.64% of Mode II.Analysis of the eeo.economic benefit of Mode I based on the emergy—monetary value showed it was close to the actual economic benefit.Therefore,Mode I can be characterized by less environmental pressure,higher self-organizing ability and high sustainable development capability,but it still needs to further optimize its system internal structure and improve its productivity.

【题目】3种不同性质改良剂对镉锌污染水稻土的修复效果及评价
【中文关键词】改良剂;小油菜;水稻土;吸收系数
【英文关键词】Amendment;Rape(Brassica campestris L.);Paddy(Oryza sativa)soil;Uptake coefficien
【中文摘要】采用盆栽试验,研究施用石灰、有机肥、海泡石3种不同改良剂对水稻土培养的小油菜生物量、镉锌吸收量、吸收系数的影响。结果表明:施用改良剂,小油菜(Brassica campestris Linn)连种3季的生物产量都显著提高,对镉锌的吸收量降低,其中以石灰和有机肥配施的效果最好,增产170%以上:单施改良剂降低小油菜对镉锌的吸收以石灰的效果较好,海泡石的最差。小油菜对镉的吸收系数大于锌的吸收系数.说明镉在土壤中的移动性比锌大,施用石灰降低吸收系数的效果最好;施有石灰的使小油菜中镉、锌含量达到食品卫生标准:改良剂对镉的后效好于对锌的后效。
【英文摘要】The effects of different amendments (lime, manure and sepiolite) on rape (Brassica cmnpestris L.) biomass, the uptake of cadmium and zinc by rape, and uptake coefficient were studied using pot experiments. Results showed that the yield of rape increased after amendments application. The treatment of lime and manure showed the highest increasing yield by more than 170% compared with no amendments application. The amount of absorbed Cd and Zn in rape decreased after the three amendments application. Lime application showed the best effect to decrease the heavy mental content in rape mots when amendments were separated applied. However, sepiolite could hardly decrease the content in rape after separated applied in contaminated soil. The uptake coefficient of Cd was bigger than that of Zn. It meant that Cd was easily to move from soil to plants. The uptake coefficient was decreased after adding lime especially. The amount of Cd and Zn in the rape met the the food standard requirement after adding lime. The effect of amendments to Cd was better than that to Zn.

【中文关键词】蔬菜硝酸盐; 安全氮肥用量; 非线性规划; 带约束条件优化法; 菠菜
【英文关键词】vegetable nitrate; safety N applicationrate; nonlinear planning; optimization method with constraints;spinach
【中文摘要】采用田间试验在灰垛田和灰沙泥田两种土壤类型上研究了不同氮素水平对菠菜生长的影响, 分析了土壤硝态氮的变化及氮肥用量与菜体硝酸盐含量、菠菜产量的关系, 采用非线性的带约束条件优化法进行搜索求解, 确定菠菜体内硝酸盐含量在符合安全生产标准条件下, 菠菜最高产量的适宜氮肥用量。结果表明: 两种土壤类型硝态氮含量均随氮肥用量的增加而提高, 且随着时间推移, 硝态氮含量下降, 尤其是在灰沙泥田上。菠菜硝酸盐含量和产量也均随氮肥用量的增加而增加, 前者呈直线关系(y灰垛田= 3.6813+ 5.6869x 和y灰沙泥田= 11.6640+ 7.7001x),而后者呈二次曲线关系(y灰垛田= 10.0710+ 0. 122x- 0.0002x2 和y灰沙泥田= 11.8480 + 0.1664x- 0. 0003x2) 。用非线性规划的带约束条件优化法, 以氮肥用量与菠菜硝酸盐含量关系模型为约束条件, 氮肥用量与菠菜产量关系模型为目标函数搜索求解, 得出灰垛田和灰沙泥田种植菠菜的菜体硝酸盐含量在符合无公害蔬菜生产安全的条件下,菠菜产量最高时的氮肥用量分别为210 30和154 35 kg / hm2, 且灰沙泥田的投入产出比优于灰垛田。
【英文摘要】The fie ld experiments were carried out to determ ine the effects of N applicat ion rates on spinach under two soil types, the grey sandy mud soil and coastal saline soil and to analyze the dynam ics changes of soil NO3-N and the relationship between the N rates, vegetable nitrate content and yield of spinach. The nonlinear planning optimization method with constraints was used to determine the appropriate amount of N with the highest yield of spinach under the condition which the NO3-N content of spinach should meet the safe production standard. The results show that the soil NO3-N contents are increased with the increase of N application rates, and the contents are decreased with time during the growing period of spinach, especially in the grey sandymud soil. There are linear correlations between the contents of vegetable nitrate and the N application rates, while there are quadratic correlations between the yields of spinach and the N rates. Using the relationship of the N rates and vegetable nitrate as constraint condition, and the N rates and yields of spinach as objective function, the results of the nonlinear optimization method with constraints indicate that the nitrogen fertilizer application rates for the maximum vegetable yields along with vegetable nitrate fitted pollution-free vegetable production are 154.35 and 210.30 kg /ha in coastal saline soil and grey sandy mud soil respectively.

【题目】不同pH值条件下金福菇菌丝体形态的电镜观察
【中文关键词】pH值;金福菇;茵丝体;电镜观察
【英文关键词】pH ;Trichlolma lobayense Heim;mycelium;scanning electron—microscopy
【中文摘要】应用扫描电子显微镜观察不同pH值相同培养基对金福菇茵丝体大小、锁状个数和表面结构的影响。结果表明:pH值为8处理的金福菇茵丝宽比pH值为6、7处理的金福菇茵丝宽了17.24% 和22.30% ,差异达极显著水平(P<0.01)。而金福菇茵丝锁状个数也比pH值为6和7处理的金福菇锁状个数多了75.19% 和133.00% ,差异达显著和极显著水平(P<0.05和P<0.01)。电镜观察显示,不同pH值条件下金福菇菌丝体形态发生明显改变,甚至形态严重改变;有的茵丝体扁和纹饰模糊

,表面粘着单核体或堆积花菜状。有的锁状大小均匀,有的干瘪或无纹饰。
【英文摘要】The size,lock—shaped number and surface structure of the Trichlolma Zobayense Heim mycelium under different PH were observed by the scanning electron microscopy.The results showed that the width of mycelium under pH 8 was 17.24% and 22. 30% wider than that under pH 6 and pH 7,respectively,with significant difference(P <0.0 1).The number of the lock.shaped under pH 8 was 75.19% and 133.00% more than that under pH 6 and pH 7,respectively,with difference or significant diference(P <0.05 and P <0.01).The mycelia of lobayense showed significant changes under different pH.Some myeelia became flat with flatten surface sticking monocyte together or cauliflower—like accumulation.The lock—shaped heim was uniform in size,dry or flatten.

【题目】不同栽培基质对大球盖菇产量和品质的影响
【中文关键词】大球盖菇;生物转化;营养成分
【英文关键词】Stropharia rugosoannulata; Biotransformation; Nutritional composition
【中文摘要】通过稻草和谷壳等不同培养料栽培大球盖菇试验,结果显示,利用培养料(稻草50%+谷壳50%) 栽培的大球盖菇,生物学效率极显著高于纯稻草或者纯谷壳的栽培料,同时菌丝生长快、出菇早。说明在稻草中加了谷壳的培养料比纯稻草疏松,这样既有利于提供大球盖菇生长所需的氧气,又保持了稻草的营养供给。这样使废弃物(稻草和谷壳) 得以资源化利用,实现经济与生态的可持续发展,同时也为食用菌生产开辟了新的原料来源,缓解食用菌生产发展存在的“ 菌林 ”矛盾。
【英文摘要】Stropharia rugosoannulata was cultured on different rice straw and rice hull substrates. Results indicated that the biological efficiency of mixing group (50% rice straw + 50% rice hull) was significant higher than pure rice straw group and rice hull group, as well as faster growing rate of mycelium and earlier sowing. This revealed that the culture substrate of rice hull was looser than that with pure rice straw, so it not only benefited the oxygen breathe during the mushroom growing but also kept the nutrient supply from rice straw. By using this waste, resource can be used and sustainable development of economy and ecologicalcan be realized, as well as the new material for edible fungi industry were explored. The contradiction of mushroom and forest industry development were relieved.

【题目】大杯香菇辐射选育新株系品质性状的遗传分析
【中文关键词】大杯香菇;氨基酸;细胞保护酶;丙二醛:遗传分析
【英文关键词】Lentinus giganteus;Amino-acids;Cell protection enzyme;MDA;Genetic analysis
【中文摘要】以20个大杯香菇品种和辐射选育新株系为材料,对22个品质性状其进行了相关和主成分分析 结果表明,遗传变异系数最大的品质性状为SOD活性(47.16%),其次为胱氨酸含量(44.33%).再次为MDA含量(44.12%),第四为PPO活性(43.89%),变异系数最小为缬草氨酸含量(4.89);子实体中的各种氨基酸含量、可溶性蛋白含量、细胞保护酶活性和MDA含量之间均存在一定的相关性,部分性状间相关性达显著至极显著。主成分分析结果表明,22个性状可以缩减为7个主成分,遗传变异贡献率大小分别为37.82%、18.07%、13.14%、9.80%、6.02%、4.94%和2.67%,7个主成分累积贡献率达92.47%。由此可见。在品质性状选择上,首先对遗传变异大的性状进行选择是非常重要的。在品种和辐射选育新株系选择时,应注意选择甲硫氨酸含量、可溶性蛋白含量和CAT活性较高的品种.这样才能比较容易获得综合品质性状优良的新品种。
【英文摘要】Based on 20 strains and new radiated mutants of Lentinus giganteu,the correlations and maincomponents of 22 characters were analyzed.The results showed that SOD activity(47.16%)exhibited the highest genetic variation coeficient,followed by cystine content(44_33%),MDA content(44.1 2%)and PPO activity(43.89%),while the lowest genetic variation coeficient was observed in valine content(4.89%).A certain correlation existed among different amino acid contents,soluble protein contents,activities of eell protection enzymes and MDA contents,and the corelations in some characters reached significant or very significant levels.The main components analysis showed that the 22 characters could be divided into 7main components,of which the genetic variance contribution rates were 37.82% ,18.07% ,13.14% ,9.80% , 6.02% ,4.94% , and 2.67% respectively,and the accumulated contribution rate reached 92.47% .It means that it is critical to choose quality characters with large genetic variation in mushroom breeding.The ones with high methionine,soluble protein contents,and high CAT activity would be the potential ones with excellent comprehensive characters.

【题目】大杯香菇辐射选育新株系子实体蛋白质构成的多元回归与聚类分析
【中文关键词】大杯香菇;蛋白质;氨基酸;回归分析;聚类分析
【英文关键词】Lentinus giganteus; Protein, Amino acid; Regressive analysis; Cluster analysis
【中文摘要】以20 个大杯香菇品种和辐射选育新株系为材料, 分析了大杯香菇品种和辐射选育新株系蛋白质及其构成的17 种氨基酸含量间的多元相关、回归和聚类关系, 并采用生物统计方法分析品种和新株系的蛋白质及各种氨基酸间的关系。结果表明: 大杯香菇辐105 号新株系子实体中天门冬氨酸、苏氨酸、甘氨酸、丙氨酸、胱氨酸、缬氨酸、异亮氨酸、苯丙氨酸、蛋白质含量最高, 与部分品种和新株系子实体间差异显著或极显著, 且大多数氨基酸间及其与蛋白质含量之间存在显著或极显著正相关关系; 各种氨基酸与蛋白质含量之间分别有5 种呈一次曲线关系, 10 种呈二次曲线关系, 2种呈三次曲线关系; 采用系统聚类的方法可将蛋白质及17 种氨基酸含量聚为4 个大类, 对每类中的典型性状如精氨酸、亮氨酸、胱氨酸和蛋氨酸含量进行优化, 可有效提高大杯香菇品质育种中蛋白质构成的改良效率。
【英文摘要】Using 20 varieties and radiated mutants of Lentinus giganteus as materials, the multiple correlation, regression relation and cluster analysis between protein content and 17 amino acids contents were conducted to provide scientific basis for breeding of L. giganteus. The results show that among the new radiated mutants of L. giganteus, Fu105 contains the highest amounts of Asp, Thr, Gly, Ala, Cys, Val, Ile, Phe and protein in its fruit body, which is significantly higher than some tested varieties or new radiated mutants.

There exists a significant positive correlation between most amino acid content and protein content, of which 5 amino acids have a linear, 10 have conic, and 2 have cubic relationship with protein. Trough systematic cluster analysis, the protein content and 17 amino acids are divided into 4 groups. The optimization of typical characters, such contents of Arg, Leu, Cys and Met, in each group could improve the efficiency of protein composition in L. giganteus breeding.

【题目】发展农田秸秆菌业的技术集成与资源循环利用管理对策
【中文关键词】循环农业;秸秆;食用菌;菌渣;资源再利用
【英文关键词】Circular agriculture; Crop straw; Edible fungi; Fungi residue; Resource reuse
【中文摘要】本文分析了我国草生菌业的生产实际, 深入探讨了农田秸秆菌业循环生产体系的主要环节和优化构建, 并详细阐述了各个环节的管理对策。通过对秸秆堆制发酵、优质高产栽培管理、菌渣循环利用和环境生态监测等关键环节的有效链接与整合优化, 建立“ 稻草(秸秆) – 食用菌 – 菌渣 – 农田(园地)再循环 – 资源再利用 ”的农田秸秆菌业循环生产新体系的运作模式, 并展望了农田秸秆菌业的推广和开发前景。
【英文摘要】This article discusses the practical production techniques of rural edible fungi, explores the main technical links and optimized structure of crop straw-edible fungi industry with detailed descriptions of a series of technical measures. On the base of the efficient links and optimized key techniques including straw fermentation through composting, high-yield cultivation technique of Agaricus bisporus, fungi residues recycling utilization technique and environmental monitoring, a new mode of action is established, which is: straw → edible fungi → fungi residues → farmland (garden) recycle → resource reuse. Consequently, efficient promotion and prospect of crop straw-edible fungi industry are envisaged.

【题目】福建省畜禽养殖业废弃物污染风险评估
【中文关键词】畜禽粪便;耕地负荷;氮磷流失量;富营养化。
【英文关键词】animal manure;N,P cropland load;the loss amounts of N,P;eutrophication
【中文摘要】通过估算1985-2005年期间福建省畜禽养殖业粪便排放量变化,并通过耕地负荷、流失量等参数评价了福建省畜禽养殖业废弃物污染风险。评估结果表明:1985年福建省的畜禽粪便产生量为2180万t,而到了2005年达到了4249万t,翻了一番。1985年时福建省畜禽粪便耕地负荷、纯氮耕地负荷和纯磷耕地负荷分别为l5.2 t/hrn 、96 kg/hm 和45 kg/hm2;而到了2005年已分别达到了29.6 t/hm 、l81 kg/hm~和96 kg/hm2。同时,福建省畜禽粪便中氮、磷、钾流失量分别从1985年的3.26万t、0.70万t和4.47万t增长到6.05万t、1.85万t和10.53万t。2005年福建省畜禽养殖业的氮排放量分别是同期工业废水和生活污水氮排放量的7.4倍和1.9倍,已成为福建省流域水体富营养化的主要原因,其贡献已大大超过工业废水和生活污水。
【英文摘要】The pollution risk of livestock and poultry breeding industry in Fujian province from 1985 to 2005 was assessed through the production amounts of animal manure of livestock and poultry breeding industry and the parameter of cropland load and lOSS amount.Assessment results are as follows:The production amounts of animal manure of livestock and poultry breeding industry of Fujian in 1985 was 21.8 million tons,and in 2005 reached 42.5 million tons more than doubled.The average cropland load of animal manure and its N。P205 nutrient in 1985 were 15.2 t/hm。,96 kg/hm and 45 kg/hm ;but in 2005 were 29.6 t/hm。,181 kg/hm and 96 kg/hm .And the lOSS amounts of N,P205,K20 nutrient of animal manure in 1 985 were 32,600 t,7 000 t and 44700 t;but in 2005 were 60 500 t,1 8 500 t and 105 300 t.In 2005,N emissions of livestock and poultry breeding industry in Fujian are 7.4 times the amount of industrial wastewater and 1.9 times the amount of domestic sewage.Hence,the livestock and poultry breeding industry of Fujian Province has become one of the most important pollution sources of eutrophication.

【题目】规模化牛场_肉牛_沼气_牧草_循环农业模式能值分析
【中文关键词】循环农业; 能值; 可持续发展
【英文关键词】circular agriculture; energy; sustainable development
【中文摘要】应用能值分析方法对规模化牛场" 肉牛-沼气-牧草"循环农业模式进行能值投入、产出分析, 并依据能值投入和产出分析资源利用效率、环境压力和可持续发展指数等。结果表明, 与单一的肉牛养殖业相比, " 肉牛-沼气-牧草"循环农业自然资源利用从0 增加至0.041% ,但系统还是以购买能值投入为主; 全系统净能值产出率和可持续发展指数分别为2.11和1.03,比单一养殖业提高10.5% 和71.05% ; 环境负载率为1.08, 降低了18.18%。表明通过增加产业链农业循环模式有利于降低环境压力, 提高系统可持续发展指数。
【英文摘要】In this paper, input and output of "beef-methane-forage" circular agriculture in scale cattlefarm were analyzed on the basis of energy theory, and then resource utilization, resource utilization and sustainable development index also were analyzed by means of input and output energy . The results showed that natural resource utilization rate increased from 0 to 0.041 percent, but purchased energy were main inputs in cicular agriculture systems. Energy yield ratio and sustainable development index were 2.11 and 1.03, increasing respect ively 10. 5% and 71. 05% compar ed w ith subsy stem breeding industry, and environmental loading ratio was 1.08, decreasing 18.18%. The results indicated circular agriculture is beneficial to decrease environmental pressure and increase the index of sustainable development for the system by means of increasing industry chain.

【题目】规模化养猪场粪污循环利用技术集成与模式构建研究
【中文关键词】猪粪便;循环利用模式;技术集成;循环经济
【英文关键词】feces;the recycling model;technology integration;the circular economy
【中文摘要】简述全国及福建的生猪养殖发展现状与粪污产生量,并根据循环经济的“3R”理论,构建了以规模化生猪养殖为源头,通过技术集成,拓宽粪污循环利用产业链,发展粪污治理、沼气能源、食用菌、种植业、有机肥料、养鱼等产业,解决了规模化养猪场区域内部各产业产生的“废弃物”再利用问题。福建省福清星源农牧开发有限公司应用该模式建成的粪污循环利用产业链运行结果表明,各产业充分利用上游产业排放的“废弃物”,年节省各种原料投入达105万元,并解决了规模化养猪场粪污治理,污水经过各层次利用后作为冲栏回用,最终在系统内部实现了粪污全价再利用,达到污染物“零”排放的目标。
【英文摘要】The status ofpig breeding andfeces output ofFujian Province and China was summarized. According to the circular economy “3R” theory,we constructed the recycling model of feces from large—scale pig farm,through technology integration and broadening the recycling industry chain.And then the feces pollution of the large—scale pig farm was solved by developing the industries of slurry treatment,biogas energy, edible fungus,planting,organic fertilizer and fish fanning.This recycling model was applied to Fuqing Xingyuan Agriculture and Farm Development Co.,Ltd.of Fujian Province,and the results showed that:the industries could take full advantage of the emissions from the upper-stream industry,and it could save 1.05 million yuan annually by reducing a vafieU of raw material inputs. Finally,the system achieved the full price of the slurry recycling and the pollutants “zero” emissions.

【题目】褐色蘑菇透气袋栽培种制作的关键技术研究
【中文关键词】褐色蘑菇;栽培种;透气塑料袋;膨胀珍珠岩
【英文关键词】Portabella;Spawn;Breathable bag;Perlite
【中文摘要】通过对褐色蘑菇MC441透气袋栽培种不同的基质含水量、膨胀珍珠岩添加量、培养温度、冷藏温度等方面进行对比试验,并与同样冷藏3个月后的美国Sylvan公司的褐色蘑菇栽培种SB65、SB295进行出菇比较。结果表明:MC441的麦粒基质最适含水量为42%~45%;在小麦基质中添加干重比例为3%的膨胀珍珠岩(含水量预先调至72%),可使MC441经过3个月冷藏仍具有良好的外观和活力;MC441最适的培养温度在(21±1)℃;在2℃一4℃下,MC441经过3个月冷藏后出库成品率稳定在99%左右;MC441和进口的SB65、SB295之间,在产量和菇体大小方面不相上下,可以在国内替代进口菌种用于栽培褐色蘑菇。
【英文摘要】With making spawn of portabella MC441 with unicorn bags,the contrast test for moistures of wheat,scale of perlite,euhrue temperature and storage temperature were studied.The condition of producing mushroom MC44 1 were compared with SB65 and SB295 from Sylvan storaged three months.The results showed that the wheat moisture of 42% is good to make substrates of portabella spawn.and adding 3% perlite will make spawns keep good appearance and activity after cold storage for 3 months.f21±1) is the suitable temperature for incubating of portabella spawns,in which spawns will keep rate of 99% in final products.The yield and diameter of fruitbody of MC441 are almost the same with SB65 and SB295,So we can use local portabella spawn instead of import one.

【题目】姬松茸新菌株J3的细胞生物学鉴定与菌盖不同部位微量元素含量分析
【中文关键词】扫描电镜;x射线能谱;透射电境;姬松茸J3;姬松茸J1
【英文关键词】scanning electron microscope;X—ray energy spectrum;transmission electron microscope;Agaricuz blazei Murril.J3 Strain;Agaricus blaze Murril.J1 Strain
【中文摘要】利用扫描电镜和x射线能谱仪对姬松茸菌株L与原菌株J1子实体的菌盖皮、菌盖内和菌褶中常见的微量元素s、P、Ca、K、Fe、Cu和zn进行了测定,计算了它们的相对重量百分比。利用扫描及透射电境观察姬松茸菌株L与原菌株J菌丝体、子实体的表面和内部结构。结果表明菌盖皮、菌盖内和菌褶均含上述各种微量元素,但含量各不相同;姬松茸J3菌丝表面有明显竹节状,在菌丝的外部形态特征上不同于原菌株J1。此外,姬松茸J1细胞壁厚,而出现重度质壁分离;姬松茸菌株J]子实体中淀粉粒、线粒体均比原菌株J1多。由此,说明姬松茸J3与原菌株Jl在细胞学特性存在一定差异。
【英文摘要】By using scanning electron microscope and X-ray energy spectrum,the common trace elements,S,P,Ca,K,Fe,Cu and Zn contents in the pileus peel,context,and lamella were detected The relative weight percentage of these elements were calculated.The myeelium and fruit body's surface and internal structure were also observed by scanning electron microscope and transmission electron microscope.The results showed that the pileus peel,context,and lamella contain all the trace elements above,with different quantities.The mycelium surface of the J3 strain was obvious bamboo—shaped,that was diferent from the Jl strain.Besides,the J3 cell—wall was thicker,and plasmolysis appeared.Its starch grains and mitoehondria were more than in the Jl strain.Thus,the Agarieus blazei Murril.J3 Strain was diferent from the cytological characteristics of Jl strain.

【题目】几种双孢蘑菇菌株对稻草降解能力的研究
【中文关键词】双孢蘑菇Bavendamm显色;RB亮蓝平板变色;Eriksson变色圈试验;木质降解
【英文关键词】Agaricus bisporus;Bavendamm chromogenic reaction;RB bright blue flat color test;Eriksson discoloration circle test;degradation of rice straw
【中文摘要】以蘑菇属的5个菌株为试材,采用Bavendamm显色反应、RB亮蓝平板变色反应、Eriksson变色圈试验及木质降解试验等方法,研究双孢蘑菇对稻草的降解能力。结果表明:通过Bavendamm平板和RB亮蓝平板显色试验,初步判断2796及

,优于其它菌种,有较高的木质素降解相关酶系(木质素降解酶;木质素过氧化物酶;锰依赖过氧化物酶)活力;这2种菌种进一步通过变色圈和降解试验,表明2796为选择性降解纤维素的菌种,而AI为选择性降解木质素的菌种,但2796对木质素的降解率为39.82 , 仅为20.91 ,说明菌种对木质素的选择性降解与否与其降解率之间没有相关性。

【英文摘要】To promote the yield ofAgaricusbisporus and improve efficiently using of farmland straw,5 Agaricusbisporus strains(2796,A5,Az,A3 and Ar)was investigated about the function of degradation rice straw.In this experiment, Bavendamm chromogenic reaction,RB bright blue flat color reaction,Eriksson discoloration circle test and Woodiness degradation test was finished.The results showed that A5 and 2796 had higher relevant lignin degrading enzymes inelucling lignin degradation enzyme,lignin peroxidase,manganese dependence peroxidase vitality through the Bavendamm chromogenic reaction and RB bright blue flat color test;then all the strains by Eriksson discoloration circle test and Woodiness degradation test appeared that 2796 and A3 strains were selective degradation of cellulose in the beginning of the experiment,however the others was selective degradation of lignin,and the highest degradation rate of lignin of 2796 was 39.82 ,A5 was 2O.91 ust only,those results explained to US that there was no correlation between the selectivity of lignin and degradation rate of it.Finally we can selected that 2796 and A5 were the most efficient degradation ofrice straw stains.

【题目】培养料碳氮比与猪肚菇蛋白质营养水平的关系
【中文关键词】猪肚菇;碳氮比;蛋白质;营养评价

【英文关键词】Panusgiganteus; C:N ratio; protein; nutritional value
【中文摘要】采用国际上通用的营养价值评价方法,对不同碳氮比培养料栽培的猪肚菇第二潮子实体进行蛋白质营养价值评价。结果表明,子实体蛋白质中,必需氨基酸含量以培养料III(碳氮比为35:1)的最高.之后依次为培养料IV 、 II 、I、V、VII和VI ;而蛋白质营养综合评价结果则以培养料I(碳氮比为25:1)的最高,其次为培养料III ,再次为培养料II、V、VII、VI和IV 。
【英文摘要】Protein from Panus giganteus fruit bodies cultivated using substrates with different C: N ratios was assessed in terms of essential amino acid content and six nutritional quality indices Amino Acid Score (AAS), Chemical Score (CS), Essential Amino Acid Index (EAAI), Biological Value (BV), Nutritional Index (NI) and Amino Acid Ratio Coefficient Score (AARCS). The highest content of essential amino acids was recorded in protein from fruit bodies cultivated using substrate III with a C: N ratio of 35 : 1. Protein from fruit bodies cultivated using substrate Ⅰ (C : N ratio 25 : 1) had a superior nutritional value, and was ranked highest in terms of three protein quality indices (CS, AARCS and NI), second highest in the case of EAAI and BV, and had the third highest AAS. Protein from fruit bodies cultivated using substrate III (C : N ratio 35 : 1) was ranked highest in terms of two indices (EAAI and BV) and second, third, fourth and seventh in the case of AAS, NI, CS and AARCS, respectively.

【题目】区域特色肉牛规模养殖循环经济模式及关键技术研究
【中文关键词】肉牛;循环经济;废弃物资源;草地
【英文关键词】meat cattle; recycling economy; resource of waste materials; grassland
【中文摘要】对南安官桥金牛养殖场肉牛规模养殖循环经济模式,开展农副产品和肉牛场废弃物资源利用及对生态环境影响等技术研究。结果表明,肉牛场可充分利用啤酒糟、花生膜、豆油糟、麦糠等农作物及粮油、食品工业副产品资源,既降低了肉牛育肥饲料成本,又达到农副产品的资源化利用;收集的牛粪外售进行食用菌生产,实现肉牛场废弃物的生物转化和循环利用;利用草地消纳牛场沼液,形成了"肉牛-沼气-牧草"循环利用,浇灌沼液的杂交狼尾草地牧草叶片硝酸盐含量均未超过0.25%硝酸盐安全值,且每年杂交狼尾草草地可消纳约3 000 t的沼液,但对不同土层土壤进行硝态氮含量测定表明,草地土壤硝态氮有呈现下渗的趋势。
【英文摘要】To the recycling economic model for beef cattle scale breeding in Guanqiao Jinniu cattle farm,this project was carried on to study resource utilization of agricultural by-products and residues from cattle farm.The results showed that the by-product resource in food-oil industries,such as beer fermentation residues,peanut seed coats,bean dregs and wheat bran,could be fully utilized in cattle farm.In this way,both purposes to reduce the raising cost in meat cattle fattening process and to utilize the by-product resources could be achieved.The cattle dung was used to produce mushroom in order to realize the biological transformation and recycling utilization of cattle farm residues.By using grass land to digest the biogas liquid produced from cattle farm and form"meat cattle-biogas-forage"recycling utilization model.The nitrate content in the leaves of Pennisetum americanum×.P.pureum irrigated by biogas liquid did not excess the safety value of 0.25% nitrate.The grass land growing Pennisetum americanum×.P.pureum plants could digest 3000t biogas liquid annually.However,the determination to nitric N contents in different soil layers showed the nitric N has a leaking-down tendency.

【题目】施氮对杂交狼尾草产量及硝酸盐的影响
【中文关键词】杂交狼尾草;氮肥水平;产量;硝酸盐
【英文关键词】nitrogen levels; Pennisetum americanumxP, purpureum; yield; nitrate
【中文摘要】采用田间小区试验,研究不同供氮水平对杂交狼尾草产量、硝酸盐含量及烘干率的影响。结果表明.随着施氮水平的提高,杂交狼尾草(Pennisetum americanum×P.purpureum)的产量也明显提高.但相同的施氮水平对不同品种的影响差异不显著,单茬最高产量出现在8月份,在N3(300kg/hm^2)水平时.闽牧6号杂交狼尾草(S16)的总产量(15.34kg/m^2)虽然比推广品种杂交狼尾草(S1)总产量(14.84kg/m2)高,但差异不显著:硝酸盐含量,也随着氮素水平的提高而提高.试验期内.8月份的硝酸盐含量最低.闽牧6号的硝酸盐含量在相同的施氮水平下均较高.说明硝酸盐更易于在闽牧6号体内积累,但在0-300kg/hm^2氮肥水平下.硝酸盐含量均处在牲畜的安全食用标准内:烘干率不受施氮水平的影响,只与生长量有关,生长量大,则烘干率高。
【英文摘要】A field plot trial was arranged to investigate the effects of different N application levels (0, 100, kg/hm^2) on yield, nitrate, and drying rate of 2 hybrids (S16 and S1) of Pennisetum americanumxP. purpureum. The results showed that the S16 and S1 yielded obviously higher with increased N levels but not significantly different at the same N level. The highest yield of single cropping occurred in August when the S16 and S1 treated with 300 kg/hm2 (N3) yielded respective biomasses of 15.34, 14.84 kg/m2. These 2 hybrids had higher nitrate content when applied with higher nitrogen levels, which was the lowest in August during the trial. The S16 contained higher nitrate than the S1 when applied with the same N level, indicating that nitrate was more readily accumulated by the S16. However, the nitrate content of these two hybrids fell within the safe food limits when these 2 hybrids were applied with the N at the levels ranging from 0-3 000 kg/hm2. The drying rate of the biomass was not affected by the N levels applied but related with the growth of the hybrids. The higher the growth the higher the drying rate.

【题目】食用菌农药残留控制研究
【中文关键词】食用菌;病虫害;农药残留;产品质量安全
【英文关键词】Edible mushroom; The diseases and insect pests; Maximum pesticide residues limit; Product quality and safety;
【中文摘要】我国食用菌快速发展,食用菌病虫害时有发生,为控制农药残留量,确保食用菌产品质量安全,试验选择了16种农药,以喷施、覆土、拌土3种方式,在1000倍~3000倍的剂量下防治病虫害,检测试验地产品的农药残留量,均未超过国内或国际限量标准,该研究结果为菇农进行食用菌病虫害防治和出菇管理提供了技术支持。建议进一步规范农药使用方法,完善产品质量标准,确保食用菌产品质量安全。
【英文摘要】With the rapid development of edible mushroom industry, the diseases and insect pests on edible fungus takes place sometimes and the incidents of pesticide residues which exceeded maximum residues limits on edible mushrooms frequently occurred. In order to study the method of control pesticides residues in production of edible mushroom and assurance product quality and safety, 16 kinds of agricultural chemicals were chosen in this paper. It was designed that the agricultural chemicals were used in three ways (including: spraying, covering, mixing) and 1 000 ~3 000 dose. After the experiment was finished, products of the experimental land were test. The experiment showed that pesticide residues in experimental products didn ’ t exceed the maximum residues limits of Chinese standards and international standards. The results may be applied in the diseases and insect pests control and pesticide residues control. It is suggested that the standard about maximum pesticide residues limitsof edible mushroom products should be full-scale

established for improving the safety production and the product quality of edible mushroom.

【题目】Identification of lactobacillus casei-BDI and Streptococcus thermophilus by fluorescence spectra
【中文关键词】fluorescence spectra
【英文关键词】fluorescence spectra
【中文摘要】Fluorescence analysis applied in the study of lactic acid bacteria (LAB) provides a new method and theory to study probiotics and realize the detection and identification of the strains. It is also possible to achieve automation and computerization. In this letter, the differences between the fluorescence spectra of lactobacillus casei-BDI (Lc-BDI) and Streptococcus thermophilus (St) are shown, and the second-order derivative spectra are used to further study the diversity of these two strains. According to the results, with the excitation wavelengths of 285 and 340 nm, there are significant differences between them. The experiment is repeated for 6 times, showing good repetitiveness.

【题目】Antimicrobial proteinaceous compounds obtained from bifidobacteria: From production to their application
【中文关键词】Adhesion; Antimicrobial compounds; Bacteriocins; Bacteriocin-like compound; Bi fi dobacteria
【英文关键词】Adhesion; Antimicrobial compounds; Bacteriocins; Bacteriocin-like compound; Bi fi dobacteria
【中文摘要】Antimicrobial proteinaceous compounds such as bacteriocins or bacteriocin-like compounds produced by bi fi dobacteria are largely unknown but have been found to have potent antimicrobial activities toward closely related bacteria and undesirable harmful microorganisms. They are useful in the fi elds of food preservation or safety, health care, and pharmaceutical applications. The inhibition activity of these substances has been reported to be strain-dependent. Binding to the epithelial cell on the gastrointestinal surfaces is one of the important factors of resident micro fl ora to colonize the intestine. Certain Bi fi dobacterium strains are able to produce substances that compete and prevent pathogenic bacteria from adhering to the receptors on epithelial cells of intestinal surfaces. The potential probiotic effects of bi fi dobacteria is well known in the human ecosystem and their production of antimicrobial peptides can contribute to elucidate the precise mechanisms by which bi fi dobacteria can dominate the intestinal microbiota and achieve their probiotic function. This paper presents a review of the antimicrobial proteinaceous compounds produced by various Bi fi dobacterium strains, the attempts made to purify them, their characterization, identi fi cation anduseful applications.

【题目】Interaction of Bifidobacterium and Yoghurt Mixed Culture with Salmonella During Associated Cu
【中文关键词】Bifidobacterium;associated cultures;dgree of inhibition;di-associated cultures;yoghurt mixed cultures
【英文关键词】Bifidobacterium;associated cultures;dgree of inhibition;di-associated cultures;yoghurt mixed cultures
【中文摘要】The antimicrobial activity of four strains of Bifidobacterium toward Salmonella ssp. during associated cultures growth was investigated in skim milk medium. All strains showed different degrees of antagonistic action toward the indicator strain. The highest degree of inhibition (96%) was obtained with Bifidobacterium infantis and Bifidobacterium longum (92%). The combination effect of yogurt mixed culture with bifidobacterial strains (di-associated culture) toward Salmonella ssp. resulted in an enhancement of the antagonistic action for Bifidobacterium strains as a result of their production of organic acids, in particular lactic acid, which has a strong inhibitory effect against Gram-negative bacteria. The di-associated cultures all resulted in similar pH values but the degree of inhibition were different with B. infantis and B. longum; meaning that organic acids are not the sole inhibitory factors present in these cultures, but it could be another compounds which may contribute in this inhibitory effects. The combination between Bifidobacterium and YMC strains could has a great value in industrial application in resolving some problems in dairy products and pharmaceutical formulas

【题目】Antimicrobial activity and partial characterization of bacteriocin-like inhibitory substances (BLIS) produced by Bifidobacterium infantis BCRC 14602
【中文关键词】Bacteriocin-like inhibitory substance;Bi fi dobacterium infantis BCRC 14602;Bactericidal action
【英文关键词】Bacteriocin-like inhibitory substance;Bi fi dobacterium infantis BCRC 14602;Bactericidal action
【中文摘要】Bi fi dobacterium infantis BCRC 14602 was found to produce a bacteriocin-like inhibitory substance (BLIS) with inhibitory activities against a wide range of Gram- positive and Gram-negative bacteria. An activity level of 400 AU/ml in the middle of the exponential phase (i.e. 6 h) and maximum activity (1600 AU/ml) at the beginning of the stationary phase (i.e. 16 h) was recorded in MRS broth at 37 C. BLIS was partiallypuri fi ed by a two-step puri fi cation protocol resulting in a speci fi c activity of 31,605 AU/mg and a puri fi cation fold of 120. Based on Tricine – SDS – PAGE, the BLIS is approximately 3.0 kDa in size. Complete inactivation of BLIS activity was observed after treatment with proteolytic enzymes, but not with catalase, a-amylase and lipase. The adsorption of the BLIS to the producer cells was strongly affected by the pH of the broth culture of which 100% adsorption to the killed cells occured between pH 6.0 and 7.0, whereas at pH values below 6.0 and above 7.0, the adsorption ratio decreased to 43 and 60%,respectively. BLIS showed high temperature stability up to 121 C for 15 min with no loss in its activity, and had pH stability in the range of 4 – 10. The temperature and heat stability of BLIS makes it useful for applications in food processing technologies and food safety control applications

【题目】Comparison of three different methods for the isolation of bacteriocin-like inhibitiory substances from bifidobacterium infantis BCRC 14602

【中文关键词】bacteriocin-like inhibitiory substances;Bifidobacterium;

【英文关键词】bacteriocin-like inhibitiory substances;Bifidobacterium;

【中文摘要】The objective of this research was to compare three different methods for the isolation of bacteriocin-like inhibitory substances (BLIS) from Bifidobacterium infantis BCRC 14602 (Bioresource Collection and Research Center) for their ease of use and reliability. Ammonium sulfate with 80% saturation of the neutralized cell-free supernatant resulted in 80% of total activity and a 4.56-fold increase in specific activity. After dialysis, the specific activity increased 76-fold, but total activity recovered decreased to 8%. In the second method, adsorption and desorption of the BLIS onto/from the producer cells, the adsorption of the BLIS to the producer cells was strongly affected by the pH of the culture broth whereby 100% adsorption to the killed cells occurred between pH 6.0 and 7.0. Desorption of BLIS from the producer cells was achieved at pH 1.5 – 2.0. This procedure increased the purification fold 120 times, which was the highest among the three methods studied with a specific activity of 31,605 AU/mg and a yield of 64%. In the adsorption and desorption of BLIS onto/from silicic acid, it was confirmed that the adsorption of the BLIS to silicic acid (5%) was strongly affected by the pH of the broth culture of which 100% adsorption occurred between pH 5.0 and 7.0, whereas at pH values below 5.0 and above 7.0, the adsorption ratio decreased to 67% and 45%, respectively. The best method in terms of purification fold and yield was the adsorption and desorption of BLIS onto/from silicic acid.

【题目】In vitro comparison of probiotic properties of Lactobacillus casei Zhang, a potential new probiotic, with selected probiotic strains

【中文关键词】Probiotic properties;Lactic acid bacteria;Fermentation characterization

【英文关键词】Probiotic properties;Lactic acid bacteria;Fermentation characterization

【中文摘要】Since 2004,our research group has isolated 240 Lactobacillus strains from Koumiss, a traditional fermented alcoholic beverage prepared from mare ’ s milk in Inner Mongolia, Xinjiang of China and Mongolia. Among these Lactobacillus strains a novel strain with potential probiotic properties, Lactobacillus casei Zhang, was screened out and studied extensively for its probiotic properties, health-promoting effects and fermentation characteristics. In vitro tests indicated that L. casei Zhang had high tolerance to simulated gastric, intestine juices and bile salts, similar to commercial probiotic strains such as Lactobacillus acidophilus NCFM, Lactobacillus rhamnosus GG, L. casei Shirota and Bi fi dobacterium animalis Bb12. Higher acid-production activity and proteolytic activity was observed in the fermented milk inoculated with L. casei Zhang during the refrigerated storage than in the samples

inoculated with the selected commercial probiotics. The yogurt samples fermented with L. casei Zhang exhibited similarer viable count (1.0×109cfu/mL) as the other samples after 28 d of refrigerated storage. The results suggested that L. casei Zhang showed good potential for application in functional foods and health-related products.

【题目】A New Probiotic Cheddar Cheese with High ACE-Inhibitory Activity and g-Aminobutyric Acid Content Produced with Koumiss-Derived Lactobacillus casei Zhang

【中文关键词】ACE-inhibitory activity;Lactobacillus casei Zhang; γ -aminobutyric acid; probiotic Cheddar cheese; koumiss
【英文关键词】ACE-inhibitory activity;Lactobacillus casei Zhang; γ -aminobutyric acid; probiotic Cheddar cheese; koumiss

【中文摘要】Cheddar cheese has been manufactured with Lactobacillus casei Zhang as the dairy starter adjunct. L. casei Zhang had previously been isolated from koumiss collected from Xilin Guole in Inner Mongolia and characterized in detail with regard to their probiotic potential. The addition of L. casei Zhang to Cheddar cheese had no adverse effects on sensory criteria. The cheese made with 0.1, 1 and 2 % of the probiotic strain L. casei Zhang adjuncts contained high levels of the Lactobacillus after 6 months of ripening with final counts of 9.6 · 10^7, 7.7 · 10^7 and 1.02 · 10^8 CFU/g, respectively. In the ripe control cheese, without the addition of probiotic strain L. casei Zhang, the number of Lactobacillus reached 5.7 · 107 CFU/g. Enterobacterial repetitive intergenic consensus PCR (ERIC-PCR) analysis was used to distinguish the added L. casei Zhang from the natural flora of the cheese and to determine whether L. casei Zhang grew in the cheese. ACE-inhibitory activity and γ -aminobutyric acid (GABA) concentrations in the cheese were measured. Compared with control cheese, experimental cheese with 0.1, 1 and 2 % of probiotic strain L. casei Zhang revealed some increase in ACE-inhibitory activity and GABA mass fraction. In the present study, the production of both ACE-inhibitory activity and GABA in the probiotic cheese with the L. casei Zhang adjunct isolated from koumiss has been found for the first time. The results suggest that cheese with the probiotic strain L. casei Zhang showed good potential for application in the management of hypertensio

【题目】Proteomics Analysis of Lactobacillus casei Zhang, a New Probiotic Bacterium Isolated from Traditional Home-made Koumiss in Inner Mongolia of China
【中文关键词】Proteomics Analysis;Lactobacillus casei Zhang;
【英文关键词】Proteomics Analysis;Lactobacillus casei Zhang;
【中文摘要】Lactobacillus casei Zhang, isolated from traditional home-made koumiss in Inner Mongolia of China, was considered as a new probiotic bacterium by probiotic selection tests. We carried out a proteomics study to identify and characterize proteins expressed by L. casei Zhang in the exponential phase and stationary phase.Cytosolic proteins of the strain cultivated in de Man, Rogosa, and Sharpe broth were resolved by two-dimensional gel electrophoresis using pH 4 – 7 linear gradients.The number of protein spots quantified from the gels was 487 21 (exponential phase) and 494 13 (stationary phase) among which a total of 131 spots were identified by MALDI-TOF/MS and/or MALDI-TOF/TOF according to significant growth phase-related differences or high expression intensity proteins. Accompanied by the cluster oforthologous groups (COG), codon adaptation index (CAI),and GRAVY value analysis, the study provided a very first insight into the profile of protein expression as a refer-ence map of L. casei. Forty-seven spots were also found in the study that showed statistically significant differences between exponential phase and stationary phase.Thirty-three of the spots increased at least 2.5-fold in the stationary phase in comparison with the exponentialphase, including 19 protein spots (e.g. Hsp20, DnaK,GroEL, LuxS, pyruvate kinase, and GalU) whose intensity up-shifted above 3.0-fold. Transcriptional profiles were conducted to confirm several important differentially expressed proteins by using real time quantitative PCR. Theanalysis suggests that the differentially expressed proteins were mainly categorized as stress response proteins and key components of central and

intermediary metabolism, indicating that these proteins might play a potential important role for the adaptation to the surroundings, especially the accumulation of lactic acid in the course of growth, and the physiological processes in bacteria cell

【题目】Preparation, partial characterization and bioactivity of exopolysaccharides from Lactobacillus casei LC2W

【中文关键词】Lactobacillus casei;Exopolysaccharides;Isolation;Characterization;Antihypertensive

【英文关键词】Lactobacillus casei;Exopolysaccharides;Isolation;Characterization;Antihypertensive

【中文摘要】Crude exopolysaccharides (LCP) were isolated from skim milk fermented by Lactobacillus casei LC2W and fractionated into three fractions (LCP1, LCP2 and LCP3) with the ratios of 35.74%, 12.61% and 33.34% (w/w) based on LCP, respectively. The molecular weight, polydispersity, intrinsic viscosity and radius of gyration of three fractions were determined by high-performance size exclusion chromatography, and monosaccharide compositions were analyzed by high-performance anion-exchange chromatography. The antihypertensive effects of exopolysaccharides were evaluated using spontaneously hypertensive rats(SHR). SHR were randomized into four groups (eight rats per group) and fed with the test samples(LCP1, LCP2 and LCP3) at the daily dosage of 15 mg/kg(body weight) and saline for 7 days. The results showed only LCP1 could decrease signi fi cantly the systolic blood pressure of SHR ($P < 0.01$), and LCP1,LCP2 and LCP3 had no signi fi cant effect on the heart rate of SHR.

【题目】响应面法优化干酪乳杆菌LC2W合成胞外多糖的培养条件
【中文关键词】干酪乳杆菌, 胞外多糖,响应面法, 培养条件,优化
【英文关键词】干酪乳杆菌, 胞外多糖,响应面法, 培养条件,优化
【中文摘要】采用响应面法(RSM)对影响干酪乳杆菌 LC2W 合成胞外多糖的培养条件进行了优化。以胞外多糖产量为指标,通过单因素试验初步得到干酪乳杆菌 LC2W 合成胞外多糖的培养条件, 再根据 Box- Benhnken 中心组合实验设计原理, 在单因素试验基础上采用 3 因素 3 水平的响应面分析法, 建立了胞外多糖产量与各影响因子的回归方程, 并得到以胞外多糖产量为响应值的响应面图和等高线图, 进而得出干酪乳杆菌 LC2W 合成胞外多糖的优化培养条件: 接种量 4 %,发酵温度 31.5℃,发酵时间 32 h。验证试验结果表明,在此条件下胞外多糖的产量可达 157.46 mg / L,比优化前产量提高了 30.81 %。

【题目】植物乳杆菌ST-Ⅲ脱脂乳体系中生长限制因子的研究
【中文关键词】植物乳杆菌ST-Ⅲ,凝乳,营养因子
【英文关键词】植物乳杆菌ST-Ⅲ,凝乳,营养因子
【中文摘要】研究了维生素、碳源和氮源(蛋白胨、氨基酸)对植物乳杆菌ST-Ⅲ在脱脂乳中生长情况的影响。试验结果表明,在脱脂乳中添加维生素、氨基酸、碳源对其生长及凝乳没有显著影响,添加鱼蛋白胨可显著促进Lb.plantarum ST-Ⅲ在脱脂乳中生长和凝乳过程。鱼蛋白胨溶液经过分子截留极限为5000 ku的膜超滤的透过液也具有促进植物乳杆菌ST-Ⅲ在脱脂乳中生长和凝乳的作用,该透过液经过Sephadex G-25和Sephadex G-15凝胶柱分离后,获得1个可以促进Lb.plantarum ST-Ⅲ在脱脂乳中生长和凝乳的单一蜂,根据其洗脱体积,可以断定其主要成分为寡肽。因此,Lb.plantarum ST-Ⅲ胞内蛋白酶和肽酶活性较弱可能是限制其在脱脂乳中生长和凝乳的主要原因。

【题目】干酪乳杆菌胞外多糖LCP1的流变性研究
【中文关键词】干酪乳杆菌,胞外多糖,流变性
【英文关键词】干酪乳杆菌,胞外多糖,流变性
【中文摘要】通过对干酪乳杆菌LC2W胞外多糖LCP1溶液流变性质研究发现,高浓度LCP1溶液呈剪切变稀,低浓度时,剪切速率对黏度没有影响,溶液黏度随温度升高下降明显,pH对LCP1溶液黏度影响很小,盐可以降低LCP1溶液黏度,但黏度降低与盐浓度有关,通过黏弹性研究发现LCP1水溶液不能形成胶体,乌氏黏度计测得LCP1水溶液固有黏度(η)为1.930dL/g。

【题目】植物乳杆菌ST-Ⅲ降胆固醇相关酶的研究
【中文关键词】植物乳杆菌ST-Ⅲ, 酶,降胆固醇
【英文关键词】Lactobacillus plantarum ST-Ⅲ; enzyme; cholesterol removal
【中文摘要】植物乳杆菌ST-Ⅲ菌株经验证具有降胆固醇的作用,在此基础上,对该菌株产生的和降胆固醇相关的酶进行了初步研究。实验发现,该酶为胞内酶,在培养基中加入胆固醇可诱导ST-Ⅲ合成降低胆固醇相关酶, 添加量为 2.5%时, 酶活力最大; 在粗酶液中加入Triton X-100可提高酶活力, 在添加量为 1%时达到最大值; 硫酸铵提取该酶的最适饱和度为 60%。实验还对该酶的酶活力测定方法进行了研究,确定了ATP以及底物的最适浓度分别为 2.5mg/mL以及 150μg/mL。
【英文摘要】Lactobacillus plantarum ST-Ⅲ has been proved to be able to remove cholesterol. Based on the former expermients, explorative research has been done on the effectiveness of cholesterol removal by the enzymes which ST-Ⅲ produced. Expermient showed the enzyme was intracellular enzyme. The enzyme which produced by ST-Ⅲ could be induced by cholesterol in the fermentation medium, when the addition gets 2.5%, the enzyme activity was higher. Added Triton X-100 into the crude enzyme liquid could increase the enzyme activity, the optmial addition was 1%. 60% ammonium sulphate was the optmial precipitation of enzyme. And the activity determination of the enzyme was studied, the optmial concentration of ATP and substrates was 2.5mg/mL and 150μg/mL respectively.

【题目】植物乳杆菌SP-3对干酪挥发性风味物质的影响
【中文关键词】干酪;挥发性;风味物质
【英文关键词】cheese; volatile; flavour compound
【中文摘要】采用固相微萃取(SPME)富集干酪模型中的挥发性风味物质,并以气相色谱-质谱联用仪(GC-MS)检测结果来评定植物乳杆菌SP-3对干酪挥发性风味的影响。结果表明,添加植物乳杆菌SP-3的干酪模型中2-丁酮、2-甲基-1-丙醇、3-甲基-1-丁醇、1-戊醇、4-甲基-2-戊醇、3-羟基-2-丁酮等具有坚果味、水果味和奶油味的物质明显高于对照组,而二甲基硫化物和3-甲硫基-1-丙醇的浓度则低于对照组。

【英文摘要】Volatile flavour compounds produced in ripend cheese slurries model was studied by GC-MS. And the difference of flavour compounds between slurries containing lactobacillus plantarum SP-3 and the control slurries was detected. In contrast to the control slurries, slurries containing lactobacillus plantarum SP-3 had high concentration of 2-butanone, 2-methyl -1-propanol, 3-methyl-1-butanol, 3-hydroxy-2-butanone which contribute nutty and creamy flavour.

【题目】干酪乳杆菌LC2W胞外多糖的提取
【中文关键词】干酪乳杆菌; 胞外多糖; 提取; 超滤
【英文关键词】lactobacillus casei;exopolysaccharides;extraction; ultrafiltration
【中文摘要】研究了干酪乳杆菌LC2W胞外多糖的提取工艺, 确定提取条件为: 沸水浴10 min灭酶活, 离心除去凝结蛋白和菌体; 终质量浓度为40 g/L的三氯乙酸除蛋白质;上清液超滤(滤膜MWCO为10 ku, 压力250 kPa, 温度25°C)浓缩4倍; 终体积分数为75%的乙醇沉淀多糖; 热水溶解多糖, 透析、冷冻干燥得粗多糖。粗多糖的得率为153.4 mg/L。
【英文摘要】Extraction process of exopolysaccharides (EPS) from lactobacillus casei LC2W was studied, and extraction conditions were determined. The fermentation broth was pretreated by heating to inactivate enzymes and then centrifuging to remove cells and coagulated proteins, and trichloroacetic acid was added into the supernatant to a final concentration of 40 g/L to remove proteins. The supernatant was concentrated to 1/4 of original volume by ultrafiltration (filtration membrane MWCO 10 ku, pressure 250 kPa and temperature 25 °C). The yield of EPS precipitated from the supernatant with three volumes of cold ethanol was 153.4 mg/L.

【题目】添加外源镧条件下姬松茸中微生素的相关性及主成分分析
【中文关键词】食用菌;镧;微生素;主成分
【英文关键词】edible and medical fungi;selenium; vitamin; principle components
【中文摘要】采用主成分分析法,对外源镧胁迫姬松茸的效应进行了研究。结果表明,姬松茸的维生素B6与烟酰胺和B2呈极显著和显著负相关;烟酰胺与B2呈显著正相关;叶酸与B2呈显著负相关;其他性状间的相关均为负或正相关。从7项微生素指标中提取出3个胁迫效应的主成分,累积方差贡献率为93.92%。根据主成分对原性状的综合能力,进行微生素系列分析,3个主成分可分别解释为叶酸和B6效应因子,Vc效应因子,B5效应因子,并建立了主成分方程分别为:y1=0.1682F1+0.1542F2+0.3570F3+0.4420F4-0.4094F5+0.4613F6-0.4947F7y2=0.6392F1-0.4636F2+0.3622F3-0.3004F5+0.3443F5+0.1855F6-0.0462F7y3=0.1380F1+0.8114F2+0.3705F3-0.1821F4+0.2739F5+0.0908F6+0.2625F7各处理组的主成分得分、综合得分计算排序第一为40mg/kg处理组,所以为较适宜的胁迫浓度。
【英文摘要】The principal components analysis was adopted to investigate the vitamin efficiency of the Agaricus blazei MURILL under the condition of exogenous addition of Se.The results showed the VC was significant positive correlated with folacin and VB2;B5 was significant negative correlated with VB6 and VB1;VB1 and VB6,folacin and VB2 were significant positive correlated;others were not significant correlated.3 main components which contributed the accumulative variance by 98.40%have been picked out from the 7 vitamin character indexes.According to the comprehensive function of each main component,the 3 main components could be

explained respectively as the factor of VB5 and VC effect,the niacinamide effect and the folacin and VB2 effect.And the equation of main components was as follows:y1=0.4112F1+0.4351F2-0.4057F3-0.3929F4+0.0270F5+0.4013F6+0.4013F7y2=0.2931F1-0.2431F2+00.2940F3+0.3314F4+0.7175F5+0.2683F6+0.2683F7y3=-0.1200F1-0.0483F2+0.3448F3+0.3341F4+-0.5962F5+0.4456F6+0.4456F7The 40 mg/kg treatment had the highest principle components and integrates scores and it was the relatively suitable concentration.

【题目】添加外源镧条件下姬松茸中脂肪酸的相关及主成分分析
【中文关键词】镧 姬松茸 脂肪酸 相关性 主成分分析
【英文关键词】Lanthanum ; Agaricus blazei Murrill ; Fatty acids ; correlation ; principle components
【中文摘要】采用主成分分析法,对外源镧协迫姬松茸的效应进行了研究。结果表明:姬松茸的C14:0与C18:1呈显著的正相关,C18:0与C18:1呈显著的负相关,C18:2与味知脂肪酸呈显著的负相关。从脂肪酸构成比例中提取出3个协迫效应的主成分,累积方差贡献率为92.05%。根据主成分对原性状的综合能力,进行脂肪酸系列分析,3个主成分可分别解释为C18:0和C18:1效应因子、C16:0效应因子、C24:0效应因子,并建立了主成分方程,分别为:y1=0.3849F1—0.1636F2—0.3999F3+0.4346F4+0.4844F5—0.2743F6-0.4080F7;y2=0.4065F1+0.7387R+0.3158B+0.1763F4-0.1179F5+0.2107F6-0.3161F7;y3=0.1545F1+0.0368F2-0.4810F3+0.1665F4+0.0878F5+0.8409F6+0.0273F7。各处理组的主成分得分、综合得分计算排序第1为0.05mg/mL处理组,所以为较适宜的协迫浓度。
【英文摘要】The principal components analysis was adopted to investigate the fatty acid efficiency of the Agaricus blazei Murill under the exogenous addition of Lanthanum in the current work. The results showed that C14:0 was positively correlated with C18: 1, and C18:0 was negatively related to C18: 1. However, C18:2 was negatively correlated with the unknown fatty acids. Three main components which contributed to the accumulative variance by 92.05% had been picked out from the fatty acids. According to the comprehensive func- tion of each main component, the three main components could be explained respectively as the factor of C18: 1 and C18:2 effect, the C16:0 effect and the C24:0 effect. The equation of main components were as follows: y1= 0.384 9F1 - 0. 163 6F2 - 0.399 9F3 + 0.434 6F4 + 0.484 4F5 - 0.274 3F6 - 0. 408 0F7 ; y2 = 0.406 5F1 + 0.738 7F2 +0.315 8F3 +0. 176 3F4 -0. 117 9F5 +0.2107F6 - 0.316 1F7;y3 = -0. 154 5F1 + 0.036 8F2 - 0. 481 0F3 + 0. 166 5F4 + 0. 087 8F5 + 0. 840 9F6 + 0. 027 3F7. The 50 mg/Kg treatment had the highest principle components and integrate scores, which mirrors this treatment is the most suiTab, concentration.

【题目】添加外源锌对大杯香菇子实体细胞保护酶活性的影响
【中文关键词】外源锌; 大杯香菇; 细胞保护酶; 丙二醛;
【英文关键词】exogenous Zn; Lentinus giganteus; cell protective enzyme; MDA(malondialchehyche);
【中文摘要】【目的】本实验研究了添加外源锌(Zn)对大杯香菇子实体保护酶活性的影响。【方法】以硫酸锌为外源锌,添加到培养料中,制成0、10、20、30、40、50mg/kg6个浓度。采用分光光度法测定大杯香菇子实体超氧化物岐化酶(SOD)活性、过氧化物酶(POD)活性、多酚氧化酶(PPO)活性、丙二醛(MDA)含量和可溶性蛋白含量,采用高锰酸钾滴定法过氧化氢酶(CAT)活性。【结果】添加外源Zn浓度为30mg/kg处理大杯香菇子实体内可溶性蛋白含量、SOD、POD和CAT活性极显著提高(P<0.01),PPO活性极显著减少(P<0.01),而MDA含量显著下降(P<0.05)。随着Zn 水平进一步升高, 可溶性蛋白含量、SOD、POD 和CAT 活性呈下降趋势, 而MDA 含量极显著和显著上升(P < 0 01 和P < 0 05) 。 结论 高用量的Zn 浓度能使大杯香菇子实体中的MDA 含量上升, SOD、POD、CAT 活性均下降, 对保护酶系统有破坏作用, 促进自由基的积累, 从而导致膜脂过氧化作用的加剧。适宜Zn 浓度能提高保护酶的活性, 从而抑制了大杯香菇子实体中细胞膜脂过氧化水平,减轻膜伤害。
【英文摘要】[Objective] The effects of exogenous Zn addition on cell protective enzyme activities in the fruit bodies of Lentinus giganteus were studied.[Methods] ZnSO4 was used as exogenous Zn and added into culture medium.The final Zn concentrations in culture media were 0,10,20,30,40,50 mg/kg respectively.The activities of superoxide dismutase(SOD),peroxidase(POD),polyphenol oxidase(PPO),malondialchehyche(MDA) content and soluble protein content in the fruit bodies were analyzed by spectrophotometry;catalase(CAT) was determined by potassium permanganate titration. [Results] The content of soluble protein and SOD, POD and CAT activities in the fruit bodies of L . giganteus were significantly increased (P< 0 01) , but PPO activity (P < 0 01) and MDA content (P < 0 05) was significantly decreased in the treatment of 30 mg kg Zn concentration. The content of soluble protein and SOD, POD and CAT activities showed a decreasing trend with the increase of Zn concentration, but MDA content was significantly increased (P < 0 01 and P< 0 05) . [Conclusion] High Zn concentration caused the increase of MDA contents and the decrease of SOD, POD and CAT activities in the fruit body of L. giganteus. It will destroy the protective enzyme system, cause the accumulation of free radicals and thus intensify membrane lipid peroxidation. Appropriate Zn concentration improved the protective enzyme activities, and lightened the harm of membrane from lipid peroxidat ion.

【题目】添加外源锌对猪肚菇子实体蛋白质营养价值的影响

【中文关键词】猪肚菇 锌 营养价值 蛋白质营养
【英文关键词】Panus giganteus; Zn; nutritional value; nutrition of protein
【中文摘要】采用国际上通用的非生物学评价方法,研究了不同供锌水平对猪肚菇子实体蛋白质营养价值的影响,以期为猪肚菇栽培技术的改善和完善提供科学依据。结果表明,氨基酸总量以40mg·kg^-1处理的最高,其与对照差异达到显著(P〈0.05),但与其他处理差异不显著(P〉0.05);而Zn含量以10mg·kg^-1处理最高。营养综合评价结果显示,以浓度为30mg·kg^-1Zn处理的培养料栽培的猪肚菇子实体蛋白质营养价值评价的6项指标中氨基酸评分、必需氨基酸指数、氨基酸比值系数分和生物价分别为95.33、91.70、82.52和88.50,均居6种Zn处理之首,化学评分和营养指数分别为73.22和25.49,均居第3位。综合评价的结果显示,以浓度为30mg·kg^-1Zn处理的蛋白质营养价值最高。
【英文摘要】Using current international method, the effects of zinc (Zn) addition of different concentrations on nutritional value of protein of Panus giganteus's fruit bodies were studied in order to provide a scientific basis for its cultivation technology improvement. The results showed that total amino acid content in the treatment of 40 mg.kg^-1 was the highest, and lied significant difference to the control and no significant difference to the others, and that Zn content was the highest in the treatment of 10 mg.kg^-1. The results of nutritional value showed that the amino acid score(AAS), essential amino acid index(EAAI), score of ratio coefficient of amino acid(SRCAA) and biological valence (BV) in the protein of Panus giganteus's fruit bodies cultivated with medium in which middle concentration (30 mg.kg^-1) of Zn treatment applicated were the highest among six treatments, being 95.33 , 91.70, 82.5:2 and 88.50 respectively; and its chemical score (CS) and nutritional index (NI) were 73.22 and 25.49, all held the third place in six treatments with different concentration of Zn. It was seen on the basis of synthesizing evaluation that the nutritional value of protein in the treatment of 30 mg.kg^-1 Zn was the highest.

【题目】外源硒对巴西蘑菇子实体数量和形态特征的影响
【中文关键词】巴西蘑菇 硒 孢子 囊状体 菌丝
【英文关键词】Agaricus brasiliensis, S. Wasser; Se; Spore; Cystidium; Mycelium
【中文摘要】用扫描电子显微镜观察Se处理的巴西蘑菇的形态特征。结果表明,添加30mg kg^-1外源Se的巴西蘑菇孢子的长、宽和数量分别比对照增加20.92%、5.41%和114.13%,差异极显著(P〈0.01);10和20mg kg^-1 Se处理的囊状体最大直径、

最小直径和数量分别比对照增加34.78%、7.73%、13.40%、15.26%和27.78%、33.33%(P〈0.01),菌丝宽平均比对照增加45.90%和50.82%(P〈0.01)。扫描电镜观察到Se处理的孢子、囊状体、菌丝表面纹饰结构发生不同程度改变。

【英文摘要】The effects of exogenous Se on the topography and quantitative characters of Agaricus brasiliensis S. Wasser fruit bodies were studied under scanning electronic microscope (SEM). When exogenous Se was 30 nag kg^-1 the length, width and number of spores of Agaricus brasiliensis S. Wasser increased by 20.92%, 5.41% and 114.13%, respectively, and had significant difference (P 〈 0.01) to the control. When treated with 10-and 20 mg kg^-1 Se, the maximum and minimum diameters and number of the cystidium increased by 34.78% and 7.73%, 13.40% and 15.26%, 27.78% and 33.33% (P 〈0.01), respectively, and the minimum width of the mycelium increased by 45.90% and 50.82% (P〈0.01), respectively. The morphological structures of the spore, cystidium and mycelium varied under SEM.

【题目】常用杀菌剂及其混剂对芒果炭疽病菌的毒力测定

【中文关键词】芒果炭疽病菌;杀菌剂;毒力;增效作用

【英文关键词】Colletotrichum gloeosporioide; fungicides; toxicty; synergistic action

【中文摘要】采用生长速率法测定10种常用杀菌剂对芒果炭疽病菌的毒力。 结果表明:45%咪鲜胺EW对芒果炭疽病菌生长的抑制作用最强,其EC50值为0.01 mg/L;40%氟硅唑EC、25%丙环唑EC、95%苯醚甲环唑TC、50%扑海因WP的抑制作用相对较强,其EC50值范围为0.03~0.81 mg/L;96%睛菌唑TC、15%三唑酮WP、96%百菌清TC、30%醚菌酯WP的抑制作用较小,其EC50值范围为4~65.2 mg/L;50%代森锰锌WP抑制作用最小,其EC50值为105.0 mg/L;采用Horsfall法,将8个组合进行混配,咪鲜胺与三唑酮的混配中,其各个配比的毒力指数均大于1,于6∶4的配比达到最大,毒力指数为1.2,共毒系数(CTC)为166.61大于100,具有明显的增效作用;其余7组混配组合均没有增效作用。

【英文摘要】Toxicitis of ten fungicides to mango causal agent Colletotrichum gloeosporioides were tested using mycelial growth rate method. The results showed that prochloraz 45% EW had the strongest of toxcity with the minimum EC50 value of 0.01 mg/L among 10 fungicides. flusilazole 40% EC, propiconazole 25% EC, difenoconazole 95% TC or iprodione 50% WP had stronger toxicities with the EC50 values of 0.03 to 0.81 mg/L. myclobutanil 96% TC, triadimefon 15% WP, chlorothalonil 96% TC and kresoxim methyl 30%

WP had the low toxicities with the EC50 values of 4 to 65.2 mg/L, while mancozeb 50% WP had the lowest toxicity with the EC 50 values of 105.0 mg/L. Among 8 mix formulation of two of these fungicides, toxicity indexes of the mix of prochloraz and triadimefon in tested ratios were more then 1 with the highest index of 1.2 at the optimun ration at 6:4, its co-toxicity index (CTC) was 166.61, which was significantly higher than 100, indicating a strong synergistic action between these two fungicides. No previously synergistic action was found between other 7 mixes.

【题目】依靠科技进步 发展低碳农业
【中文关键词】低碳经济 温室气体 科技 循环农业 固碳减排
【英文关键词】low-carbon economy; greenhouse gases; science and technology; cycle agriculture; fixed carbon and reducing discharge
【中文摘要】在全球携手应对气候变暖、减少温室气体排放的背景下,发展低碳经济是解决气候变化与经济发展矛盾的有效途径。通过描述气候变化、固碳减排对粮食安全、土壤碳汇、森林固碳、资源循环利用等影响和促进作用,深入分析发展低碳经济与可持续发展的关系,探讨如何在农业领域内开发高效循环生产体系,从而实现农业生产过程的固碳减排目的。由此,提出发展低碳农业是实现低碳经济的目标之一,它是一个复合技术体系,涉及了绿色农业、循环农业、生态文明、可持续发展理念。必须通过科学技术的突破,改造、提升低碳农业技术,改变农业现有的"高能耗、高污染"的生产状况,实现低碳生产、生活方式的转变。最后提出发展现代的低碳农业产业经济的对策和思考。
【英文摘要】Under the background of hands to deal with global warming and reducing greenhouse gas emissions, development low-carbon economy was the effective way to solve the contradictions of climate change and economic development. By describing the influences and promotions of climate change, fixing carbon and reducing discharge on food security, soil carbon sink, forest carbon fixation, resources circulation utilization and so on, depth analysis of the relationship between the development of low-carbon economy and sustainable development, explored how to develop an efficient circulation within the field of agriculture production system, to achieve the purpose of fixing carbon and reducing discharge in the agricultural production process. As a result, proposed the development of low-carbon agriculture is one of the objectives to achieve a low carbon economy, it ’s a complex technical system, covering the concepts of green agriculture, circular agriculture, ecological civilization and sustainable development, it must be through breakthroughs in science and technology to reform and improve low-carbon farming techniques, develop low agricultural production, change the production status of "high energy consumption, high pollution" in agricultural existing, implement the transformation of low-carbon production and life style, and finally, it put forward the countermeasure and thinking of development modern low-carbon agricultural industry.

【题目】羽叶决明代木栽培鸡腿菇的物质转化
【中文关键词】鸡腿菇 羽叶决明 绝对生物学效率 基物失重 呼吸消耗 木质纤维素
【英文关键词】Coprinus ovatus; Chamaecrasta nictitans; absolute biological efficiency; substrate weight loss; respiration-based consumption; lignocellulose

【中文摘要】研究羽叶决明(Chamaecrasta nictitans)代木栽培鸡腿菇(Coprinus ovatus)对其绝对生物学效率、基物失重、呼吸消耗及木质纤维素转化的影响。结果表明,羽叶决明牧草替代60%木屑(A60)栽培鸡腿菇的绝对生物学效率最高,均为10.77%。覆土前和采收后的基物失重和呼吸消耗都以A0(CK)为最高,分别为11.47%、11.47%和31.75%、25.55%,其木质素转化率也最高,为79.21%;纤维素转化率以A100(羽叶决明牧草替代100%木屑)为最高,达50.93%;半纤维素转化率以A40(羽叶决明牧草替代40%木屑)为最高,为49.74%。回归分析结果表明,绝对生物学效率和半纤维素转化率与替代比例呈抛物线相关,而基物失重、呼吸消耗及木质素、纤维素转化率与替代比例呈线性相关。

【英文摘要】Mushroom Coprinus ovatus was cultivated on a series of growth substrates in which the sawdust component was substituted with Chamaecrasta nictitans to study C. nictitans in terms of biological efficiency, substrate weight loss, respiration-based consumption and conversion of xylem cellulose. The treatment A60(C. nictitans replacing 60% of the sawdust) had the highest absolute biological efficiency (10.77%). Treatment A0(0% C. nictitans replacing the sawdust, CK) or the control had the highest substrate weight loss and respiration-based consumption either before soil covering or after harvest, which were 11.47% and 11.47%, and 31.75% and 25.55%, respectively, and the lignin conversion rate in the treatment A0 was highest(79.21%); the cellulose conversion rate in the treatment A100(100% C. nictitans substituting the sawdust) was the highest(50.93%); and the semi-cellulose conversion rate in the treatment A40 (40% C. nictitans substituting the sawdust) was the highest(49.74%) among all the treatments. Regression analysis revealed that the absolute biological efficiency and semi-cellulose conversion had significant parabolic correlation with the percentage of substitution of sawdust with C. nictitans, and that the substrate loss, respiration-based consumption, lignin conversion and cellulose conversion were linearly correlated with the percentage of substitution of saw dust with C. nictitans.

【题目】羽叶决明栽培对鸡腿菇子实体产量和脂肪酸组成的影响

【中文关键词】鸡腿菇 羽叶决明 子实体 产量 脂肪酸组成

【英文关键词】Coprinus comatus; Chamaecrasta nictitans; fruit body yield; fatty acid composition

【中文摘要】以羽叶决明(Chamaecrasta nictitans)牧草替代麸皮栽培鸡腿菇(Coprinus comatus),对其子实体产量和脂肪酸组成进行测定。研究结果表明,子实体产量以羽叶决明替代20%麸皮处理的最高,为每袋235.2g;所有处理鸡腿菇子实体中均含有豆蔻酸、棕榈酸、十六烯酸、硬脂酸、油酸、亚油酸、亚麻酸和二十二烷酸等8种脂肪酸,其中羽叶决明替代20%麸皮处理的鸡腿菇子实体中各种脂肪酸相对含量均接近或优于对照,综合表现较好。

【英文摘要】Coprinus comatus was cultivated on a series of growth substrates in which the wheat bran component (constituting 30% of the basal formula) was replaced to different extents with Chamaecrasta nictitans. Highest fruit body yields (235.2 g per bag) were obtained following cultivation on a substrate in which 20% of the wheat bran component had been substituted with C. nictitans. The myristic, palmitic, hexadecenoic, octadecanoic, oleic, linoleic, linolenic and docosanoic acid profiles in these fruit bodies were superior compared to the corresponding fatty acid profiles of fruit bodies cultivated on other test substrates.

【题目】羽叶决明栽培鸡腿菇子实体营养价值评价

【中文关键词】鸡腿菇 蛋白质 羽叶决明 营养价值

【英文关键词】Coprinus comatus; fruit body protein; Chamaecrasta nictitans; nutritional value
【中文摘要】采用国际通用营养价值评价方法,研究了羽叶决明替代常规培养料木屑对鸡腿菇子实体蛋白质营养价值的影响。结果表明,羽叶决明替代木屑栽培鸡腿菇,其子实体蛋白质营养价值较高;在6种不同替代组合培养料栽培的鸡腿菇中,以羽叶决明100%替代木屑的蛋白质综合评价最优、营养价值最高,6项评价指标中,其中必需氨基酸指数(Essential AminoAcid Index)、生物价(Biological Value)、营养指数(Nutritional Index)3项分别为117.37、116.23和68.08,均居首位,且与对照间差异达到极显著水平(P〈0.01),氨基酸评分(Amino Acid Score)和氨基酸比值系数分(Amino Acid Ratio Coefficient Score)分别为80.39和77.56,均居第2位,化学评分(Chemical Score)为69.84,居第3位。
【英文摘要】Coprinus comatus was cultivated on a series of growth substrates in which different amounts of the sawdust component were replaccd with Chamaecrasta nictitans. Protein from C. comatus fruit bodies was assessed in terms of six nutritional quality indices - Amino Acid Score (AAS), Chemical Score (CS), Essential Amino Acid Index (EAAI), Biological Value (BV), Nutritional Index (NI) and Amino Acid Ratio Coefficient Score (AARCS). Fruit bodies cultivated using a substrate containing 66.5% sawdust, 30% wheat bran,l% sucrose, 1% CaCO3, 1% Ca(OH)2,0.3% KH2PO4 and 0.2% MgSO4 served as controls. The nutritional quality of protein from fruit bodies cultivated on substrates containing C. nictitans was superior to protein from controls. Protein from fruit bodies cultivated on a substrate in which the sawdust component had been entirely substituted with C. nictitans was ranked highest in terms of EAAI, BV and NI, second in terms of AAS and AARCS, and had the third-ranked CS value.

【题目】叶绿素仪(SPAD)在茶树氮素营养诊断中的适用性研究
【中文关键词】茶树;叶绿素仪;氮素营养;影响因素
【英文关键词】Camellia sinensis L., chlorophyll meter, nitrogen nutrition, affecting factors, SPAD
【中文摘要】测定叶片氮素含量是诊断茶树氮素状况的一项重要方法。本文利用盆栽试验,通过不同的供氮水平,研究了利用叶绿素仪(SPAD-502)进行茶树氮素营养快速诊断的适用性。结果表明,茶树新梢产量与氮素用量、成熟叶氮素含量之间呈线性加平台的反应关系,成熟叶的SPAD 值与其全氮含量呈显著线性正相关,并与茶树产量存在着比较明显的关系拐点,初步显示SPAD 可以较好地表征茶树的氮素营养状况,有可能作为快速诊断方法用于指导茶树施肥,但是还需要通过大田试验进行进一步验证。本文还探讨了测定位点、叶位、天气状况、田间原位或离体测定方式、表面清洗以及样本量等因素对SPAD 测试精度的影响。
【英文摘要】Determination of nitrogen concentrations in tissues is an important diagnostic means for N status of plants. A pot experiment with tea plants applied with different amounts of N fertilizer was carried out to evaluate the usefulness of SPAD-502 as a diagnostic tool. The results showed that the yield of young shoots and N concentration of mature leaves responded to N application rates with a pattern of an initial linear increase before a platform was reached. There was a significantly positive linear relationship between the SPAD reading and total N concentration of mature leaves. The similar pattern of an initial linear increase followed by a platform was observed for the relationship between SPAD reading and the yield. These results suggested that the N status of tea plants may be characterized by the measurement of SPAD reading of mature leaves and the SPAD is a potentially useful rapid diagnostic tool in N fertilization recommendation. However, this needs further validation from field experiments. Those factors which may influence the precision of SPAD measurement, such as the point of test on a leaf, selection of leaves from twig (position), weather condition, in situ or in vitro analysis, surface cleaning and the number of leaves for a composite sample were also investigated.

【题目】杧果细菌性黑斑病病原细菌室内药剂筛选
【中文关键词】杧果;Xanthomonas campestris pv.mangiferaeindicae;药剂筛选
【英文关键词】mango; Xanthomonas campestris pv.mangiferae-indicae; pharmaceutical screening
【中文摘要】杧果细菌性黑斑病是杧果生产病害之一,该病会严重影响杧果的产量和质量。采用含毒介质法,以杧果细菌性黑斑病病原细菌为对象,进行室内评价17种药剂对该菌的抑菌效果。试验结果表明:抗生素类药物对该病菌效果较好,如利福平抑菌最低有效浓度仅为0.37μg/mL,庆大霉素、盐酸四环素、卡那霉素抑菌最低有效浓度均为3.75μg/mL,100 万单位链霉素、红霉素、氨苄青霉素抑菌最低有效浓度分别为7.5、15.00、18.75μg/mL;铜制剂类药物以噻菌铜抑菌效果较好,抑菌最低有效浓度为61.90μg/mL。此外,敌磺钠对该菌也有很好的抑菌效果,抑菌最低有效浓度为8.57μg/mL,与抗生素类药剂相当。该试验得到的一些对杧果细菌性黑斑病病原细菌有良好抑菌效果的药剂,为指导田间病害防治提供了参考。
【英文摘要】Mango bacterial black spot disease is one of the important diseases of mango that may seriously reduce fruit yield and appearance quality. 17 bactericides against Xanthomonas campestris pv. mangiferae-indicae, the pathogen of mango bacterial black spot, were tested using toxic agar plate method in laboratory. The results showed that antibiotics, such as rifampicin, gentamicin, tetracycline hydrochloride and kanamycin strongly inhibited the bacterium, with the minimal inhibitory concentration (MIC) of 0.37,

3.75, 3.75, 3.75 μg/mL, respectively. Sreptomycin, erythromycin and ampicillin were in exception; with MICs were 7.50 μg/mL, 15.00 μg/mL and 18.75 μg/mL, respectively. Among copper-based bactericides tested,thiodiazole-copper had the strong toxicity to the bacterium, with the MIC of 61.90 μg/mL. In addition, fenaminosulf has a good antibacterial effect with the MIC of 8.57 μg/mL. The bactericides with good antibacterial have potentiality to be used for future control of Xanthomonas campestris pv.mangiferae-indicae in field.

【题目】杧果畸形病病原菌的生物学特性的初步研究
【中文关键词】杧果畸形病 层出镰刀菌 生物学特性
【英文关键词】mango malformation; Fusarium proliferatum; biological characteristic
【中文摘要】杧果畸形病是世界各个杧果产区的重要病害。对发生在中国的杧果畸形病病原菌的生物学特性进行了初步研究。结果表明,病原菌生长的最适温度为24°C,最适pH为10;孢子萌发最适温度为24°C, 最适pH值5。病原菌能够利用试验的各种碳源和氮源, 碳源以果糖最好,氮源以蛋白胨最好,连续光照处理菌丝生长速率高于交替光照或持续黑暗处理。 分生孢子的致死温度为55°C,20 min或者60°C,5 min。

【英文摘要】Mango malformation threatens mango production worldwide. The biological characteristics of Fusarim proliferatum causing mango malformation in China were studied. The results showed that this fungus had an optimun fungal mycelia growth and conidia germination when cultured at 24 °C with the respectiive pH values being 10 and 5. The fungus was cultured in 7 carbon sources and 10 nitrogen sourses, and the results indicated that fructose and peptone were the best carbon and nitrogen source for the fungus growth, respectively. The fungus grew better in the continuous white fluorescent light than in the light/dark light regime or in the continuous darkness. The lethal temperature for conidia was 55 °C for 20 min or 60 °C for 5 min..

【题目】Genetic mapping of bph20(t) and bph21(t) loci conferring brown planthopper resistance to Nilaparvata lugens St å l in rice (Oryza sativa L.)0
【中文关键词】Keywords Brown planthopper Nilaparvata
lugens (BPH) Resistance genes Mapping
Genetic map bph20(t) bph21(t)
【英文关键词】Keywords Brown planthopper Nilaparvata
lugens (BPH) Resistance genes Mapping
Genetic map bph20(t) bph21(t)
【中文摘要】Abstract Brown planthopper(BPH) is one of themost serious and destructive insect pests of rice in mostrice growing regions of the world. In this study, twomajor resistance genes against BPH have been identifiedin an Oryza rufipogon (Griff.) introgression riceline, RBPH54. Inheritance of the BPH resistance inRBPH54 was studied by screening the resistance inparents, F1, F2 and BC1 generations against BPHbiotype 2. A population of BC3F2 lines was developedand SSR markers were employed for the genemapping, and new markers were designed for finemapping of the resistance genes, while sequenceinformation of BAC/PAC clones was used to constructphysical maps of the genes. The results showed that theBPH resistance in RBPH54 was governed by

recessivealleles at two loci, tentatively designated as bph20(t)and bph21(t). The locus bph20(t) was fine mapped tothe short arm of chromosome 6 about 2.7 cM to theupper marker RM435 and 2.5 cM to lower markerRM540 and in a 2.5 cM region flanked by two new SSRmarkers BYL7 and BYL8 which were developed inthe present study. The other BPH resistance locusbph21(t) was initially mapped to a region 7.9 cM toupper marker RM222 and 4.0 cM to lower markerRM244 on the short arm of chromosome 10. Forphysical mapping, the bph20(t)-linked markers werelanded on BAC/PAC clones of the reference cv.,Nipponbare, released by the International Rice GenomeSequencing Project. The bph20(t) locus wasphysically defined to an interval of about 75 kb withclone P0514G1. Identification and location of thesetwo genes in the present study have diversified theBPH resistance gene pool, which give benefit to thedevelopment of resistant rice cultivars, and the linkagePCR-based SSR markers for the bph20(t) and bph21(t)genes would help realize the application of the genes inrice breeding through marker-assisted selection.Keywords Brown planthopper Nilaparvatalugens (BPH) Resistance genes Mapping Genetic map bph20(t) bph21(t)

【题目】Correlation of resistance to brown planthopper with secondary metabolites of rice plants0

【中文关键词】Key words: Brown planthopper, Nilaparvata lugens St å l, field population, high performance liquid chromatography, model.

【英文关键词】Key words: Brown planthopper, Nilaparvata lugens St å l, field population, high performance liquid chromatography, model.

【中文摘要】It is very difficult and complex to distinguish and estimate rice varieties ’ resistance. Thus, it isnecessary to built up a simple, nicety, steady and speedy method of resistant appraisement. Secondarymetabolite is the important basic substance of rice resistance. The correlation of rice plant resistanceto brown planthopper (BPH), Nilaparvata lugens St å l, with 20 distinct secondary metabolite highperformance liquid chromatography (HPLC) peaks were investigated. Two resistance prediction modelswere established through multiple regression analysis. Model A was established for the resistance ofbrown planthopper (BPH) field population II, and model B was established for the resistance of fieldpopulation Bangladesh. The correlations between the BPH resistance levels (Y) of rice varieties and thepeak areas (X) were significant (R ’ = 0.961 and 0.942 for model A and model B respectively, p<0.01). Theresults showed that in model A, peak 2, 5, 6, 7, 11, 12, 13, 15, 16, 17 and 18 were the secondarymetabolites that affected the resistance to BPH. In model B, peak 1, 2, 5, 6, 7, 8, 10, 12, 13, 14, 15, 16,and 17 were the metabolite peaks that affected resistance. It was demonstrated that the resistantactivity of rice varieties to BPH was closely associated with quantitative combinations of manysecondary metabolites, which suggested that the BPH resistance of rice plants was the results ofactions of several secondary

metabolites that varied in contributions. The validation results showedthat field bioassay scores agreed with the simulated scores well, indicating that these models wereuseful and accurate. And these models can be used as fast assistant-method to evaluate the resistanceof rice plant to BPH and assist the selection of resistant rice plants for breeding.Key words: Brown planthopper, Nilaparvata lugens St å l, field population, high performance liquidchromatography, model.

【题目】影响芒果炭疽病病斑扩展的因素

【中文关键词】芒果炭疽病;病斑扩展

【英文关键词】mango anthracnose;lesion expansion

【中文摘要】采用离体叶片接种法,研究分生孢子浓度、芒果抗病性、温度、相对湿度、光照条件等因素对芒果炭疽病病斑扩展的影响。 结果表明,分生孢子悬浮液浓度对病斑扩展有显著影响,接种个分生孢子就能引起侵染;不同的芒果品种抗性级别和病斑大小之间显著相关;适合病斑扩展的温度是24~33°C, 最适宜温度28°C,高湿和全黑暗条件有利于病斑的扩展。

【英文摘要】Using detached leaf inoculation method, lesion expansion of mango anthracnose was observed under the conditions of various factors such as conidiophore concentration, mango disease resistance, temperature, ralative humidity and litht condition. The results showed that conidiophore concentration had remarkable effect on lesion expansion, and that infection could occur under only 4 conidiophores of the inoculum. The mango disease resistance was obviously correlated with the lesion size of the disease. The suitable temperature for lesion expansion ranged from 24 °Cto 33°C, with the optimun being 28°C, and high humidity and complete darkness facilitated lesion ixpansion.

【题目】水稻挥发性次生物质对褐飞虱的寄主定向及生长的影响.
【中文关键词】关键词:褐飞虱;挥发性次生物质;抗性
【英文关键词】KeyWords: N ilaparvata lugens (St¼l) (BPH) ; secondary volatiles; resistance
【中文摘要】摘要:从褐飞虱的抗虫与感虫水稻品种植株中提取挥发性次生物质,分析其对褐飞虱的定向选择、生长发育及成虫触角电位反应影响。结果表明,感虫品种TN1挥发性次生物质对褐飞虱生物型Ⅱ若虫的取食及生长发育未表现不良作用,对其定向选择有引诱作用;而抗虫品种IR36的挥发性物质对褐飞虱为负作用,表现为褐飞虱取食添加挥发性物质的人工饲料后,其死亡率均增加,生长发育受阻,且随着浓度的增加,不良影响加大。触角电位试验结果表明褐飞虱的电位反应总的趋势是对相同浓度的TN1挥发性物质的触角电位反应值比IR36大,且触角电位值基本都随着挥发性物质浓度的升高而增大;短翅型成虫电位值强于长翅型成虫,雄性成虫的电位值强于雌性成虫。挥发性物质气质联用检测分析结果发现抗虫与感虫水稻中挥发性次生物质的化学组成及含量相差较大,从抗感两个品种的挥发性物质中共检到44种已知化合物,部分化合物对褐飞虱有引诱作用。
【英文摘要】Abstract: Rice secondary volatiles were extracted from a p lanthopper resistant variety, IR36 , and a suscep tible variety,TN1 , and the effects of extracted volatiles on the orientation, growth and EAG response of N ilaparvata lugens (St¼l) , BPHadults were tested (Homop tera: Delphacidae) . Volatiles extracted from TN1 had a positive effect on feeding and growth ofN ilaparvata lugens, and they have attraction functuion on the insects, too. In contrast, volatiles from resistant variety IR36had opposite effects on BPH mortality and growing. The EAG results showed that the response to TN1 volatileswas strongerthan to IR36 volatiles, and that responseswere positively related to volatile concentration. EAG responses of short2wingBPHwere stronger than those of long2wingBPH, and male BPH wasmore responsive than female BPH adults. GC2MS analysis ofrice secondary volatiles showed chemical large discrepancy in composition between resistant variety IR36 and suscep tiblevariety TN1. There were a total of 44 volatile compounds identified from rice leaves, some of them attractants forN ilaparvata lugens.

【题目】芒果种质对炭疽病的抗病性评价
【中文关键词】芒果种质;芒果炭疽病;抗病性评价
【英文关键词】mango germplasm; mango anthracnose; disese resistance accessment
【中文摘要】采用离体叶片抗病性鉴定法对来自国内外的189 份芒果种质进行了抗炭疽病抗性评价,结 果表明:参 试种质中未发现免疫种质, 其中高抗种质9份、中抗种质55份、中感种质90份、感病种质34份和高感种质1份.对于这64份抗病种质, 应在炭疽病流行年份继续开展田间抗病性评价工作,同时结合农艺性状评价,确定种质是否能在生产上推广或能否作为育种材料。试验结果为189份芒果种质抗炭疽病创新利用奠定了基础。
【英文摘要】The detached disease resistance identification method was used to accessions of mango germplam introduced from home and overseas in their resistance to mango anthracnose. The results showed that no mango germplasm under assessment was

found immune to mango anthracnose, and that of all the germplasm 9 accessions were highly resistang, 55 moderately resistant, 90 moderately susceptible, 34 susceptible, and 1 highly susceptible. These 64 resistant accessions are recommended for field evaluation to observe their disease resistance and agronomic traits in the years when mango anthracnose prevails in order to make sure whether these accessions of mango permplasm can be popularized in production or used as breeding materials

【题目】食用菌菌渣利用研究现状
【中文关键词】食用菌菌渣;综合利用;研究进展
【英文关键词】Edible fungi Residue; Comprehensive Utilization; Progress
【中文摘要】随着食用菌产业的发展,食用菌菌渣的开发利用受到广泛关注。详细综述了食用菌菌渣利用的研究进展,从食用菌菌渣成份到综合利用各方面,包括食用菌栽培再利用以及用作饲料、肥料、生态环境的修复材料等方面的研究进行了系统总结和概括,并提出菌渣利用研究中存在问题和应用前景。
【英文摘要】With the vigorous development of edible fungi, the exploitation and utilization of edible fungi residue had received more and more attention. In this paper, the research progress and utilization of edible fungi residue were reviewed in detail, from the components of edible fungi residue into the various aspects of comprehensive utilization. It included the reuse of cultivating edible fungi, feed, fertilizer, eco-environment restoration materials, and at the same time, the existing problems of it ’s utilization and existing problems were also proposed.

【题目】双孢蘑菇菌渣堆肥及其肥效的研究
【中文关键词】双孢蘑菇 菌渣 堆肥 菌剂 肥效试验
【英文关键词】Agaricus b isporus; fungi residues; compost; microbial inoculant; fertilizer efficiency experiment
【中文摘要】为了促进农业废弃物资源的循环利用,以双孢蘑菇菌渣为研究对象,通过菌渣堆肥中添加发酵剂或鸡粪的处理,分析了堆肥过程中各个时期不同处理的温度、pH值、EC值、全氮、全磷和全钾的变化趋势,并用腐熟后的堆肥菌渣进行了水稻肥效试验。结果表明,双孢蘑菇菌渣堆制过程中加入发酵菌剂可快速提高堆体温度,与未加发酵菌剂的堆肥处理A相比,在堆肥中加入发酵菌剂后,堆肥中全氮、全钾和速效钾的含量增加量分别为处理A的3倍、1.43倍和2.67倍;菌渣堆肥结束后,处理A,处理B和处理C速效磷含量分别比发酵前增加了54.5%、38.5%和58.3%。菌渣肥水稻田间试验表明,双孢蘑菇菌渣有机肥能够促进水稻增产,菌渣堆肥增产效果优于不发酵菌渣,而加于菌剂处理的堆肥增产效果最佳,按400kg · 667m-2。施肥,水稻空瘪粒数少,穗粒饱满,水稻单产553.37kg · 667m-2,与当地常规施肥方式相比较增产20.55%,与不施肥处理相比较增产44.18%。
【英文摘要】The present study was designed to promote cyclic utilization of agricultural waste resources by taking A garicus bisporus residues as investigated subject. By adding microbial inoculant or chicken manures into the Agaricus bizporus residue compost, the change trends of temperature, pH value, EC value, total nitrogen, total phosphorus and total potassium at different periods in the compost preparation and in different treatments were analyzed. The performance of the residue compost on paddy rice were studied as well. The result showed that the addition of microbial i noculant during the preparation of Agaric us bisporus residues compost could rapidly increase the compost temperature. Compared with the treatment A, the contents of total nitrogen, total phosphorus and

available potassium in the compost added with the microbial inoculant increased by 3, 1.43 times and 2.67 times, respectively. After eomposting, the content of available phosphorus in the treatment A, treatment B and treatment C increased by 54.5%, 38.5% and 58.3% respectively. The field experiment of the residue compost on paddy rice indicated that organic fertilizer ofAgaricus bisporus residues could promote yield increase of paddy rice. The residue compost had better effect on crop yield than that of non-fermented residue. The residue compost added with microbialinoculant had the best effect. With fertilizer application at 400 kg.667 m-2, the paddy rice had less empty grain per ear and the yield reaches at 553.37 kg · 667 m-2, while the yield increased by 20.55% compared with that under conventional fertilizer application treatment and by 44.18% compared with that with no fertilizer application treatment.

【题目】外源重金属杏鲍菇生长发育的影响研究
【中文关键词】杏鲍菇 外源重金属 耐性指数 细胞超微结构
【英文关键词】Pleurotus eryngii; exogenous heavy metals; tolerance index; cell ultrastructure;
【中文摘要】杏鲍菇是中国等亚洲国家广泛栽培的一种食用菌,培养基中重金属影响杏鲍菇的生长和品质.采用常规袋栽培技术,通过对杏鲍菇栽培过程中添加不同水平Pb、As、Hg和Cd,研究了其毒害效应、耐受性以及对生长发育、产量的影响.结果表明,在试验设置的浓度范围内,外源添加Pb、Hg、Cd的处理对杏鲍菇菌丝生长均产生抑制作用,菌丝生长速度最低值分别比空白对照降低了24.0%、31.0%、18.7%;但浓度为5~50mg · kg<'-1>的As可能会促进菌丝生长,且添加As的处理促进杏鲍菇提早出菇.杏鲍菇对4种重金属的耐性指数排列顺序为As>Cd>Pb>Hg.添加一定浓度的重金属可导致杏鲍菇细胞变形、细胞壁溶解,且细胞质中形成大量黑色颗粒状结晶异物.因此,在杏鲍菇栽培中应控制其培养料中的重金属含量.
【英文摘要】Pleurotus eryngii is widely cultivated in China and other Asia countries,the growth and quality of P.eryngii can be affected by heavy metals in culture medium.The paper mainly studied the inhibited effects,tolerance index,growth and development of exogenous heavy metals on P.eryngii by the way to mixed different concentrations of As,Pb,Hg and Cd with culture medium during cultivated period.The results indicated that mycelium growth of P.eryngii was inhibited by the addition of exogenous Pb、Hg and Cd in medium, and the minimummycelium growth speeds under the treatments were 24.0% .31.0%. 18.7% lower than that of the control in the predetermined concentration range. However, the addition of As at the concentration of 5-50 mg-kg-' accelerated the mycelium growth and advanced the fruiting time. The tolerance of P. eryngii to the heavy metals was As>Cd>Pb>Hg. Addition of the heavy metals could cause the changes of cell ultrastructure of P. eryngii, including cytomorphosis, cell wall lysis, and formation of large amouts of black granular crystals in cytoplasm. Consequently, it was essential to control the concentrations of heavy metals in culture medium of P. eryngii.

【题目】胶孢炭疽病菌pH应转录调控因子基因的克隆与分析
【中文关键词】芒果; 胶孢炭疽菌; 环境 pH 应答转录调控因子基因
【英文关键词】mango; Colletotrichum gloeosporioides; pH-responsive transcription regulator gene
【中文摘要】参照油梨炭疽病菌(Collectrichum gloeosporioides)的环境 pH 应答转录因子基因pac1 设计1 对特异性引物,以芒果炭疽病菌(C. gloeosporioides)基因组 DNA为模板,扩增获得大小为2 625 bp 的目的基因片段。序列分析结果表明,目的片断包含完整的阅读框,与油梨炭疽病菌pac1 基因相应片段长度相同,二者碱基序列同源性达97 %. 用RT- PCR 技术获得

pac1 基因cDNA 片段,证实目的基因片段中存在3 个大小分别为59,50,71 bp 的内含子。拼接的全长cDNA 长1 755 bp ,推测编码的氨基酸序列长584 个氨基酸残基,与推测的油梨炭疽病菌 1 基因所编码的蛋白质同样大小,二者氨基酸序列相似性达99%,只有 1 个氨基酸的差异,可以肯定克隆的目的片段为 C. gloeosporioides pac1 基因,为进一步研究C. gloeosporioides侵染芒果时的pH 调控奠定了基础。

【英文摘要】According to nucleotide sequence of pac1 gene of avocado anthracnose causal agent,a pair of primers specific for pH-responsice transcription regulator gene pac1 were designed and used to ampligy a fragment homologous to pac1 gene from a strain A2 of colletotrichum gloeosporioides isolated from mango with anthracnose symptom. The amplified fragment was 2625 bp in size and covered a whole 17 bp open reading frame like pac gene, containing three putative introns,respectively.

【题目】几种改良剂及其复合对Cd污染菜园土上油菜生长和生理代谢的影响

【中文关键词】改良剂 生理代谢 叶绿素荧光参数

【英文关键词】Amendment; Physiological metabolism; Chlorophyll fluorescence parameter

【中文摘要】用盆栽试验,研究几种改良剂及其复合对Cd污染菜园土上小油菜产量、镉吸收量、酶活性、叶绿素荧光参数的影响。结果表明:对照处理SOD、POD和CAT含量最高,叶绿素荧光参数Fo上升,B、C、Ev,和Fv/ro均下降,表明植株受到逆境胁迫,生物量显著下降,加入菌渣及复合剂后油菜的外部胁迫减小.生物量增加,高量菌渣处理比对照提高7.5倍,可能与菌渣中含有丰富的养分有关。油菜叶中Cd的含量以石灰处理最低,石灰与高量菌渣配施的处理Cd含量比对照降低81.9%.达到国家食品卫生标准.油菜叶中Cd含量低于根中含量。

【英文摘要】The effects of fungi residues and compound activity and chlorophyll fluorescence parameters were on rape biomass, the uptake of cadmium by rape, enzyme studied using pot experiments. Results showed that the control treatment concentration of SOD, POD and CAT were the highest. The chlorophyll fluorescence parameters of Fo was increased, Fm, Fv, Fv/Fm and Fv/F0 were decreased. These showed that the rape under stress and the biomass decreased. The rape stress would be reduced and the yield would be increased by adding fungi residues and compound. The high fungi residue treatment showed the highest yield by 7.5times compared with the control treatment. The amount of absorbed Cd in rape was decreased after the fungi residue and compound application. Lime application showed the best effect to decrease the Cd content in rape leaf. The treatment of lime and high fungi residue co-application wouold lead to Cd content reduction by more than 81.9% compared with the control treatment. The amount of Cd in the rape after adding lime or lime and high fungi residue co-application was within the food safety standard.

【题目】添加猪粪渣下竹荪中蛋白质营养价值效应的主成分分析

【中文关键词】竹荪 猪粪渣 营养价值 相关分析 主成分分析

【英文关键词】NULL

【中文摘要】应用多元统计成分分析法,对添加不同量猪粪渣竹荪中蛋白质营养价值的6个主要营养指标进行相关及主成分分析。结果表明:竹荪子实体的化学评分与生物价、营养指数和氨基酸比值系数分呈极显著正相关;生物价与营养指数和氨基酸比值系数分呈极显著正负相关。主成分分析显示,可将原6个营养指标综合为2个主成分,其累积贡献率可达99.63%。根据主成分对原性状的综合能力进行营养价值分析,2个主成分可分别解释为可称为化学评分、生物价和营养指

数效应因子及氨基酸评分和必需氨基酸指数效应因子,建立了主成分方程。并计算出各处理的主成分得分和综合得分,排序第一的为B1处理,所以B3处理为较佳的处理。

【题目】菌渣对水稻生长性状、产量及土壤肥力的影响
【中文关键词】菌渣 水稻 生长性状 土壤肥力
【英文关键词】mushroom dregs ; rice ; growth traits ; soil fertility
【中文摘要】利用菌渣进行水稻生产小区试验,以探索其对水稻的增产效果及土壤肥力的影响。试验设无肥、化肥、低量菌渣、中低量菌渣、中量菌渣和高量菌渣6个处理。经过2年的小区试验表明,施用菌渣可有效增加水稻的分蘖数、有效穗数,提高稻谷产量;有效增加稻田土壤的碱解氮、速效钾和有机质含量。在水稻生产中,菌渣的直接施用量以7 180 kg/hm2较为合适。
【英文摘要】In a plot experiment, utilization of mushroom dregs for carrying on the rice production, which was to probe into the effect of rice yield and soil fertility. The experiment was designed for six treatments which were the no fertilizer control (CK1), a single application of chemical fertilizer (CK2), low quantity of mushroom dregs, medium-low quantity of mush- room dregs, medium quantity of mushroom dregs, and higher quantity of mushroom dregs. The result of two years' plot ex- periment showed that fertilizing mushroom dregs increased number of sub-lotus, effective panicles, improved rice yield and had a positive effect on the content of available nitrogen, available potassium and organic matter of paddy soil. It was concluded that the content of fertilizing mushroom dregs was 7 180 kg/hm2which was suitable relatively.

【题目】姬松茸^60Co辐射诱变菌株J5与原菌株J1蛋白质营养价值比较
【中文关键词】姬松茸 ^60Co辐射菌株 潮次 营养价值
【英文关键词】Agaricus blazei; ^60Co radiated mutant strain; flush; nutrition value
【中文摘要】采用非生物学评价法对姬松茸^60Co辐射诱变菌株J5和其原菌株J1不同潮次菇蛋白质的营养价值进行评价。结果表明:J5子实体的必需氨基酸指数、生物价、营养指数、氨基酸比值系数分、化学评分和氨基酸评分分别比J1高1.02%、2.26%、2.93%、11.72%、9.35%和5.13%;以上6项蛋白质评价指标中,J5第1、第2、第3、第4潮菇分别有4、5、5、6项指标高于J1,表明J5子实体的蛋白质营养价值高于J1。
【英文摘要】The protein nutrition of ^60CoCo-radiated mutant strain J5 ofAgaricus blazei and its original strain J1 in different growing flushes were studied by non-biological evaluation. The results showed that essential amino acid index, biological value, nutritional index, score of ratio coefficient of amino acid, chemical score and amino acid score of fruit bodies of mutant strain is were 1.02%, 2.26%, 2.93%, 11.72%, 9.35% and 5.13% higher than that of strain J1 respectively. Four, five, five and six protein indexes respectively in the first, second, third and fourth growing flushes of mutant strains J5 were higher than that of its original strain J1. These results indicated that the protein nutrition of mutant strain J5 was higher than that of strain J1.

【题目】灰色关联分析硒镧复合作用下巴西蘑菇氨基酸含量与铅含量的关系
【中文关键词】巴西蘑菇 氨基酸 重金属铅 灰色系统理论 关联度
【英文关键词】Agaricus brasiliensis; Amino acid; Pb; Grey system theory; Relational grade
【中文摘要】用灰色系统理论分析硒镧复合作用下巴西蘑菇子实体中17种氨基酸含量与重金属铅含量的关系。结果表明:在硒镧复合作用下,巴西蘑菇子实体氨基酸含量与铅含量的关联度顺序为:异亮氨酸〉赖氨酸〉缬草氨酸〉脯氨酸〉亮氨酸〉丝氨酸〉苯丙氨酸〉天门冬氨酸〉甘氨酸〉精氨酸〉丝氨酸〉组氨酸〉胱氨酸〉酪氨酸〉苏氨酸〉丙氨酸〉甲硫氨酸。其中,异亮氨酸含量与重金属铅含量关联度最大,为0.8148。关联度越大,相似程度就越高,说明硒镧复合作用下巴西蘑菇子实体中异亮氨酸含量与重金属铅含量的关系最为密切;其次是赖氨酸和缬氨酸。关联度最小的是甲硫氨酸。各处理的关联度及排序为:B4〉B0〉B3〉B1〉B2。其中,B4处理关联度最大,B2处理关联度最小。说明硒镧浓度对巴西蘑菇子实体铅含量与各氨基酸含量有一定效应。
【英文摘要】The relationship of 17 amino acid contents and Pb content in the fruit bodies ofAgaricus brasiliensis under interaction of Se and La has been analyzed by grey system theory herein. The results showed that, under the interaction of Se and La, the order of relational grade with Pb content among 17 amino acids was Ile〉 Lys〉 Val〉 Pro〉 Leu〉 Ser〉 Phe〉 Asp〉 Gly〉 Arg〉 Trp〉 His〉 Cys〉 Tyr〉 Thr〉 Ala〉 Met. The Ile content was the biggest relational grade with Pb content among 17 amino acids, the value was 0. 814 8. The Lys and Val contents ranked the second, and the lowest was Met. The order of relational grades in different treatments was B4〉 Bo〉 B3〉 B1〉 B2, among which, B4 got the biggest relational grade and B2 got the lowest. Available data proved that the concentration of Se and La had certain effects on Pb and amino acid contents in the fruit bodies of Agaricus brasiliensis.

【题目】姬松茸^60Co辐射新菌株J_3营养成分与农药残留分析
【中文关键词】食用菌 氨基酸 脂肪酸 重金属 农药残留
【英文关键词】edible fungus; amino acid; fatty acid; heavy metal; pesticide residua
【中文摘要】通过常规生产床栽,对比研究姬松茸60Co辐射新菌株J3和原菌株J1在营养品质以及重金属含量和农药残留情况。结果表明,姬松茸60Co辐射新菌株J3子实体中鲜味氨基酸总量(56.5g.kg-1)、甜味氨基酸总量(52.4g.kg-1)、硫氨基酸总量(15.8g.kg-1)、支链氨基酸总量(38.1g.kg-1)、芳香族氨基酸总量(16.1g.kg-1)、儿童氨基酸总量(17.8g.kg-1)、必需氨基酸总量(95g.kg-1),分别占氨基酸总量(221.7g.kg-1)的25.48%、23.64%、7.13%、17.19%、7.26%、8.03%和42.85%,分别比姬松茸J1高28.12%、12.93%、0%、14.41%、12.59%、16.34%和11.76%。J3的多不饱和脂肪酸(76.15%)和不饱和脂肪酸(77.55%)分别比姬松茸原菌株J1高4.39%和3.82%。J3子实体含镉(3.86mg.kg-1)、汞(0.42mg.kg-1)和砷(0.09mg.kg-1),也分别比原菌株J1低45.86%、32.25%和18.18%;其铅含量符合国家食用菌卫生标准GB7096—2003;砷含量符合国家绿色食品食用菌NY/T749—2003的标准。子实体中联苯菊酯、溴氰菊酯、百菌清、六六六、多菌灵、阿维菌素、甲基托布津、甲胺磷、毒死蜱、滴滴涕和二氧化硫含量均符合国家绿色食品食用菌NY/T749—2003的标准。
【英文摘要】Agaricus blazei Murill as rare edible fungi was adored by more and more customers.But with the increasing attention of food hygiene quality,it was important guidance of the safety production of Agaricus blazei to understand the health status of Agaricus blazei in the actual cultivation.This paper studied the difference in terms of nutritional quality,heavy metal contents and pesticide residues between strain J3 and J1.The results showed that the contents of delicious amino acid(56.5 g · kg-1),sweet amino acid(52.4 g · kg-1),sulfur amino acid(15.8 g · kg-1),branched chain amino acid(38.1 g · kg-1),aromatic amino acid(16.1 g · kg-1),children amino acid(17.8 g · kg-1),necessary amino acid(95.0 g · kg-1)in the fruit bodies of Agaricus blazei J3,occupied 25.48%,23.64%,7.13%,17.19%,7.26%,8.03% and 42.85% of total amount of amino acid(221.7 g · kg-1),respectively.These values were 28.12%,12.93%,0%,14.41%,12.59%,16.34% and 11.76% respectively higher than those of Agaricus blazei J1.The content of polyunsaturated fatty acids(76.15%) and unsaturated fatty acid(77.55%) in Agaricus blazei J3 were 4.39% and 3.82% higher than Agaricus blazei J1,respectively.The contents of cadmium,mercury and arsenic in fruitbodies of Agaricus blazei J3,were 3.86 mg · kg-1,0.42 mg · kg-1 and 0.09 mg · kg-1,respectively,and decreased by 45.86%、32.25% and 18.18% than those of Agaricus blazei J1.Lead

content was lower than the limit of mushroom health standard of China(GB 7096—2003).Arsenic content was also lower than national green food standard for edible fungus(NY/T 749—2003) in China.The residues of pesticides in the fruitbodies of Agaricus blazei J3,such as bifenthrin, decamethrim, chlorothalonil, hexachlorocyclohexane,carbendazim,avermectins,thiophanate-methyl, methamidophos, chlorpyrifos,DDT and SO2,were lower than the limits of national green food standard for edible fungus(NY/T 749—2003),respectively.Therefore,strain J3 of Agaricus blazei has a higher application value.

【中文关键词】大球盖菇 黄酮类化合物 提取率 抑菌性
【英文关键词】Stropharia rugoso-annulata Farlow; flavonoids; extraction rate; antibacterial activity
【中文摘要】为了探讨大球盖菇黄酮类化合物提取工艺及其抑菌效果,通过正交试验确定了大球盖菇黄酮类化合物的优化提取工艺条件;采用大球盖菇黄酮类化合物对大肠杆菌、青霉菌、啤酒酵母进行抑菌试验.结果表明,优化后的提取工艺为:乙醇体积分数95%,物料比为1∶90,温度60℃,时间120 min,提取率为7.94‰.40 g/L的大球盖菇黄酮类化合物溶液对大肠杆菌和青霉菌有抑制作用;20 g/L和10 g/L的溶液只对大肠杆菌有抑制作用,对青霉菌没有抑制作用;大球盖菇黄酮类化合物对啤酒酵母没有抑制作用;对大肠杆菌的抑制作用要强于对青霉菌的抑制作用.

【英文摘要】The flavonoids were extracted from Stropharia rugoso-annulata Farlow and the antibacterial activity on E.coli,Penicillium and S.cerevisiae was studied in this paper.The extraction conditions of flavonoids were optimized by orthographic experiment.The extraction rate could get to 7.94‰ under the optimum extraction conditions including ethanol concentration of 95%,material ratio of 1∶90,60℃,and 120min.The growth of E.coli and Penicillium could be inhibited by 40g/L of the flavonoids from Stropharia rugoso-annulata Farlow.Only E.coli could be inhibited by 20g/L and 10g/L of the flavonoids.The flavonoids showed no obvious inhibition effect on S.cerevisiae.The results indicated that the flavonoids from Stropharia rugoso-annulata Farlow have stronger inhibition effects on E.coli than Penicillium.

【题目】畜牧业发展与低碳经济
【中文关键词】畜牧业 低碳经济 污染 资源 节粮
【英文关键词】animal husbandry; low-carbon economy; pollution; resource; save food
【中文摘要】低碳经济指的是在发展中排放最少的温室气体,同时获得整个社会最大的产出经济,它是以低能耗、低排放、低污染为基础的经济模式。低碳经济既是经济问题,又是环境问题,也是社会问题。文章就中国畜牧业的发展面临养殖业环境污染和粮食安全两大难题进行了深入剖析,指出中国畜牧养殖业必须走低碳经济之路,应通过畜禽污染废弃物的资源化利用和营养调控措施,实现节能减排;合理利用农工业废弃物资源,包括合理利用秸秆、粮油食品工业等废弃物资源,实现节粮生产,并以循环经济理念指导,大力发展循环养殖模式,实现中国畜牧业的可持续发展。同时针对当前中国畜牧业实现向低碳经济型转型存在的诸多问题,提出了应突破观念创新、科技创新和管理创新,推进低碳经济发展。
【英文摘要】Low-carbon economy refers to the least greenhouse gases discharged during the development of economy, to gain the largest output of the entire social economy at the same time. It is the economic model that is based on low-power, low emissions, low pollution. Low-carbon economy not only is economic problem, but also is environmental problems and the social problems. The paper analyzed thoroughly the two difficult problems of environmental pollution and food security that the development of animal husbandry faced in our country, pointed out that the animal husbandry industry must take the road of low-carbon economy, and it should achieve energy saving and emission reduction through resource utilization of animal wastes and nutritional manipulation measures; To utilize agro-industrial wastes resources rationally, including the rational use of the waste resources of straw, food and oil industry to achieve grain-saving production, and to achieve the sustainable development of animal husbandry and vigorously develop the cycling breeding pattern in the guidance of circular economy concept. At the same time, according to many problems which exists in the transition from animal husbandry to a low carbon economy, put forward that it should breakthrough innovation, technology innovation and management innovation to promote the development of low-carbon economy.

【题目】工厂化生产双孢蘑菇栽培种关键工艺研究
【中文关键词】双孢蘑菇 栽培种 透气塑料袋 关键工艺
【英文关键词】mushroom; spawn; breathable bag; key techniques
【中文摘要】通过对不同透气膜的透气塑料袋、不同配方的原种进行比较试验,从麦粒基质含水量、麦粒基质表面理化性状以及抗菌素添加配比等研究适合工厂化生产的双孢蘑菇栽培种。结果表明:T型透气膜的透气塑料袋更适合现有工厂化

生产工艺条件;矿物原种为生产双孢蘑菇大袋栽培种的理想用种;蒸煮后的小麦培养基含水量控制在42%~45%能保证栽培种较高成品率;小麦蒸煮时添加0.3%石灰、2%CaSO4、4%CaCO3与能使麦粒表面附着1层厚度适合的弱碱性包衣,其黏度、酸碱度等理化性质适合双孢蘑菇菌丝生长,比杂菌具有较强的竞争优势;添加0.02%苯骈咪唑44号、农用硫酸链霉素0.025%(干重浓度)能防止双孢蘑菇栽培种生长后期多种霉菌及细菌污染,且对双孢蘑菇菌丝影响微弱。

【英文摘要】By varying the breathable plastic bags,formulation of mother spawns,moisture levels of the wheat,external physical and chemical characteristics of the wheat,and antibiotics added to the wheat,the mass producing of mushroom spawns was optimized.The results showed that(a) T type breathable bags was suitable for the application;(b) the mineral mother spawn was the best;(c) moisture level should be in the range of 42% to 45% to yield the highest production rate;(d) cooking wheat with 0.3% quicklime,2% gypsum and 4% calcium carbonate resulted in a alkaline coat on the wheat, which is conducive to mycelium growth and improves its competitiveness to other mieroorganisms; and, (e) cooking wheat with 0. 02% benzimidazole 44 and 0. 025% streptomycin sulfate prevented spawns from mold and bacterial infections during incubation, while being harmless to the mycelium development.

【题目】施氮对圆叶决明生物固氮及氮肥利用效率的影响

【中文关键词】圆叶决明 15N示踪 生物固氮 氮素利用率

【英文关键词】Chamaecrista rotundifolia; biological nitrogen-fixation; nitrogen utilization efficiency;

【中文摘要】采用15N同位素示踪方法,对不同施氮水平下的圆叶决明生物固氮水平,氮肥的分配、氮素来源,以及氮肥的利用率、土壤残留、挥发损失进行研究。结果表明:圆叶决明生物固氮百分率随着施氮水平的增加呈先升高后下降的趋势,并在N2(30mg/kg)水平下达到最高,为29.50%,之后逐渐下降,且各处理间差异极显著。随着施氮量的增加圆叶决明对肥料氮的吸收增加,而对土壤氮的吸收降低。在较低(N2)施氮水平下,圆叶决明所需的氮主要来自土壤氮(56.17%)和生物固氮(29.50%);较高(N4)施氮条件下圆叶决明所需的氮主要由肥料氮(43.46%)和土壤氮(45.49%)提供。随着施氮水平的提高,圆叶决明氮肥利用率也逐渐降低,而氮素残留率逐渐升高。就氮肥损失率而言,N1(15mg/kg)、N2(30mg/kg)和N3(45mg/kg)处理间的差异不显著,N4(60mg/kg)处理损失率最小。

【英文摘要】Isotope 15N was used to analyse the biological nitrogen (N)-fixation rate and N distribution in the plant, the plant N source, N utilization efficiency, soil N residue, and N volatilization loss under different N fertilizer levels. The biological N-fixation rate of Chamaecrista rotundifolia showed a trend of increasing and then decreas- ing, climbing to the peak of 29.50% at the N2 level (30 mg/kg) and then gradually decreasing, had a highly sig- nificant difference between the treatments. At a certain N level, the N absorption of C. rotundifolia increased from the N fertilizer as the N fertilization rate increased, but the N absorption decreased from the soil. At the low N fertilization level, the main N required by C. rotundifolia was mainly supplied by soil N (56.17%) and biological N-fixation (29.50%), but at the high nitrogen fertilization level it was mainly supplied by fertilizer N (43.46%)and soil N (45.49%). As the N fertilization rate increased, the N utilization efficiency of C. rotundifolia gradually decreased, but the N residue rate increased gradually. There was no significant difference in loss of N fertilizer among the treatments N1 (15 mg/kg), N2 (30 mg/kg) and N3 (45mg/kg), and treatment N4 (60 mg/kg) had minimum loss of N fertilizer.

【题目】硒镧复合作用下姬松茸氨基酸数量性状的因子分析
【中文关键词】姬松茸 因子分析 氨基酸组分 综合评价
【英文关键词】Agaricus blazei Murill; Factor analysis; Amino acid component; Comprehensive evaluation
【中文摘要】对硒镧复合作用下姬松茸氨基酸数量性状进行因子分析。结果表明,硒镧复合作用下姬松茸氨基酸的17个数量性状,可提取为2个公因子,其累积方差贡献率达93.66%,具有较好地反映这些性状所包含的信息。按照主因子所包含的性状及其所反映的营养学和药学含义,可把2个主因子命名为芳香族氨基酸、支链氨基酸因子和鲜味氨基酸因子。一个2因子的模型能够合理地解释氨基酸含量间的相关关系。其因子得分可用于对硒镧复合作用下氨基酸质量的综合评价,证实氨基酸含量与硒镧复合作用下姬松茸含量之间大部分存在着极显著相关性.这些研究为以后姬松茸的栽培及营养学和药学机理提供科学依据。
【英文摘要】The factors affecting quantitative characters of amino acids in Agaricus blazei Murill under interaction of Selenium and Lanthanum were analyzed.Results showed that,17 quantitative characters of amino acids in Agaricus blazei Murill could be induced into 2 common factors,which the contributing rates reached 93.66% and fairly reflected the information included in these characters.According to the characters included in the main factors and its meanings in nutrition and pharmacology,the 2 main factors could be named as the factor of aromatic amino acid and branched chain amino acid and the factor of flavor amino acid.A double factor model could reasonably explain the correlation among different amino acid contents.The factor scores could be used in the comprehensive evaluation on amino acid qualities under interaction of Selenium and Lanthanum.It was proved that a very significant correlation occurred between amino acid contents and yields of Agaricus blazei Murill under interaction of Selenium and Lanthanum.This study provided a scientific basis for the cultivation of Agaricus blazei Murill and the mechanism of its nutrition and pharmacology.

【题目】镧在草-菇-土系统中的循环与生物富集效应
【中文关键词】镧; 草-菇-土系统; 循环; 生物富集; 南非马唐; 杏鲍菇;

【英文关键词】lanthanum; forage-mushroom-soil system; recycling; bioaccumulation; Digitaria smutsii; Pleurotus eryngii;
【中文摘要】利用稀土镧肥种植牧草南非马唐,采用含镧牧草栽培杏鲍菇和以菇渣作为有机肥种植牧草进行连续性试验,研究镧在草-菇-土系统中的分配与生物富集情况。结果表明:施镧处理的南非马唐和杏鲍菇各器官的镧元素含量均高于不施镧处理,其中镧在牧草南非马唐中的分布为根>叶>茎,镧在杏鲍菇中的分布为菌盖>菌柄;外源镧进入土壤以后,南非马唐不同器官的镧元素生物富集系数均随着镧施入量的增加而增大,其中以根的镧生物富集系数最大,介于0.443—0.580之间。除高剂量(M4)处理外,叶和茎的镧生物富集系数不同处理间无显著差异,但根出现明显变化;含镧牧草栽培杏鲍菇和菇渣种植南非马唐后,不同器官的镧含量无显著增加,说明镧残留在草-菇-土系统中迁移转化效率降低。
【英文摘要】Rare earth elements(REE) and their compounds have been widely applied in agronomic and medical fields for many years.The bioinorganic chemical research of REE in the past few years indicates that REE play important roles in the promotion of photosynthesis,root absorption, and regulation of hormone and nitrogen metabolism.There was an increasing interest in the bioaccumulation processes of rare earth elements(REEs) due to the wide application of REEs in a variety of non-nuclear industries and agriculture,resulting in possible environmental contamination. Investigations into the bioaccumulation characteristics of REEs have been carried out in recent years as sensitive techniques such as inductively coupled plasma-mass spectrometry (ICP-MS) and neutron activation analysis (NAA) have became available. Despiteextensive studies on REE uptake and transport in plants,few studies have been carried out on the REE fractionation in the soil plant system via laboratory experiments. However,little attention has been paid to the REE fractionation and migration in the multi-link food chain. In this study,three cultivation experiments were carried out,including the pot experiments of Digitaria smutsii cultivation with La fertilizer and mushroom residue fertilizer,and the experiment of Pleurotus eryngii cultivation using La-applied forages as medium. The distribution and biological concentration of lanthanum (La) in the forage-mushroom-soil system were discussed. The results showed that the trend of La adsorption of D. smutsii were root > leaf > stem. La concentration in all organs of forage increased with the increase of La application rate. La relative contentof roots in La application treatments rose significantly,increasing by 10. 76% - 31. 37% compared with the control. Theyield of P. eryngii fruitbodies with the La application treatment increased by 16. 10% compared with that of the no-La application treatment,but there was no significant difference between them. The trend of La adsorption of P. eryngii were pileus > stipe. There was no significant difference in the La concentration of P. eryngii between the La application treatment and the control. La concentration in fruitbodies were 0. 7 mg /kg or so,lower than the critical limit of rare plant food standards in China (2 mg /kg) . The results also showed that the bioaccumulation coefficients of La by D. smutsii increased with increasing La dose,and that the bioaccumulation coefficient of root was the highest,ranging between 0. 443 and 0. 580. Except for the high-dose La treatment (M4) ,there was no significant difference about the bioaccumulation coefficients of La by leaf and stem among the other treatments,but that of root obviously varied. The results of P. eryngiicultivation with La-applied forage showed that there was no significant difference about the bioaccumulation coefficients of La by pileus and stipe. But La bioaccumulation coefficients of the control were 2. 45 - 2. 61 times of that of the La application treatment. This explained that the La bioavailability in forage was lower to P. eryngii. The results of D. smutsii cultivation with residues showed that there were no significant difference about La bioaccumulation coefficients among different treatments. This study revealed that reuse efficiency of exogenous La gradually decreased after several biological cycles. Onlya small amount of lanthanum was absorbed by living organisms,most of the La elements still remained in the environment.

【题目】大球盖菇多糖的分子质量分布及其单糖的组成
【中文关键词】大球盖菇; 多糖; 分子质量;
【英文关键词】Stropharia rugoso-annulata; polysaccharides; molecular weight;
【中文摘要】【目的】从大球盖菇(Stropharia rugoso-annulata)中提取多糖,并对其分子质量及组成糖进行研究。【方法】采用水提法提取大球盖菇多糖,利用高效液相色谱法研究大球盖菇多糖分子质量分布及提取过程中多糖分子质量的变化,并采用红外光谱、核磁共振法对其组成糖进行研究。【结果】大球盖菇多糖水溶性多糖类物质的分子质量分布于22 kD附近;大球盖菇多糖同时存在α和β糖苷键,以吡喃糖为主,由5种单糖构成,其中有D-果糖、D-葡萄糖和D-木糖。【结论】以稀盐溶液为流动相的检测手段更能真实地反映大球盖菇多糖的分子质量分布情况,大球盖菇多糖是由5 种单糖组成的杂多糖。
【英文摘要】【Objective】The aim of this paper was to extract and isolate Stropharia rugoso-annulata polysaccharides and analyze the molecular weight and component sugar of polysaccharides.【Method】In this paper,polysaccharide from Stropharia rugoso-annulata was obtained by water extraction method,which the molecular weight distribution and changes during extraction course was investigated by using high performance liquid chromatography.The component sugar of the polysaccharides were also measured by

infrared spectrum and nuclear magnetic resonance methods. 【Result】The molecular weight distribution of water soluble polysaccharides from Stropharia rugoso-annulata was about 22 kD, α and β glucosidic bonds were co-exist inpolysaccharides molecule which contain 5 kinds of monosaccharides. The main monosaccharide was pyranose. D-fructose, D-glucose and D-xylose exist in polysaccharides molecule. 【Conclusion】 The detection method with hydrochloric acid solution as the mobile phase can reflect more real molecular weight distribution of polysaccharide from Stropharia rugoso-annulata, and Stropharia rugoso-annulata polysaccharide is a heterosaccharide which is composed of five monosaccharides.

【题目】不同配方下姬松茸营养价值效应的主成分分析

【中文关键词】姬松茸; 营养价值; 相关分析; 主成分分析;

【英文关键词】Agaricus blazei Murrill; nutrient value; correlation analysis; main component analysis;

【中文摘要】应用多元统计成分分析法,对不同配方下姬松茸蛋白质营养价值的6个主要营养指标进行相关及主成分分析。结果表明:姬松茸的化学评分与氨基酸评分和营养指数呈极显著正相关,氨基酸评分与营养指数呈显著正相关,必需氨基酸指数与生物价呈极显著正相关。主成分分析显示,可将原6个营养指标综合为2个主成分,其累积贡献率可达93.52%。根据主成分对原性状的综合能力进行营养价值分析,2个主成分可分别解释为氨基酸评分和化学评分效应因子及营养指数效应因子,并建立主成分方程。据此计算出各配方的主成分得分和综合得分,排序第一...

【英文摘要】Using multi-factor statistical analysis for main components,the correlative and main components of six chief nutrient indexes related to the protein nutrient value of Agaricus blazei in different medium formula was analyzed in the current work.Results showed that the chemical score and amino acid score were positively significantly correlated to nutritional index,and the essential amino

acid index was positively significant correlated to biological value.The main component analysis showed that the six chief...

【题目】木薯新叶斑病病原鉴定及其生物学特性
【中文关键词】木薯;离蠕孢;生物学特性;杀菌剂
【英文关键词】Cassava; Bipolaris setariae; biological characteristics; fungicides
【中文摘要】2008和2009年在对木薯主产区病害的普查中,发现了一种新的叶斑病,命名为离孢叶斑病。形态观察结果表明病原菌分生孢子梗丛生,褐色,基细胞膨大呈半球形,成熟的分生孢子长椭圆形,两端钝园,具5~8个隔膜,表明其为狗尾草离孢。ITS序列分析表明其和一株狗尾草离孢(EF452444)的序列同源性为99 %。生物学特性研究表明,PDA培养基、28 ℃、pH 7和光暗交替是菌落生长最适条件,D-葡萄糖和硝酸钠是其最适碳氮源,孢子萌发最适温度和致死温度分别为28 ℃和55 ℃ 5 min。10种杀菌剂的室内筛选结果表明,咪鲜胺(25 %咪鲜胺EC)的EC50值最小,抑菌效果最好。
【英文摘要】A new leaf spot disease was first found during a survey made from 2008 and 2009 in cassavamain growing regions. Microscopic examination showed the conidiophores were fasciculate and brown, and that the basal cell was enlarged and hemispheric. Well-developed conidia were long-obclavate, obtuse at both ends, with five to eight transverse septa, which indicated that the pathogen was Bipolaris setaria. The ITS sequence of the pathogen had homology of 99% with a sequence of B. setaria(EF452444). The optimum condition for mycelial growth included PDA medium, 28 益, pH7 and alternative light, and optimum carbon and nitrogen sources were D-glucose and sodium nitrate, respectively. The optimum temperature for conidia germination was 28 益and the lethal temperature for conidia was 55 益for 5 min. Ten fungicides were screened in laboratory, and prochloraz 25% EC was found to have the lowest EC50 value and best inhibition activity against the pathogen.

【题目】木薯炭疽病菌的室内杀菌剂筛选
【中文关键词】木薯炭疽病;杀菌剂;室内筛选
【英文关键词】Cassava Anthracnose, fungicides, laboratory screening
【中文摘要】采用菌丝生长速率法对两个来自海南的木薯炭疽病菌菌株进行了13种杀菌剂的室内筛选。结果表明,必扑尔(25 %丙环唑EC)、咪鲜胺(25 %咪鲜胺EC)和国光多菌灵(50 %多菌灵WP)的EC50值最小,抑菌效果最好;敌克松(55 %敌磺钠WP)和代森锰锌(50 %代森锰锌WP)的EC50值最大,抑菌效果最差,建议生产上使用丙环唑、咪鲜胺和多菌灵等来防治木薯炭疽病。
【英文摘要】Based on two Colletotrichum gloeosporioides isolates came from Hainan province, 13 fungicides were screened in laboratory by hypha growth rate method. Propiconazol 25 % EC, prochloraz 25 % EC and carbendazim 50 % WP were found to have the lowest EC50 value and good inhibition of C. gloeosporioides isolates, whereas fenaminosulf 55 % WP and mancozeb 50 % WP had the highest EC50 value and poor inhibition, propiconazol, prochloraz and carbendazim were suggested to be applied in the field control of Cassava Anthracnose.

【题目】First Report of Leaf Spot Caused by Bipolaris setariae on Cassava in China.
【中文关键词】木薯;离孢
【英文关键词】Cassava; Bipolaris setariae
【中文摘要】2009年,在海南省儋州市的木薯品种华南205上发现了一种新病害。经致病性评价、形态观察和ITS序列分析,证明该病由离孢侵染引起。
【英文摘要】Cassava (Manihot esculenta Crantz) is an important food crop in tropical regions of China. Seventy percent of the cassava output is used for starch and ethanol production and it has become the base of food and bioenergy industries. In July 2009, a new leaf spot disease was found on cv. HuaNan205 from a cassava plantation in Danzhou, Hainan Province. Disease occurred on 50% or less of the plants. Initial symptoms were elliptical, chlorotic, and water-immersion lesions of 2 to 4 mm in diameter. These lesions

became dry and yellow due to the progress of the disease. A brown halo was around the lesions, and in wet conditions, a dark gray mildew often appeared in the middle of the lesion. Diseased leaves turned yellow and the plants eventually became defoliated. The pathogen was isolated and pathogenicity was established by following Koch's postulates. Young, healthy, and fully expanded green leaves of Cassava cv. HuaNan205 were surface sterilized and then inoculated by spraying them with a suspension of conidia (1 × 105 conidia per ml) of the isolate. Sterile water was used as a control. The leaves were kept in a humid chamber at 28 ° C for 4 days, at which time similar symptoms to those described above were observed on the leaves. The pathogen was reisolated from inoculated leaves. Microscopic examination showed the conidiophores were fasciculate and brown, septate and straight, and the basal cell was enlarged and hemispherical. Well-developed conidia were long-obclavate, obtuse at both ends, straight, brown, with five to eight transverse septa, and measured 49.7 to 117.1 × 13.3 to 17.2 μ m. Genomic DNA of this isolate was extracted with a cetyltrimethylammoniumbromide protocol, and amplification and sequencing of the internal transcribed spacer (ITS) region of rDNA was performed with procedures outlined by Cooke et al. (2). The sequence of the region was deposited in GenBank (Accession No. GU290228). Comparison of the sequences available in the GenBank database revealed that the current ITS sequence differs by three base pairs from two Bipolaris setariae isolates (EF452444 and FJ606786). Morphological identification and sequence analysis of ITS rDNA showed that the pathogen was B. setariae. B. setariae is one of the most important pathogens of lawn grass, gramineous crops, and other plants (1,3). However, no leaf spot disease caused by B. setariae has been recorded previously on cassava in China or elsewhere.

【题目】Apcl基因在毕赤酵母中的表达
【中文关键词】"ApCl 基因 抗旱 抗盐 巴斯德毕赤酵母 生物抗逆
"
【英文关键词】"ApCl gene Drought-resistance Salt-resistance Pichia pastoris Biology anti-adversity
"
【中文摘要】"为了研究 ApCl 基因的功能,应用基因重组技术将 ApCl 基因片段克隆入大肠埃希菌—酵母穿梭质粒 pGAPZ α A,构建重组真核表达质粒 pGAPZ α A-ApCl,电转化巴斯德毕赤酵母 GS115,Zeocin 筛选出阳性克隆转化子。通过比较转化空载体 pGAPZ α A 和重组载体 pGAPZ α A-ApCl 的不同菌株分别在含有高盐和高山梨醇浓度的液体培养基中生长情况,发现毕赤酵母 GS115 在转化 ApCl 基因后其抗旱、抗盐能力显著提高(约 3 倍) ,进一步验证了 ApCl 基因对提高生物抗逆能力有显著作用,为将来分离该蛋白及进一步研究奠定基础。"
【英文摘要】"For research ApCl gene function,the DNA ApCl gene sequence was subcloned into yeast shuttle expression vectorpGAPZ α A,and the recombinant plasmid pGAPZ α A-ApCl was constructed. Pichia pastoris GS115 was electrotransformed withpGAPZ α A and pGAPZ α A-ApCl,and the postive transformants were selected in the medium of zeocin. Then,the two electrotransformedyeasts with different vectors were cultured in two kinds of mediums that have high levels of salt and sorbitol. Compared to Pichia pastorisGS115 with pGAPZ α A,transgenic yeast with ApCl gene grows faster,about there times of the contrast. It is proved that ApCl gene issignificant to prove biology anti-adversity. The finding settles a favourable base to study and research ApCl protein."

【题目】绿色荧光蛋白基因标记芒果畸形病病原菌研究
【中文关键词】芒果畸形病;层出镰刀菌;绿色荧光蛋白基因;转化
【英文关键词】mango malformation disease; Fusarium proliferatum; GFP; transformation
【中文摘要】芒果畸形病是世界性的芒果重要病害。采用介导的原生质体转化法用绿色荧光 蛋白(GFP)表达载体转化芒果畸形病病原菌,获得了表达的转化子。转化子经过单孢纯化后连续继代培养仍能发出稳定而强烈的荧光,通过特异性引物扩增转化子基因组获得预期片段,表明GFP基因已成功转入芒果畸形病病原菌基因组中且稳定遗传.GFP标记菌株生长正常,致病性和野生菌丝无差别。获得GFP标记的转化子,为应用发绿色荧光的芒果畸形病病原菌研究病原菌的侵染方式扩展过程等奠定了基础。

【题目】绿茶中的GCG 研究
【中文关键词】茶,GCG,高温蒸汽
【英文关键词】tea, GCG, high temperature steam
【中文摘要】采用HPLC 分析技术系统研究了国内茶树种质资源的GCG 含量、GCG 在绿茶加工过程中的变化以及高温蒸汽处理对绿茶中GCG 含量的影响。结果表明,在200 份茶树种质中发现GCG 的含量大于1.5%的茶树种质有5 个;绿茶加工过程中GCG 含量有持续增加的趋势,温度是影响茶叶GCG 含量的关键因素;茶鲜叶经过高温蒸汽处理,能有效提高绿茶中的GCG 含量。
【英文摘要】The GCG content in different tea germplasms, change of GCG content during green tea processing and the tea leaf treated with high temperature steam were studied by using the HPLC determination. Results showed that the content of GCG in five tested tea cultivars was more than 1.5% among 200 tea germplasms, and it was increased continuously during the green tea processing.

Temperature was the key factor that influenced the GCG content in tea, and the high temperature steam treatment could effectively increase the GCG content in green tea.

【题目】超高压处理对红碎茶感官品质和主要化学成分的影响
【中文关键词】超高压;茶叶;茶黄素;氨基酸;香气
【英文关键词】ultrahigh pressure;tea;theaflavins;amino acids;aroma
【中文摘要】经超高压处理后的茶鲜叶加工成红碎茶,对成品茶进行感官评定,香气组分分析,茶黄素(theaflavins)含量、茶红素(thearubigins)含量、游离氨基酸含量和水浸出物含量测定。结果表明:采用鲜叶→超高压处理(550MPa,10min)→室温密闭放置4h →切碎→发酵30min →烘干工艺制得的红碎茶,汤色红艳明亮,滋味浓强带鲜,带有花香,感官品质最优。和对照相比,按照最优工艺制得的红碎茶茶黄素含量提高20.43%,茶红素含量下降10.09%,游离氨基酸总量提高24.03%,水浸出物含量提高8.70%,呈甜味氨基酸(赖氨酸、丙氨酸、丝氨酸、脯氨酸) 有所增加,芳香型醇类、酯类、醛类物质的含量增加,而部分烷类物质含量下降。
【英文摘要】CTC black tea was procuded by following process: fresh tea leaves → urtra-high pressure processing (UHPP) (550 MPa for 10 min) → withering sealedly at room temperature for 4 h → cutting → fermenting for 30 min → drying. It was found that the urtra-high pressure processing can obviously improve the aroma of CTC black tea, in which the contents of alcohols, esters and aldehydes increase, but the content of some alkanes decreases. Compared with the control, the 550- MPa pressure processing for 5 min can increase the contents of theaflavins, free amino acids and water extracts in CTC black tea by 20.43%, 24.03% and 8.70% respectively, but decrease the content of thearubigins in CTC black tea by 10.09%.

【题目】鲜茶汁浸提工艺研究
【中文关键词】鲜茶汁;浸提;感官品质;得率
【英文关键词】fresh tea juice;extraction;sensory quality;extraction rate
【中文摘要】研究鲜茶固体饮料加工的鲜茶汁制备提取工艺,以鲜茶汁浸提温度、时间及茶水比为影响因素,采用正交试验设计L9(3) 3,探讨浸提工艺对鲜茶汁的感官品质、提取得率、浓度、主要生化成分浸出量、酚氨比、外观颜色及冷后浑等的影响。结果表明,随着浸提温度的升高和时间的增加,鲜茶汁的感官品质下降,但鲜茶汁提取率、浓度增大,茶水比

1:1(W/V)时鲜茶汁提取率和浓度较高且感官品质较好。综合考虑鲜茶汁的感官风味品质、提取得率及产业化成本,鲜茶汁提取最佳工艺参数为浸提温度45℃,浸提时间10min,茶水比1:10(W/V)。

【英文摘要】Effects of extraction temperature, time and ratio of tea to water on sensory quality, extraction rate, concentration, extraction quantities of main biochemical components, TP/AA, – a/b and tea cream of fresh tea juice were studied by orthogonal test L9 (33). The results showed that with increases of extraction temperature and time, sensory quality of fresh tea juice declines, but the extraction yield and concentration increase. Higher extraction rate and concentration and better sensory quality of fresh tea juice can be obtained at the ratio of tea to water 1:10. Considering the sensory quality and extraction rate of fresh tea juice as well as the cost of industrialization, the optimum conditions of extracting of fresh tea juice are determined as fallows: extraction temperature 45 ℃, time 10 min and ratio of tea to water 1:10.

【中文摘要】"利用荧光标记 AFLP 技术研究剑麻种质遗传多样性及亲缘关系。 筛选 8 个多态性高、 分辨力强的 Pst I/Mse I 引物组合对 40 份供试材料的基因组 DNA 扩 增 , 共 获得 条 带 数 785 条 , 多 态性条 带 数 507 条, 扩 增 效 率64.58%, 平均 每 对 引 物 扩 增 条 带 数 98.13 条 。 其中 , 以 P-GAC/ M-CAC 引 物的 扩 增 效 率 最 高 , 达 到 78.63%;其次是 P-GTG/M-CTC, 达到 71.28%; 扩增效率最低的引物是 P-GTA/M-CTT, 为 52.94%。 表明供试材料在DNA 水平 上, 酶 切 位 点的分布 存 在 广 泛 的变 异 。 各 供试 材 料 相似 系数 介于 0.44~0.83, 在 相 似系数 0.51 处 可将40 份种质划分为 4 大类。 8 组引物在 40 份供试材料中检测到数目不等的特异带型, 这些特异带型对供试剑麻种质具有一定的鉴别价值。"
【英文摘要】"The genetic diversity and relationship of si sal were analyzed by fluorescent AFLP technology. AFLP fingerprinting of 40 accessions with eight pairs of Pst I/Mse I primers revealed a total number of 785 unambiguous bands including 507 polymorphic bands, and the polymorphism frequency was 64.58% . Each pair of primers produced 98.13 polymorphic bands on average. The primer P-GAC/M-CAC had the highest polymorphism frequency (78.63%), followed by the primer P -GTG/M -CTC (71.28%). The primer P -GTA/M -CTT had the leastpolymorphism frequency (52.94%). These show there are abundant diversities about enzyme digestion sites in the accessions. The similarity coefficient of the 40 accessions ranged from 0.44 to 0.83. The 40 accessions were divided into 4 groups at the similarity coefficient of 0.51. Moreover, some specific bands were detected from the 40 accessions by using 8 pairs of primers, and could be used to distinguish the accessions under test."

【题目】Biological activity of the essential oil from the leaves of Piper sarmentosum Roxb (Piperaceae) and its chemical constituents on Brontispa longissima (Gestro) (Coleoptera Hispidae)
【中文关键词】null
【英文关键词】Piper sarmentosum Roxb; Essential oil; Brontispa longissima (Gestro); Biological activity; Chemical composition; Myristicin; Enzyme activity
【中文摘要】无
【英文摘要】The results showed that the essential oil from Piper sarmentosum has strong antifeedant and toxicity effects on Brontispa longissima. The best antifeedant and contact toxicity effects were observed in the 1st – 2nd instar larvae. The essential oil also displayed

a notable fumigation effect on the eggs and pupae of B. longissima. It took the control-treated insects 43.34 d to complete one generation, while the insects treated with 2000 mg/L essential oil needed 73.58 d. The essential oil was analyzed by gas chromatography/mass spectrometry and 41 components were identi fi ed. Myristicin (65.22%) and trans-caryophyllene (13.89%) were the major components. Myristicin exhibited strong antifeedant and contact toxicity effects on both the 3rd instar larvae and the imagoes of B. longissima, when it showed a signi fi cant fumigation effect on the eggs and pupae of B. longissima. Another P. sarmentosum essential oil and myristicin all showed a strong inhibiting effect on the growth and development of B. longissima along with the activity of AChE, CarE, GSTs and Na+, K+-ATPase in B. longissima larvae.

【题目】芒果蒂腐病菌对多菌灵的抗药性测定及其杀菌剂筛选

【中文关键词】杧果; 蒂腐病菌; 杀菌剂; 抗药性; 筛选

【英文关键词】Mango; Botryodiplodia theobromae Pat.; Fungicide; Resistance; Screening

【中文摘要】对来自海南3 个地区的86 个杧果蒂腐病菌(Botryodiplodia theobromae Pat.)菌株进行了对多菌灵的抗药性测定,结果表明,杧果蒂腐病菌群体中存在着对多菌灵抗性的群体。采用生长速率法进行了23 种杀菌剂对4 株杧果蒂腐病菌的室内毒力测定,通过EC50值、EC90值及与多菌灵的交互抗性等的综合分析,结果表明,作为防治杧果蒂腐病的首选药剂有咪鲜胺锰盐、丙环唑、氟硅唑、咪鲜胺、异菌脲、苯醚甲环唑、戊唑醇、腈菌唑、吡唑醚菌酯和井冈霉素10种杀菌剂,可选杀菌剂还有百菌清和代森锰锌。杧果蒂腐病菌除对多菌灵产生抗性外,还对甲基硫菌灵、醚菌酯和烯唑醇3 种杀菌剂产生了抗药性。通过交互抗性分析,多菌灵、甲基硫菌灵和烯唑醇3 种杀菌剂之间存在交互抗性,而醚菌酯与井冈霉素之间存在负交互抗性。为了避免杧果蒂腐病菌对某种杀菌剂产生抗药性,建议上述可选用杀菌剂交替使用。

【题目】木薯炭疽病病原鉴定及其生物学特性研究
【中文关键词】木薯;炭疽病;生物学特性
【英文关键词】Cassava; Anthracnose; biological characteristics
【中文摘要】炭疽病是我国木薯生产中最为常见的病害之一,本研究从我国海南木薯发病叶片上分离到两株木薯炭疽病菌CCGHN01和CCGHN03,分生孢子形态观察和ITS序列分析表明其为胶孢炭疽菌。生物学特性研究表明,两个菌株生长最适培养基为PSA,最适温度分别是26 ℃和30 ℃,最适pH值为8,最适光照条件分别是光暗交替和完全黑暗。两个菌株孢子萌发最适温度分别是28 ℃和30 ℃,致死温度为55 ℃ 10 min。

【英文摘要】The Cassava Anthracnose was a kind of popular disease in China. Two isolates of CCGHN01 and CCGHN03 were isolated from the diseased leaves which were collected in HaiNan province of China, morphological identification and the sequencing analysis of ribosomal DNA internal transcribed spacer region showed the two isolates were Colletotrichum gloeosporioides. For mycelial growth, study on biological characteristics indicated that the optimum medium was PSA, the optimum temperatures were 26 °C and 30 °C respectively, the optimum pH was 8, the optimum light condition were alternative light and dark and complete darkness respectively. For conidia germination that the optimum temperatures were 28 °C and 30 °C respectively, the lethal temperature for conidia was 55 °C remaining 10 min.

【题目】A study of the development of bio-energy resourcesand the status of eco-society in China
【中文关键词】Marginal land
Bio-energy
Energy plant
Ecological benefit
【英文关键词】Marginal land
Bio-energy
Energy plant
Ecological benefit
【中文摘要】Industrialization of bio-energy relies on the supply of resources on a large scale. The theoretical biomass resources could reach 2.61 – 3.51 billion tce (tons of coal equivalent)/a in China, while the available feedstock is about 440 – 640 million tce/a, however,

among this only 1.5 – 2.5% has been transferred into energy at present. Marginal land utilization has great prospects of supplying bio-energy resources in China, with co-benefits, such as carbon sequestration, water/soil conservation, and wind erosion protection. There is a large area of marginal land in China, especially in northern China, including about 263 million ha of desertification land, 173 million ha of sand-land, and 17 million ha of salinizatin land.The plant species suitable to be grown in marginal lands, including some species in Salix, Hippophae,Tamarix, Caragana, and Prunus is also abundant Biomass feedstock in marginal lands would be 100 million tce/a in 2020, and 200 million tce/a in 2050. As a result, a win – win situation of eco-society and bio-energy development could be realized, with an expected 4 – 5% reduction of total CO2 emission in China in 2020 – 2050. Although much progress has been made in the field of bio-energy research in China,yet significant efforts should be taken in the future to fulfill large-scale industrialization of bio-energy.

【题目】Above- and belowground biomass of Artemisiaordosica communities in three contrasting habitats ofthe Mu Us desert, northern China

【中文关键词】Allometric equations; Biomass allocation; Branch level; Dunes; Whole plant level
【英文关键词】Allometric equations; Biomass allocation; Branch level; Dunes; Whole plant level

【中文摘要】We developed and compared allometric equations describing leaf, branch, and fruit biomass at thebranch level, and leaf, branch, fruit and coarse root biomass at the whole plant level for Artemisiaordosica plants growing on fixed, semi-fixed and shifting dunes of the Mu Us desert. At the branchlevel, branch diameter significantly correlated with leaf, branch and fruit biomass. The allometricrelationships predicting leaf, branch and fruit biomass significantly differed among the different dune types. At the whole plant level, crown area significantly correlated with leaf, branch, fruit and coarse root biomass. The allometric relationships predicting leaf and fruit biomass significantly differed among the different dune types. Stand total biomass was 339.9, 178.8 and 25.0 gm 2 in fixed, semifixed and shifting dunes, respectively. Stand biomass of leaves, branches, fruits, coarse roots, and fine roots (1 – 2mm and o1mm in diameter) significantly decreased, while the below- to aboveground biomass ratio significantly increased from the fixed to the shifting dunes, with intermediate values for the semi-fixed dunes. Vertical distribution of fine root biomass also significantly differed among the three dune types. There was a significant and positive correlation between stand fine root biomass and stand crown area. These results will help to predict how the species will adapt to habitat changes through adjustments in morphology and biomass of different compartments under arid environmental conditions.

【题目】Belowground carbon pools and dynamics in China ’s warmtemperate and sub-tropical deciduous forests

【中文关键词】Organic matter;Microbial biomass;carbon cycling

【英文关键词】Organic matter;Microbial biomass;carbon cycling

【中文摘要】We report the first estimates of pools and dynamics of microbes, roots, plant litter and soil organic carbon (SOC) in three dominant types of China ’s vast deciduous forest area: Betula platyphylla, Quercus liaotungensis,and Quercus aliena var. acuteserrata. Organic matter degradation rates overshadowed litter inputs as the main determinant of the soil carbon stocks. Across the three forests,rates of litter decomposition were also indicative for turnover rates of SOC. Litter and SOC decay was faster in the subtropical than in the warm-temperate forests. Among the latter,SOC turnover was highest in the forest producing the higher-quality litter. Microbial biomass was, as expected,correlated with SOC content. Microbial activity, in contrast,was highest at the sub-tropical forest, despite the lower SOC availability, lower fraction of labile SOC, and lower soil microbialbiomass. These results may contribute to increased understanding of controls over belowground carbon cycling in deciduous forests.

【题目】Effect of vegetation coverage on aeolian dust accumulation in a semiarid steppe ofnorthern China

【中文关键词】Land management

Organic carbon

Nutrient accumulation

Soil particle size

【英文关键词】Land management

Organic carbon

Nutrient accumulation

Soil particle size

【中文摘要】Wind erosion and sand storms are common phenomena in semiarid steppes of northern China and could have important impact on soil nutrient balances. Vegetation coverage is one of the key factors influencingwind erosion and aeolian dust accumulation.We conducted a field experiment to investigate the effects of vegetation coverage on airborne dust accumulation and evaluated effects of dust input on the contribution of nutrients to vegetationmulched fields. Five vegetation coverage treatments (15%, 35%, 55%, 75% and 95%) were constructed, with 0% coverage as a control. Vegetation coverage significantly affected dust accumulation in degenerated semiarid grasslands. Theamounts of dust trapped by the increasing coverageswere 1.7, 1.8, 2.0, 2.1 and 2.1 times of that by the control plot, respectively. The total accumulations reached a maximum of 2.5 g m − 2 day − 1 at 75% coverage and remained stable with further increasing vegetation coverage. The particles in the dust trapped by treatment without vegetation coveragewere significantly coarser than those by treatmentswith vegetation. In addition, the dust trapped by treatments with vegetation contained more organic carbon, nitrogen and phosphorus content than that by the control plot. This finding indicates that areas with higher vegetation coverage can obtain more nutrients by trapping airborne dust in semiarid steppes.
【英文摘要】Wind erosion and sand storms are common phenomena in semiarid steppes of northern China and could have important impact on soil nutrient balances. Vegetation coverage is one of the key factors influencingwind erosion and aeolian dust accumulation.We conducted a field experiment to investigate the effects of vegetation coverage on airborne dust accumulation and evaluated effects of dust input on the contribution of nutrients to vegetationmulched fields. Five vegetation coverage treatments (15%, 35%, 55%, 75% and 95%) were constructed, with 0% coverage as a control. Vegetation coverage significantly affected dust accumulation in degenerated semiarid grasslands. Theamounts of dust trapped by the increasing coverageswere 1.7, 1.8, 2.0, 2.1 and 2.1 times of that by the control plot, respectively. The total accumulations reached a maximum of 2.5 g m − 2 day − 1 at 75% coverage and remained stable with further increasing vegetation coverage. The particles in the dust trapped by treatment without vegetation coveragewere significantly coarser than those by treatmentswith vegetation. In addition, the dust trapped by treatments with vegetation contained more organic carbon, nitrogen and phosphorus content than that by the control plot. This finding indicates that areas with higher vegetation coverage can obtain more nutrients by trapping airborne dust in semiarid steppes.

【题目】Modeling Optimal Grazing Management for GrasslandRehabilitation on the Typical Steppe: A Case Study in TaipusiBanner, Inner Mongolia, China
【中文关键词】bioeconomic model, farm returns, grassland degradation, livestock productivity, stocking rate
【英文关键词】bioeconomic model, farm returns, grassland degradation, livestock productivity, stocking rate
【中文摘要】Grassland degradation is a serious production and environmental problem in China where approximately 90% of available grasslands are being degraded to some degree.Off-site impacts take the form of sandstorms and the negative impacts upon urban centers in terms of human health and damage to infrastructure. On the other hand, onsite impact is exhibited by low livestock productivity from reduced pasture quality. To evaluate optimal grazing management in China's typical steppe regions, the condition of grassland, number of animals, farm income, seasonal conditions and experimental datawere included in a bioeconomic model to analyze the public grazing system in Taipusi Banner, Inner Mongolia, China. The model solutions indicate that net farm income can be increased by reducing stocking rates from current levels, as this could result in a combination of an improvement in grassland condition and increased animal productivity. Improved grazing management through reduced grazing intensity in this region has the potential to not only rehabilitate grasslands but increase whole-farmreturns from improved livestock productivity.

【题目】Modeling responses of the meadow steppe dominated byLeymus chinensis to climate change
【中文关键词】climate change;Modeling;meadow steppe
【英文关键词】climate change;Modeling;meadow steppe
【中文摘要】Grassland is one of the most widespread vegetation types worldwide and plays a significant role in regional climate and global carbon cycling. Understanding the sensitivity of Chinese grassland ecosystems to climate change and elevated atmospheric CO2 and the effect of these changes on the grassland ecosystems is a key issue in global carbon cycling.China encompasses vast grassland areas of 354 million ha of 17 major grassland types,according to a national grassland survey. In this study, a process-based terrestrial model—the CENTURY model—was used to simulate potential changes in net primary productivity (NPP) and soil organic carbon (SOC) of the Leymus chinensis meadow steppe (LCMS) under different scenarios of climatic change and elevated atmosphericCO2. TheLCMSsensitivities,its potential responses to climate change, and the change in capacity of carbon stock and sequestration in the future are evaluated. The results showed that the LCMS NPP and SOCare sensitive to climatic change and elevated CO2. In the next 100 years, with doubled CO2concentration, if temperature increases from 2.7 – 3.9 ◦ C and precipitation increases by 10%,NPP and SOC will increase by 7 – 21% and 5 – 6%, respectively. However, if temperature increases by 7.5 – 7.8 ◦ C and precipitation increases by only 10%, NPP and SOC would decrease by 24% and 8%, respectively. Therefore, changes in the NPP and SOC of the meadow steppe are attributed mainly to the amount of temperature and precipitation change and the atmospheric CO2 concentration in the future.

【题目】Modeling SOC and NPP responses of meadow steppe todifferent grazing intensities in Northeast China
【中文关键词】Meadow steppe
Grazing intensity
Soil organic carbon
NPP
【英文关键词】Meadow steppe
Grazing intensity
Soil organic carbon
NPP
【中文摘要】Grassland ecosystems play an important role in Chinese terrestrial ecosystems. However,great demand and excessive utilization of human beings on grassland resources have made it more susceptible to rapid degeneration in ecosystem properties and soil carbon levels.Among them, grazing is one of the key factors to make grassland ecosystems degraded.Therefore, it is very important to graze sustainably on grassland for preventing the degradation of grasslands. In this paper, as a case study, we simulated the potential changes of soil organic carbon (SOC) and net primary productivity (NPP) of meadow steppe dominated by Leymus chinensis under different grazing intensities based on CENTURY model (V4.0) in order to evaluate the effects of different grazing intensities and to pursue for optimal grazing intensity. The results showed that NPP and SOC of meadow steppe dominated by Leymus chinensis were very sensitive to grazing intensity. The optimal grazing intensity could beexpressed by live shoots, and it should be less than 40% of whole live shoots per month, inorder to mitigate the degradation of Leymus chinensis grassland and maintain its sustainabledevelopment.

【题目】Seasonal Dynamics in Resource Partitioning to Growth andStorage in Response to Drought in a Perennial RhizomatousGrass, Leymus chinensis
【中文关键词】Resource partitioning Growth Storage
Biomass Gross calorific value N K+ Na+
Drought Perennial rhizomatous grass Leymus chinensis
【英文关键词】Resource partitioning Growth Storage
Biomass Gross calorific value N K+ Na+
Drought Perennial rhizomatous grass Leymus chinensis
【中文摘要】A natural grassland in northeastern China dominated by Leymus chinensis (Trin.) was subject todrought treatments to determine the seasonal dynamics in resource partitioning to shoot and storage organs in response to drought. The growing season was divided into six stages according to the phenology of L. chinensis. Plant samples of L. chinensis were collected at each stage todetermine biomass, gross calorific value, relative water content, and key mineral contents of plant parts, including rhizomes, roots, leaves, and stems. Resource partitioning to shoot and storage organs as measured by biomass, gross calorific value, and N, K+, and Na+ contents

varied significantly among phenologic stages. Drought treatment (natural precipitation, 50 – 60 % of field capacity) significantly reduced biomass, gross calorific value, relative water content of shoot, and N and K+ contents in both shoot and storage organs, but it enhanced rhizome : shoot ratio and Na+ content. A negative correlation in biomass, gross calorific value, and K+ and Na+ contents between shoot and storage organs was found throughout the growing season,which may have been accentuated by drought when soil moisture was limited. Our results indicate that resource partitioning to storage plays an important role in regulatingplant growth of L. chinensis, especially under droughtconditions.

【题目】外源重金属对杏鲍菇生长发育的影响研究

【中文关键词】杏鲍菇;外源重金属;耐性指数;细胞超微结构

【英文关键词】Pleurotus eryngii; exogenous heavy metals ;tolerance index; cell ultrastructure

【中文摘要】杏鲍菇是中国等亚洲国家广泛栽培的一种食用菌,培养基中重金属影响杏鲍菇的生长和品质。采用常规袋栽培技术,通过对杏鲍菇栽培过程中添加不同水平Pb、As、Hg和Cd,研究了其毒害效应、耐受性以及对生长发育、产量的影响。结果表明,在试验设置的浓度范围内,外源添加Pb、Hg、Cd的处理对杏鲍菇菌丝生长均产生抑制作用,菌丝生长速度最低值分别比空白对照降低了24.0%、31.0%、18.7%;但浓度为5~50mg.kg-1的As可能会促进菌丝生长,且添加As的处理促进杏鲍菇提早出菇。杏鲍菇对4种重金属的耐性指数排列顺序为As〉Cd〉Pb〉Hg。添加一定浓度的重金属可导致杏鲍菇细胞

变形、细胞壁溶解,且细胞质中形成大量黑色颗粒状结晶异物。因此,在杏鲍菇栽培中应控制其培养料中的重金属含量。
【英文摘要】Pleurotus eryngii is widely cultivated in China and other Asia countries,the growth and quality of P.eryngii can be affected by heavy metals in culture medium.The paper mainly studied the inhibited effects,tolerance index,growth and development of exogenous heavy metals on P.eryngii by the way to mixed different concentrations of As,Pb,Hg and Cd with culture medium during cultivated period.The results indicated that mycelium growth of P.eryngii was inhibited by the addition of exogenous Pb、Hg and Cd in medium,and the minimum mycelium growth speeds under the treatments were 24.0%、31.0%、18.7% lower than that of the control in the predetermined concentration range.However,the addition of As at the concentration of 5~50 mg · kg-1 accelerated the mycelium growth and advanced the fruiting time.The tolerance of P.eryngii to the heavy metals was AsCdPbHg.Addition of the heavy metals could cause the changes of cell ultrastructure of P.eryngii,including cytomorphosis,cell wall lysis,and formation of large amouts of black granular crystals in cytoplasm.Consequently,it was essential to control the concentrations of heavy metals in culture medium of P.eryngii.

【题目】不同用量长效复合肥添加剂(NAM)在茶树上的应用效果

【中文关键词】NAM 茶树 效果

【英文关键词】NAM; tea; fertilization

【中文摘要】通过2年田间小区试验研究不同用量长效复合肥添加剂(NAM)在茶树上的应用效果。结果表明,随添加剂用量的增加,土壤中铵态氮含量逐渐升高,硝态氮含量逐渐降低,表明添加剂能减慢铵态氮向硝态氮的转化。随添加剂(NAM)用量的增加,茶青产量先增加后降低,以添加7.5‰NAM处理的茶青产量和百芽重最高,2010年和2009年茶青产量分别比对照增产5.20%和2.64%。2010年茶青产量、芽头密度和百芽重增长率高于2009年,土壤中铵态氮和硝态氮含量也普遍高于2009年。可见,NAM具有抑制尿素的水解和铵态氮硝化的作用,能够节省劳动力,具有延长肥效的效果。

【英文摘要】A 2-year field experiment was conducted to study the effect of the long-term compound additives(NAM) in varying quantities on the tea trees.The results showed that increased NAM caused gradual increase on NH+4-N and reduction on NO-3-N.The additive slowed down the conversion of NH+4-N to NO-3-N.With the additon of NAM,tea yield was increased initially,and then,decreased.Both yield and hundred-bud-weight of green tea peaked when 75% NAM was applied.The yield was more than 5.20% in 2010,and 2.64% in 2009,as compared to the control.The increasing rates on tea yield,bud density and hundred-bud-weight were higher in 2010 than 2009.And,the NH+4-N and NO-3-N contents in the soil were also higher in 2010 than 2009.Thus,it was concluded that NAM application could inhibit urea hydrolysis and ammonium nitrification resulting in savings on labor fertilizer.

【题目】两种氮肥不同用量及添加双氰胺对蔬菜品质和土壤氮形态的影响

【中文关键词】氮肥用量;双氰胺;氮形态;蔬菜品质

【英文关键词】Dosage of nitrogenous fertilizer; Dicyandiamide; N form; Vegetable quality

【中文摘要】采用网室盆栽结合田间小区试验,研究了两种氮肥(尿素和硝酸铵)不同用量及其添加双氰胺对土壤铵态氮、硝态氮、土壤硝化细菌动态变化的影响,以及与空心菜、菠菜中硝酸盐、产量和品质关系。结果表明,2 种氮肥不同用量都与空心菜的产量呈显著或极显著的二次曲线关系,与土壤铵态氮和硝态氮、以及蔬菜中硝酸盐含量呈正相关。不论施用尿素还是硝酸铵的处理,添加双氰胺都有利于提高蔬菜产量和维生素C、降低土壤中硝化细菌数量、减缓铵态氮的转化,从而减少蔬菜对硝酸盐的吸收。不论是减少土壤硝化细菌数量、减少土壤硝态氮含量、增加土壤铵态氮含量,还是减少菜体硝酸盐含量的效果上来看,在尿素中添加双氰胺处理的效果均好于在硝酸铵中添加双氰胺的处理,证实了双氰胺作为一种硝化抑制剂,能有效抑制硝化细菌数量,从而降低土壤硝态氮含量,最终导致降低菜体硝酸盐含量。

【英文摘要】Hyocaust and field plot experiments were carried out to study effects of different dosage of two nitrogenous fertilizers and dicyandiamide (DCD) on the kinesis of NH4+-N, NO3--N and nitrobacteria on soil, as well as the relationship with the amount of nitrate, yield and quality of swamp cabbage and spinach. Results indicated that the relation between different dosage of two N fertilizers

and yields of swamp cabbage was significant and taking on the curve of second order, while the correlations of dosage of N fertilizers and the contents of NH4+-N and NO3--N or the amount of nitrate in cabbage were positive. The yield of vegetable and Vc quantum were elevated and the amounts of nitrobacteria were reduced and the translation of NH4+-N was retarded, no matter DCD was added to urea or ammonium nitrate (AN). Thereby, the absorption of NO3--N was decreased in vegetable. The effect of applying DCD to urea on reducing the numbers of nitrobacteria and retarding decreasing the content of NH4+-N and increasing that of NO3--N was better than application of DCD into AN. It confirmed the mechanism that DCD as a nitrification inhibitor could inhibit the amounts of nitrobacteria effectively, thus reduced the content of NO3--N in soil and vegetables.

【题目】Enhancing disease resistances of Super Hybrid Rice with four antifungal genes
【中文关键词】无
【英文关键词】disease resistances Super Hybrid Rice
【中文摘要】无
【英文摘要】A plant expression vector harboring four antifungal genes was delivered into the embryogenic calli of ‘ 9311 ’,an indica restorer line of Super Hybrid Rice,via modified biolistic particle bombardment.Southern blot analysis indicated that in the regenerated hygromycin-resistant plants,all the four anti-fungal genes,including RCH10,RAC22, β -Glu and B-RIP,were integrated into the genome of ‘ 9311 ’,co-transmitted altogether with the marker gene hpt in a Mendelian pattern.Some transgenic R1 and R2 progenies,with all transgenes displaying a normal expression level in the Northern blot analysis,showed high resistance to Magnaporthe grisea when tested in the typical blast nurseries located in Yanxi and Sanya respectively.Furthermore,transgenic F1 plants,resulting from a cross of R2 homozygous lines with high resistance to rice blast with the non-transgenic male sterile line Peiai 64S,showed not only high resistance to M.grisea but also enhanced resistance to rice false smut(a disease caused by Ustilaginoidea virens)and rice kernel smut(another disease caused by Tilletia barclayana).

【题目】Strategy and utilization of a herbicide resistance gene in two-line hybrid rice
【中文关键词】无
【英文关键词】Herbicide resistance gene Purity of hybrid seed Sterility fluctuation Transgenic rice Two-line hybrid rice
【中文摘要】无
【英文摘要】Hybrid rice plays an important role in China ’s aim to improve rice production as it accounts for some 50% of rice planting area but produces about 60% of the total rice grain. However, the existing three-line system used in hybrid rice production has its limitations. The two-line system, which makes use of photoperiod-sensitive genic male-sterile (PGMS) and thermo-sensitive genic male-sterile (TGMS) lines to generate the malesterile parental line, was developed to overcome some of these limitations. The sterility of the malesterile line of two-line hybrid rice, however, fluctuates when the temperature-sensitive phase of fertility encounters abnormal low temperatures during hybrid seed production, which induces selfing and decreases the purity of hybrid. We describe here the strategy of utilizing a herbicide resistance gene in two-line hybrid rice to eliminate this fluctuation in the sterility of the P/TGMS lines during hybrid seed production and reports the development of the herbicide resistance restorer line Bar68-1 and its herbicide-resistant early season hybrid rice Xiang125s/Bar68-1. When the restorer line and its derived hybrid are herbicide resistant, the selfed seeds can be removed easily from the hybrid by herbicide spraying. A herbicide resistance gene bar was transferred into a restorer line by particle bombardment. The resulting transgenic restorer line Bar68-1 and its hybrid Xiang125 s/Bar68-1 inherited stable herbicide resistance. The purity of Xiang125s/Bar68-1 was increased by spraying the seed bed with herbicide, which resulted in a significant increase in yield, grain quality, and disease resistance in comparison to the controls in a regional trial.

【题目】光温敏核不育水稻幼穗育性转换期蛋白质组的初步分析
【中文关键词】水稻; 蛋白质组; 幼穗; 双向电泳; MOLDI- TOF 质谱分析
【英文关键词】oryza sativa, proteomics, spikelet, 2D-gel electrophoresis, MADLI-TOF mass spectrometry analysis
【中文摘要】为找寻光温敏核不育水稻幼穗与育性调控有关的蛋白质, 采用固相pH 梯度- SDS 聚丙烯酰胺双向凝胶电泳对光温敏核不育水稻(培矮64S) 育性转换期幼穗总蛋白进行了分离, 获取凝胶图像并进行重复性分析, 通过微量测序- Edman 降解方法和原位酶解及MALDI- TOF 质谱的方法鉴定了60 个蛋白质点。结果表明: 本方法可得取分辨率和重复性较好的凝胶图谱。蛋白质点在2D 胶上的重复性为: 沿等电聚焦方向偏差为1. 49 ? 0. 22 mm, 沿SDS- PAGE 方向偏差为1. 24? 0. 18 mm。37 个蛋白质点得到了准确的鉴定结果, 其中16 个是差异蛋白质点。在不育变化为可育的过程中, 明显表达上调的蛋白质点包括几丁质酶, 丙酮酸脱氢酶等; 明显下调的蛋白质包括超氧化物歧化酶, 硝酸还原酶脱辅基酶蛋白等; 金属硫蛋白RicMT 只在可育中存在。
【英文摘要】The proteins of photo-thermo-sensitive genetic mail sterile rice (ORYZASATIVA peiai64S) spikelet on fertility alternat ion stage were separated by tw o- dimensional electro phoresis with immobilized pH (3-10) gradient s as the first dimension and SDS-PAGE as the second1 2-D maps with high quality and reproducibility were obtained1Mean standard deviations of 1. 49±0. 22 mm for IPG-IEF and 1. 24±0. 18 mm for SDS-PAGE were obtained. 60 protein spots out of about 1000 detectable spot s on the 2-D gels were indentified by the follow ing tw o methods: 1) Nterminal Edman degradat ion microsequencing after the protein spots were electrot ransferred to PVDF membrane. 2) MALDI-TOF-MS peptide finger print analysis of the protein spots and protein database searching. The 2D protein maps of the rice spikelet during the sterile and fertile stages were compared. While the rice spikelet changed from sterile to fertile stages, about 16 protein spots showed variations that were significant and reproducible. Six up-regulated proteins and nine down-regulated proteins were identified. One protein only exist infertile stage.

【题目】利用实时荧光定量PCR法检测转基因水稻外源基因拷贝数的研究
【中文关键词】SYBR Green Ⅰ实时荧光定量PCR; 烟酰胺合成酶基因; 转基因水稻; 拷贝数
【英文关键词】SYBR Green Ⅰ real-time fluorescence quantitative PCR; nicotianamine synthase gene;transgenic rice; copy number
【中文摘要】转基因植物中外源基因拷贝数是影响目的基因表达水平和遗传稳定性的重要因素, 因此外源基因拷贝数的检测成为转基因研究的关键. 利用高通量、快速、灵敏的SYBR Green Ⅰ荧光定量实时PCR 法, 检测了转大麦烟酰胺合成酶基因(NAS1) 水稻中外源基因拷贝数. 以蔗糖磷酸合成酶基因(SPS) 作为水稻的内源参照基因, 通过梯度稀释法, 分别获得了NAS1 和SPS 基因的Ct 值与起始模板数的相关性标准曲线, 相关系数分别为0.999 76 和0.995 71, 相关性高. 通过目的基因NAS1 和水稻内源参照基因SPS 起始模板数的比较, 获得了目的基因在转基因水稻中的拷贝数, 在8 株转基因株系中, 1 株为假阳性, 1 株拷贝数为1, 3 株拷贝数为2, 其余3株拷贝数分别为3、4 和7, 而阴性对照拷贝数为0. 这种方法快速、简便、准确, 可以满足转基因育种工作中对后代优良株系的选择.
【英文摘要】In transgenic plants, the number of transgene copy is an important factor that can greatly influence the level of expression and genetic stability of the target gene. Estimating the transgene copy number becomes a significant step in transgenic research. High-throughput, fast and sensitive SYBR Green Ⅰ real-time fluorescence quantitative PCR was used to estimate the copy number of nicotianamine synthase gene(NAS1) of barley in transgenic rice, and the sucrose phosphate synthase gene(SPS) in rice was used as endogenous reference gene. With a serial of dilutions, the standard curves of the threshold cycle(Ct) relative to the log of each initial template copy of NAS1 and SPS gene were obtained, and the correlation coefficients were 0.99976 and 0.99571, respectively. The

transgenic copy number was obtained by comparing the initial template copy of NAS1 with that of SPS. Among the eight putative transgenic lines, one was non-transgenic plant, one had one copy number, three had two copies, and the other had three, four and seven copies, respectively. At the same time, the negative control had zero copy. The method of estimating copy number of exogenous gene by real-time fluorescence quantitative PCR was characterized as speediness, convenience and nicety, which can satisfy the demands of elite line selection in transgenic breeding.

【题目】三种野生稻候选抗病基因的克隆与分析
【中文关键词】野生稻, RT-PCR, 候选抗病基因
【英文关键词】Wild rice (Oryza rufipogon Reserve in Chaling,Oryzae sativa f spontanea, Oryza minuta),RT-PCR,Candidate desease resistance gene
【中文摘要】候选抗性基因克隆策略是克隆植物新抗性基因的重要途径。根据已知NBS-LRR 类抗病基因结构中的氨基酸保守区域,设计兼并引物,通过RT-PCR 扩增、克隆和测序,从茶陵野生稻,东乡野生稻和小粒野生稻中共获得了11 条NBS-LRR 类抗病基因同源序列。通过聚类分析可将同源序列分为3 类,其中茶陵野生稻中得到1 类,东乡野生稻中得到2 类,而小粒野生稻中得到3 类。但是小粒野生稻包含有其他两种野生稻的序列。三类序列都与水稻抗病基因RPR1 具有较高的同源性,有一类氨基酸序列同源性甚至高达88%,可能为其家族成员。利用电子定位将三类序列定位在水稻基因组11 号染色体上RPR1 附近。根据序列比对分析结果认为其中可能有1~2 个新抗病基因。
【英文摘要】The method of cloning by candidate resistance gene is an important way to clone of the resistance gene of plant. We designed degenrate oligonucleotides primers according to amino acid conserved regions of reported plant disease resistance genes which encode protein that have nucleotide-binding site and leucine-rich repeats (NBS-LRR). Amplified By RT-PCR,and the DNA fragments from amplification cloned into the vector, and sequenced, we have been obtained 11 disease resistance gene analogues from three wild rice species..The analysis of the phylogenetic tree indicated that 1 class NBS-LRR disease resistance gene analogues from Oryza rufipogon Reserve in Chaling; 2 classes from Oryzae sativa fspontanea and 3 classes from Oryza minuta.And the sequences of Oryza minuta have all the classes of sequence of the others. and the three classes of disease resistance gene analogues have highly homologous with the resistance gene RPR1. and one class was 88% homologous to the disease resistance gene RPR1 as the alignment of the amino acid, possibly as one of the member of RPR1 family. We mapped the sequences in the region near the gene RPR1 in the chromosome 11 of the rice genome by the method of electronic mapping. we think maybe there is one to two new resistance genes according to the result of the analysis of the sequence

【题目】Comparative analysis of young panicle proteome in thermo-sensitive genic male-sterile rice Zhu-1S under sterile and fertile conditions
【中文关键词】无
【英文关键词】Proteome Rice semi-quantitative RT-PCR Thermo-sensitive genic male-sterility Young panicle
【中文摘要】无
【英文摘要】Proteome analysis was carried out to identify the young panicle proteins during different developmental stages under sterile and fertile conditions. Based on spot quantity and quality, 50 protein spots were analyzed by matrix associated laser desorption/ionization time of flight mass spectrometry (MALDI-TOF-MS) and 20 spots were identified. Most of these proteins are closely associated with energy metabolism, protein biosynthesis, cell wall formation and stress responses, which are essential cell activities to the pollen development. Gene expression analysis of three different proteins by semi-quantitative RT-PCR showed that the mRNA level was not correlated exactly with the protein level.

【题目】水稻叶鞘3种氧化还原酶活眭在褐飞虱胁迫中的变化
【中文关键词】水稻; 褐飞虱; 超氧化物歧化酶(SOD); 过氧化物酶(POD); 过氧化氢酶(CAT)
【英文关键词】rice; Nilaparvata lugens; superoxide dismutase(SOD); peroxidase(POD); catalase(CAT)
【中文摘要】为阐明水稻抗褐飞虱的机制,分析了褐飞虱为害对感、抗虫水稻品种叶鞘中3种保护酶活性的影响。采用苗期群体接虫方法对水稻品种进行抗性鉴定,在此基础上测定了褐飞虱为害前后水稻叶鞘中超氧化物歧化酶(SOD)、过氧化物酶(P0D)、过氧化氢酶(cAT)的活性。受褐飞虱为害后,抗虫和感虫品种叶鞘中s0D活性均上升,表明无论是抗性植株还是感性植株在清除超氧阴离子自由基方面都具有较强的能力;POD活性在抗虫品种中下降,而在感虫品种中增加,表明抗性品种较感性品种具有更强的酶促抗氧化性能,从而对褐飞虱胁迫具有更强的适应能力。cAT活性在抗虫品种中增加,而在感虫品种中大幅下降,这与其对褐飞虱抗性弱密切相关。
【英文摘要】The activities of three protective enzymes in rice sheath were analyzed before and after Nilaparvata lugens stress,so as to provide reference for clarifying the mechanism of the resistance to N.1ugens.The resistance of rice varieties to N.1ugens were appraised by the method of colonizing seedling rice plants and comparing the activities of superomde dismutase(SOD),peroxidase(POD)and catalase(CAT)in rice sheath before and after stresses of N.1ugens.After the infestation of N .1ugens,the activity of SOD increased in both resistant and susceptible varieties,which showed that both resistant and susceptible varieties have strong ability to scavenge superoxide anion radical;the activity of POD decreased in resistant varieties and increased in susceptible varieties,which showed that resistant varieties have stronger enz ymatic antioxidant function than susceptible varieties.It is suggested that the resistant varieties have stronger adapting ability under stresses of N.1ugens.The activity of CAT increased in resistant varieties and decreased greatly in susceptible varieties,which is closely related to low resistance of susceptible varieties under stresses of N.1ugens.

【题目】温敏核不育系水稻株1S及其矮秆突变体SV14茎的蛋白质组学比较
【中文关键词】水稻;矮秆突变体;蛋白质组学;半定量RT—PCR
【英文关键词】Rice:Dwarfing variant;Proteomics;Semi—quantitative RT—PCR
【中文摘要】采用双向凝胶电泳对温敏核不育水稻株1S和其矮秆突变体SV14的茎(穗颈下第1节和第2节)蛋白进行了分离,通过银染显色,获得了分辨率和重复性较好的双向电泳图谱.选取了26个蛋白质点采用MAL—DI—TOF—MS进行肽质谱指纹图分析,最终有12个蛋白质点得到了可靠鉴定.其中在SV14中相对于株1S上调的仅有OSJNBa0039C07.13蛋白,其它蛋白均表现为下调.这些差异蛋白按照功能可分为4类:(1)能量代谢相关蛋白;(2)次生代谢相关蛋白;(3)调控蛋白;(4)未知蛋白.对光合系统Ⅱ氧延伸复合物蛋白质前体2,果糖二磷酸醛缩酶,UDP一葡糖醛酸脱羧酶对应的基因进行了半定量RT—PCR分析,发现这几个基因与蛋白质的表达不一致,可能是RNA发生了翻译后修饰而减少了蛋白表达量的结果.这些差异蛋白很可能与水稻矮化有关,为水稻矮秆基因的寻找提供了另一个有效途径.
【英文摘要】The stem of thermo—sensitive genic male—sterile rice Zhu一1 S and its dwarfing variant SV14 were seDarated bv 2一DE.Twelve differential spots were identified by MALDI—TOF—MS.In the 2一DE protein patterns 0f SV14.one up—regulated proteins and eleven down—regulated proteins were identified.According to the functional classification of identified proteins.they were divided into the following categories:(1)energy metabolism;(2)secondary metabolism;(3)regulatory proteins;(4)proteins with unknown function.Further m0re.semi-qHantitative RT.PCR was carried out to verify the different expressions.These results shows converse changes in expression at both the RNA an ’ d protein levels.The converse changes suggest that during the process 0f stern development some kind of post—transcriptional modification of these genes occured.The results sh0w that these Droteins may be related to dwarfing rice stem and provide another pathway for finding the dwarfing gene.

【题目】Bulked Segregant Analysis to Detect QTL Related to Heat Tolerance in Rice (Oryza sativa L.) Using SSR Markers
【中文关键词】无
【英文关键词】bulked segregant analysis, heat tolerance, QTL, rice (Oryza sativa L.), SSR markers
【中文摘要】无
【英文摘要】The study was undertaken to assess the genetic effect of quantitative trait loci (QTLs) conferring heat tolerance at flowering stage in rice. A population consisting of 279 F2 individuals from the cross between 996, a heat tolerant cultivar and 4628, a heat-sensitive cultivar, was analyzed for their segregation pattern of the difference of seed set rate under optimal temperature condition and high temperature condition. The difference of seed set rate under optimal temperature condition and high temperature condition showed normal distribution, indicating the polygenic control over the trait. To identify main effect of QTL for heat tolerance, the parents were surveyed with 200 primer pairs of simple sequence repeats (SSR). The parental survey revealed 30% polymorphism between parents. In order to detect the main QTL association with heat tolerance, a strategy of combining the DNA pooling from selected segregants and genotyping was adopted. The association of putative markers identified based on DNA pooling from selected segregants was established by single marker analysis (SMA). The results of SMA revealed that SSR markers, RM3735 on chromosome 4 and RM3586 on chromosome 3 showed significant association with heat tolerance respectively, accounted for 17 and 3% of the total variation respectively. The heat tolerance during flowering stage in rice was controlled by multiple gene. The SSR markers, RM3735 on chromosome 4 and RM3586 on chromosome 3 showed significant association with heat tolerance respectively, accounted for 17 and 3% of the total variation respectively. The two genetic loci, especially for RM3735 on chromosome 4, can be used in marker-assistant-selected method in heat tolerance breeding in rice.

【题目】Epsps 基因为筛选标记的多基因抗虫表达载体构建
【中文关键词】Ep sps 基因; 抗虫基因; 植物表达载体; 大分子连接
【英文关键词】Epsp s gene; insect- resistant gene; plant expression vector; large fragment DNA ligation
【中文摘要】为了获得水稻的广谱抗虫性, 同时也避免由潮霉素抗性基因引起的安全性问题。构建以抗除草剂基因(Epsps 基因) 为筛选标记的多基因抗虫植物表达载体pCTSK。方法: 以双元载体pCAMBIA1300 为基础, 将潮霉素抗性基因hpt 替换成携带烟草叶绿体转运肽序列TSP 的草甘膦抗性突变基因aroAM12(编码细菌5- 烯醇式丙酮酸莽草酸- 3- 磷酸合成酶Epsps) 作为筛选标记基因, 获得中间表达载体pCTSM1300。然后再连接上3 个抗虫基因(马铃薯蛋白酶抑制剂基因Pin - Ò 、苏云金杆菌毒蛋白基因Bt cryI (A) 及雪花莲外源凝集素基因GNA) 的完整表达片段(包含各自的启动子和终止子) 。结果: 通过PCR 方法和酶切方法鉴定已成功地构建了该表达载体; 通过不同实验方案的数据分析, 得出在载体构建的大分子连接中优化的一次连接法连接效率高于二次连接法的结论。

【英文摘要】For the security of hygromycin phosphotransferase gene hpt was oppugned, the herbicide- resistant gene (Epsps gene) was used as a selection marker in construction of the plant expression vector pCTSK which contained multiple insect- resistant genes to endow rice with broad- spectrum insect resistance. Methods: Firstly, the hpt gene in binary vector pCAMBIA1300 was replaced by glyphosate resistant gene aroAM12 (a mutant of 5- enolpyruvylshikimate- 3- phosphate synthase gene) leading by chloroplast transit peptide of tobacco (TSP) for obtaining the medium vector pCTSM1300. Results: Then, the complete expression frame of potato proteinase inhibitor gene Pin Ò , Bacillus thuringiensis endotoxin gene cryI (A) and Galanthus nivalis agglutinin gene GNA were inserted into pCTSM1300 which resulted in the achievement of vector pCTSK. The ligation method of large fragment DNA was improved in construction of the vector.

【题目】OsbHLH1 基因过表达载体构建及转化水稻研究
【中文关键词】O sbHLH1 基因 Bar 基因 过表达 基因枪转化 水稻 耐低温 光合速率
【英文关键词】OsbHLH1 gene Bar gene Over-expression Particle bombardment Rice Cold to lerance Photosynthetic rate
【中文摘要】OsbHLH1基因编码bHLH类转录因子, 与水稻耐寒性相关。以pCAMB IA3300为母体, 利用玉米泛素(Ub iqu itin)启动子构建了能使OsbHLH1 基因过表达且含有Bar 基因的植物表达载体p3300-Ub-i 8- OsbHLH 1。利用基因枪法将其转化到粳稻品种东稻3号中, 获得再生苗47株。选取其中9株进行PCR、Sou thern检测, 结果表明目的基因已经整合到水稻基因组中; 草铵膦叶片涂布试验结果表明, Bar基因在水稻植株中正常表达; 低温处理后, 除45号植株外, 其余8株光合速率的变化率显著低于非转基因对照, 初步证明O sbHLH1基因在水稻中过表达显著提高了水稻的耐低温能力。
【英文摘要】OsbHLH1 gene which codes one of transcription factors of the bHLH family, is involved in cold tolerance1 An over-expression vector including OsbHLH1 gene and Bar gene was constructed based on pCAMBIA33001 The target genes were transformed into Dongdao number 3 by particle bombardment1 Forty seven plantlets were regenerated. Nine of them were analyzed by PCR and Southern blot ting, and the results show ed that the target genes had been integrated into the rice genome. The spreading of glufosinate on the leaves indicated that the Bar gene had been expressed normally in r ice1 Under low temperature treatment, the changes of net photosynthetic rate of the regenerated plantlets, except plantlet number 45, were significantly lower than that of check, which showed that over-expression of OsbHLH1 gene could be able to enhance the co ld tolerance of rice.

【题目】干旱响应转录因子DREB1A 基因导入水稻光温敏核不育系的研究
【中文关键词】干旱响应转录因子; DREB1A 基因; 光温敏核不育系; 水稻
【英文关键词】dehydration responsive transcription factor; DREB1A gene; hoto-sensitive and thermo-sensitive genic male sterile line; rice
【中文摘要】以成熟胚诱导的愈伤组织作为农杆菌转化的受体材料, 将诱导型启动子rd29A 驱动的拟南芥DREB1A基因导入粳型光温敏核不育系水稻4008S, 共获得67 株再生苗. 再生苗经0.75 mg/ L 除草剂草铵膦涂布筛选,有62 株再生苗表现出对草铵膦抗性. PCR 检测抗性苗中DREB1A 基因, 结果全为阳性. 挑选部分进行Southern 检测, 结果表明目的基因已经整合到水稻基因组中. 在干旱胁迫下, 转基因水稻当代(T1 代) 植株的电导率显著低于非转基因对照植株(P < 0.05) , 脯氨酸含量显著高于对照植株(P < 0.05) , 证明DREB1A 基因能提高水稻对干旱胁迫的耐受性.
【英文摘要】Sixty-seven regenerated plantlets were obtained by agrobacterium-mediated transformation of Arabidopsis thaliana DREB1A gene driven by stress-inducible promoter rd29A into photo-sensitive and thermo-sensitive genic male sterile(P / TGMS) line 4008S. They were spread with 0.75 mg/L glufosinate on leaves, sixty-two of them were approved to be herbicide resistant. PCR analysis showed that all of the resistant plantlets possessed the DREB1A gene and the Southern blot confirmed that the target gene had been integrated into the rice genome. Under the drought stress, the relative conductivity of the transgenic plants were lower than that of the control plants(P<0.05) , and the content of proline in the transgenic plants were higher than that in the control plants(P<0.05) . They implied that the expression of DREB1A gene can improve the drought tolerance of rice.

【题目】湖南省水稻品种应用生产现状调查与思考
【中文关键词】水稻;品种;生产现状;调查;对策
【英文关键词】rice; variety; status quo of production; investigation; strategy
【中文摘要】湖南是中国稻米第一生产大省,新时期下,水稻品种应用情况也呈现出新的特征。对湖南省30 个县(市、区)的3000 户农户进行调查与统计,结果表明,在水稻品种应用上,存在着农户对选用的稻种名称关注度不高、应用的品种个数多等问题,未形成“ 一村一种 ”规模化种植的局面。最后,对现阶段湖南省水稻品种应用状况进行了探讨,并提出了相关发展对策。
【英文摘要】Hunan is the larggest Province of rice production. In order to find out the new characteristics in implement of rice variety, 3 000 farmers in 30 counties (cities and districtions) of Hunan Province were investigated. The results showed that there were some problems in the implement of rice variety: farmers have low attention to the name of rice variety, there were numerous varieties to implemted and the large-scale planting of "one variety in one village" was not formed. In the end, status quo of implemented rice varieties in Hunan Province at present was analyzed and the correlating developmental stratigies were proposed.

【题目】花药培养对水稻温敏核不育系香125S不育性的遗传纯化效果初探
【中文关键词】水稻温敏核不育系; 香125S; 花药培养; 育性; 遗传纯化
【英文关键词】rice; TGMS line; Xiang 125S; fertility
【中文摘要】在人工低温(23. 5e)和自然条件下研究了香125S DH (Double hap lo id)群体的育性变化、异交特性和重要农艺性状。结果表明, 在23. 5e 的人工低温条件下, DH 群体各株系育性不一致, 有11个DH 株系(占36. 7%)花粉不育度在99. 5% 以上, 其中5个株系(占16. 7%)花粉不育度达100%, 自交结实率为0, 是不育性稳定、不育临界温度低的DH 系。各DH 系的株高、穗长、有效穗、每穗总粒数和异交结实率与对照香125S 差异不显著, DH 系保持了原品种的优良农艺性状。花药培养技术是对水稻光温敏核不育系的不育性进行遗传纯化的有效方法。
【英文摘要】The pollen sterility, outcrossing and major agronomic characters o f the DH (Double haploid) populations of Xiang 125S were investigated under low temperature(23. 5e) in the phytotron and natural climatic conditions. The results showed that the fertility of DH populations varied from one to another under the 23. 5e low temperature conditions in phytotron. Among all tested 30 DH populations, there were 11 DH lines (36. 7%) w ith the po llen sterility over 99. 5%, and five o f them (16. 7%) had the pollen sterility as high as 100% with no selfed seed set , indicating that they are the DH lines with stable male sterility and low critical temperature. There were no significant differences between various DH populations and Xiang 125S (CK) in plant height, panicle length, effective panicles, spikelets per panicle and outcross setting percentage, indicating that the elite agronomic characters of Xiang 125S are preserved in DH populations. It is concluded that anther culture is an effective way to be applied in the genetic homogenization of TGMS lines in rice.

【题目】基因枪介导获得转植酸酶基因水稻研究
【中文关键词】水稻; 植酸酶基因; 遗传转化; 植酸酶
【英文关键词】r ice; phy tase gene; g enetic transform ation; phy tase
【中文摘要】植酸酶是一类能促进植酸及其盐类水解成肌醇和磷酸的酶的总称. 它能提高饲料和食品中磷的利用率, 减轻粪便中磷排放所造成的环境污染, 清除植酸与金属离子的螯合作用, 改善微量元素的吸收和利用. 本研究将马铃薯的胞外分泌信号肽(P sec) 和大肠杆菌的植酸酶基因(appA2) 结合组成融合基因导入粳稻台北309 中. PCR检测和Sou thern杂交表明, 植酸酶基因和分泌信号肽序列已经整合到水稻的基因组中. 无机磷含量分析表明, 含目的基因的转基因水稻种子及茎叶中的无机磷含量均较未转化植株有显著的提高. 图6表1参14
【英文摘要】Phytase, catalyzing the hydrolysis of phytate tomyo- inosito l and inorganic phosphate, can improve the bioavaibility of phytate phosphorus in hum an food and animal feed stuff, reduce phosphorus pollution of animal waste, eliminate chelation between phytate and m e tallic ion, and increase the absorption and utilization of nutritious substance. In this study, potato extracellular secrete signal sequence (P sec) and phytase gene (appA2) cloned from Escherichia coli were transformed into genome of rice variety Taipei 309. The results of PCR detection and Southern blot showed that the appA2 and P sec were inserted into rice genome. The analysis data of inorganic phosphorus indicated that the inorganic phosphorus content in the mature seeds, leaves and stem of the transgenic r ice we re higher than that of the contro1. 【题目】基于杂交水稻种子鉴别其亲本的分子检测技术
【中文关键词】杂交水稻种子; 稻壳; SSR 分子标记; 亲本鉴别
【英文关键词】hybrid rice seed; husk; SSR marker; molecular identification of parents
【中文摘要】根据杂交水稻种子稻壳来自母本及SSR分子标记的共显性特点, 提出了一种基于杂交水稻种子鉴别其亲本的分子检测技术。首先提取杂交水稻种子稻壳的DNA, 获得母本的DNA指纹图谱, 再结合杂种带型, 推导出父本带型。这样只要建立已有亲本的DNA 指纹图谱库, 通过比对, 就可以鉴别杂交水稻的亲本是已登记亲本还是新创亲本。以金优207 及其亲本作为实验材料, 选用5对SSR引物验证了上述检测技术。
【英文摘要】According to the distinguishing features that seed husk has the same genotype as the female parent and SSR markers are co-dominant, a molecular technology was proposed to identify the parents of hybrid rice based on its hybrid seed. Firstly, the finger printing of the female parent was obtained from the husk o f hybrid seed. The fingerprinting of the male parent could be deduced by comparison o f the band patterns between the female and its F1 hybrid. On the basis of the existing fingerprinting bank of hybrid rice parents. It could be easy to identify whether a parent is a new one or not. We tested successfully the identification techno logy by using Jinyou 207 and its parents as the materials and 5 sets o f primers.

【题目】抗除草剂转基因水稻花粉漂移距离及生态风险分析
【中文关键词】转基因水稻; 抗除草剂基因; 基因漂移; 生态风险
【英文关键词】transgenic rice; herbicide resistant genes; gene flow; ecological risk
【中文摘要】以抗除草剂转基因水稻Bar68- 1及其杂种香125S /Bar68- 1 为花粉源, 探讨了转基因水稻的花粉漂移距离和漂移频率,结果表明: 在花粉源大(667m 2)、花粉受体为可育植株时转基因水稻的最大花粉漂移距离< 30 m, 最大漂移频率0. 295%; 当花粉源小(4 m2)、花粉受体为部分可育的两系不育系时, 最大花粉漂移距离< 9m, 最大漂移频率4. 518%。因此, 通常情况下, 转基因水稻向正常可育的栽培稻转移基因的可能性小。另据分析, 普通野生稻向栽培稻转移基因的可能性极低; 湖南和江西栽培稻向普通野生稻转移基因的可能性小, 两广和海南地区需要采取距离和障碍隔离防止栽培稻向普通野生稻转移基因。
【英文摘要】The pollen drift distance and gene flow percentage o f the herbicide resistant transgenic rice Bar68-1 and its F1 hybrid Xiang 125S /B ar68- 1 were studied. The results show ed that the maximal drift distance of pollen from herbicide resistant transgenic rice w as less than 30 m and the max imal gene flow percentage was 0. 295% when the pollen receptor was a normal rice variety and the pollen resources were abundant (667 m2), while the maximal drift distance of pollen from herbicide resistant transgenic rice was less than 9m and the maximal gene flow percentage was 4. 518% w hen the polen receptor was a PTGMS line with a partial fertility of about 30% and the pollen resources were small (4m2). Therefore, the probability of gene flow from transgenic rice to normally fertile cultivated rice is usually low. In addition, the analysis indicated the gene flow from common w ild rice to r ice cultivars had a very low probability. The probability of gene flow from cultivars to common wild rice in Hunan and Jiangxi was low, but in Guangdong, Guangxi and Hainan, the measures such as space or obstacle barrier isolations

【题目】拟南芥、荠菜DREB1A 基因的克隆与植物表达载体的构建
【中文关键词】DREB1A 基因 拟南芥 荠菜 基因克隆 表达载体构建
【英文关键词】DREB1A gene Arabidopsis thaliana Capsella bursa-pastoris Gene cloning Expression vector
【中文摘要】用PCR 方法从拟南芥和荠菜中分别克隆了DREB1A 基因。序列分析发现从拟南芥中克隆的AtDREB1A基因与已发表的AtDREB1A 基因序列(DQ372533) 的同源性为99.69%, 首次从荠菜中克隆的CbDREB1A 基因序列(EF156749) 与DQ372533 的同源性为99.54%。利用这两个基因分别构建了两个诱导表达载体(prd29A/AtDREB1A,prd29A/ CbDREB1A) 和两个组成型表达载体(pCaMV35S/AtDREB1A, pCaMV35S/ CbDREB1A) , 以便进一步开展植物抗旱基因工程研究。
【英文摘要】The AtDREB1A and CbDREB1A genes were isolated from Arabidopsis thaliana and Capsella bursapastor is respectively by the method of PCR. Sequencing analysis of AtDREB1A indicated that the cloned fragment showed 99.69% identity to the published sequence(DQ372533).The sequence of firstly cloned CbDREB1A gene(EF156749) shared 99.54% identity with that of DQ372533. By using of AtDREB1A and CbDREB1A genes, two induced expression vectors(prd29A/AtDREB1A, prd29A/ CbDREB1A) and two constitutive expression vectors(pCaMV35S/AtDREB1A, pCaMV35S/ CbDREB1A) in plant were constructed. The obtained expression vectors can be applied on plants genetic engineering for drought-tolerance improvement.

【题目】籼型三系杂交水稻品质性状配合力与遗传力研究
【中文关键词】杂交水稻;品质性状;配合力;遗传力
【英文关键词】Hybrid rice; Quality trait; Combining ability; Heritability
【中文摘要】以3 个不育系和11 个恢复系为材料, 采用不完全双列杂交设计研究了水稻12 个品质性状配合力和遗传力的表现规律。结果表明: (1) 大部分性状特殊配合力方差极显著, 即主要受基因非加性效应作用; 少部分性状一般配合力和特

【英文摘要】3 sterile lines and 11 restoring lines were chosen for the research on combining ability and heritability of 12 quality traits by incomplete diallele cross design. The results were as follows: (1) Most of the traits were determined by non-additive effect of genes, few of the traits were determined by additive and non-additive effect of genes, and the non-additive effect was in leading position. (2) Brown rice rate, length of grain and chalky area were influenced mainly by sterile line, while head rice rate and gelatinization temperature were influenced mainly by restorer line , and the effect of male and female parents on milled rice rate, length/width and chalky rice rate was almost equal. (3) The narrow heritability of the traits were listed out from big to small as follows: protein content , head rice rate, gelatinization temperature, brown rice rate, chalky area , grain length, gel consistency , amylase content and milled rice rate. (4)Xing cheng A and Ming hui 77 were more ideal in parents, and Xing cheng A/ TO974 and Jin 23A/ R207 were better in hybrid combinations.

【题目】特矮稻ED基因的遗传定位和分析

【中文关键词】水稻; GA3鉴定; 矮秆基因; 遗传分析; 基因定位

【英文关键词】rice (Oryza sativa); GA3 identification; dwarfing gene; genetic analysis; gene mapping

【中文摘要】赤霉素(GA3)鉴定表明, 一种新型特矮稻(命名为‘特矮稻-2’)的GA3 信号转导途径正常, 施加外源GA3不能恢复到正常植株的高度, 说明此种矮稻的矮化机制与GA3无关。来源于组合‘特矮稻-2’×‘日本晴’的F2 群体的遗传分析表明,‘特矮稻-2’的特矮性状受1对隐性基因控制。采用SSR分子标记, 将该矮秆基因定位于第12 染色体上的RM519和RM235标记之间, 遗传距离分别为15.9 和22.0 cM, 该基因暂命名为ED。

【英文摘要】We investigated gibberellin (GA3) signaling in a novel dwarfing rice (Oryza sativa)‘Teaidao-2’, the results showed that exogenous GA3 could not rescue the dwarfing phenotype of‘Teaidao-2’. So GA3 was not involved in the dwarfing phenotype. The dwarfing gene was referred to as ED, a F2 population derived from cross between‘Teaidao-2’and‘Nipponbare’was constructed for mapping of the ED locus. The dwarfing phenotype of‘Teaidao-2’was regulated by a single recessive gene. Simple sequence repeat (SSR) marker analyses revealed that ED was located between RM519 and RM235 with the genetic distance of 15.9 and 22.0 cM on chromosome 12.

【题目】亚热带区域水稻耐逆境生态育种的问题和对策
【中文关键词】亚热带;水稻;耐逆境;分子设计;育种
【英文关键词】subtropical regions; rice; stress tolerance; molecular design; breeding
【中文摘要】水稻主要种植在我国亚热带地区,高温干旱、淹涝、低温、低磷是它遇到的主要非生物逆境。水稻耐逆境生态育种主要采用分子标记辅助选择和转基因技术,改良的主要对象是杂交水稻亲本。不育系侧重于耐涝、耐旱、耐寒性状的分子设计,同时兼顾抗病性状的改良。恢复系主要开展耐低磷和抗除草剂性状的分子设计,同时兼顾抗虫性状的改良。通过不育系与恢复系的合理配组,获得耐多种逆境的杂交稻组合,利用耐逆境杂种优势。
【英文摘要】Rice is mainly planted in subtropical regions of China and suffered with the mostly abiotic stress including high temperature, drought, submergence, low temperature and low phosphorus. To improve the stress tolerance of rice, marker assistant selection and genetic transformation technique are adopted firstly and the parental lines of hybrid rice are preferred to be the object for modification. The male sterile lines of hybrid rice are emphasized particularly on molecular design of the tolerance of submergence, drought and cold when disease resistances are considered. For the restorer lines of hybrid rice, improvements are focused on phosphorus uptake and herbicide resistance as insect resistances are concerned. The hybrid combinations with multi-stress tolerance are developed by suitable mating one stress tolerant male sterile line with another stress tolerant restorer line of rice, and then the heterosis of stress tolerance is utilized.

【题目】烟酰胺合成酶基因在植物铁胁迫应答反应中的功能
【中文关键词】烟酰胺合成酶基因; 铁胁迫; 机理Ⅰ型; 机理Ⅱ型
【英文关键词】nicotianamine synthase gene;iron stress;strategy Ⅰ plants;strategy Ⅱ plants
【中文摘要】铁离子在植物的生理生化代谢中具有重要的功能. 缺铁和铁过量都会对植物造成伤害, 因此, 维持植物铁离子的动态平衡具有很重要的作用. 烟酰胺合成酶基因(NAS) 与植物铁离子的吸收转运关系非常密切,但在机理Ⅰ型和机理Ⅱ型植物中, NAS 基因的作用机理和表达模式却不同. 在双子叶和非禾本科单子叶植物中, 烟酰胺(NA) 的主要功能是铁离子的储藏和运输, NAS 基因的表达不受缺铁胁迫诱导. 而在禾本科植物中,NAS 基因的表达受缺铁胁迫诱导, 并且与铁元素的吸收关系密切.
【英文摘要】Iron ion plays important roles in plant physiological and biochemical processes. The deficiency or excessive accumulation of iron causes severe damages to plants. Thus,a precise control of iron ion homeostasis in plant is essential for normal cellular function. Nicotianamine synthase gene (NAS) is involved in iron ion absorption and transport. NAS functions differentially between strategy Ⅰ and strategy Ⅱ plants. In dicotyledonous and nongraminaceous plants,NAS synthesizes nicotianamine (NA) which is responsible for iron storage and transportation,and the expression of NAS gene is not induced by iron deficiency. Whereas in graminaceous plants,NAS gene expression is induced by iron deficiency,and is involved in iron uptake .

【中文关键词】水稻; 重组自交系; 芽期; PEG 胁迫; 耐旱性
【英文关键词】rice; recombinant inbred line; germinating stage; PEG water- stress; drought tolerance
【中文摘要】以20% PEG-6000 作渗透介质, 模拟干旱条件, 芽期处理水稻籼爪重组自交系7 天, 测定处理后的胚根长、芽长、芽干重。以各性状相对值的耐旱级别而得出的耐旱总级别为指标, 筛选出8 个耐旱株系, 它们可作为耐旱资源在育种和耐旱机理研究中应用。
【英文摘要】Drought tolerance of indinca/ javanica recombinant inbred line (RIL) at germinating stage in r ice by use of 20% PEG-6000 as water-stress agent were studied. The radicle length, shoot length and the dry weight of shoot were measured after the 20% PEG treatment for 7 days. The final class of drought tolerance, der ived from the sum of the drought tolerance class of each trait, was used as index in assessing the drought tolerance of RIL. The results showed that eight lines are of drought tolerance among the 270 lines, which could be used as drought tolerance resources in rice breeding and research on mechanism of drought tolerance in r ice.

【题目】转大麦烟酰胺合成酶基因提高水稻逆境胁迫耐受性的研究

【中文关键词】水稻; 烟酰胺合成酶基因; 遗传转化; 耐逆性
【英文关键词】rice; nicotianamine synthase gene; genetic transformation; stress tolerance
【中文摘要】维持铁等金属离子的动态平衡是保持植物细胞功能正常的先决条件。烟酰胺合成酶基因在单子叶禾本科的缺铁胁迫应答反应中起着关键作用, 它的催化产物烟酰胺(NA) 是铁及其他二价金属离子在体内吸收和转运的重要载体, 且能与Fe2+ 结合形成Fe2+-NA 复合物, 从而使植物在酸性土壤中免受铁毒害。利用农杆菌介导法, 将大麦烟酰胺合成酶基因NASH OR1 转入水稻台北309 中, 经PCR 及PCR- Southern 杂交检测,确定目的基因已经整合到水稻基因组中。铁、锰、铜和锌含量的检测结果显示: 与非转基因对照植株相比,转基因植株的金属元素含量都明显提高, 铜、锌、锰和铁元素含量分别增加了15%、80%、31%和44%, 但铁、锰和锌元素增量在株系间差异较大。在干旱胁迫下, 转基因植株的超氧化物歧化酶(SOD) 活性和脯氨酸含量都高于非转基因对照植株的, 暗示大麦烟酰胺合酶基因在一定程度上提高了水稻的耐旱性。
【英文摘要】Keeping Fe2+ and other ions homeostasis is essential work for plant cell. Nicotianamine synthase gene has an important function in the Fe-def iciency response of graminaceous monocots, and it catalyzes substance to nicotianamine which plays an important carrier in the internal transport of Fe2+ and other divalent metal ions. Nicotianamine can bind with Fe2+ to form Fe2+-NA complex and protect plants from toxicity in acidic soil. The transformation of nicotianamine synthase gene of barley to rice Taipei 309 was reported. The PCR and PCR-Southern blot analy sis showed that the interest gene had been integrated into rice genome. The contents of Fe, Mn, Cu and Zn in t ransgenic plants were measured and the results showed that the contents of transgenic plants were higher than those of the control respectively, i. e. Cu increased by 15% , Zn increased by 80% , Mg increased by 31%, and Fe increased by 44%. How ever , the contents of Fe, Mg and Zn in transgenic line were different between individuals. The SOD activity and proline contents of transgenic plants were higher than those of non-transgenic plants under drought stress, which hints that the barley nicotianamine synthase gene can increase the drought stress tolerance of r ice to some degree.

【题目】转基因抗除草剂两系杂交早稻新组合高产栽培试验初报
【中文关键词】抗除草剂;转基因;杂交早稻;栽培
【英文关键词】herbicide-resistant; transgenic; early season hybrid rice; cultivation
【中文摘要】对转Bar 基因抗除草剂两系杂交早稻株S/Bar68-1 和株S/Z003 进行高产栽培试验研究,结果表明, 供试组合各项经济性状稳定,生长整齐,抗倒伏能力比对照强,株S/Bar68-1 和株S/Z003 比对照株两优819 分别增产2.4%和8.2%。转Bar 基因抗除草剂两系杂交早稻高产栽培技术要点为:3 月下旬播种;3 叶一心期喷0.045%草铵膦(w/v)除杂;插植规格16.5 cm×16.5 cm;全生育期施肥总量为纯氮186 kg/hm2,磷47 kg/hm2,钾131 kg/hm2;按常规方法管水和防治病虫害。
【英文摘要】The studies on high-yielding cultivation techniques of herbicide-resistant two-line early season hybrid rice Zhu S/Bar68-1 and Zhu S/Z003 were reported. The results showed that the two combinations were stable in economic characters and synchronous in growth. Compared with the control hybrid rice Zhu-liang-you 819, Zhu S/Bar68-1 and Zhu S/Z003 were better in lodging resistance and their yields increased by 2.4% and 8.2% respectively. The keys of high-yielding cultivation techniques of herbicide-resistant two-line early season hybrid rice were sowing in the last ten days of March; spraying 0.045% glufosinate (w/v) at the three-leaf and one-bud stage for controlling weeds; transplanting in density of 16.5 cm×16.5 cm; and fertilizing nitrogen 186 kg/hm2, phosphorus 47 kg/hm2 and potassium 131 kg/hm2 per hectares in total. Water management and pests control were followed as routine procedures.

【题目】荧光定量PCR检测淹涝胁迫下水稻Adh2基因的表达量变化
【中文关键词】淹涝胁迫;乙醇脱氢酶;实时荧光PCR;基因表达
【英文关键词】Submergence stress, Alcohol dehydrogenase, Real- time fluorescence quantitative PCR, Gene expression
【中文摘要】采用荧光定量PCR 方法, 应用特异性引物, 对淹涝胁迫下水稻叶片中低丰度表达的乙醇脱氢酶基因Adh2 (Alcohol dehydrogene 2)进行转录水平上的定量分析。实验得到一组基线平整、斜率大、指数区明显的S形荧光曲线。结果显示, 在淹涝胁迫前期, Adh 2基因表达持续增加, 在水淹后8 h表达量最大, 随后下降。淹涝胁迫能诱导叶片中Adh 2基因大量表达, 且呈低- 高- 低的变化趋势。
【英文摘要】Real-time fluorescence quantitative polymerase chain reaction was used to determine transcription levels of Adh2 (Alcohol dehydrogene 2) gene in submerged leaves of rice using specific primers, expressed at low abundance under normal conditions. SYBR Green real-time PCR platform was established to check low abundance genes, which gave rise to a series of S curves with flat baselines, large slopes and distinct exponential areas. The results show thatAdh2 transcription increases at the beginning of submergence and reaches the maxmium level 8 hours after submergence, and then decreases. Adh2 transcription level in r ice leaves follows a low-high-low pattern under submergence.

【题目】Tolerance of submergence in rice gene studies using differential display technique
【中文关键词】无
【英文关键词】mRNA differential display; Oryza sativa ssp. indica; submergence stress
【中文摘要】无
【英文摘要】Gene expression profiles between submergence rice (Oryza sativa ssp. indica) varieties, tolerant FR13A and sensitive IR39595-503-2-1-2, under submergence stress were identified using differential display reverse transcriptase-polymerase chain reaction (DDRT-PCR). A total of 1428 bands were amplified with 40 pairs of primers, of which 102 were significantly different between the two lines. The differential display ratio was 7.1%. Among 42 differential display bands derived from the submergence tolerant variety, the expression of seven fragments was confirmed by Northern blot analysis. The analysis of their sequences indicated that four of them showed high homology with genes related to a water stress response: genes encoding ATPbinding protein, isocitrate dehydrogenase,

NADH dehydrogenase and terminal acetyltransferase, respectively. The remaining three fragments were novel cDNA fragments.

【题目】硫脲用量对菠菜生理指标及土壤氮素转化的影响
【中文关键词】硫脲 菠菜 硝酸盐累积 土壤氮素 叶绿体色素
【英文关键词】Thiourea; spinach; nitrate accumulation; soil N; chloroplast pigments
【中文摘要】采用盆栽法,研究了硫脲不同用量(0%、1%、3%、5%、7%)对菠菜生长、硝酸盐累积、土壤氮含量及叶绿体色素含量的影响。结果表明,不同硫脲用量对菠菜的单盆重、株高均有提高。随硫脲用量的增加,菠菜叶绿体色素含量均有提高;硫脲能显著降低菠菜硝酸盐含量,随着硫脲用量的增加,降低效果提高,其中硫脲用量为7%时,降低效果达极显著水平。硫脲对土壤硝态氮累积的抑制作用随硫脲用量的增加而增强,硫脲用量达7%时,抑制作用表现为极显著。
【英文摘要】The effects of different thiourea-applying amounts(0%, 1%, 3%, 5% and 7%) on the growth, nitrate accumulation of spinach, N content in soil and chloroplast pigment contents in plants have been studied by pot experiment. The results showed that, the application of thiourea with different dosages increased both the fresh weight of spinach in single pot and plant height. Following with the increased of thiourea-applying amounts, the chloroplast pigment contents in plants were increased. Thiourea application could significantly decrease the nitrate contents in spinach. The nitrate-decreasing efficiency has been improved following with the increase of thiourea-applying amounts. When thiourea-applying amount reached as higher as 7%, the nitrate-decreasing efficiency reached a very significant level. The depressing function of thiourea application on nitrate accumulation in soil was strengthened with the increase of thiourea-applying amounts. When thiourea-applying amount was 7%, the depressing function reached a very significant level.

【题目】污泥茶渣堆肥发酵过程酶活性变化
【中文关键词】污泥 茶渣 堆肥 酶活性
【英文关键词】sludge; tea waste; compost; enzyme activity
【中文摘要】对污泥茶渣等物料进行堆肥发酵,结果表明:不同物料配比堆肥第3d均进入高温(75°C)降解阶段,持续时间16~18d。污泥含量40%~50%处理的全氮、速效氮含量高于污泥含量30%的处理;处理D全氮含量最高,达19.17g.kg-1,各处理全氮平均值大小顺序为D〉E〉C〉B〉A;处理E速效氮含量最高,为1171mg.kg-1,各处理速效氮平均值大小顺序为E〉D〉C〉B〉A。堆肥过程中纤维素酶活性的变化与污泥或茶渣的含量无明显的相关关系,而与温度呈正相关线性关系。处理A、B、C、E的纤维素酶活性于第8d达最高值,分别为0.396、0.498、0.499、0.498mg.g-1.d-1,处理D第12d达最高值,为0.590mg.g-1.d-1。随着茶渣用量的增加,脲酶的活性有所降低;经相关关系分析,脲酶活性与茶渣用量呈负相关关系,各处理脲酶活性平均值大小顺序依次为C〉A〉D〉E〉B。
【英文摘要】Enzyme activities in compost containing various proportions of sludge and tea waste were compared.The results showed that the higher compost temperature was reached on the third day,and maintained for 16-18 days for all treatments.The total N in the compost containing 40%-50% of sludge was higher than when 30% sludge was used.The total N of Treatment D was 19.17 g · kg-1,which was the highest among all treatments.The order of total N content for the treatments was DECBA.The available N of Treatment E was 1171 mg · kg-1,which was the highest among all treatments.The order of average available N for the treatments was EDCBA.The cellulase activity increased linearly as the temperature rose.On the 8th day,the cellulase activities of the Treatment A,B,C and E reached maximum values of 0.396,0.498,0.499 and 0.498 mg · g-1 · d-1,respectively.Treatment E attained the highest value of 0.590 mg · g-1 · d-1 on 12th day.The urease activity decreased with increasing tea waste addition.The order of the average urease activity in the treatments was CADEB.

【题目】茶叶脱咖啡因技术研究进展
【中文关键词】茶叶;脱咖啡因;技术;进展
【英文关键词】tea:decaffeination:technique;review
【中文摘要】茶叶具有许多医疗保健作用,然而咖啡因的负作用使消费者对低咖啡因茶及茶制品特别青睐。目前脱咖啡因技术主要有水脱除、溶剂萃取、吸附分离和超临界CO2 萃取等传统方法,以及后来发展的微生物和酶法降解咖啡因和培育低咖啡因茶树等。本文对茶叶脱咖啡因的研究进行综述,并讨论其可行性;水脱除法与吸附分离法相结合、微生物和酶法降解及培育低咖啡因茶树将是今后茶叶脱咖啡因技术发展的主要方向。
【英文摘要】It is reported that tea has many medical functions. However, consumers prefer decaffeinated tea and tea products due to caffeine ’s negative disadvantageous. Decaffeination is realized by different methods, including the traditional methods such as water decaffeination, solvent extraction, adsorption separating and supercritical carbon dioxide extraction. The recent developmental microbial and enzymatic degradation and breeding low caffeine tea varieties are also developed for removal of caffeine. The investigation on tea decaffeination was reviewed, and the feasibility was discussed in this paper. The techniques of water decaffeination combined with adsorption separating, microbial and enzymatic degradation as well as low caffeine tea breeding were regarded as the main developmental direction of tea decaffeination by the authors.

【题目】硝化抑制剂及其组合对小白菜产量、品质的影响与土壤残留分析
【中文关键词】小白菜 清江白 硝酸盐 硝化抑制剂组合 残留
【英文关键词】Chinese Cabbage; Brassica chinensis L. cv. ; nitrate; nitrification inhibitors'conbinations; residue
【中文摘要】采用网室盆栽试验,研究了3种不同硝化抑制剂及其组合对清江白产量和品质的影响。结果表明,尿素配施3种不同硝化抑制剂及其组合的清江白硝酸盐含量呈现相似的波动曲线,菜体硝酸盐总体呈降低的趋势,降幅在8.34%~65.60%之间。配施不同硝化抑制剂及其组合的清江白,收获时菜体硝酸盐比对照减少13.21%~70.86%。产量增加3.45%~59.42%,叶绿素总量增加0.15%~27.41%,类胡萝卜素增加2.30%~29.15%,Vc提高26.00%~131.97%,植株N、P、K也有不同程度的提高。单施3种硝化抑制剂的作用效果以硝化抑制剂Ⅰ效果最好,从组合看,整体表现为配施硝化抑制剂Ⅰ的组合效果较好,其中硝化抑制剂Ⅰ+Ⅱ+Ⅲ的硝化抑制作用效果最佳。对配施硝化抑制剂Ⅰ的残留量研究表明,硝化抑制剂Ⅰ施用67d后,降解率为89.93%。
【英文摘要】A hyocaust plot experiment was employed to study the effects of three different nitrification inhibitors and their combinations on yield and quality of Brassica chinensis. A similar fluctuant pattern on vegetable nitrate contents during the growing period of B. chinensis was observed when different nitrification inhibitors were added to urea. The nitrate in vegetable decreased, by 8.34%-65.60% on average. After harvest, it decreased by 13.21%- 70. 86%. As compared to the control, the yield and contents of nitrate, chlorophyll, carotenoid and vitamin C of B. chinensis increased by 3.45%- 59.42%, 13.21%- 70.86%, 0.15%- 27.41%, 2.30%- 29.15%, and 26.00%-131.97 %, respectively. At the same time, the nitrogen, phosphorus and potassium in the plant increased in varying degrees. The Nitrification Inhibitor Ⅰ was found to be the best among three inhibitors tested, when they were added individually to urea. The combinations of the Nitrification Inhibitor I and other inhibitors were also better than those of the others. The best combination was found to be Nitrification Inhibitors Ⅰ + Ⅱ + Ⅲ. Significant portion (i. e. , 89.93%) of the Nitrification Inhibitor Ⅰ was degraded, 67 clays after the fertilization.

【题目】不同污泥肥料对水稻和大豆的肥效实验研究
【中文关键词】土壤肥料学 污泥 自机肥 生物肥 速效养分 增产效果
【英文关键词】soil and fertilizer science ; sludge ; organic fertilizer; biological fertilizer; quick result nutrient; yielding effect
【中文摘要】为探讨城市生活污泥农用效果,以莆田市城市生活污水处理厂的鲜污泥为材料,制成下污抛、有机肥及生物肥等3种不同有机肥料品种,将这3种肥料在水稻、大豆上进行肥效盆栽试验,测定作物产量,并分析不同施肥处理其土壤N,P、K养分供应能力及作物对N、P、K养分的吸收情况。试验结果表明,污泥作为肥料施用能提高土壤速效N、P,K养分供应水平和水稻、大豆对N、P、K的吸收量,并具有明显的增产效果;3种污泥肥料品种的供肥能力从高到低的顺序为生物肥、有机肥、干污泥;并就污泥农用资源化提出看法。
【英文摘要】This article is concerned with the authors' study on the effects of different kinds of sludge on the nutrient supply for rice and beans in Putian context. To test the effects of the different kinds of sludge on the soil of the paddy fields, we have taken fresh sludges supplied by a sludge processing plant in Putian as samples to test the yields of rice and beans before and after their use. Particularly,tests were done with the different effects of different kinds of sludge, such as dry sludge, organic fertilizer and biological fertilizer on the soil absorption and supply of N, P and K. The results of our experiments show that the use of sludge as a kind of fertilizer helps to increase quick absorption of N, P and K by the soil. In case of rice absorption of N, P, and K, the increase rates can be 3.74 g/plant, 0.45 g/plant and 4.83 g/plant respectively, with 4.76%, 15.4% and 14.5 % as increase rates of yields as compared with the soil without such supply. As to beans, the increase rates are 15.2%, 14.6% and 13.7% respectively. If dry sludge is taken as sample fertilizer, the increase rates of rice and bean yiekts are 56.9 g/plant and 29.4 g/plant, with an increase of 13.4% and 6.1% respectively. The resuits also prove an extra-salience in rice yield and a salience in beans' . Among the three kinds of fertilizer, biological fertilizer ranks the highest, organic fertilizer in the middle and dry sludge the lowest. This article also give some insights into how to make sludge more useful as a kind of agricultural resources and brought about the ideas of composite process of sludge when turning the sludge into organic fertilizer or biological fertilize.

【题目】固液分离机研制与应用效果
【中文关键词】固液分离机 质量标准 悬浮物
【英文关键词】solid-liquid separator; quality standard; suspended solid ramoval
【中文摘要】本文叙述了Fz-12固液分离机的设计原理与原则,详述了主要技术性能指标及其生产工艺流程,并对样机进行空载和试运行检验.结果表明各项性能和技术指标均符合Q/HXJ001-2004产品质量标准,对粪污悬浮物去除效果好,说明该机对降低粪便污水有机物浓度与促进粪渣多层次循环综合利用具有重要作用.
【英文摘要】Design principles of solid-liquid separator FZ-12 were presented in this paper with a detailed recount of its technical capability and process flow. The performance showed an effective removal of suspending materials of dung wastewater, and it was coincident to the quality standard of Q/HXJJ001-2004. The separator could effectively decrease organic content of dung wastewater and promote the comprehensive use of it.

【题目】规模化养猪场污水处理工程实例分析
【中文关键词】污水处理 固液分离 厌氧发酵
【英文关键词】wastewater treatment; Solid-liquid separation ; Anaerobic fermentation
【中文摘要】本文以规模化养猪场的污水处理工程实例分析了各阶段的处理效果,结果认为,在改进规模化养猪场传统污水处理方案时,应用固液分离机进行前处理对去除SS,COD,BOD和NH,等效果好,去除率分别为75.7%,62.4%,59.9%和18.3%,且投资省、回收快,不增加企业的运行费用负担。
【英文摘要】This article briefly introduced the present state of development of large scale pig farm and the wastewater discharge in Fujian province. On the basis of a case study of wastewater treatment on a Large Scale Pig Farm, it was found that solid-liquid separators, as prctreatment, could help the removal of SS, COD, BOD and NH3, which could reach the removal rate of 75.7%, 62.4%, 59.9% and 18.3% respectively,thus greatly improving efficiency of wastewater treatment. It also has the advantage of less cost, and no financial burden of transportation.

【题目】龟纹瓢虫对茶树挥发物的行为反应
【中文关键词】龟纹瓢虫;茶树挥发物;行为反应;互利素
【英文关键词】Propylaea japonica (Thunberg) ; tea plant volatiles ; behaviour responses ; synomone
【中文摘要】以洁净空气为对照,源于茶树的27个单一挥发物及其中芳樟醇、反-2-己烯醛和顺-3-己烯-1-醇的混合物和8个“绿叶组分”的混合物为味源,设10-6 ,10-4 ,10-2 g/ ml 3个剂量, 用Y形嗅觉仪测定了这29种味源对龟纹瓢虫的引诱效应。结果表明: (1) 当剂量是10-6 g/ ml 时,选择烯丙基异硫氰酸酯的瓢虫数显著高于选择对照的(P < 0. 05); (2) 当剂量是10-4 g/ml 时,选择芳樟醇、苯甲醛、水杨酸甲酯、正己醇、1-戊烯-3-醇、(+)-3-蒈烯和苯甲醇的瓢虫数分别高于选择对照的(P < 0. 05); (3)当剂量是10-2 g/ ml 时,选择所有单一挥发物的瓢虫数分别与选择对照的瓢虫数的差异均未达显著水平; (4) 龟纹瓢虫趋向2 组混合物,其数量分别与趋向对照的数量差异不显著。分析认为,茶树挥发物对该瓢虫有引诱效应,其中苯甲醛和水杨酸甲酯等互利素的引诱效应更强;该瓢虫对信息物的趋向性存在着阈值,但高剂量信息素有抑制效应;不恰当的信息物组配不能引起该瓢虫显著趋性。可供信息物调控龟纹瓢虫行为的参考。
【英文摘要】Using clean air as the control, and 27 single volatile components from tea plants and their partial mixture, ie. the mixture of linalool, E-2-hexen-1-ol and Z-3-hexen-1-ol and the mixture of 8 green leaf volatiles as tested odor resources, at the dosages of 10-6, 10-4 and 10-2 g/ml, the attraction of the 29 odor resources to Propylaea japonica was detected by Y-tube olfactometer. The results showed that: (1) when the tested dosage was 10-6 g/ml, the number of ladybug choosing allyl isothiocyanate was significantly larger than the number choosing the control (P<0.05); (2)when the tested dosage was 10-4 g/ml, the number choosing linalool, benzaldehyde, methyl salicylate, hexanol, 1-penten-3-ol, (+)-3-caren and benzyl alcohol was significantly larger than the number choosing the control (P< 0.05), respectively; (3) when the tested dosage was 10-2 g/ml, the difference between the number choosing anyone of the tested single volatile components and the number choosing the control did not reach the level of P<0.05; (4)when the dosage was 10-6, 10-4 or 10-2 g/ml, the more ladybug chose the 2 groups of mixtures than those chose the control, respectively, but the difference between the number choosing the mixture and the number chosing the control did not reach the level of P<0.05. It is considered that the ladybugs are attracted to the volatiles from tea plants, from which benzaldehyde and methyl salicylate have more attractive effect than the other components. There exist thresholds during the attractive process; however, the high dosage infochemicals reveal the depressing effect. The mixtures that composed of non-appropriate components or ingredients with nonproper ratios do not

markedly allure the ladybug. Those may be referred in the aspect for infochemicals application to mediate the behaviour of the ladybug.

【题目】不同沼液施用量下象草养分利用效率和土壤养分含量的变化研究
【中文关键词】象草;养分利用效率;沼液;氮肥;磷肥;土壤养分含量
【英文关键词】biogas slurry; Pennisetum purpureum ; nutrient use efficiency; nitrogen; phosphorus
【中文摘要】本研究设置了不同沼液施用量0kg · m-2、40kg · m-2、60kg · m-2、80kg · m-2和100kg · m-2的处理,研究了象草的生物量、养分吸收利用效率以及土壤养分含量的变化。试验结果表明,适量施用沼液,促进象草分蘖,增加生物量。象草的氮利用效率在施用沼液60kg · m-2的处理上最高,为27.5%,而之后随着沼液施用量的增加,氮利用效率逐渐降低,而磷的利用效率在施用沼液40kg · m-2的处理上最高,为14.3%,而之后随着沼液施用量的增加,磷利用效率变化不大,维持在13%。施用沼液的处理0~30cm土层土壤全氮养分出现累积,而30~60cm土层土壤的全氮养分出现亏缺,但是施用沼液对不同土层土壤的碱解氮、全磷和速效磷没有影响。然而,种植象草之后土壤中的全磷和速效磷含量分别比种植象草之前降低了83%~90%和96%~98%。
【英文摘要】In this study, we set up a experiment with different application amount of biogas slurry, 0 kg · m-2、40 kg · m-2、60 kg · m-2、80 kg · m-2 and 100 kg · m-2, to study the change of biomass, nutrient use efficiency of Pennisetum purpureum and soil nutrient content. The results showed that: Pennisetum purpureum could grow well with appropriate application amount of biogasslurry. The highest nitrogen use efficiency of Pennisetum purpureum , 27.5%, was reached at 60 kg · m-2 application amount of biogas slurry. And the nitrogen use efficiency of Pennisetum purpureum declined with an increase in the application amount of biogas slurry within 60~100 kg · m-2. The highest of phosphorus use efficiency, 14.3%, was reached at 40 kg · m-2 application amount of biogas slurry and the other treatments of biogas slurry maintained 13%. Soil TN of 0~30 cm layer was accumulation with the application of biogas slurry, and Soil TN of 30~60 cm layer was deficiency with the application of biogas slurry. But there were no significant difference between the application of biogas slurry and no application on the soil alkali-N, TP and available P of different layer. However, the soil TP and available P reduced by 83%~90% and 96%~98% after Pennisetum purpureum growing contrast to before Pennisetum purpureum growing.

【题目】时间序列自回归模型预测茶园小绿叶蝉种群动态的探讨
【中文关键词】时间序列; 自回归模型; 茶园; 假眼小绿叶蝉; 预测
【英文关键词】temporal sequence; autoreg ressionmodel; tea garden; Empoasca vitis Gothe; forecast
【中文摘要】选定西湖龙井茶叶原产地的优质丰产茶园、普通丰产茶园、山林间茶园、种质资源圃和茶-林间作等5类代表性茶园, 从2007年4月20日-12月26日, 5 d 1次调查假眼小绿叶蝉种群数量, 作为时间序列自回归模型的数据源。据此对自回归模型预测假眼小绿叶蝉种群动态的可行性、建模步骤及准确性验证进行了探讨。与其他相关预测模型相比, 自回归模型显得简便易行实用。
【英文摘要】The five typical tea gardens, .i e. high eff icient fertility tea garden, common fertility tea garden, tea garden among mounta in fores,t tea plant idiop lasm resource garden, and tea and forest in tercrop tea garden, were chosen in X ihulong jing Tea provenance. The population abundance of tea green leafhopper, Empoasca vitis Gothe, was investigated at intervals of five days, from April20 to December 26 in 2007, which acted as the data source of the temporal sequence autoregression model. Based on the data source, the feasibility, the modeling procedure and the accuracy on the autoregression model to be used to forecast leafhopper dynamics, was discussed. Compared with the other correlativemodels, the autoreg ressionmodel appeared simple and practical.

【题目】固相萃取-气相色谱法测定茶叶中残留的92种农药
【中文关键词】固相萃取; 气相色谱法; 农药; 多残留检测; 茶叶
【英文关键词】solid-phase extraction (SPE); gas chrom atography (GC); pesticides; multiresidue determination; tea
【中文摘要】建立了茶叶中92种农药多残留的气相色谱分析方法。茶叶样品用乙腈一次性提取后, 有机磷类农药经Envi-Carb固相小柱净化, 用10 mL乙腈-甲苯(体积比为3:1)洗脱剂淋洗, 气相色谱-火焰光度检测器(GC-FPD)检测; 有机氯类和拟除虫菊酯类农药经串联Envi-Carb和NH2 固相小柱净化, 用5 mL乙腈-甲苯(体积比为3:1)洗脱剂淋洗, GC-电子捕获检测器(ECD)检测。采用外标法定量。添加回收试验的结果表明: 92种农药的平均回收率为80.3% - 117.1%, 相对标准偏差为1.5%-9.8%。方法的检出限为0.0025-0.10 mg/kg。该方法的灵敏度、准确度和精密度均符合农药残留测定的技术要求。
【英文摘要】Amultiresidue analytical method was developed for the determ ination of ninety-two pesticides in tea using solid-phase extraction (SPE) and gas chrom atographic determination. Tea samples were extracted with acetonitrile, organophosphorus pesticides were clean-up by anEnvi-Carb SPE cartridge, eluted with 10mL acetonitrile-toluene (3:1, v /v) and determined by gas chromatography-flame photometric detection (GC-FPD); organochlorine pesticides and pyrethroids pesticides were cleaned-up by Envi-Carb+ NH2 SPE cartridges, eluted with 5mL acetonitrile-toluene (3:1, v /v) and determ ined by gas chromatography-electron capture detection (GC-ECD). The recoveries of those pesticideswere ranged from 80.3% to 117.1% by fortification test with the relative standard deviations being from 1.5% to 9.8%. The limits of detection were 0.0025 – 0.10 mg /kg. The proposed method is characterized by simplicity, higher sensitivity and accuracy.

【题目】Effects of Molybdenum Application on Plant Growth, Molybdoenzyme Activity and Mesophyll Cell Ultrastructure of Round Leaf Cassia in Red Soil
【中文关键词】无
【英文关键词】molybdenum, Chamaecrista rotundifolia, nodule nitrogenase, leaf nitrate reductase, mesophyll cell, ultrastructure
【中文摘要】无
【英文摘要】Round leaf cassia (Chamaecrista rotundifolia) cv.‘Wynn’, a species of leguminous forage,was introduced into China from the Australian Centre for International Agricultural Research in 1989. It possesses strong resistance to adversity and is suited for planting in the red soil area of Southern China. The purpose of this study is to investigate the effects of molybdenum (Mo) application with different concentrations on plant growth, molybdoenzyme activity and mesophyll cell ultrastructure of C. rotundifolia in red soil. The results showed that, plant height, number of branches, and dry matter weight of C. rotundifolia under varying Mo applications (0.5, 1.0, 2.0, 4.0 mg kg − 1) increased by 2.7% 11.5%, 0.92% 28.68%, and 52.9% 115.2% compared with the control group, respectively, and they all increased with the increase ofMo concentration. Molybdenum contents in plants were also increased significantly with increasing the concentration of Mo, but Mo contents in plants at 4 mg kg − 1 Mo application were lower than that at 2 mg kg − 1 Mo application. The activities of nitrate reductase in leaf and nitrogenase in root nodule both reached the maximum at 1.0 mg/kg Mo, which increased by 57.77% and 113.1% than the control group respectively. However, their activities began to decrease at 2 and 4 mg kg − 1 Mo. The observation on mesophyll cell ultrastructure showed that, Mo application could increase the number of chloroplasts, enhance the stability of lipid bilayer of chloroplast membrane and increase the density of chloroplast lamellae and grana. Simultaneously, the total number of mitochondria and the density of inner cristae were decreased, but therewas no significant influence onmitochondrial outer membrane. Moreover, the right amount of Mo fertilizer could enhance the stability of mesophyll cell wall and cell membrane. Although the molybdoenzyme activity decreased at the higher concentration (e.g., 2 and 4 mg kg − 1), the application of Mo fertilizer in this test (0.5 4 mg kg − 1) could promote the growth and development of C. rotundifolia.

【题目】Use of biogas fluid-soaked water hyacinth for cultivating Pleurotus geesteranus
【中文关键词】无
【英文关键词】Pleurotus geesteranus;Biogas fluid;Heavy metals;Waste utilization
【中文摘要】无
【英文摘要】Experiments were carried out to test the viability of growing Pleurotus geesteranus on media containing varying amounts of crushed water hyacinth slices, which were soaked in pig farm biogas fluid and dried. The water hyacinth material was utilized to substitute sawdust in the media for mushroom cultivation. Mushroom fruiting bodies harvested were evaluated for yield, amino acid and heavy metal contents. Among the eight treatment groups, the greatest yield and highest amino acid content in the mushrooms were obtained when the proportions of water hyacinth and sawdust in the medium were equal. The concentrations of heavy metals, Hg, Pb and Cd, in most of the present mushroom samples did not exceed the maximum allowed levels according to the limits set forth by the food hygienic and safety regulations for edible mushrooms in China. The proposed waste utilization of water hyacinth could conceivably benefitthe environment in various aspects including conservation of forest by reducing the demand on natural woods for mushroom production.

【题目】Water hyacinth (Eichhornia crassipes) waste as an adsorbent for phosphorus removal from swine wastewater
【中文关键词】无
【英文关键词】Water hyacinth;Eichhornia crassipes;Phosphorus;Adsorption;Swine wastewater
【中文摘要】无
【英文摘要】Both live plants and dried straw of water hyacinth were applied to a sequential treatment of swine wastewater for nitrogen and phosphorus reduction. In the facultative tank, the straw behaved as a kind of adsorbent toward phosphorus. Its phosphorus removal rate varied considerably with contact time between the straw and the influent. In the laboratory, the straw displayed a rapid total phosphorus reduction on a KH2PO4 solution. The adsorption efficiency was about 36% upon saturation. At the same time, the water hyacinth straw in the facultative tank enhanced NH3-N removal efficiency as well. However, no adsorption was evident. This study demonstrated an economically feasible means to apply water hyacinth phosphorus straw for the swine wastewater treatment. The sequential system employed significantly reduced the land use, as compared to the wastewater stabilization pond treatment, for pollution amelioration of swine waste.

【题目】福州郊区7年生柑橘果园植被的碳吸存研究
【中文关键词】柑橘; 碳库; 凋落物; 净生产力; 碳吸存

【英文关键词】Citrus reticulate; carbon stock; litter fall ; net primary productivity; carbon sequestration
【中文摘要】果园作为一种重要农用型的植被类型, 其在中国陆地生态系统碳汇评价中占有重要的地位。本研究以福建省分布面积最大的柑橘果园植被为研究对象, 研究了果园植被碳库、碳吸存量及其分配规律　　结果表明: 7年生柑橘果园植被的碳密度为5.589 thm-2, 年固定有机碳为2.028 thm-2a-1, 其所吸存的有机碳23.82% 的有机碳以活体生物量形式存留在植被层中, 41.42% 储存于果实而被移到系统之外, 34.76% 以凋落物分解的形式进入土壤或释放到大气中.
【英文摘要】As a part of agricultural vegetation, orchard ecosystem plays an important role in the evaluation of carbon sink of terrestrial ecosystem s in China. This paper studied carbon storage and carbon sequestration with its distribution of citrus orchard, whose area is largest in orchard ecosystem in Fu jian province. The result showed that the carbon stock of a 7　　Year　　old Citrus reticulata plantation was 5.589 thm-2, and the annual net fixation carbon was 20.28 thm-2 a-1. In the a llocation of carbon sequestration, the carbon fixation of fruit accounted 41.42% which finally would bemoved out of the ecosystem, and the biomass of live plant and litterfall made up 23.82% and 34.76% ,respective ly.

【题目】福建省柑橘林生态系统碳储量的时空变化
【中文关键词】柑橘林; 生态系统; 碳密度; 碳储量; 时空变化
【英文关键词】citrus forest; ecosystem; organic carbon density; o rganic carbon storage; spatiotem poral variation
【中文摘要】通过野外实地调查对福建省柑橘林生态系统碳储量及其分布特点进行研究. 结果表明: 柑橘各器官生物量回归模型显示, 柑橘各器官的相关性较好, 树干、树叶、果实的相关系数均大于0.90, 树高和基径的相关系数为0.89; 柑橘林生态系统有机碳密度为222.80 thm-2, 其中, 土壤(0-100cm)碳密度为200.21thm-2, 占总有机碳密度的89.86%, 果树碳密度为22.58thm-2, 占10.14%; 1978-2007年, 柑橘林生态系统碳储量从3. 16 @ 106 t增加到37.97 @ 106 t, 年均增加1.20 @106 t, 表现为碳汇; 在第4- 6次(1993- 2003年)森林资源连续清查期间, 柑橘林生态系统碳储量占全省森林生态系统碳储量的比重都高于2. 43%; 柑橘林生态系统碳储量在空间分布上表现出由闽东南向闽西北递增的规律, 9个设区市的柑橘林生态系统碳储量呈现出不同的消长规律, 三明市、南平市、漳州市3个地区平均柑橘林生态系统碳储量占全省的63.43%.
【英文摘要】O rganic carbon incitrus forest was detected with the field investigation and measurement in Fujian Province. The results showed that citrus organs had a positive correlation each other based on the analysis of biomass linear regression mode.l Correlation coefficient of stem, leaf and fruit both exceeded 0.90. The correlation coeffic ient be tw een he ight and base d iam eter was 0.89. The carbon density in the ecosystem was 222.80 t# hm-2, in which soil (0-100 cm) carbon densityw as 200.21t# hm-2, vegetation carbon density was of 22.58 t# hm-2, accounting for 89.86% and 10.14% of total carbon density, respectively. From 1978 to2007, the organic carbon storage in citrus forest ecosystem inc reased from 3.16 @ 106 t to 37.97 @ 106 t in Fu jian Province, which played a role of sink. During the continuous fo rest inventory from 1993 to 2003, the proportion o f carbon storage between citrus and forest ecosystem was more than 2.43% in Fu jian. The carbon storage in citrus forest ecosystem increased from southeast to northwest in Fu jian. The organ ic carbon sto rage in the 9 prefectures in Fujian showed different grow th and decline law. The organic carbonstorage in Sanming, Nanping and Zhangzhou accounted for 63.43% of the whole province.

【中文关键词】有机碳含量; 垂直分布; 柑橘; 锥栗; 毛竹
【英文关键词】organic carbon content; vertical distribution; Citrus reticulata Blanco; Castanea henryi; Phyllostachys heterocycla
【中文摘要】人工经济林在中国南方种植面积大,并有不断增加的趋势. 人工经济林生态系统受人为周期性经营活动影响比较大,是重要的流动性碳库. 因此,选择福建省建瓯市万木林自然保护区内本地条件基本一致的毛竹(Phyllostachys heterocycla) 、柑橘(Citrus reticulata Blanco) 和锥栗(Castanea henryi) 作为研究对象,探讨其土壤有机碳含量及其垂直分布特征,结果表明: 3种林地土壤剖面有机碳含量的变化范围分别为毛竹林5. 91 ~ 19. 18 g · kg - 1、柑橘5. 70 ~ 13. 31g · kg - 1、锥栗3. 84 ~ 10. 78 g · kg - 1,3 种林地土壤有机碳含量随着深度的增加呈现递减趋势;3 种林地0 ~ 20 cm、20 ~ 40 cm 层土壤有机碳含量与40 ~ 60 cm、60 ~ 80 cm 、80 ~ 100 cm 各层均存在显著性差异(P < 0. 05) ; 3 种林地间土壤有机碳储量均存在显著性差异(P < 0. 05) ;使用对数方程对3 种林地土壤有机碳含量随土壤深度的变化进行拟合均达到显著水平(P <0. 05) ; 土壤有机碳含量与土壤全N、C /N 比之间存在一定的相关性,特别是3 种林地土壤有机碳含量均与土壤全N 含量的相关性最好(P < 0. 05) .
【英文摘要】The economic plantations,whose area seems to be increasing,are important composition offorest resources in the south of China. Ecosystems of economic plantations are intensively influenced by periodic management activities and their soil is the important liquidity carbon pool. Therefore,the soil organic carbon content and vertical distribution features in Phyllostachys heterocycla,Citrus reticulata Blanco and Castanea henryi were investigated under similar soil characters in Wanmulin Nature Reserve in Jian'ou City,China. The results showed that soil carbon content in the three forests decreased generally with soil depth,with a range of 5. 91 ~ 19. 18 g · kg - 1,5. 70 ~ 13. 31 g · kg - 1 and 3. 84 ~10. 78 g · kg - 1 . Significant differences were found among the three forests in the soil depth of 0 ~ 20 cm,20 ~ 40 cm,40 ~ 60 cm,60 ~ 80 cm and 80 ~ 100 cm (P < 0. 05) . Great significant differences have appeared among three forests concerning soil organic content (P < 0. 05) . The distribution of SOC content in soil profile in different forest types could be expressed as logarithmic equation with the increase of the soil depth. Soil organic carbon content was positively correlated with soil total nitrogen content and C /N ratio. Especially,in the three forests,there was significant correlation between soilorganic carbon content and total nitrogen (P<0.05)。

【题目】应对全球气候变化的低碳农业发展战略与技术对策研究
【中文关键词】海峡两岸; 低碳农业; 发展战略
【英文关键词】cross-straits; low-carbon agriculture; development strategy
【中文摘要】首届海峡两岸低碳农业发展战略与技术对策研讨会于2010 年6 月在福州市召开. 会议总结了近年来两岸在农业应对气候变化方面的战略研究、固碳增汇模式与关键技术、废弃资源利用与节能减排、微生物资源开发与应用技术等方面的成果和进展,并提出了新时期两岸低碳农业发展的战略与技术对策.
【英文摘要】The first seminar on the development strategy and technology countermeasures of crossstraitslow-carbon agriculture was held in June 2010 in Fuzhou,China. The meeting summed up the achievements and progress of agricultural strategy in response to climatic change,carbon sequestration model and key technologies,waste resources utilization and energy conservation,development and application of microbial resources,and other aspects. Based on the review,the development strategies and technical countermeasures of cross-straits low carbon agriculture were put forward.

【题目】生物黑炭及其增汇减排与改良土壤意义
【中文关键词】生物黑炭;固碳减排;土壤改良;应对气候变化
【英文关键词】biochar; C stock and emission reduction; soil reclaimation; mitigation of climate change
【中文摘要】国际上对将农田废弃物制成生物黑炭施用于土壤作为农业增汇减排的一种关键途径的呼声越来越高。通过文献资料调研,介绍了生物黑炭的基本性质及其碳稳定性,对农田土壤的改良效应,并讨论其在农业增产和增汇(碳)中的作用。结果表明,作物秸秆无氧高温热解制备的生物炭具有高度的芳香化、物理的热稳定性和生物化学的抗分解性。施用于土壤大幅度提升土壤碳库,并因其结构性质有利于农田土壤固持养分,提高养分利用率,改善微生物生境,从而达到提高土壤质量而促进作物增产的双赢效果。
【英文摘要】 Abstract:There is increasing demand worldwide for application of biochar from crop residues to croplands as a key countermeasure for en-hancing soil C stock and reducing greenhouse gases emission from agriculture. This paper reviewes the basic properies and the decomposition stability of biochar, the benefial effects on soil reclaimation as well as in both enhancing crop yield and soil C stock by using biochar in crop-lands. Many works done have inidcated that the biochar produced from crop residues with pyrolysis under moderate and high temperature in absence of oxygen, has a highly aromatic chamical structure, physical and biological stability against thermal and biological decomposition, increases nutrient efficiency as well as improving soil habitat for soil biota. Thus, it is believed that application of biochar will reach a win-win effect for improving soil productivity and soil C stock in agriculture.

【题目】低碳农业:从理论构想到科学实践的若干问题
【中文关键词】全球变化; 温室气体; 低碳经济; 低碳农业; 发展模式

【英文关键词】global change; greenhouse gases; low carbon economy ; low carbon agriculture; development mo del
【中文摘要】全球气候变化背景下, 低碳经济已成为全球热点, 被誉为人类第四次　　技术革命　　, 温室气体排放已经深度触及了农业和粮食安全。低碳农业成为经济社会发展的必然趋势。当前, 低碳农业已由理论构想转向了科学实践, 其发展途径主要包括: (1) 发展新型能源, 推广清洁技术; (2) 优化耕作制度, 提高复种指数;(3) 培育优良品种, 延长减排链条; (4) 改进施肥技术, 优化养分管理; (5) 实施保护耕作, 减少碳素流失;(6) 合理开发草业, 保护草地资源; (7) 发展生物能源, 推行过腹还田; (8) 整治养殖污染, 实施规模养殖。发展低碳农业的保障机制主要涉及: (1) 完善相关法律法规; (2) 转变农业发展方式; (3) 大力依靠科技进步;(4) 民众广泛参与。发展低碳农业、实现资源的可持续利用, 对增强农业的基础地位、通过农业措施来缓减全球气候变化具有重要的战略意义。
【英文摘要】Low　　carbon economy has become a global hot spot, known as the Fourth Technological Rev olution under global climate change. At present, greenhouse gas emissions have already imper iled ag riculture and food security. Low　　carbon agriculture becomes the inevitable trend of economic and social development . Currently, the concept of low　　carbon agriculture has turned from scientific theory to practices, including its approach to development: (1)development of new energy resources, promoting clean technologies; (2) optimize the farming systems, raising multiple cropping index ; (3) develop and popularize fine varieties to ex tend the chain of emission reduction; (4)improve the fertilization techniques, optimize the nutrient management; (5) implementation of conservation tillage,reduce carbon loss; (6) r ational development of grass industry, protection of grassland resources; (7) development of bioenergy resources, raising the application of cattle manure; (8) farming pollution remediation and extending scale live stock breeding . Safeguard mechanisms of the lowcarbon agriculture development include: (1) improve relevant laws and regulations; (2) the adjustment of economic grow th mode; (3) rely on scientific and technological progress; (4) increase public participation. Development of low　　carbon agriculture is important for sustainable use of resources and enhanced the agricultur e foundation, through agricultural measures tomitigate global climate change has important strategic significance.

【题目】植草恢复对侵蚀红壤重组有机质的影响
【中文关键词】人工植草; 红壤; 土壤侵蚀; 有机质; 腐殖质结合形态
【英文关键词】planting forage ; red soil ; soil erosion ; organic matter ; combined forms of humus
【中文摘要】在福建中亚热带红壤区,将侵蚀经济林(油茶) 改造成人工草地(人工植草) 、封山育林(自然恢复) 进行生态恢复,11 a 后,分析A - C 层土壤的常规理化性质、土壤复合量、原土复合度、腐殖质结合形态用以评价土壤肥力变化。结果表明:不同土层各指标有明显差异,其中土壤速效养分、有机质、土壤复合量表现为A 层> B 层> C 层,原土复合度则表现为C 层> B 层> A 层。土壤腐殖质在C 层呈松结合态向紧结合态转变的趋势,其中在自然恢复区B、C 层土壤的松/ 紧比值较A 层分别下降0.149 ,0.458 个单位,人工植草区C 层土壤的松/ 紧比值较A 层下降0.292个单位,松结合态向紧结合态转变速度较自然恢复区有所减缓。人工植草区A 层土壤的有机质及有机碳总量虽低于自然恢复区,但重组有机碳含量相近,其它测定

指标亦无明显差异。
【英文摘要】The study was conducted on the effect of 2 kinds of restoring measure , planting forage (PF) , natural regradation (NR) to the quality of soil in eroded Camel iaolei fera forest in subtropical region of Fujian Province , China. The results show that layer A enjoy the best at contents of soil available nutrient , organic matter , and degree of soil organomineral complexing , second by layer B , worst by layer C. But , at content of soil complexes , the t rend is layer C > layer B > layer A. When humus of combined types of soil wastested , it seems that humus could be transferred from tightly combined type to loosely combined type on deeper soil layer . In plant forage plot , ratio of types between loosely combined and tightly combined were decreased 0.149 , 0.458 on soil of layer B and C ,compared wit h layer A. In NR plot , the ratio was decreased 0.292 on soil of layer C , compared with layer A. as analyzing on restoration effect of difference measure , it seems that humus transformation rate from tightly combined type to loosel 2combined type is slower in PF plot . No difference was found on key index , including available nutrient , carbon content of heavy soil on soil of 2 restoring plot , although organic matter content was lower in PF plot than in NR plot .

【题目】氮素对羽叶决明缩合单宁及相关酶活性的影响
【中文关键词】缩合单宁; 羽叶决明; 氮素; DFR
【英文关键词】condensed tannins; Chamaecr asta ni ct itans; nitr ogen level; DFR
【中文摘要】缩合单宁对牧草品质的影响极大, 适量的缩合单宁含量对于提高牧草的利用率和营养品质非常重要。研究以豆科牧草羽叶决明Cassia nictitoms 为材料, 分析了氮素梯度处理后茎和叶中缩合单宁的含量及其生物合成酶二氢黄酮醇还原酶(DFR) 活性的变化特征。结果表明, 羽叶决明叶片的缩合单宁含量高于茎, 随氮素的增加, 叶片中缩合单宁含量从14. 78%下降到1. 14%; 茎中从4. 62%开始降低, 达到0. 98%后趋于稳定; DFR 活性表现出与缩合单宁相似的变化规律, 二者在叶和茎中都呈显著(P< 0. 01) 的二次曲线关系。植株粗蛋白含量测定发现, 随氮素的增加粗蛋白含量无显著增加(P> 0. 05) 。因此, 适当增加氮素的使用量可以达到减少缩合单宁含量, 从而提高羽叶决明的利用率和营养品质。
【英文摘要】Co ndensed tannins (CT) affect the quality of the forage greatly. Proper amount of CT could improve the utilization rate and the nutritional quality for the forage. Content of the CT was examined with vanillic aldehyde, and the Dihydrof lavonol 4-Reductase (DFR) activity was determined with rea-l time monitor method after fertilizing different level of nitrogen on legume forage, Chamaecr astanictitans. The condensed tannins decreased as nitrogen level increased, from 14.78% to 1.14% in leaves,from 4.62% to 0.98% in stems. Chang e of DFR act ivity is similar to CT content . This implied that increase nitrogen fertilizer would decr ease CT content, which is helpful to the quality of the forage.

【题目】长期植草对山地果园土壤腐殖质的影响
【中文关键词】果园;套种牧草;腐殖质;土壤胶体;红壤
【英文关键词】orchard ;interplanting grass ;humus ; soil colloids ;red soil
【中文摘要】1996年起在福建中亚热带红壤区开展山地果园套种平托花生Arachis pintoi cv. Amarillo 、圆叶决明Chamaecrista rotundifoliacv.Fuyin NO.1试验,用于治理水土流失。为了科学评价土壤质量的变化,在治理11 年后,分析土壤腐殖质及有机无机复合状况,结果表明:与对照(清耕) 相比,套种平托花生、圆叶决明区土壤表层(0~15 cm) 土壤重组有机碳含

量可提高2.56 和1.90 g/kg ,亚表层(15~30cm) 重组有机碳含量的变化弱于表层。试验区土壤表层的原土复合度达83.09%~96.75% ,高于亚表层(77. 73 %~92.14 %) 。不同垦植方式比较,土壤表层、亚表层的原土复合度均呈清耕> 套种平托花生> 套种圆叶决明的变化趋势。不同套种牧草品种比较,在土壤表层、亚表层的原土有机碳、腐殖质有机碳、原土复合度方面,平托花生均有优于圆叶决明的表现,套种平托花生对表层土壤增值复合度为83.42% ,比后者提高12.9%。

【英文摘要】Archis pintoi cv. Amarillo and Chamaecrist arot undifolia cv. Fuyinn No. 1 were interplanted in hilly orchard for water and soil conservation in subt ropical red soil region in Fujian Province in 1996. The contents of humus organic carbon and the combining between organic matter and minerals were measured in 2007. The results showed that the humus organic carbon content in surface soil (0 to 15 cm) of treatments interplanted A . pintoi cv. Amarillo and C. rotun difolia cv. Fuyuan No.1 were increased by 2.56 g/ kg and 1.90 g/kg respectively compared with the control (clean tillage) .But the change of humus organic carbon content in sub2surface soil (15 to 30 cm) was weaker than surface soil . The combining degree of original soil in surface was 83.09 % to 96.75% , higher thanthat in subsurface (77.73 % to 92.14 %) . And the increased combing degree in surface soil of interplanting t reatments was 70.52% to 83.42%. Among different treatments and control, the order of combining degree was clean tillage > interplanting A. pintoi cv. Amarillo > interplanting C. rotundi folia cv. Fuyuan No.1. The treatment of interplanting A . pintoi cv. Amarillo showed better performance than C. rot undifolia cv. Fuyuan No.1, and the increased combing degree was 83.42% which was 12.9% more than latter .

【题目】5个热带豆科牧草14个营养品质组成因子的相关性研究

【中文关键词】热带豆科牧草; 营养品质; 相关性

【英文关键词】tropical leguminous forage; nutritional quality; correlation

【中文摘要】对热研2 号柱花草(S1)、圆叶决明CP I34721 (S2)、圆叶决明CP I86134 (S3)、圆叶决明A TF3248(S4)、羽叶决明A TF2217 (S5) 等5 个热带牧草的营养成分和品质影响因子的研究表明, 随着牧草生长S2、S4、S5 的粗蛋白(CP) 质量分数呈持续下降, S3 前后变化不大, 而S1 呈低- 高- 低的趋势; 磷(P) 质量分数为S1、S4 持续下降, S2、S3、S5 呈低- 高- 低趋势; 粗脂肪(EE) 质量分数为S3 呈高- 低- 高趋势,其他4 个品种前后变化不大; 5 个品种的钙(Ca) 质量分数前后变化都不大, 钾(K) 质量分数呈持续下降,粗纤维(CF) 和洗涤纤维质量分数都为持续上升, 尤其是酸性洗涤性木质素(ADF) 质量分数在生长后期急剧上升. 对14个品质影响因素的相关性分析表明, 有63 对呈极显著相关, 7 对显著相关, 21 对相关不显著.其中叶茎比和CP、EE、P、K、Ca 为牧草品质正作用因子, 烘干率、根冠比和CF、NDF、ADF、ADL 为负作用因子.

【英文摘要】The 14 nutrient composition and quality factors of 5 tropical legumious forages, which included Stylosan the sguianensis C IA T 184 (S1) , Chamaecristarotund ifoliaCP I34721 (S2) , C. rotund if olia CP I86134 (S3) , C. rotund if olia A TF3248 (S4) and C. n ictitans A TF2217 (S5) , were investigated. The results showed that crude protein content(CP) of S2, S4 and S5 were decreased continuously, S3 had no significant changes, and S1changed from low to high, then to low as fo rage grew. P content of S1 and S4 were descending, and S2, S3 and S5 changed from low to high, then to low. Coarse fat content (EE) of S3 changed from high to low , then to high, and other four species had no significantchanges. For all five species, Ca content had no significant changes, K content was descending, crude fiber (CF) and detergent fiber content were increasing, and especially acid detergent fiber (ADF) content increased rapidly at late growth stage. Correlation analysis of 14quality factors revealed that 63 pairs of factors had extremely significant relationships, 7pairs of factors had significant correlations, and 21 pairs of factors had no significant co rrelation. Among 14 factors, CP, EE, P, K, Ca and leaf stemratio were positive effect factorsfor forages quality, but CF, NDF, ADF, ADL , oven dry rate and root canopy rat io werenegative effect factors.

【题目】柑橘果园凋落物量及凋落叶的分解特征
【中文关键词】柑橘果园; 凋落物; 分解
【英文关键词】citrus orchard; litterfal;ldecom position
【中文摘要】对福州郊区7年生柑橘果园生态系统凋落物的发生及凋落物叶分解特征进行观测研究。结果表明, 柑橘果园年凋落物总量为1682.48 kg hm-2, 其中以叶凋落量最大, 占58.97%; 凋落物的发生呈现不规则的月变化, 以3月和7月凋落物量最大; 柑橘果园凋落物年碳、氮归还量分别为704.56、43.72 kg hm-2。凋落物叶分解过程呈现先快后慢的规律, 经过1a分解后, 凋落物叶分解残留率为21.50%, 凋落物叶分解95%所需时间为1.83a。
【英文摘要】Observation was carried out in a 7 year old citrus orchard in Fuzhou to study character istics of litter fall process and decomposition of litters. It was found that the orchard had 1682.48 kg hm- 2 of litters a year, of which 58.97% were fallen leaves. Litter fall occurred irregular ly from month to month, reaching peaks in March and July. The amounts of carbon and nitrogen returned with litters in a year in the citrus orchard was 704.56 and 43.72 kg hm- 2, respectively. Decomposition of the litters proceeded fast at the beginning and slowed down later. After 1 year of decomposition the resid ualrate was 21.50%, and it took 1.83 years to have 95% o f litters decomposed.

【题目】从“ Azolla Event ”论满江红在生态农业中的应用
【中文关键词】满江红事件;水生蕨类植物;生态农业;应用前景
【英文关键词】Azolla Event;aquatic fern;ecological agriculture;application prospect
【中文摘要】从分析始新世满江红在地球气候从"温室效应"向"冰室效应"转变的过程所起的作用入手,指出满江红具有在未来生态农业应用的潜力,包括作为优质农产品的生产原料、作为控制农业生态环境和重金属污染的植物、作为外太空开发的先行植物等。并提出要加强满江红在节能、环保和有机肥源、外源基因导入和满江红孢子果生产技术的研究以充分发挥满江红在未来生态农业中的作用。
【英文摘要】From the analysis the Eocene Azolla in the Earth's climate from the role played by the "greenhouse effect " to " icehouse " effect , the process of transforming paper pointed out that Azolla has potential for the future application of ecological agriculture ,

including the production of quality agricultural products raw materials , as the control of agricultural ecological environment and heavy metal pollution of the plant , as the outer space development first plant . And proposed to strengthen the Azolla in energy-saving , environmental protection , and organic fertilizer , exogenous gene into Azolla production technology in order to give full play to the role of Azolla in future ecological agriculture .

【题目】福建省龙眼园天敌资源调查与研究

【中文关键词】龙眼园;天敌;调查
【英文关键词】Longan Orchards; Natural Enemy;Investigation
【中文摘要】根据田间系统调查,共发现福建省龙眼园天敌144 种,隶属于2 个纲12 目54 科,包括昆虫纲10 目43 科100 种,蛛形纲2 目11 科44 种;其中以蛛形目、膜翅目、鞘翅目和半翅目的种类数较多,分别占全部天敌种类的29.17%、24.31%、18.75%和9.03%;按作用方式分为捕食性与寄生性天敌,其中属捕食性天敌的种类有119种,寄生性天敌的有25种,分别占全部天敌种类数的82.64%和17.36%。
【英文摘要】found that 144 species of natural enemies were founded in longan orchards, which belonged to 2classes, 12 orders, and 54 families. All species of the natural enemies were included in 100 species, 43 families and 10 orders of Instecta, and were included in 44 species, 11 families and 2 orders of Arachnida. The ratioes of species of Araneida, Hymenoptera, Coleoptera and Hemiptera to all the natural enemies were 29.17%, 24.31%, 18.75%, 9.03%, respectively. All the natural enemies might be divided into 2 classes (predacious and parasitic enemy). There were 119 species belonging to predacious enemy and 25 species belonging to parasitic enemy, occupying 82.64% and 17.36% of the species of all the natural enemies.

【题目】侵蚀果园长期植草的生态效益分析
【中文关键词】水土保持; 侵蚀果园; 牧草; 套种
【英文关键词】Water and soil conservat ion; Ero ded fruit g arden; Fo rage; Intercrop
【中文摘要】针对山地果园不合理开发引发的土壤侵蚀和土壤退化问题, 将适生牧草套种于幼龄侵蚀果园, 开展水土流失、土壤肥力及果树生长的定位观测。结果表明: 套种平托花生(A r achis p intoi) 、圆叶决明(Chamaecr istarotundi folia) 1~ 12 年, 年地面径流系数0~ 0.0136, 均值为0.007 左右, 仅为清耕处理的1/ 10, 基本无土壤侵蚀发生; 套种11年, 套种区0~ 30cm 土层的土壤pH 值比清耕分别提高0. 25~ 0.30 个单位, 0~ 15 cm 土层土壤有机碳、碱解氮、有效磷质量分数比清耕提高7. 595~ 6. 728 g kg - 1 , 26. 84~ 31. 89 mg kg- 1 , 3. 57~ 4. 62 mg kg- 1; 轻组有机碳质量分数在0~ 30 cm 土层呈套种平托花生> 套种圆叶决明> 清耕的变化趋势, 重组有机碳质量分数在0~ 15cm 土层亦呈相同变化趋势。套种处理有助改善果肉糖酸比和商品果率, 牧草综合利用可明显提升果园建园初期的经济效益, 尽管套种处理给果树带来一定的减产。
【英文摘要】To solve problems of soil & water loss with soil degradation effects of long term intercro pping forage on erosion fruit garden was observed and studied. Results showed that runoff coefficient of intercropping plots was 0.007 equivalent to 10% that of clean tillage plots f rom 1 to 12 years. Soil erosion was not nearly found in intercropping plots. After 11 years intercropping, soil quality was obviously improved.The pH of soil (0~ 30cm) in intercro pping plots increased 0.25~ 0.30 unit more than that in clean tillage plots. The organic carbon content, available N content, available P content of soil (0~ 15 cm) in inter cropping plots increased 7.595~ 6.728 g kg-1 , 26.84~ 31.89 mg kg -1 , 3. 57~ 4.62 mg kg -1 over that in clean tillage plots, respectively. The organic carbon contents of both soil lig ht fract io n (0~ 30 cm layer) and soil heavy fr act io n (0~ 15 cm layer) in intercropping A rachis p intoi w ere hig her than that in intercr opping Chamaecr ista rotundi folia , with the low est in clean tillage. Intercropping forage in erosion fruit gardens increase commercial f ruit rate, fruit tasty value, and benef it forage comprehensive utilization,although it may cause slig ht yield loss of fruit trees.

【题目】圆叶决明对重金属镉胁迫的响应及镉吸收效果研究
【中文关键词】圆叶决明2228;镉;保护酶;生长;生物富集
【英文关键词】Chamaecrista rotundifolia 2228; cadmium; antioxidant enzymes; growth; bioaccumulation
【中文摘要】以圆叶决明2228(Chamaecrista rotundifolia)为材料,采用土培法,研究重金属镉对圆叶决明2228 保护酶(SOD 和POD)、生长(生物量、株高、SPAD 值和含水量等)的影响,同时分析圆叶决明对镉的吸收效果。结果表明,重金属镉胁迫下圆叶决明2228 保护酶活性均随着镉处理浓度的升高呈先升后降的趋势,其中20 mg · kg-1 镉胁迫下SOD 酶活性最强,50 mg · kg-1 镉胁迫下POD 酶活性最强;镉对圆叶决明的生长抑制表现为抑制植物的生长,降低株高和生物量,但与叶绿素相关的SPAD 值无显著变化。通过镉含量。分析可知,圆叶决明2228 吸收的镉量均未超过镉临界指标含量,因此该植物不是镉超富集植物,但生物富集系数大于1,为镉耐性植物。由于圆叶决明生长过程中生物量大,在生长过程中可通过生物量带走部分重金属镉,圆叶决明2228 具有修复轻度镉污染土壤的潜能。
【英文摘要】The objective of this study is to analyze the effect of cadmium(Cd)stress on cadmium uptake of the studied plant. Chamaecrista rotundifolia 2228, growing in plastic pots(d=25 cm), was investigated in terms of changes of antioxidant enzymes(Super Oxide Dismutase,SOD and Peroxidase, POD), and growth indices (biomass, plant height, chlorophyll content-SPAD value, and water content). The results indicated that with increasing concentrations of applied Cd, the enzyme activities increased and then decreased. The strongest activities of SOD and POD were observed at a Cd stress level of 20 mg · kg-1 and 50 mg · kg-1, respectively. The results also showed that the presence of Cd significantly limited the growth of Chamaecrista rotundifolia 2228, implying by the reduced plant height and biomass, in comparison of the control. However, no significant change of SPAD value was identified at all levels of Cd stress. Cd contents of all the plants had never exceeded the critical value, which implied that Chamaecrista rotundifolia 2228 might not be a hyper-accumulator for Cd. However, the plant showed a substantial tolerance level to Cd as the bioaccumulation factor for most of the treatments was greater than one. A substantial amount of Cdcould still be taken by Chamaecrista rotundifolia 2228 from the contaminated soil considering such high biomass values of the plant accumulated during the growing process. Clearly, Chamaecrista rotundifolia 2228 has a promising remedial potential for soils with a light or middle level of Cd contamination.

【题目】不同垦殖方式下果园土壤有机碳的空间分布特征
【中文关键词】果园;红壤;有机碳;空间分布
【英文关键词】orchard; red soil; organic carbon; spatial distribution
【中文摘要】以福建尤溪玉池果园水土流失定位观测点为平台,研究了不同果园垦殖方式对土壤有机碳分布的影响。结果表明,不同垦殖方式下果园土壤有机碳在小生境分布和坡面再分布两个尺度上呈现出不同的分布特征,水平方向上,清耕果园土壤有机碳含量呈沿树干向外减少的分布规律,而生草果园土壤有机碳含量水平变化不明显;垂直方向上,果园土壤有机碳含量随土层加深而逐渐减少;坡面再分布上,清耕果园表现为下坡位>中坡位>上坡位,生草果园为中坡位>下坡位>上坡位。生草垦殖模式降低了果园土壤有机碳的水平分异,但促进果园土壤有机碳的垂直分异。在以上结果的基础上,提出了小生境混合取样的果园土壤采样方法。
【英文摘要】The information on the spatial distribution of soil organic carbon is critical for appropriate measurements of soil productivity, hydrology characteristics and carbon balance. A better understanding of the spatial distribution of soil organic carbon and its impact factors will increase the accuracy for estimating organic carbon storage. Thus three types of orchard soils with different reclamation modes(located at Yuchi village, Fujian Province)were chosen to study the spatial variability of soil organic carbon content. Results showed that there were different distribution characteristics of soil organic carbon in the orchard on microhabitat distribution and redistribution slope. Soil organic carbon contents in the clean-tillage orchard showed less outward along the trunk in the horizontal direction. But there was no significant difference in soil organic carbon along the trunk in the herbage interplanting orchard. Soil organic carbon under different cultivating systems decreasedwith soil depth in vertical direction. On the slope re-distribution, soil organic carbon content varied greatly with different cultivating methods, for example, the downhill bits> middle slope> upper slope

under clean tillage treatment, the middle slope> downhill bit> upperslope under herbage interplanting. Herbage interplanting reduced the horizontal heterogeneity of soil organic carbon in orchards, but increased the vertical variation. On the basis of the above results, a mixed sampling method from different niches under canopy of fruit trees waproposed.

【题目】万木林保护区毛竹林土壤呼吸特征及影响因素
【中文关键词】毛竹,土壤呼吸,凋落物,土壤温度
【英文关键词】Phyllostachys edulis; soil respiration; litter fall; soil temperature
【中文摘要】2009 年1—12月,利用Li-Cor 8100 开路式土壤碳通量系统测定福建省万木林自然保护区毛竹林土壤呼吸速率,分析毛竹林土壤呼吸动态变化及其与凋落物量的关系. 结果表明: 毛竹林土壤呼吸月变化呈明显的双峰型曲线,峰值分别出现在6 月(6. 83 μmol · m- 2 · s - 1)和9 月(5. 59 μmol · m- 2 · s - 1) . 土壤呼吸速率的季节变化较明显,最大值出现在夏季,最小值出现在冬季; 土壤呼吸速率与土壤5 cm 温度呈显著正相关关系(P < 0. 05) ,与土壤含水量无显著相关性(P > 0. 05) ; 毛竹林凋落物量月变化呈单峰型曲线. 毛竹林土壤呼吸速率与当月凋落物归还量呈显著正相关(P < 0. 05) . 土壤温度和凋落物量的双因素模型可以解释土壤呼吸速率变化的93. 2%.
【英文摘要】By using Li-Cor 8100 open soil carbon flux system,the dynamic changes of soil respirationrate in Phyllostachys edulis forest in Wanmulin Natural Reserve in Fujian Province of Chinawere measured from January 2009 to December 2009,with the relationships between the dynamicchanges and related affecting factors analyzed. The monthly variation of soil respiration rate in the forest presented a double peak curve,with the peaks appeared in June 2009 (6. 83 μmol · m- 2 · s - 1) and September 2009 (5. 59 μmol · m- 2 · s - 1) ,and the seasonal variation of the soil respiration rate was significant,with the maximum in summer and the minimum in winter. The soil respiration rate had significant correlation with the soil temperature at depth 5 cm (P < 0. 05) ,but no significant correlation with soil moisture (P > 0. 05) . The monthly variation of litter fall mass in the forest was in single peak shape,and there was a significantly positive correlation between the monthly litter fall mass and soil respiration rate (P < 0. 05) . Two-factor model of soil temperatureand litter fall mass could explain 93. 2% variation of the soil respiration rate.

【题目】绿僵菌在3种不同培养基上培养时产孢量的影响因素
【中文关键词】绿僵菌; 培养基; 产孢量; 初始接种浓度; 相对湿度; 继代培养代数
【英文关键词】Metarhiziums spp.; medium; sporification; inoculation concentration; relative humidity(RH); subculture generations.
【中文摘要】分析了绿僵菌菌株在3 种不同培养基上培养时其产孢量的2 个影响因素(初始接种浓度和相对湿度),得出菌株在3 种不同培养基上培养时须分别配以适宜的接种浓度和相对湿度, 以获取最大产孢量(燕麦培养基:1×107cfu/mL, 65%; PPDA 培养基: 1×106cfu/mL, 85%; 玉米粉酵母浸膏培养基: 1×108cfu/mL, 75%)。另外,随继代培养代数增加, 菌株在这3 种培养基上前五代的产孢量比较稳定, 第七代及之后的产孢量明显下降。根据3 种培养基不同的功能, 在PPDA 培养基上培养菌株时要着重注意不同继代培养代数对产孢量的影响, 其它2种培养基培养菌株一般不超过五代, 产孢量比较稳定
【英文摘要】Metarhiziums spp. is a broad spectrum entomopathogenic fungus, and it is thus of great significance to increase sporification of this fungus. Two factors [inoculation concentrations and relative humidity (RH)]affecting the sporification of

Metarhiziums spp. strains grown in 3 different mediums were determined. The results showed that these two factors were very important for maximum sporification of this fungus on these three mediums. Maximum sporification occurred when the fungus were cultured on the oats medium at the inoculation concentration of 1×107 cfu/ml and RH 65%; on PPDA medium at the inoculation concentration of 1×106 cfu/ml and RH 85%; or on the corn powder and yeast soaking flour medium at the 1×108 cfu/ml and RH 75%. Moreover, this fungus when subcultured under these mediums and conditions had higher and stable volume of spores in the first 5 generations of the subculture but produced less spores in and after the 7th generation of subculture. According to the different functions of the 3 mediums, the subculture generation greatly affected the sporification in the PPDA medium, and lightly affected other two mediums unless the subculture overtakes the fifth generation.

【题目】绿僵菌对甘蔗螟虫的室内致病力测定
【中文关键词】绿僵菌; 甘蔗螟虫; 致病力测定
【英文关键词】Meatarhizium spp.; Sugarcane stemborer; pathogenicity bioassay.
【中文摘要】在室内用喷雾法测定了4株绿僵菌对甘蔗螟虫3~4 龄若虫的致病力。结果表明, 绿僵菌致病力强弱与菌株种类和接种剂量有密切关系。先接虫后喷施菌剂时, 菌株对甘蔗螟虫若虫致病力的强弱顺序为JF813>HS1>MA4>JF883; 先喷施菌剂后接虫时, 菌株对甘蔗螟虫若虫致病力的强弱顺序为MA4>HS1>JF813>JF883。在接种各菌株孢子浓度为1×108 个/mL 时, 菌剂对甘蔗螟虫若虫的致死率高。其中JF813 菌株对甘蔗螟虫若虫具有很强的二次侵染能力, HS1 菌株在两种处理方式中致病力稳定。
【英文摘要】The third to fourth instar nymphs of sugarcane stem borers were sprayed with solutions of 4strains of fungus Metarhiziums spp. in laboratory to observe the pathogenicity of each strain against thenymphs. The bioassay showed that the pathogenicity of the fungus was closely related with the strains andtheir inoculation rate. The pathogenicity of the fungus was in the order of the strains JF813 > HS1 > MA4 > JF883 when sugarcane was inoculated with the larvae of sugarcane stemborers first and then with the fungus,and MA4 > HS1 > JF813 > JF883 when vice versa. The mortality of sugarcane stem borers was the highestwhen sugarcane was inoculated with fungus at a concentration of 1×108 spores · ml-1. The strain JF813 had avery high ability in infecting the nymphs the second time, and the HS1 had a stable pathogenicity.

【题目】苯醚甲环唑的水解研究
【中文关键词】苯醚甲环唑;水解;活化能;活化熵
【英文关键词】difenoconazole; hydrolysis; activation energy; activation entropy
【中文摘要】研究了苯醚甲环唑在水溶液中的水化学降解行为,结果表明:(1) 苯醚甲环唑水解作用随溶液pH 值的增大而增强,25°C时其在pH 5、7 和9 的缓冲液中的水解半衰期分别为315.07、11.53 和1.33 d。(2) 苯醚甲环唑在水体中的水解速率随温度升高而加快,其在温度为15、25、35、45°C的pH 7 缓冲液中的水解半衰期分别为20.81、11.53、6.80 和2.14 d,平均温度效应系数为2.22。苯醚甲环唑水解反应的平均活化能和活化焓分别为55.53 kJ/mol 和53.01 kJ/mol,而苯醚甲环唑水解反应的活化熵随温度升高而降低,表现出明显的相关性,其平均活化熵为-92.45 kJ/mol · k。(3) 在相同的培养条件下,苯醚甲环唑在池塘水、河水和超纯水中的降解速率是不同的,其水解半衰期分别为7.31、4.47 和12.49 d。

【英文摘要】Subtropical Crop Research Institute, CATAS, Guangdong Zhanjiang 524091, China; 3. Analysis and Testing Center,CATAS, Haikou 571101, China; 4. Guangzhou Experimental Station, CATAS, Guangzhou 510140, China)Abstract: The hydrolysis kinetics of difenoconazole were studied in aqueous solutions. Results were obsevred asfollows: (1) Hydrolysis of difenoconazole increased as the pH value of the solution went up, and its hydrolysis half-livesin the buffer solutions of pH 5, pH 7 and pH 9 were 315.07, 11.53 and 1.33 d at the temperature of 25°C. (2) Hydrolysisof difenoconazole in the buffer solutions of pH 7 increased as the temperature went up. Hydrolysis half-lives were 20.81,11.53, 6.80 and 2.14 d at the temperature of 15, 25, 35 and 45°C, and the temperature coefficient of hydrolysis fordifenoconazole was 2.22. The mean activation enegry (E) and enthalpy (△H) for hydrolysis of difenoconazole was 55.53kJ/mol and 53.01 kJ/mol. The activation entropy (△S) decreased as the temperature went up, and the mean activationentropy was -92.45 kJ/mol · k. (3) Hydrolysis half-lives of difenoconazole in natural water such as pond water, river waterand ultra-pure water were 7.31, 4.47 and 12.49 d when the culture conditions were the same.

【题目】甘蔗二点螟杀虫真菌绿僵菌的筛选与毒力测定
【中文关键词】二点螟; 绿僵菌; 致病性
【英文关键词】Chilotraea influscatellus; metarhizium; pathogenicity.
【中文摘要】从椰心叶甲僵虫上分离得到10 株对甘蔗二点螟具有较好致病性的绿僵菌, 其中MC3 的致病性最好, 校正死亡率为89.16%, 且甘蔗二点螟的校正死亡率随着MC3 菌株孢子浓度的增加而逐渐提高, 当浓度为1.0×107 个/mL时, 其死亡率为93.02%。MC3 菌株在SDAY 培养基菌丝生长及产孢效果最好, 孢子萌发的最适温度是25~28°C。
【英文摘要】Twelve Metarhizium strains were isolated from dead bodies of coconut leaf beetles (Brontispalongissina (Gestro)). Among the strains, 10 showed higher pathogenicity against Chilotraea influscatellus(Snellen), an insect pest, than the control, of which the strain MC3 was found most efficient in controllingof this insect pest. The corrected mortality rate of C. influscatellus inoculated with the strain MC3 wasincreased gradually with the spore concentration of Metarhizium. About 93.02% of the adults of the insectpest were controlled with the strain MC3 at a spore concentration of 1.0×107 conidia/mL. The strain MC3showed the best mycelial growth and sporulation on the SDAY, and the optimum temperature for the sporegermination was 25~28 °C.

【题目】AcNPV polyhedrin与cry3Aa基因重组融合蛋白在大肠菌中的初步表达
【中文关键词】BTcry3Aa AcNPVpolyhedrin 重组 表达
【英文关键词】BTcry3Aa AcNPVpolyhedrine Recombination Expression
【中文摘要】目的:将cry3Aa基因与斜纹夜蛾多角体蛋白(AcNPVPolyhedrin)基因重组,构建重组蛋白原核表达载体并在大肠杆菌中表达。方法:首先以PHT305a载体质粒DNA为模板,PCR扩增cry3Aa基因。再以PET30a ph 1a载体质粒DNA为模板,PCR扩增多角体蛋白基因。将两基因片段分别连入PMD18 T克隆载体,测序鉴定。表达载体的构建分为两步,先将SacI和XhoI双酶切下来的cry3Aa基因连入表达载体pET30a,再将PMD18T Ph经BglⅡ和SacI双酶切,所获得的ph基因片段与具有BglⅡ/SacI末端的pET30a cry3Aa相连接,构建表达载体pET30a cry3Aa ph,表达载体转化进入大肠杆菌BL21(DE3)。IPTG诱导蛋白表达并纯化,SDS PAGE分析结果。结果:cry3Aa和AcNPVPolyhedrin基因序列与报道完全一致。1mmol/LIPTG诱导4h表达的外源蛋白,经SDS PAGE分析显示在大约103kDa处有表达产物特异条带。结论:获得cry3Aa与

polyhedrine基因的重组蛋白工程菌株,为此基因应用于杀虫剂奠定了基础。

【题目】原核表达Cry3Aa蛋白对椰心叶甲的杀虫活性研究
【中文关键词】Cry3Aa 蛋白, 椰心叶甲, 包涵体
【英文关键词】Cry3Aa protein, Brontispa longissima, Inclusion bodies
【中文摘要】椰心叶甲是近年来传入我国的危险性有害生物,严重危害了我国海南省、广东省、台湾省和香港地区的椰子、槟榔等棕榈科植物,并有蔓延趋势,。Bt Cry3Aa 毒蛋白对鞘翅目害虫有较强的杀虫活性。本研究首次发现大肠杆菌原核表达的Cry3Aa 重组蛋白对椰心叶甲成虫具有快速杀灭作用,工程菌表达的包涵体重组蛋白处理叶片,饲喂椰心叶甲成虫,浓度为2.0 mg/mL 时,24 h 内死亡率为100%。一次性饲喂处理24 h、48 h 和72 h 的LC50分别为0.751 6 mg/mL、0.475 5 mg/mL 和0.371 4 mg/mL,连续性饲喂即使低浓度也达到较高死亡率。本试验结果为cry3Aa 基因在转基因技术方面的应用或研发生物农药防治椰心叶甲害虫提供了重要的理论与技术支撑。
【英文摘要】Brontispa longissima is a new harmful insect invading in China. At present, it has spreaded to causedamage in Hainan province, Guangdong province, Taiwan province and Hongkong which feeds on the palmaceousplants. The crystal protein of cry3Aa gene have high toxic to Coleoptera. We have firstly find the protein of cry3Aagene expressed in E. coli possessed high toxicity to Brontispa longissima. The mortality of Brontispa longissimawould reach 100% in 24 h when fresh leaves treated by 2.0 mg/mL expressed-protein were provided as food foronly 12 h. The LC50 value at 24 h, 48 h, and 72 h was 0.751 6 mg/mL, 0.475 5 mg/mL, 0.371 4 mg/mL, respectively.On the other hand, after feeding the leaves treated with low concentration of expressed protein continuouslu, thehigh death rate would appear. It's indicating the great potential of this system for manufacturing novel pesticides inan efficient and cost-effective manner.

【题目】椰心叶甲的生物防治
【中文关键词】椰心叶甲, 生物防治, 寄生蜂, 绿僵菌

【英文关键词】Brontispa longissima, Bio-control, Parasitic wasps, Metarhizium spp.
【中文摘要】椰心叶甲是近年来传入我国的危险性有害生物。1994 年,我国内陆将椰心叶甲列为禁止入境的二类植物检疫危险性害虫。目前椰心叶甲在我国海南省、广东省、台湾省和香港地区危害严重并有蔓延趋势,严重危害了椰子、槟榔等棕榈科植物。针对椰心叶甲的危害特征,在实际防治应用中,化学防治,物理防治等方法不能起到很好的效果,生物防治是比较重要的防治方法。本文综述了对于椰心叶甲生物防治常用的几种防治方法:释放寄生蜂、病源微生物和生物农药等。椰心叶甲的生物学防治措施,关键是开发新的防治措施和提高现有方法的防治技术,达到持续有效控制
【英文摘要】Brontispa longissima is a new harmful insect invading in China, Brontispa longissima was ranked asthe second class quarantinable dangerous pest forbidden to be introduced into the mainland of China in 1994. Atpresent, it has spreaded to cause damage in Hainan, Guangdong, Tainwan and Hongkong. which feedson the palmaceousplants. For Brontispa longissima harm characteristics, applying chemical and physics for Brontispa longissimacontrol can not have a good effect, biological prevention and control is an important measure. The article reviewedthe research on biological prevention and control for Brontispa longissima, such as releasing parasiticwasps, pathogenic micro-organisms and biopesticide. It is necessary to find other measures and improve the technologyof useing control methods in order to achieve effective and sustained control.

【题目】水分影响印楝素及同系物降解动力学研究
【中文关键词】印楝素; 水分; 降解; 动力学
【英文关键词】azadirachtin ; water ; degradation ; kinetics
【中文摘要】研究水分对印楝素A、6-deacetylnimbin、6-deacetylsalannin、nimbin 和salannin 5 种同系物稳定性的影响, 并建立水分影响印楝素及同系物降解动力学模型。结果表明, 水能加快印楝素A 及同系物的降解,且降解率随着水分含量的增加而增大。
【英文摘要】Azadirachtin A and its homologues (6-deacetylnimbin, 6-deacetylsalannin, nimbin andsalannin) were added with water to determine their stability, and a kinetics model was constructed fordegradation of the azadirachtin A and its homologues when added with water. The result showed thatwater accelerated degradation of aradirachtin A and its homologues, and that the degradation rateincreased with the water content.

【题目】精甲霜灵在热带气候土壤中的残留及消解动态研究
【中文关键词】气相色谱法;精甲霜灵;残留;消解;土壤;热带气候
【英文关键词】gas chromatography; metalaxyl-M; residue; degradation; soil; tropical climate
【中文摘要】建立了精甲霜灵在土壤中的残留分析方法及其在热带气候下在土壤中的消解动态和最终残留。土壤样品经乙酸乙酯萃取,净化后采用毛细管气相色谱法-氮磷检测器(GC-NPD)进行测定。在0.05、0.10、1.00 mg · kg-1 3 个添加水平,平均添加回收率分别为82.7%、89.4%、95.1%,变异系数分别为7.2%、8.3%、3.2%,符合农药残留分析的要求。结果表明,精甲霜灵在土壤中消解速度较快,测得在土壤中半衰期第一次2005 年为3.49 d,第二次2006 年为2.91 d;以最大推荐施用剂量和2倍最大推荐施用剂量施用,不同处理测得在最后一次施药后2 d 残留量均小于0.5 mg · kg-1。分析结果表明精甲霜灵是一种使用安全的杀菌剂。

【英文摘要】The method for analysis of metalaxyl-M, its degradation and residue in soil under tropical climate were investedin this study. Soil samples were extracted with ethyl acetate and clean up, prior to detection by GC with NPD. Spike experimentswere carried out to determine the recovery and precision of the method. The recoveries and coefficients of variationof the metalaxyl-M were in the range of 82.7%~95.1% and 3.2%~8.3% respectively at a spiked concentration of 0.05 , 0.10and 1.00mg · kg-1. The results revealed that Metalaxyl-M degraded rapidly in soil with half-lives of 3.49d in 2005y and 2.91din 2006y. The final residues of metalaxyl-M in soils after 2 days of last treatment were both less than 0.5mg · kg-1 at the recommendedlevel and twice level, which indicated that metalaxyl-M was a safe fungicide in the soil under tropical climate.

【题目】印楝种仁粗提物对植物病原菌的抑制作用研究
【中文关键词】印楝; 粗提物; 超临界CO2 萃取; 抑菌作用
【英文关键词】Azadirachta indica; Crude extract; Supercritical carbon dioxide extraction; Antifungal activities
【中文摘要】[目的]研究无公害生物农药的抑菌效果。[方法] 通过室内毒力测定, 比较印楝种仁的常规溶剂萃取物和超临界CO2 萃取物对供试的8 种病原菌的抑制作用。[结果] 印楝常规溶剂萃取物和超临界CO2 萃取物对8 种病原菌均有良好的抑制作用, 尤其对辣椒疫霉、茄子枯萎、番木瓜炭疽、西瓜蔓枯、香蕉黑星作用明显, 其中超临界CO2 萃取物抑菌效果比常规溶剂萃取物好, 具有萃取时间较短, 活性较高, 对中、低分子量和非极性化合物有较强的亲和力等特点, 但萃取率较常规溶剂低, 提取时所耗的原材料多。[结论] 印楝种仁超临界CO2 萃取物对植物病原菌抑制效果较好,但在实际应用中要根据生产效益来选择适合的萃取物。

【英文摘要】[Objective] The research aimed to study the inhibitory effects of harmless bio!pesticides. [Method] The inhibitory effects of twoextracts, common solvent extract and supercritical carbon dioxide extract from A. indica kernel, on 8 tested plant pathogens through laboratorytoxicity test. [Result] Two extracts had significant effects on 8 plant pathogens, especially on Phytophthora capsici, Fusarium oxysporum,Colletotrichum papayae, Didymella bryoniae and Phyllosticta musarum. The inhibitory effect of supercritical carbon dioxide extracts wasrelatively better. It had some good characters, such as shorter time for extraction, higher activity, stronger appetency for the compound with middleand low molecular weight and nonpolarity. But it had lower extractability than the common solvent extract and need more raw materials duringextraction. [Conclusion] The supercritical carbon dioxide extracts from A. indica kernel had better inhibitory effect on plant pathogens, but theproper extracts should be chosen on the basis of production efficiency in practical application.

【题目】印楝素A降解动力学研究
【中文关键词】印楝素A 降解动力学
【英文关键词】azadirachtin A degradation kinetics
【中文摘要】研究pH、水分、紫外光、温度对印楝素A 稳定性的影响,建立在不同条件下印楝素A 的一级降解动力学模型。计算印楝素A 降解反应的反应速率常数、温度效应系数(Q)、活化能(Ea)、活化焓(ΔH)和活化熵(ΔS)。结果表明,印楝素A 的活化能为98.49 kJ/mol,活化焓为95.84 kJ/mol,活化熵为10.68 kJ/mol · K。印楝素A 在环境中的降解反应是自发反应,在环境中易自然降解。
【英文摘要】The pH val ue, temperature, water and UV light were systematically investigated to explain theirinfluence on chemical reaction grade, reaction rate coefficient, Arrhenius coefficient, temperature effect quotient(Q), activation energy(Ea), activation enthalpy(ΔH) and activation entropy(ΔS) of azadirachtin A. Degradation ofazadirachtin A was observed to follow the first- order kinetic equation. The Ea of azadirachtin A was 98.49 kJ/mol,the ΔH of azadirachtin A 95.84 kJ/mol, and the ΔS of azadirachtin A 10.68 kJ/mol · K. Azadirachtin A belonged toa group of easily degraded insecticide, and its degradation reaction was spontaneous.

【题目】淡紫拟青霉PL04菌株抗逆性及其对香蕉根结线虫的寄生作用
【中文关键词】淡紫拟青霉;抗逆性;香蕉根结线虫;寄生作用
【英文关键词】Paecilomyces lilacinus; Stress resistance;Meloidogynespp; Parasitism effect
【中文摘要】抗逆性测定结果表明,淡紫拟青霉PL04菌株有较强的抗逆性和对化学农药的兼容性。PL04菌株在PSA培养基上菌落生长和产孢的适温为5~40°C(最适温度为29°C)。PL04菌株在pH4~13(最适pH为7)范围内的培养基上均可生长;PL04菌株在40°C和50°C条件下的LT50分别为78.8 min和40.8 min。PL04菌株有较强的耐盐碱能力;PL04菌株对氯霉素有较强的耐受性;PL04菌株对杀菌剂多菌灵、百菌清、苯醚甲环唑、除草剂百草枯以及消毒防腐剂福尔马林较敏感,其EC50分别为0.021、0.013、0.006、0.016和0.120mg/mL,PL04菌株对杀线虫剂阿维菌素和辛硫磷,杀菌剂三唑酮不敏感,其EC50分别为

0.175、0.338和0.337 mg/mL。采用双温测定法,室内测定淡紫拟青霉PL04菌株对香蕉根结线虫的寄生作用,不同处理具有显著性差异,PL04菌株孢子悬浮液处理18 d后对香蕉根结线虫卵的相对寄生率为94.3%。

【英文摘要】Stress resistance characteristics tests showed that the strain PL04 strain ofPaecilomyces li-lacinushad strong resistance ability and was compatibility with chemistry pesticide. For the growthand spore production of PL04 strain, the suitable temperature was 5~40°C(the optimum temperaturewas 29°C). The PL04 strain could grow on potato sugar agar with pH range from 4 to13(the optimumpH was 7). Tests showed that the LT50at 40°Cwas 78.8 min and at 50°Cwas 45.3 min of the PL04strain. The PL04 strain was able to endure higher concentration saline-alkali and chloramphenicol.Tests showed that the PL04 strain was sensitive to fungicide carbendazol, chlororthalonil, difenocon-azole, herbicide paraquat and formalin, EC50of them were 0.021 mg/mL, 0.013 mg/mL,0.006mgmg/mL, 0.016 mg/mL and 0.120 mg/mL respectively. But the PL04 strain was consistent to thenemacicide avermecti, phoxim and fungicide trazodone, EC50of them were 0.175 mg/mL, 0.338 mg/mL and 0.337 mg/mL respectively. The PL04 strain was demonstrated as a highly effective strain to controlMeloidogynespp. There was significantly difference among the different treatment. Results of the petridish test showed 94.3% of the eggs were parasitized by the fungus 18 d (7 days at 18°Cplus 11 days at 25°C) after inoculation.

【题目】产纤维素酶菌株的分离筛选及酶活性测定

【中文关键词】纤维素降解菌; 分离; 筛选; 纤维素

【英文关键词】Cellulose- decomposing microorganisms; Isolation; Screening; Cellulose

【中文摘要】[目的] 寻找更多高效降解纤维素的新菌种及其科学利用方法。[方法] 利用(采样) 培养) 分离单菌落) 初筛) 复筛) 测OD值0的方法筛选出分解纤维素能力较强的菌株。[结果] 经反复培养和划线分离从80 份样品中初选出35 株具有分解纤维素能力的菌株。其中10 株由白转绿, 长势较好; 6 株深绿色, 长势一般; 4 株绿色, 长势较好。这20 株都产孢子, 被初步鉴定为绿色木霉。用刚果红培养基进行复筛选, 得到9 株透明圈较大的菌株。将这9 株菌株再进行发酵培养, 用DNS 法

进行酶活测定得到2 株酶活较强的菌株。这2 株菌株被鉴定为棘孢木霉。通过滤纸崩解测试筛选出20 株降解纤维素能力较强的菌种。DNS 法酶活测定结果表明采自甘蔗堆积处和甘蔗地的2 个菌株的产酶活性最高。[结论] 采自甘蔗堆积处和甘蔗地的2个菌株可以作为降解纤维素的新菌种。

【英文摘要】[Objective] The purpose was to find more new high- efficiency cellulose- decomposing strains and their utilization methods. [Method] The strains with stronger cellulose- decomposing abilitywere screened out by themethod/ sampling) culture) isolation of single colony) primary screening) secondary screening) determination of OD value0 . [Result] Thirty- five strains with cellulose- decomposing ability were isolated from 80 samples through repeated culture and streaking in primary screening. Among them, 10 strains turned fromwhite to be green and their growth potentials were better;6 strains were dark green and their growth potentials were common; 4 strains were green and their growth potentials were better; all these 20 strains produced spores and were identified to be Trichoderma viride preliminarily. The congo-red mediawere used and 9 strains with bigger transparent circles were got in secondary screening. These 9 strains were cultured by fermentation and their enzyme activities were determined by DNS method, then 2 strains with stronger enzyme activity were got. These 2 strains were identified to be Trichoderma asperellum. Twenty strains with stronger cellulose- decomposing ability were screened out through filter- paper disintegration test. The results of enzyme activity determination by DNS method showed that the inulinase-producing activities of the 2 strains collected from the stacking place of sugar cane and sugar cane field were highest. [Conclusion] The 2 strains collected from thestacking place of sugar cane and sugar cane field could be used as new cellulose- decomposing strains.

【题目】绿僵菌对菠萝粉蚧的室内致病力测定
【中文关键词】绿僵菌; 菠萝粉蚧; 致病力
【英文关键词】Meatarhizium s; Dysmicoccus Brevip es; Pathogenic ity
【中文摘要】[目的]筛选对菠萝粉蚧有高毒力的菌株, 为菠萝粉蚧的田间防治提供科学依据。[方法] 以菠萝粉蚧为目标昆虫, 从自然感病虫体和土壤中分离获得3株绿僵菌菌株, 在室内用喷雾法测定这3株绿僵菌对菠萝粉蚧的致病力。[结果]在室温下, 用绿僵菌MA4、J813、J86C接种后, 菠萝粉蚧的的死亡率随着绿僵菌孢子浓度的增加而逐步提高。在同一孢子浓度(108, 107, 106)中, 绿僵菌3个菌株对菠萝粉蚧的致病力顺序均为J813 > MA4 > J86C。感病的粉蚧行动迟缓, 死亡2~ 3 d后, 形成僵虫。僵虫经保湿培养3~ 4 d后, 虫体表面长出绿色的粉状孢子。[结论]绿僵菌J813菌株在室内对菠萝粉蚧有强致死力, 拥有良好的田间应用前景。
【英文摘要】[Objective] The ami w as to screen the strain w ith high v irulence againstDy sm icoccusB revip es and provide the scientific basis for the fie ld contro l ofD. Brevip es. [Method] W ith theD. 【题目】绿僵菌菌株JF-813的抗逆性
【中文关键词】绿僵菌; 抗逆性; 菌落; 生长速度; 萌发率
【英文关键词】Metarhizium sp.; stress resistance; colony; growth rate; germination rate
【中文摘要】通过测定菌落生长速度和孢子萌发率对绿僵菌菌株JF-813抗逆性进行了研究, 结果表明: 菌株JF-813有较强的抗逆性, 在pH 值4~ 9范围内的PPDA 培养基(添加1%蛋白胨的PDA 培养基)中均可以生长, 其最适pH值为8; 在NaC l浓度为01 05~ 0125 m o l/L条件下, NaC l对菌株JF-813 的生长有一定的促进作用, 浓度越大促进越明显, 该菌株有较强的耐盐能力; 高温条件及紫外光对绿僵菌菌株JF-813孢子萌发有较强的抑制作用。
【英文摘要】The research focused on stress res istance o fM etarhiz ium sp. strain JF-813 by measur ing colony growth rate and spore germination rate. The resu lts show ed that this strain JF-813 could grow on PPDA m edium (PDA medium supplemented with 1% peptone) with pH range of 4 to 9 and them ost suitable pH was 8. N aC l a t a concen tration of 0105~01 25 mo l/L in the substrate cou ld increase the g row th sign ificantly and the tests indicated that the stra in w as able to enduresa line. High tem pera ture and UV lihgt inh ibited the con idia l ge rm ina tion o f the stain JF-813.

【题目】Biological assessment of Tetrastichus brontispae,a pupal parasitoid
【中文关键词】椰心叶甲啮小蜂;椰心叶甲;生物学特性
【英文关键词】Tetrastichus brontispae Ferrie`re; Brontispa longissima (Gestro);biological characteristic
【中文摘要】椰心叶甲啮小蜂是从台湾引进的一种椰心叶甲重要蛹寄生蜂,为有效控制椰心叶甲,本研究对椰心叶甲啮小蜂在中国海南的生物学特性进行了研究。该寄生蜂的发育历期包括卵期、三个幼虫期和三个蛹期。在温度为24±2°C和湿度为75±5%条件下,该寄生蜂从卵到成虫的发育历期为19.5±0.5天。温度对椰心叶甲啮小蜂的后代性比无显著影响,但会显著影响其对椰心叶甲的寄生率和繁殖。在28,24和 20°C温度条件下,其对椰心叶甲蛹的寄生率分别为98.07,97.97 和95.03%,而在18°C下,其寄生率仅为52.18%,在30°C下,其寄生率仅为69.48%,且在这两个温度下,其所产生的后代数量显著少于20,24和 28°C。随着温度从18°C升高到28°C,该寄生蜂的发育历期呈线性缩短趋势,从18°C时的46.19天缩短至28°C时的17.10天。湿度亦显著影响椰心叶甲啮小蜂的寄生和繁殖。随着湿度从20%升高至95%,椰心叶甲啮小蜂的发育历期从22.94天缩短至18.84天。相比之下,寄生率和平均每雌产卵量却随着湿度的增大而增加。虽然在50%和95%湿度条件下,该寄生蜂的羽化率比在20%和35%湿度下高,但其性比却无显著差异。光周期仅对椰心叶甲啮小蜂的发育历期存在影响,而对其寄生和繁殖无显著影响。补充蔗糖、蜂蜜和葡萄糖显著增加了后代成虫的寿命,寄生率和平均每雌后代产卵量,但对性比和存活无显著影响。雌蜂仅寄生4到5龄椰心叶甲幼虫和1-5天老的蛹。本研究结果表明,椰心叶甲1天蛹、24-28°C温度以及65-95%的湿度是椰心叶甲啮小蜂寄生的最佳条件。将有助于椰心叶甲啮小蜂人工繁殖体系的建立以及利用其有效防治椰心叶甲提供了前提。
【英文摘要】To control coconut leaf beetle, Brontispa longissima (Gestro), the pupal parasitoid Tetrastichus brontispae Ferrie`re was imported from Taiwan and its biology was studied in quarantine in Hainan, China. The parasitoid development includes an egg, three larval instars and three pupal stages. Its developmental time from egg to adult was 19.5±0.5 days under conditions of 24±2°C and 75±5% relative humidity (RH). Temperature had no effect on the sex ratio of offspring, but significantly affected the parasitism rate

and reproduction. The parasitism rates were 98.07, 97.97 and 95.03% at 28, 24 and 20°C, respectively, whereas the parasitism rate was 52.18% at 18°C and 69.48% at 30°C, respectively. Furthermore, the parasitoids reared at 18 and 30°C produced fewer offspring than those at 20, 24 and 28°C, respectively. With the increase in temperature, developmental time decreased linearly from 46.19 days at 18°C to 17.10 days at 28°C. RH significantly influenced development, parasitism rate and the reproduction of T. brontispa. With the decrease of RH, developmental time increased from 22.94 days at 20% RH to 18.84 days at 95% RH. In contrast, parasitism rate and the number of offspring per female increased with the increase of RH. Though emergence rates between 50 and 95% RH were much higher than those between 20 and 35% RH, the sex ratios between 20 and 95% RH were not different. Photoperiod had no effect on parasitism, the number of offspring per female, emergence and the sex ratio of T. brontispae, but developmental time was significantly different for different photoperiods. Sucrose, honey and glucose significantly enhanced adult longevity, parasitism and the number of offspring per female of T. brontispae, but had no effect on the sex ratio and survival. Females of T. brontispae only parasitized fourth to fifth larval instars and 1_5-day-old pupae, but there was a significant difference in the number of offspring per female, development time, emergence and the sex ratio of offspring in different instars. These results showed that 1-day-old pupae, a temperature of 24_28°C and 65_95% RH were optimal for T. brontispae. These findings should be helpful in developing a production system to rear and release T. brontispae in large enough quantities to effectively control coconut leaf beetle.

【题目】绿僵菌在土壤中宿村的数量级产孢量变化研究
【中文关键词】绿僵菌; 成菌落数; 产孢量; 宿存
【英文关键词】Metarrhizium anisopliae, CFU, sporulation, survival ability
【中文摘要】研究了MA4、JF842、JF86C、JF883 和JF813E 五个绿僵菌菌株在土壤中宿存情况, 结果表明, 绿僵菌在土壤中宿存两个月内, 成菌落数呈波动状态, 下降较慢, 自第3 个月起, 成菌落数下降较快, 最终除JFJF842 外土壤中的成菌落数维持在103~104CFU/ 土样水平。其中JF86C、JF883 的宿存能力相对较强, 比较适合用于田间应用; 而绿僵菌在宿存过程中, 其产孢能力的稳定性有利于害虫的持续控制。
【英文摘要】The research on the survival ability of Metarrhizium anisopliae (MA4、JF842、JF86C、JF883、JF813E)shows that the CFUs (colony forming unit) of Metarrhizium anisopliae survived in soil decreasedslowly within the first two months, but after two months, the CFUs dropped sharply every month.The CFUs ofMetarrhizium anisopliae could be monitored in level of 103- 104CFU /sample after 1 year. JF86C and JF883have more strong survival ability in soil. Too high quantity of spores was detrimental to the long survival ofMetarrhizium anisopliae. The sporulation of Metarrhizium anisopliae kept relatively stable in soil.

【题目】绿僵菌农药助剂的筛选及混配防治荔枝蝽蟓的研究
【中文关键词】绿僵菌;荔枝蝽蟓;相容性;孢子萌发率;增效作用
【英文关键词】Metarhizium sp. ; Tessaratoma papillosa; Compatibility; Spore germination rate; Synergistic interaction
【中文摘要】[目的]探讨化学杀虫剂与绿僵菌菌株MA4、JF2813的相容性以及菌药混用的增效作用。[方法]以荔枝蝽蟓为供试昆虫,绿僵菌MA4、JF2813为供试菌株,研究5种化学杀虫剂对绿僵菌孢子萌发的影响以及菌药混用防治荔枝蝽蟓的效果。[结果]供试的5种化学药剂对MA4、JF2813菌株孢子萌发均有一定的抑制作用。20%乳油氰戊菊酯与MA4、JF2813菌

株的相容性最好,低剂量20%乳油氰戊菊酯对菌落抑制作用明显低于其他4种化学药剂。低剂量的农药与绿僵菌混合使用对绿僵菌的致病力具有协同增效作用。绿僵菌JF2813和次亚致死剂量的2. 5%溴氰菊酯混用效果最佳,绿僵菌MA4和4. 5%高效氯氰菊酯混用效果最佳。[结论]该研究为绿僵菌混合制剂的生产应用提供了参考依据。

【英文摘要】[Objective]The aim was to discuss the compatibility between chemical pesticides and Metarhizium sp. stain JF2813 and MA4 andthe synergism combined fungus and pesticides. [Method]With Tessaratoma papillosa as tested insect andMetarhizium sp. strain JF2813 andMA4as tested stains, the influence of 5 pesticides on spore germination ofMetarhizium sp. and the effect ofmixed use of fungus and pesticides on con2trolling T. papillosa were studied. [Result]The 5 tested pesticides all had certain inhibition on spore germination ofMetarhizium sp. strainMA4and JF2813. The compatibility between 20% fenvalerate EC andMetarhizium sp. strainMA4 and JF2813 were best. The inhibition of 20% fen2valerate EC at low dosage on colony were lower obviously than that of other 4 chemical pesticides. Mixed use of pesticides at low dosage andMetarhizium sp. had synergistic interaction on Metarhizium sp. pathogenicity. The effect of mixed use of Metarhizium sp. strain JF2813 and2.5% decamethrim at low sublethal concn. was best and that ofmixed use ofMetarhizium sp. strainMA4 and 4. 5% beta cypermethrin was best.[Conclusion]The research provided reference basis for application of mixed preparation ofMetarhizium sp. .

【题目】绿僵菌对荔枝蝽蟓的室内致病力测定

【中文关键词】绿僵菌; 荔枝椿象; 致病力测定

【英文关键词】Meatarhizium spp.; Tessaratoma papillosa Drury; pathogenicity; bioassay

【中文摘要】在室内用喷雾法测定了4 株绿僵菌对荔枝椿象3~4 龄若虫的致病力。结果表明, 绿僵菌致病力强弱与菌株种类和接种剂量有密切关系, 菌株对荔枝椿象若虫致病力的强弱顺序为J813 > MA4 > J86C > MA3。在接种菌株J813 孢子浓度为1×108 个/mL 的情况下, 对荔枝椿象若虫的LT50为7.63 d。J813 菌株对荔枝椿象若虫具有很强的二次侵染能力。

【英文摘要】The pathogenicity of 4 strains of Metarhiziums spp. against the third to fourth instar nymphs of Tessaratoma papillosa Drury was bioassayed in laboratory by spraying. The virulence was closely related with the strains and their inoculation rate. The pathogenicity was J813 > MA4 > J86C > MA3. The LT50 of nymphs with J813 strain at 1×108 spores/ml is 7.63 d. The J813 had a very

high secondary infection ability to the nymph.

【题目】金龟子绿僵菌菌株培养基的改良
【中文关键词】金龟子 绿僵菌 菌丝体 干重 次代产孢量 培养基配方优化
【英文关键词】Metarhizium anisopliae dry weight of mycelia sporulation optimum cultural medium
【中文摘要】采用液体振荡与固体平板双培养的方法, 对金龟子绿僵菌MA4, MAlm1 两菌株的培养基进行改良。研究结果表明: MA4, MAlm1 菌株的最适复合碳源均为玉米粉、最适氮源为蛋白胨、最适碳氮比为4: 1(m: m,下同) 、碳浓度分别为0.5, 1.0 mol/L, 即改PPDA 培养基为: MA4 菌株以11.8 g/L 的玉米粉代替蔗糖, 17.1 g/L的酵母浸膏代替蛋白胨; 而MAlm1 菌株的则以23.6 g/L 的玉米粉代替蔗糖, 蛋白胨由10.0 g/L 更换为16.2 g/L。
【英文摘要】Metarhizium anisopliae is a broad spectrum entomopathogenic fungus. It is significant to increase the growth rate and sporulation of this fungus. So an attempt was made to conduct submerged shaking culture and solid plate culture to improve the PPDA medium. For the MA4 and MAlm1 strains, the optimal carbon sources were found to be both corn powder, the optimal nitrogen source be yeast soaking flour and peptone respectively, the optimal carbon nitrogen ratio be both 4:1, and the optimal carbon density be 0.5 mol/L and 1.0 mol/L respectively. So for the improved PPDA medium 11.8 g/L corn powder and 17.1 g/L yeast soaking flour were usedin place of sucrose and peptone for the culture of MA4 strain; 23.6 g/L corn powder was used to replace sucrose for the culture of MAlm1 strain, and the peptone was changed from 10.0 g/L to 16.2 g /L.

【题目】淡紫拟青霉E7菌株对香蕉根结线虫的致病性和生防效果
【中文关键词】淡紫拟青霉; 香蕉根结线虫; 致病性; 防效
【英文关键词】Paecilomyces lilacinus; banana root-knot nematode; pathogenicity; control effect
【中文摘要】测定淡紫拟青霉 E7 菌株对香蕉根结线虫致病性和生防效果, 各处理间差异显著。结果表明, 利用不同浓度E7孢子悬浮液侵染香蕉根结线虫卵, 处理 18 d 后含孢子 109个/mL 的 E7 孢子悬浮液对卵的相对寄生率为 96.5%; 利用不同稀释倍数的 E7 发酵滤液处理 2 龄幼虫, 稀释 1.5 倍液处理 6 d 后相对死亡率为 98.2%。在温室盆栽试验中, 用剂量为 20、10 和 5 g/株固体菌剂处理, 90 d 后香蕉根围土壤中香蕉根结线虫 2 龄幼虫的群体密度比对照分别降低84.5%、71.1%和 66.7%, 香蕉根重分别增加 27.7%、20.6%和 8.4%, 株高分别增加 17.2%、49.6%和 16.9, 地上部鲜重分别增加 31.9%、23.9%和 21.1%。3 g/株阿维地线净处理的虫口减退率为 70.7%, 与 10 g/株和 5 g/株固体菌剂处理效果接近。高剂量的 E7 菌剂防病和促生效果均高于剂量为 3 g/株阿维地线净处理。
【英文摘要】The E7 strain of Paecilomyces lilacinus was demonstrated as a highly effective strain to control banana root-knot nematode. There was significantly difference among the different treatments. Results indicated that the petri-dish test showed 96.5% of the eggs were parasitized by the fungus 18d (7 days at 18 ℃ plus 11 days at 25 ℃) after inoculation.Using fermented filtrates of different diluted times to deal with juvenile banana root-knot nematodes, relative death rate of juveniles was 98.2% by the 1.5 times diluted solution of E7 filtrate 6d after treatment. A pot experiment was conducted in glass house to evaluate the biological control effects of the E7 strain of P. lilacinus against banana root-knot nematode on banana as compared with the nematicide. After 90 days, the fungus solid culture treatment at dosages of 20 g/stock, 10 g/stock and 5 g/stock reduced the larval population in the soil around the roots by 84.5%,

71.1% and 66.7%, increased the weight of root by 27.7%, 20.6% and 8.4%, increased the plant height by 17.2%, 49.6% and 16.9%, and increased the fresh mass weight of the above ground part of the plants by 31.9%, 23.9% and 21.1%, respectively. While in the treatment using arvertins (at dosages of 3g/stock) the population of larvae on banana plant was reduced 70.7%. The biological control effects of the high dosages E7 strain of P. lilacinus against banana root-knot nematode and promoting growth of banana are better than the arvertins(at dosages of 3g/stock).

【题目】5 个油茶品种胚轴嫁接容器育苗及其年生长规律研究初报
【中文关键词】油茶;胚轴嫁接;轻基质配制;生长规律;引种
【英文关键词】Camellia oleifera; Hypocotyl grafting; Light substrate preparation; Growth pattern; Introduction
【中文摘要】:通过对长林系列油茶优良无性系3 号、4 号、18 号、27 号及166 号5 个品种的胚轴嫁接容器育苗试验,总结出油茶胚轴嫁接容器育苗技术全过程。同时,对5 个油茶品种嫁接苗苗高年生长规律进行研究与分析,为对5 个油茶品种的合理引种提供技术参考。
【英文摘要】Hypocotyl grafting container seedlings of the five Camellia varieties, namely Changlin clones No.3, No.4, No.18, No.27 and No.166, were tested, and the whole technical process was summarized. The annual height growth patterns of the five grafted seedlings were studied and analyzed, which may provide technical reference for successful introduction of the 5 Camellia varieties.

【题目】安徽大别山区油茶优株选择初报
【中文关键词】油茶;大别山区;优树;选择
【英文关键词】Camellia oleifera; Dabie mountain area; Fine quality tree; Selection
【中文摘要】:油茶是我国重要的木本食用油料树种,也是世界四大木本油料树种之一。在对大别山区的舒城、潜山、太湖油茶种质资源调查发掘的基础上,通过群众报优、初选、复选和决选,筛选出皖舒21 号、皖舒23 号、皖潜11 号、皖太5 号等6 个优良单株,平均单果重10.0~24.2 g、单位面积产量1.06~2.24 kg、鲜出籽率40.0%~47.7%、干出籽率26.2%~28.7%、干籽出仁率42.8%~63.8%、出油率30.6%~43.4%、单位面积产油50~160 g/m2,各项指标均达到了油茶优树选择标准。同时兼具花期早、抗寒性强、病虫害少、丰产稳产等优良性状。
【英文摘要】Camellia oleifera is an important edible woody oil species in China, and is also one of the world's four major woody oil trees.Based on the germplasm resource investigation of C.oleifera in Shucheng, Qianshan and Taihu county, six fine quality individuals including Wanshu 21, Wanshu 23, Wanqian 11, Wantai 5 etc. were selected through preliminary, repeated and final selection. The mean fruit weight was 10.0~24.2 g; the yield was 1.06~2.24 kg/m2; fresh and dry seed- producing percentage was 40.0%~47.7% and 26.2%~28.7% respectively; dry seed kernel rate was 42.8%~63.8%; oil extraction rate was 30.6%~43.4%; the oil production was 50~160 g/m2.All of the indicators had reached the fine quality tree selection criteria, meanwhile, they had such good characters as early blooming, strong cold resistance, fewer diseases and pests, high and stable yield and so on.

【题目】大别山油茶4 个优良品种光合作用特性
【中文关键词】油茶; 优良品种; 光合作用; 日变化
【英文关键词】Camellia oleifera; improved varieties; photosynthesis; daily variation
【中文摘要】2010 年9 月20 测量了大别山系列油茶优良品种1 号、2 号、3 号及4 号光合特性的日变化,结果表明: (1)4 个油茶品种的Pn日变化均为单峰曲线,大别山1 号和4 号的峰值出现在12: 00,2 号和3 号峰值出现在11: 00,不存在光合午休现象; (2) 4 个油茶品种Tr日变化均为单峰曲线,但峰值出现时间不一致; (3) eWUE的日变化总体呈逐渐下降的趋势,最高值出现在8: 00,到16: 00 以后有小幅上升,随后迅速下降; (4) 从4 个油茶的光补偿点(ELCP) 和光饱和点(ELSP) 来看,均为耐阴喜光的阳性树种。
【英文摘要】The diurnal variation of photosynthetic characteristics of four improved varieties of Camellia oleifera in Da Bie mountain were measured on Sep. 20,in 2010,which were respectively called D1,D2,D3 and D4 . The results showed that:(1) the curves of Pn diurnal variation for all four improved varieties were a single peak,among those,the peak values for D1 and D4 appeared at 12: 00,the peak values for D2 and D3 appeared at 11: 00,but the phenomenon of photosynthetic lunch break did not appear. (2) Tr daily courses of leaves for four improved varieties were obviously one-peak curve. the peak values of four improved varieties came out at different hour. (3) On the whole,eWUE daily courses of leaves from four improved varieties all presented a gradually declining trend,the maximum value came out at 8: 00. There were a slight rebound at 16: 00,and then quickly dropped. (4) Through the analysis of light compensation points (ELCP) and light saturation point(ELSP) ,four improved varieties belonged to the positive species,which can endure shade and high light.

【题目】施肥量对油茶嫁接苗生长的影响
【中文关键词】普通油茶; 嫁接; 根系
【英文关键词】Camellia oleifera; grafting; rooting
【中文摘要】以长林系列3 号、4 号、23 号、27 号、40 号和53 号6 个品种的芽苗砧嫁接苗进行高低施肥量试验,研究品种间对施肥量的表现。试验结果表明: 品种因素对植株的根系生长具有显著的影响。施肥量也对根梢的同步生长具有一定的影响。随着增加施肥量情况下,长林53 号无显著变化,长林3、长林4、长林40 号中可以显著提高生长量; 长林23、长林27 号中高施肥量不利于植物的生长。
【英文摘要】The effect of fertilization on the growth of camellia oleifera grafting seedlings of six varieties,including Changlin 3,4,23,27,40,53 was studied. The results showed that there were differences in performance of the amount of fertilization in different varieties,and it did not necessarily promote plant growth in multiple fertilization; Besides affecting root growth,development and distribution,the impact of fertilization on the growth of root hair should not be ignored; there was different adaption ability in different species to rtilization.Changling 53 was of weak adaption ability to fertilization; enough fertilization improved the growth of Changlin 3,4, 40; increased amount of fertilizer,was unfavourable to the growth of Changlin 23,27.

【题目】小果油茶种实形态变异频率 及其多样性指数分析
【中文关键词】小果油茶; 种实; 变异频率; 多样性指数
【英文关键词】Camellia meiocarpa Hu; fruits and seed; variation frequency; diversity index
【中文摘要】以采自小果油茶(Camellia meiocarpa Hu.) 分布区的18 个地理群体为材料,观测种实表观性状各项指标,分析种实形态变异频率及其多样性指数,结果表明: 各种实性状表观数据分布大多数在平均值附近,形成高窄尖峭峰。18 个地理群体及10 个种实性状的多样性指数都较大,种实的不同数量性状的多样性指数位于2. 472 6 ~3. 000 8,而不同地理群体数量性状的多样性指数为2. 543 ~ 2. 839。果实质量性状多样性指数相对较小,其中果色为2. 306 5、果型为2. 181 6 及种子为0. 927 7,均略小于数量性状的多样性指数,说明数量性状变异程度高于质量性状。从不同地理群体的多样性指数来看,它们相差不大,但仍存在一定的差异,P10 (崇仁) 最高(2. 839) ,变异程度最大,P13 (黎川) 最低(2. 543) ,变异程度最小,两者多样性指数相差0. 296。其余群体的多样性指数大小位于群体P10和P13之间。小果油茶种实表观性状多样性指数大都与生态地理因子并不相关,影响小果油茶种实表观性状多样性指数高低的主要生态因子是E、N、H、Hy、Tl 及Rfe。与生态因子相关的主要性状多样性指数为L'f /W'f、R's、W'ss、L's 及W's。在3 次趋势面分析中,W'f 和L's 和经纬度的拟合效果最好,达到显著和极显著水平。
【英文摘要】Fruits and seeds were picked from all the flora of 18 geographic population of Camellia meiocarpa Hu as the research material,all of the phenotypic traits were observed and the characteristics variation frequency and diversity index of the fruits and seeds

were analyzed. The results indicated that great majority of phenotypic data distributions were near the mean value and formed highly steep value. The diversity indexes of 18 geographic population and 10 phenotypic traits were relatively great,the diversity indexes of quantitative characters of different traits were located at 2. 472 6 - 3. 000 8,however,the diversity indexes of quantitative traits different geographical populations were located at 2. 543 - 2. 839. The diversity indexes of fruit quality traits were relatively small,those of fruit color,fruits and seeds were 2. 306 5,2. 181 6 and 0. 927 7 relatively, slightly smaller than the numbers of the diversity indexes of characters,which showed the level of quantitative trait variation was higher than that of quality traits. There was difference in the diversity indexes of different populations,but not so large. The diversity index (2. 839) of P10 was the maximum,and that of P13 (2. 543)was the minimum,there was a difference of 0. 296 between them. The indexes of the other population lied between that of P10 and P13 . The diversity indexes of phenotypic traits were not related to choreographic factors,and the major factors that affected diversity index levels of phenotypic traits were E,N,H,Hy,Tl and Rfe .The diversity indexes of main phenotypic traits were L'f /W'f,R's,W'ss,L's and W's . The fitting results of W'f and L's to longitude and latitude were the best in three times of trend surface analyses. The different levels were significant or very significant.

【题目】修剪对油茶采穗圃穗条生长及抗病性的影响
【中文关键词】油茶;修剪;采穗圃
【英文关键词】Camellia oleifera, pruning, cutting orchard
【中文摘要】为给油茶产业化发展提供科技技术支撑,研究了不同修剪时间、修剪强度对油茶优良无性系采穗圃穗条数量、长度和抗病性等的影响。研究结果表明,修剪强度、修剪时间对抽梢数量和长度有显著影响,中、轻度修剪能促进树枝抽梢数的增加和穗条延长,重强度修剪能抑制树枝抽梢数和穗条的生长;采穗圃最好的修剪强度是轻度修剪,最佳的修剪时间是夏冬2次联合修剪;修剪能有效防治新梢病害的发生。
【英文摘要】In order provide technological support for Camellia oleifera industrialization development, effects of different pruning time and intension on number, length and resistance of cuttings were researched in superior C. oleifera clones cutting orchard. The results showed that pruning time and intension had significant effects on number and length of new shoots, the pruning at middle and light degree could promote increasing of new shoots number and growth of new shoot, and the pruning at serious degree could control number of new shoots and growth of cuttings. The pruning at light degree in summer and winter was fit for cutting orchard. Pruning could effectively control occurrence of disease in new shoot.

【题目】油茶扦插繁殖育苗技术研究进展
【中文关键词】油茶;扦插;繁殖;育苗技术
【英文关键词】Camellia oleifera; cuttage; propagation; seedling nursery technique
【中文摘要】油茶是中国特有的木本食用油料树种之一,在我国南方栽培甚广。油茶扦插繁殖具有繁殖速度快,性状稳定,操作简单等优势,已成为油茶繁殖的重要技术手段。介绍了20 a 来油茶扦插繁殖在水肥温湿度、激素应用、培养基质、穗条状态、造林应用等方面的研究进展,并针对影响油茶扦插繁殖的相关问题提出了建议。

【英文摘要】Camellia oleifera is one of the unique woody edible oil tree species in China and is widely cultivated in South China. The cuttage techniques for Camellia oleifera has a lot of advantages such as quick propagation, stable characteristics and easy operation, etc., so it had became a important breeding techniques for propagation of Camellia oleifera. The advances in water, fertilizer, temperature, humidity, hormone application, culture substrates, cutting state of cuttage techniques for Camellia oleifera and its application in afforestation in recent 20 years were introduced, and then the corresponding suggestions for the problems which influenced cuttage of Camellia oleifera were proposed.

【题目】油茶容器育苗基质配方的研究
【中文关键词】油茶;容器育苗;轻型基质
【英文关键词】Camellia oleifera; containerized seedling; light medium
【中文摘要】以农林废弃物稻壳、锯木屑、树皮等为主要原料,经混料回归试验设计,研究了油茶容器育苗的基质配方对油茶嫁接成活率、抽梢长、生根量的影响。试验结果表明:不同配方对苗木成活率、抽梢长和生根量的影响达极显著水平,不同基质对油茶嫁接苗木的成活率、抽梢长和生根量的影响规律不同;不同基质及交互作用对苗木的影响力大小顺序为树皮>稻壳>木屑>树皮和木屑的交互作用>稻壳和树皮的交互作用>稻壳和木屑的交互作用;最佳配方范围:稻壳20%~26%,树皮28%~44%,木屑36%~52%。
【英文摘要】The experiment is to test the influences of the mixtures of light medium on the livability of engraftation, the length of the bud, and the quality of the root of Camellia oleifera in containerized seeding. The materials of the light medium are the mixtures of skins of rice, saw dust, and skins of trees. The experimental results of different proportional mixtures were analyzed by using multiple regression. The results are as follows: Firstly, the influence of the different proportional mixtures show sufficient level on the livability of engraftation, the length of bud, and the quality of root of camellia oleifera in containerized seedling. Secondly, the different light mediums also have sifferent influences on the livability of engraftation, the length of the bud, and the quality of the root of Camellia oleifera in containerized seedling. Thirdly, the influencing order is tree skin >rice skin >saw dust >the mixture of tree skin and saw dust >the mixture of rice skin and tree skin> the mixture of rice skin and saw dust. Finally, the most proportional mixtures are rice skin 20%~26%, tree skin 18%~44%, saw dust 36%~52%.

【题目】油茶籽油精炼过程中主要营养成分的变化
【中文关键词】油茶籽油; 加工; 活性物质
【英文关键词】oil - tea camellia seed oil; processing; bioactive constituents
【中文摘要】研究了碱炼、脱色、脱臭、冬化4 道加工工序对油茶籽油中的α - 生育酚、甾醇、角鲨烯含量的影响。结果表明: 在4 道加工工序中,脱臭对油茶籽油中α - 生育酚、甾醇、角鲨烯的含量影响最大,分别损失了52. 1%、34. 5%、55. 4%,而相应脱臭馏出物中3 种活性物质含量最高,分别为750. 90、2 463. 58、8 887. 47 mg /kg; 脱色对油茶籽油中α - 生育酚、甾醇、角鲨烯的含量影响次之,分别损失了11. 5%、9. 5%、8. 5%。脱色和脱臭是影响油茶籽油中活性物质含量的重要环节,碱炼和冬化对油茶籽油脂肪酸组成有很大的影响。

【英文摘要】The effects of different processing procedures(alkali refining,bleaching,deodorization,dewaxing) on the content of α - tocopherol,sterol,squalene in the oil - tea camellia seed oil were investigated.The results showed that among the four processing procedures,the effect of deodorization on the content of α - tocopherol,sterol,squalene in the oil - tea camellia seed oil was the greatest,and their content lost 52. 1%,34. 5%,55. 4%,respectively,while the content of α - tocopherol,sterol,squalene in the corresponding deodorizer distillate was the highest,and the content was 750. 90 mg /kg,2 463. 58mg /kg and 8 887. 47 mg /kg,respectively. The influence of bleaching was greater,and the content of α - tocopherol,sterol and squalene lost 11. 5%,9 . 5%,8. 5%,respectively. Bleaching and deodorization were important procedures to affect the content of bioactive constituents in oil - tea camellia seed oil.The alkali refining and dewaxing procedures affected greatly the fatty acid compositions.

【中文关键词】浙江红花油茶; 脂肪酸; 变异
【英文关键词】Camellia chekiangoleosa Hu; fatty acid; variation
【中文摘要】对浙江红花油茶茶油中脂肪酸性状的组成变化进行了研究,结果表明各产地油茶茶油中脂肪酸组成的单株间变异主要可分为3 类: 硬脂酸、亚油酸、亚麻酸、花生酸变异系数较大,其次为棕榈酸,油酸的变异系数最小。亚油酸、亚麻酸、花生酸在产地间差异不显著,硬脂酸和油酸在产地间差异显著,棕榈酸在产地间差异极显著。
【英文摘要】The variation of compositions with fatty acid characters variation in Camellia chekiangoleosa Hu was investigated.The results showed that,according to fatty acid contents in C. chekiangoleosa Hu,the variation coefficient in individual plant could be devided into three types,i. e.,the maximium variation coefficient for stearic acid,linoleic acid and linolenic acid and peanut acid,followed by palm acid,the minimum for oleic acid. The contents of linoleic acid,linolenic acid and peanut acid in different habitats did not show the significant differences. The composition of stearic acid and oleic acid were different due to the different habitats. But the palm acid had extremely significant differences dependent of thehabitats.

【题目】赣南脐橙园蜘蛛优势种群发生动态及相关气象因子分析
【中文关键词】赣南脐橙园;蜘蛛;发生动态;气象因子
【英文关键词】navel orange orchard; spider; occurrence dynamics; meteorological factors
【中文摘要】在江西省赣州市章贡区蟠龙镇一个集中连片面积达32hm2且管理粗放的11年生“纽荷尔”脐橙园调查发现,脐橙园蜘蛛分属13科38种。脐橙园树冠层蜘蛛优势种有3种:草间钻头蛛Hylyphantes graminicola全年以5-6月及9-10月的发生数量最大;斑管巢蛛Clubiona deletrix在7-9月发生量较大,2-3月的数量明显减少;鳞纹螨蛸Tetragnatha squamala在4月和11-12月的种群数量较多,6-9月较少见到。脐橙园地面层蜘蛛优势种有2种:草间钻头蛛的季节消长同样具有两个高峰期,但时间跨度较短,仅在6月和10月出现;拟水狼蛛Pirata subpiraticus种群数量在3月达到最高峰,在12月处于低谷。脐橙园树冠层草间钻头蛛和斑管巢蛛的发生数量都与平均气温和日照时数呈显著或极显著正相关,鳞纹螨蛸的发生数量则与平均气温间呈显著负相关;地面层拟水狼蛛的发生数量与相对湿度和降雨量间表现出极显著的正相关性。
【英文摘要】13 families and 38 species of spiders were found in Gannan navel orange orchards. The dominant species in tree canopies were Hylyphantes graminicola, Clubiona deletrix and Tetragnatha squamata. Two main peaks of H. Graminicola population

appeared from May to June, and from September to October. C. Deletrix population was peaked from July to October, and significantly reduced from February to March. The peak of T.Squamata population was observed in April and December whereas the smallest population was observed from June to September. Hylyphants graminicola and Pirata subpiraticus were the dominant spider species on the ground of the orchards. The main peaks of H. Graminicola population appeared in June and October. The population of P. subpiraticus peaked in March and bottomed in December. There was a significant positive correlation between the seasonal changes in the populations of H. graminicola and C. deletrix in navel orange canopies and the average temperatures and sunshine hours. In contrast, a significant negative correlation was found between the seasonal changes in the population of T.squamata and the average temperatures. There were very significant positive correlations between the seasonal variations in the population of P. subpiraticus on the ground of navel orange orchards and the relative humidity and precipitation.

【题目】6种杀菌剂对剑麻斑马纹病的田间药效试验
【中文关键词】剑麻; 斑马纹病; 杀菌剂; 田间药效试验
【英文关键词】Sisal; Zebra disease; Fungicide; Field efficacy trial
【中文摘要】对6种防治剑麻斑马纹病的杀菌剂的田间药效试验结果表明:68%金雷 WG 200 倍液和90%疫霜灵 WP 100 倍液的防治效果最好,防效达90%以上; 其次是 55% 敌克松 WP 200 倍液和 70% 甲基托布津 WP 500 倍液,防效在 85% ~90% 之间; 而50%烯酰吗啉 WP 150 倍液和64%克菌特 WP 100 倍液防治效果较差,防效低于50%。通过药剂防效和成本分析,建议在生产上可使用55%敌克松 WP 200 倍液和70%甲基托布津 WP 500 倍液来防治剑麻斑马纹病。
【英文摘要】The field experiments of the control effects of six kinds of fungicides on sisal zebra disease were carried out. The results showed that the 200 - times diluent of 68% Metalaxyl - M WG and 100 - times diluent of 90% Phosethyl - Al WP had the best control efficiency (more than 90%) ,followed by the 200 - times diluent of 55% Fenaminosulf WP and 500 - times diluent of 70% Thiophanate - methyl WP,whose control efficiency was 85% ~ 90% . However,the control efficiency of 50% Dimethomorph WP (150 times) and 64% Oxadixyl WP (100 times) was less than 50% . Through analyzing the control efficacy and cost of the tested fungicides,it was optimum to apply 200 - times diluent of 55% Fenaminosulf WP and 500 - times diluent of 70% Thiophanate - methyl WP to control sisal zebra disease.

【题目】13种药剂对剑麻斑马纹病病原菌的室内毒力测定
【中文关键词】剑麻斑马纹病; 烟草疫霉菌; 杀菌剂; 毒力测定
【英文关键词】zebra leaf spot of sisal; Phytophthora nicotianae; Fungicides; Laboratory screening
【中文摘要】为筛选出适合大田防治剑麻斑马纹病的高效低廉的药剂,采用菌丝生长速率法对13种药剂的抑菌效果进行室内筛选。 综合分析结果表明:55%敌克松、70%甲基托布津和68%精甲霜·锰锌的EC50和EC95最小,抑菌效果最好;10%苯醚甲环唑和66%霜霉威的EC50和 EC95最大。通过对药剂抑菌效果和使用成本的分析,建议生产上使用55%敌克松、70%甲基托布津、68%精甲霜·锰锌、72%霜脲·锰锌、50%烯酰吗啉、50%锰锌·氟吗啉和64%克菌特防治剑麻斑马纹病。
【英文摘要】To screen suitable fungicides with high efficiency and low cost to control zebra leaf spot disease of sisal caused by Phytophthora Nicotianae, the anti activity of 13 fungicides were tested in the laboratory by mycelium growth rate method.The results

showed that the best ones of bacteriostatic effect with the lowest EC 50 and EC 95 were fenaminosulf 55% , thiophanate -methyl 70% and metalaxyi • mancozeb 68% . However difenoconazole 10% and propamocarb 66% were the highest with EC 50 and EC 95 value. By analysis of inhibiting effect and cost of these fungicides, It is suggested that fenaminosulf 55%, thiophanate -methyl 70% and metalaxyi • mancozeb 68%, cymoxanil mancozeb 72% , dimethomorph 50% , flumorph • mancozeb 50% and 64% oxadixyl could be used for controlling Zebra disease effectively.

【题目】剑麻斑马纹病病原鉴定
【中文关键词】剑麻;斑马纹病;rDNA-ITS;序列分析;病原鉴定
【英文关键词】sisal; zebra disease; rDNA-ITS; sequence analysis; pathogen identification
【中文摘要】剑麻斑马纹病是剑麻的毁灭性真菌病害,是剑麻最严重的病害之一。从海南、广东和广西的剑麻主产区共收集剑麻斑马纹病样品12份,提取其病原菌的基因组DNA 并进行rDNA-ITS 区序列扩增,序列的比对结果与形态学的鉴定结果相一致,表明参试菌株的病原菌均为烟草疫霉菌(Phytophthora nicotianae Breda);N-J 法构建的系统发育树结果表明,12个参试菌株可分为两个类群,存在一定的地域分化。以上研究将为今后对剑麻斑马纹病的发病规律、防治方法及抗病机制等方面的研究奠定基础,提供了理论依据。
【英文摘要】Zebra spot disease caused by Phytophthora nicotianae is the most serious and devastating fungi disease in sisal. 12 diseased samples were collected from the main sisal production areas in Hainan, Guangdong and Guangxi. The genomic DNA from these samples were extracted, and then rDNA-ITS were amplified. Sequence analysis of the results using morphological identification consistent (comply) with the results, indicated that the strains tested were Phytophthora nicotianae Breda; NJ phylogenetic tree was constructed the result showed that 12 tested isolates could be divided into two groups, and have some genetic differences. Future research would provie a theoretical basis for future research in sisal law zebra spot disease occurrence regularity, prevention methods and disease resistance mechanisms basis.

【题目】槟榔基因组DNA提取方法及RAPD分析体系的初步优化
【中文关键词】槟榔;DNA提取;RAPD分析;体系
【英文关键词】Arecanut;Extraction of DNA;RAPD analysis;System
【中文摘要】采用TAB法 、改良CTAB法和高盐低pH法等3种不同的方法比较了槟榔基因组DNA提取的效果,其中改良CTAB法最优,提取的DNA质量高,DNA降解少,杂质含量少。通过对退火温度、DNA模板用量、TaqDNA聚合酶浓度等因素的优化实验,建立了槟榔RAPD 分析体系,从PCR扩增程序和反应体系两个方面对槟榔RAPD分析体系进行了优化并验证了优化后的体系扩增谱带清晰、多态性强稳定性好。
【英文摘要】The three methods for extraction of genomic DNA CTAB method, improved CTAB method andHigh salts and low pH method are practical and efficient. The result showed that the improved CTAB method is the best method, because it obtains high - quality genomic DNA with less degradation and impurity. A number of factors affected the results of RAPD were studied such as annealing temperature, quantity of template DNA and concentration of DNA polymerase enzyme etc. The optimized RAPD analysis system of the areca was established. Several clear bands with better polymorphism, stability and repeatability could be obtained.

【题目】甘蔗赤腐病菌对碳、氮源的利用及其室内毒力测定
【中文关键词】甘蔗赤腐病; 生物学特性; 毒力
【英文关键词】Sugarcane red rot; Biological characteristics; Toxicity
【中文摘要】选择来自海南岛不同蔗区的 4 个甘蔗赤腐病菌的有效单孢菌株用于毒力测定, 并对其代表菌株的碳、氮利用特性进行了研究。结果表明, 综合赤腐病菌生长速度及其长势 2 个指标而言, 其最适碳源是 D- 木糖, 氮源则是硝酸钠。此外, 毒力测定结果表明, 6 种常用药剂对 4 株赤腐病菌的生长有不同程度的影响。其中, 多菌灵、正品甲津托、福美双和丙环唑对甘蔗赤腐病菌毒力较强, 相比之下, 百菌清和代森锰锌两种药剂效果较差。
【英文摘要】Red rot disease caused by the fungus Colletotrichum falcatum Went is the major production constraint for sugarcane production in the world. In this study, isolates collected from Hainan provinces were identified on the morphological characteristics, 1 single spore isolates carbon and nitrogen nutrient utilization and 4 single spore isolates toxicity of sugarcane red rot were studied. The main results indicated that: xylose was the best of carbon sources, while NaNO3 was the best of nitrogen sources. Moreover, the results from 6 tested fungicides to toxicity of the pathogens showed that Carbendazim, Meroif, Thiram, Propiconazole were more effective, and both Chlorothalonil and Mancozeb were a little effective in the treatment.

【题目】甘蔗黑穗病菌冬孢子生物学特性及杀菌剂对其萌发的影响
【中文关键词】甘蔗黑穗病菌;生物学特性;杀菌剂
【英文关键词】sugarcane smut; Ustilago scitaminea; biological characteristics; fungicide
【中文摘要】通过对甘蔗黑穗病菌冬孢子的生物学特性研究,明确了该菌冬孢子萌发的适宜温度范围为25~30 ℃,28 ℃为最佳。中性或偏酸性、高湿度、氧气充足等条件,均有利于孢子的萌发。光照对孢子萌发的影响不大。甘油、蔗糖、葡萄糖、甘露醇、乳糖等5种碳源以及L-脯氨酸、L-酪氨酸、硝酸钠、L-天冬氨酸、硫酸铵、L-谷氨酰胺等6种氮源均有利于甘蔗黑穗菌冬孢子的萌发。2种供试药剂的各浓度中,均是三唑酮的萌发率低于五氯硝基苯的,即三唑酮的抑制效果要好于五氯硝基苯。
【英文摘要】Smut disea se in sugarcane caused by the fungus Ustilago scitaminea Sydow occurs in all sugarcane producing countries, and can cause considerable yield losses to sugarcane and reduction in cane quality. The biological characteristics of the teliospores of this fungus were studied in this context. The result indicated that the temperature favorable for teliospore germination was 25 ~30 ℃, optimum at 28 ℃. The conditions, neutral or slightly acid, highly humid and sufficient oxygen, were conducive to teliospore germination, while light almost failed to influence the germination. Five carbon sources such as glycerol, sucrose, glucose, mannitol and lactose, and 6 nitrogen sources such as L -tyrosine, sodium nitrate, L -aspartic acid, ammonium sulfate and L-glutamine were all beneficial to the germination of the teliospores. Two fungicides, triadimefon and PCNB, were applied to control the teliopsore germination at various levels, of which triadimefon gave a low teliospore germination rate of the fungus than PCNB, indicating that triadimefon was better than PCNB in inhibiting the teliospore germination of the fungus.

【中文关键词】甘蔗;黑穗病菌;生物学特性
【英文关键词】Sugarcane;Ustilago scitaminea Sydow;Biological characteristics
【中文摘要】对甘蔗黑穗病病原菌的基础生物学特性研究,结果表明,该菌的最适生长培养基为马铃薯葡萄糖琼脂与马铃薯蔗糖琼脂培养基,最适生长温度范围为25~30 ℃,28 ℃最为适宜。中性或偏酸性条件下有利于菌落生长。光照对菌落生长影响不大。在碳氮源方面,蔗糖、乳糖、淀粉、L-鼠李糖、甘油等5种碳源,以及硝酸钠、L-天冬氨酸、乙酸铵等3种氮源均有利于甘蔗黑穗病菌菌落生长,碳源以甘油为最好,氮源则以L-天冬氨酸与乙酸铵为最好。该病原菌冬孢子的致死温度为55 ℃,10 min。
【英文摘要】Smut disease in sugarcane is caused by the fungus Ustilago scitaminea (H. & P. Sydow) whichoccurs in all sugarcane-producing countries and causes a lose as high as 90% of the total yield. Therefore, it is important to study on the biological characteristics. In the present study, some biological characteristics of the pathogen of sugarcane smut disease were studied. The main results are described as follows: the most suitable medium for the fungus growth was potato glucose agar medium and the suitable growth temperature was from 25 ℃ to 30 ℃ and the optimal was 28 ℃. Acidic or neutral condition was conducive to the growth of the mycelium. Light affected little to the growth of the mycelium. Among the tested carbon and nitrogen resources, sugar, lactose, starch, L -rhamnose and glycerin were better, while sodium nitrate, L -aspartic acid and ammonium acetate were better for growth of the pathogen. Lethal temperature of the teliospore was 55 ℃ for 10 minutes.

【题目】甘蔗眼斑病菌部分生物学特性及其室内毒力测定
【中文关键词】甘蔗眼斑病菌;生物学特性;毒力测定
【英文关键词】sugarcane eye spot; biological characteristics; virulenle
【中文摘要】研究测定了甘蔗眼斑病原菌部分生物学特性以及对杀菌剂的敏感性。结果表明,该菌的最佳生长温度为30°C,而最佳产孢温度为25°C;光照条件下有利于菌丝体生长,而黑暗则有利于孢子产生;其生长最适pH为6~7,而产生分生孢子的最适pH值为5;该菌对蔗糖、葡萄糖和麦芽糖利用效果较好,果糖和木糖次之,山梨糖效果最差。多菌灵、正品甲津托、代森锰锌、百菌清、菌核净5种供试杀菌剂对眼斑病菌的菌落生长均具有显著的抑制作用。
【英文摘要】Sugarcane eye spot caused by Bipolaris sacchari (E.J. Butler) Shoemaker (also known as Helminthosporium sacchari or Drechslera sacchari), it can cause losses as high as 40% of the total yield in some sugarcane-growing areas worldwide. Therefore, it is important to study on the biological characteristics. In the present study, some biological characteristics of the pathogen of sugarcane eye spot were studied. The main results were described as follows:The optimal of temperature for the growth and sporulation of pathogen was 30°C and 25°C, respectively. Light could promote pathogen growth and dark could promote pathogen sporulation. The optimal of pH value for the growth and sporulation of pathogen was pH 6 ~7 and pH 5, respectively. Sucrose, glucose and maltose were the best of carbon sources. The results from toxicity indoor of the pathogens suggested that carbendazim, meroif, mancozeb, chlorothalonil and dimethachlon had significant inhibitory effect on mycelial growth.

【题目】我国苦茶资源主要生化成分的鉴定评价
【中文关键词】茶树; 苦茶; 生化成分; 儿茶素; 聚类分析
【英文关键词】tea plant, bitter tea, biochemical component, catechins, cluster analysis
【中文摘要】苦茶是中国特有的一类茶树资源。对保存于国家种质杭州茶树圃的24份苦茶资源进行了主要化学成分的测定与评价。结果表明, 苦茶资源在影响茶叶品质的主要生化成分上与普通资源相比, 不存在本质的差异; 在体现茶类适制性的指标上, 苦茶资源具有适制红茶的特点; 在体现茶树进化程度的儿茶素组成及含量的指标上, 苦茶资源偏向于阿萨姆茶变种, 属于进化上比较原始的类型。聚类分析结果表明, 苦茶与阿萨姆茶聚为一类, 可以将苦茶类归属于阿萨姆茶。
【英文摘要】Bitter tea germplasms are a very special kind of tea germplasms in China. Major biochemical components of 24 bitter tea and other 8 Camellia sinensis var. sinensis and 8 C. sinensis var. assamica tea germplasms were analyzed. The results showed that no significant differences of the major biochemical components were found between bitter tea and common tea germplasms. At the processing suitability indices, bitter tea germplasms were suitable for black tea. At the components and contents of catechins indices, which indicate the tea plant evolutionary degree, bitter tea germplasms were similar to var. assamica tea germplasms, and they belonged to primordial type. Cluster analysis results showed that bitter teas were clustered with var. assamica tea germplasms.

【题目】Supperssion of chitin synthase gene expression in Ectropis onliqua larva by dsRNAi method
【中文关键词】无
【英文关键词】chitin; chitin synthase; baculoviruse; dsRNAi
【中文摘要】无
【英文摘要】Biological control of pests is an important measure to control pesticide residues in tea products. The pests can be controlled by disfunction of chitin synthase.A conserved cDNA fragment (192bp) of chitin synthase gene from Ectropis Oblique larva was isolated by PCR. Sense and antisense strand of the gene were incorporated into pFGC5941 vector and a double strand RNA (dsRNA) recombinant named cs-intron-csr was formed, and the latter was then incorporated into a shuttle vector (pFastBac 1). The shuttle vector carried the recombined fragment into bacmid DNA, which could transfect cells in which a recombinant baculovirus, and it interfered the expression of chitin synthase gene in the infected sf9 cells and Ectropis Oblique larva, resulting growth suppression of the infected pest.

【题目】Decaffeination of catechins by stalk lignocellulose
【中文关键词】无
【英文关键词】camellia sinensis; caffeine; pine sawdust; bagasse; macroporous resin
【中文摘要】无
【英文摘要】Lignocellulose was prepared from woody tea stalk and used to isolate caffeine from tea catechins in tea extract by static adsorption and gradient elution using ethanol solution. The isotherm adsorption curve of the lignocellulose was consistent with Langmuir equation.The saturated adsorption of the lignocellilose to catechins, especially catachin gallate esters was higher than to caffeine, suggesting that the tea stalk lignocellulose can be used to isolating caffeine from tea catechins and specifically collecting catechin gallate esters.By isolation of lignocellulose column, product containing 97.32% total catechins and 0.64% caffeine were obtained from raw material containing 60% of catechins and 12% caffeine. IF the 20th fraction was collected separately,EGCg with 98% purity was obtained.The isolation results were confirmed to be better than that of macroporousa resin HPD600.

【题目】Effects of ultrasound assisted extraction on extractability and liquor quality of tea
【中文关键词】无
【英文关键词】ready-to-drink tea; temperature;amino acids; catechins;sensory quality
【中文摘要】无
【英文摘要】“Tea cream”, a precipitate formed in cold tea liquor, dose not favor the ready-to-drink tea production.If tea is extracted at low temperature,creaming can be controlled but yield of extracted solids is low.Ultrasound-assisted extraction(UAE) was used to improve the extractability of tea at low temperature.Solids extraction yield of UAE at 50°C for 30 min was 353.8±2.6mg g-1 based dry weigh (DW) of tea, being significantly higher than that without sonication treatment (LTE) ($P<0.05$), but 2.1% lower than that extracted at 90°C(HTE).The extracted total catechins of UAE was 125.91±0.12mg g-1 (DW),being significantly higher than those of THE and LTE, but the levels of amino acids and caffeine were between THE and LTE.The sensory quality of tea liguor extracted by UAE was better than THE. The results confirmed that UAE will improved extractability of the at low temperature.

【题目】高温对椰心叶甲啮小蜂保护酶系活性的影响
【中文关键词】高温; 椰心叶甲啮小蜂; 保护酶
【英文关键词】High temperature; Tetrastichus brontispae; Protection enzymes
【中文摘要】采用分光光度法测定椰心叶甲啮小蜂(Tetrastichus brontispae)幼虫 、蛹和成蜂经 30、 33、 36、 39、 42 ℃处理后体内 3 种保护酶活性的变化。结果表明: (1)经不同高温处理后, 椰心叶甲啮小蜂幼虫、 蛹和成蜂体内过氧化氢酶(Catalase, CAT)活性随着温度升高而先升高后降低, 其中幼虫、蛹体内 CAT 活性高于对照。 39 ℃为CAT 清除 H2O2的最适温度,高于39 ℃则 CAT 活性受抑制。(2)经不同高温处理后, 椰心叶甲啮小蜂幼虫体内过氧化物酶(Peroxidase, POD)活性高于对照, 蛹和成蜂体内 POD 活性低于对照。幼虫在 33 ℃时体内 POD 活性达最大值,之后随着温度的升高逐渐下降;蛹和成蜂体内 POD 活性随温度的升高而升高。(3)经不同高温处理后,椰心叶甲啮小蜂幼虫和蛹体内超氧化物歧化酶(Superoxide dismutase, SOD)活性随温度升高而升高, 其体内 SOD活性均高于对照。 成蜂体内 SOD 活性随温度升高而先升高后降低,在 39 ℃时达到最大值,但低于对照。
【英文摘要】The activity of protective enzymes in larvae, pupa and adult of Tetrastichus brontispae was determined after exposed to 30, 33, 36, 39, 42 ℃ with spectrophotometric method. The results showed that: (1) The activity of catalase (CAT) in the larvae, pupa and adults of T. brontispae after exposed to different high temperatures increased first and decreased later while temperature rising. The activity of CAT in the treated larvae and pupa of T. brontispae were higher than that of the control. 39 ℃ was the most suitable temperature at which H2O2 was scavenged by CAT, and the activity of CAT was inhibited after the temperature was higher than 39 ℃. (2) The activity of peroxidase (POD) in the larvae of T. brontispae after exposed to different high temperatures was higher than that of the control , while that of the pupa and adult of T. brontispae were lower. The activity of POD in the larvae of T. brontispae was stimulated initially when the temperature reach to 33 ℃, and then decreased with the raise of temperature. The activity of POD in the pupa and adult of T. brontispae increased with the raise of temperature. (3) The activity of superoxide dismutase (SOD) in the larvae and pupa of T. brontispae after exposed to different high temperatures increased with the raise of temperature, and the activity of SOD were higher than that of the control. The activity of SOD in the adult of T. brontispae was the highest when the temperature reached 39 ℃ and lower than that of control. The research above layed a basis to further study the heat-tolerant mechanism of T. brontispae.

【题目】寄生蜂与寄主的不同配比对椰心叶甲啮小蜂子代的影响
【中文关键词】椰心叶甲啮小蜂; 椰心叶甲; 配比; 寄生; 繁殖
【英文关键词】Tetrastichus brontispae Ferri è re; Brontispa longissima(Gestro); Proportion; Parasitic; Reproduction
【中文摘要】椰心叶甲啮小蜂(Tetrastichus brontispae Ferri è re)是一种重要的椰心叶甲蛹寄生蜂。为了探讨繁育椰心叶甲啮小蜂的最佳寄主密度, 研究1 对椰心叶甲啮小蜂与椰心叶甲1 日蛹的不同配比对椰心叶甲啮小蜂寄生与繁殖的影响。结果表明, 雌蜂与椰心叶甲1 日龄蛹的不同配比对椰心叶甲啮小蜂寄生率、每寄主出蜂量和后代性比有显著影响, 当雌蜂与椰心叶甲1 日龄蛹配比为1 ： 1 时, 椰心叶甲啮小蜂的寄生率和出蜂量最高, 其寄生率为100%, 每蛹平均出蜂量为27.67 头, 显著高于其它配比, 但雌蜂与椰心叶甲1 日龄蛹配比为1 ： 6 时, 椰心叶甲啮小蜂后代性比(雌蜂的百分比)最高为88.04%, 显著高于其它配比。平均每雌怀卵量、出蜂率、羽化率在椰心叶甲啮小蜂与椰心叶甲蛹的不同配比之间无显著差异。

【英文摘要】Tetrastichus brontispae Ferri è re is a very important pupal parasitoid of Brontispa longissima (Gestro). To understand the best host density for the breeding, the influence of different proportions of parasitoid and host on parasitic and reproduction of Tetrastichus brontispae Ferri è re was studied. The results showed that, different proportion of female with 1 -day -old pupae of Brontispa longissima (Gestro) significantly influenced on parasitism, offspring per host and sex ratio of offspring. When the ratio of the female and 1-day-old pupae of Brontispa longissima (Gestro) was 1:1, the parasitism and offspring per host were the highest, the rate was 100% and offspring per pupae was 27.67, which was significantly higher than other proportions. However, the ratio of the female and 1 -day -old pupae of Brontispa longissima (Gestro) was 1: 6, the sex ratio of offspring was 88.04% , which was significantly higher than other proportion. Eggs per female, emergence of wasp and eclosion between different proportions were not significantly different .

【题目】Study on the antioxidant activity of tea flowers
【中文关键词】无
【英文关键词】tea flower, antioxidant activity, DPPH, hydroxyl radical, chemiluminescence
【中文摘要】无
【英文摘要】Major chemical compounds in different extracts from tea flowers (Camellia sinensis) were analyzed. Distilled water or 70% ethanol extracts were then fractionated with chloroform, ethyl acetate and n-butanol, respectively. Each extract fraction was tested its scavenging activities on 2,2-diphenyl-1-picrylhydrazyl (DPPH) and hydroxyl free radicals. The results showed that ethyl acetate fraction of ethanol-extract of tea flower (EEA) exhibited the highest quenching activity to hydroxyl radicals (SC50 11.6 μg/ml), followed by ethanol-extract (EE) of tea flower (SC50 19.7 μg/ml). Same tea flower extract showed big different scavenging activities on different free radicals. EEA quenched 80% of hydroxyl radicals generated by Fenton ’ s reaction, however, only 40% of DPPH radical was scavenged in the Fe (II)-H2O2 -luminol system. The contents of flavones, polyphenols and catechins in EE and EEA fractions were higher than those in other fractions. We suggest that the stronger scavenging abilities to free radicals might be due to polyphenols, EGCG, ECG and flavones. However, the water extracts of tea flower and their fractions showed lower antioxidant activity for their inhibitory effect on hydroxyl radicals and DPPH radicals.

【题目】Effect of different extracting methods on quality ofC hrysanthemum Morifolium Ramat. Infusion
【中文关键词】无
【英文关键词】Chrysanthemum Morifolium, extraction, flavonoids, HPLC, extracted solids yield, color differences
【中文摘要】无
【英文摘要】The flower of Chrysanthemum Morifolium Ramat. (CM) is a useful food and folk medicine in China. Effects of Chrysanthemum Morifolium extracting (CME) conditions, including extraction temperature, extraction time and the ratio of flower to water on infusion quality were investigated. The extractability, liquor color differences and the major flavonoids of luteolin-7-O- β -D-glucoside and luteolin of various CME methods were evaluated. The results indicated that CME temperature was the most important factors affecting quality of CM infusion. Based on the extractability and chemical compositions, the best CME conditions were the 90~100 º C, 20-30min and the ratio of flower to water of 1:40 (w/v). High-performance liquid chromatography (HPLC) of

Chrysanthemum Morifolium chemical compositions including luteolin-7-O- β -D-glucoside and luteolin was also discussed in the present paper.

【题目】椰甲截脉姬小蜂对4种棕榈科植物挥发物的行为反应研究
【中文关键词】棕榈科植物挥发物; 椰心叶甲; 椰甲截脉姬小蜂; 行为反应
【英文关键词】Palm plant volatiles; Brontispa longissimat; Asecodes hispinarum; Behavioral responses
【中文摘要】为阐明4种棕榈科植物挥发物对椰甲截脉姬小蜂的引诱作用。本文用“Y”型嗅觉仪观测了椰甲截脉姬小蜂雌蜂对4种棕榈科植物(椰子Cocos nucifera, 大王椰子Roystonea regia, 槟榔Areca catechu和散尾葵Chrysalidocarpus lutescens)的行为反应。结果表明:4种棕榈科植物未受害心叶和机械损伤心叶挥发物对椰甲截脉姬小蜂没有明显的吸引作用; 每叶10头椰心叶甲3龄幼虫为害20~ 48 h,幼虫- 散尾葵心叶复合体、幼虫- 槟榔心叶复合体和幼虫- 椰子心叶复合体对椰甲截脉姬小蜂有明显的吸引作用; 幼虫- 大王棕心叶复合体仅在36、48 h对椰甲截脉姬小蜂有明显的吸引作用;小于或大于这些时间范围, 4种复合体对椰甲截脉姬小蜂都没有明显的吸引作用; 相比之下, 椰甲截脉姬小蜂对幼虫- 椰子心叶复合体的趋向率稍强于其他3种复合体, 但对4种复合体的行为反应没有明显差别。本文结论如下:椰心叶甲幼虫为害寄主植物心叶后, 诱导的植物挥发物可引起椰甲截脉姬小蜂的寄主栖境定向行为。
【英文摘要】The article ami ed to elucidate the attracting effects of the four palm plants volatiles toA secodes hisp inarum. The behavio ral response ofA. hisp inarum fema les to the vo la tiles em itted from 4 palm plants (Cocos nucifera, Roystonea regia, Areca catechu and Chrysalidocarpus lutescens) were studied by using a Y- tube olfactometer. The volatiles emitted from undamaged andmechanically damaged heart leaves of 4 palm plants had not attraction to A. hispinarum; the attraction of volatiles from 3L-Cocos nucifera, 3L-Areca catechu and 3L-Chrysalidocarpus lutescens com plexes to A. hispinarum females were only evident between 20 h and 48 h after infestation by 10 B. longissima 3th larvae per leaf but not before or after. The volatiles from 3L-Roystonea regia complexes had evident abstraction at 36 h and 48 h, but not at other time. T he behavioral responses of the female parasitoids to different larvae-plam complexes were not evident at 48 h; in contrast parasitoids preferred the volatiles from 3L-Cocos nucifera. The volatiles from heart leaves of host plants damaged by the larvae of B. longissima could attract A. hispinarum to locate to the host habitat.

【题目】Assessing Geographic Origins of Green Teas Using Instruments
【中文关键词】无
【英文关键词】Camellia sinensis, authenticity, catechin, tea infusion, principal component analysis
【中文摘要】无
【英文摘要】Parameters of soluble solids, amino acids, catechins, and color difference of 24 green tea samples from China andKorea were determined. The levels of soluble solids, amino acids, total catechins, and infusion lightness in tea samples from Korea were higher than those from China. Concentrations of epigallocatechin galate and epigallocatechin in teas from China were higher than tea samples from Korea. Geographical origin of teas from the 2 countries was discriminated using parameters of infusion lightness, gallocatechin, and total catechins and applying principal component analysis.

【题目】椰甲截脉姬小蜂寄生对椰心叶甲幼虫体内几种酶活性的影
【中文关键词】椰心叶甲; 椰甲截脉姬小蜂; 酶活性
【英文关键词】Brontispa longissima; Asecodes hispinarum; catalase; peroxidase; polyphenol oxidase; esterase
【中文摘要】采用分光光度法测定被椰甲截脉姬小蜂寄生0.5~4 d 内的椰心叶甲3 龄和4 龄幼虫体内几种酶活性的变化。结果表明: 寄生后, 寄主幼虫体内过氧化氢酶(CAT)和过氧化物酶(POD)活性均高于对照; 多酚氧化酶(PPO)活性受抑制; 酯酶(EST)活性先升高后降低。结果揭示了椰心叶甲幼虫对寄生产生的生理防御反应。
【英文摘要】By using spectrophotometric method, the activities of several enzymes, including catalase (CAT), peroxidase (POD), polyphenol oxidase (PPO) and esterase (EST), were determined in Brontispa longissima larvae parasitized by Asecodes hispinarum. The results showed that the activities of CAT and POD were higher in the parasitized larvae than in the unparasitized larvae at the same stage, that the activity of PPO was inhibited in parasitized larvae, and that the activity of EST was stimulated initially and then inhibited in the parasitized larvae. The changes of the enzymatic activities were helpful to the successful development of A.hispinarum in the host larvae. This study indicated the B.longissima larvae had a physiological defensive action against A. hispinarum, which can be used to probe into the relationship between B. longissima and A. hispinarum.

【题目】冰草属植物ISSR 遗传分析与评价
【中文关键词】冰草属; ISSR; 遗传分析; 居群
【英文关键词】Agropyron. ; ISSR; Genetic analysis; Populations
【中文摘要】利用ISSR 分子标记技术,对采自内蒙古、河北、山西、宁夏、甘肃和吉林6 省区,经引种栽培筛选出的5 种12个冰草属植物居群,进行DNA 分子水平的遗传结构分析和评价。构建了国内冰草属ISSR-PCR 扩增反应体系。研究结果表明: 供试材料共检测出88 条谱带,其中多态性谱带83 条,多态性条带的比例为94. 32%,表明供试材料遗传多态性丰富。不同物种居群间遗传多样性丰富程度不同,蒙古冰草遗传多样性最大,其次为冰草,光穗冰草最小。种间遗传分化占冰草属物种遗传多样性的56. 35%,冰草物种地区间遗传多样性高于地区内遗传多样性。UPGMA 聚类结果显示,同种不同材料基本能够聚在一起,但有交叉现象,部分材料表现出地域性; 生态环境相似的物种遗传距离较近,聚类在一起。种间亲缘关系能够推测冰草属5 个种的系统关系。
【英文摘要】1The genetic structure of 12 Agropyron populations,including five species was analysed and evaluatedby inter-simple sequence repeat (ISSR) markers. These materials were collected from six provinces in China,including Inner Mongolia,Hebei,Shanxi,Ningxia,Gansu and Jilin. ISSR-PCR amplification reaction system on Agropyron was been construct in China. The results showed that: A total of 88 fragments were amplified from 7 primers,of which 83 bands (94. 32%) were polymorphic for the test materials,and there were a large amount of genetic polymorphism in the tested materials.Populations accessions of different species had different genetic richness. A. mongolicum had the most abundant genetic diversity. The second was A. cristatum. Genetic diversity of A. cristatum. var.pectinforme was relative lower than other species of Agropyron. The genetic variation found among species was 56.35% and genetic diversity among regions is higher about A. cristatum. By UPGMA clustering,different populations of inter-species can be basically clustered together,but a few different populations of inter-species can't be clustered together. The species from similar eco-geographical situations have closer genetic distance and were clustered together.The genetic relationship among species can be speculated systematic relationship of five species on Agropyron.

【题目】冰草属植物醇溶蛋白遗传分析与评价
【中文关键词】冰草属; 醇溶蛋白; 遗传分析
【英文关键词】Agropyron; gliadin; genetic analysis
【中文摘要】利用A PAGE 酸性聚丙烯酰胺凝胶电泳技术, 对采自内蒙古、河北、山西、宁夏、甘肃和吉林6 省, 经引种栽培筛选出的5 种12 个冰草属植物居群醇溶蛋白进行遗传结构分析和评价研究。结果表明, 供试材料总计电泳出了37 条相对迁移率不同的醇溶蛋白带纹, 在 、 、、! 区分别有5、15、10 和7条, 4 条谱带为稳定表达带, 多态率89. 19%。不同物种居群间蛋白多样性丰富程度不同, 冰草醇溶蛋白遗传多样性指数最丰富。其次为蒙古冰草, 遗传多样性相对最低的为细茎冰草。种间遗传分化占冰草属物种遗传多样性的78. 70%; 冰草地区间的遗传多样性占总体遗传多样性的73. 31%。Jaccard 系数为0. 498 时聚为4 类, 同种不同材料基本能够聚在一起, 但有交叉现象; 地理分布相近的物种聚类在一起。
【英文摘要】Twelve populations of five kinds of A gropyron species had been used for gliadin genetic structure analysis and evaluation research by A-PAGE, which had been collected from Inner Mongolia, Hebei, Shanxi,Ning xia, Gansu and Jilin provinces in China and selected by the introduction and cultivation. The results showed that in total, 37 elect rophor et ic bands w ere observed following A PAGE, among which 5, 15, 10 and 7 allelic va-riants were separated into α , β , γ and ω fractions of prolamine. Populat io ns accessions o f different species had different gliadin diversity. A . cristatum had abundant gliadin diver sity. Its Shannon index was 1. 288, Nei's genetic diver sity was 0.281 2 and the proportion of polymor phicloci was 66.67% . The second was A . mongolicum which Shannon index was 0.884, Nei's genetic diversity was 0.2807 and the proportion of polymorphic loci was 63.16%.

A. trachy caulumg liadin diversity was relative lower thanother A gropyron species. The genetic variation found among species was 78.70% (Ho) . According to the dentrogram based on the Jaccard coefficient matrix , the Agropyron populations from different regions were distinctly classified. At Jaccard coefficient of 0.498, the populations of A gropyron were divided into four groups. The UPGMA phenogr am indicated that different populations of inter species can be basically clustered tog ether, but a few dif ferent populat ions of inter species can't be clustered together, and the species from similar ecogeographical situations were clustered to gether. More at tention should be paid to greater numbers of populations of different regions in regard to collection and in preservation of Agropyron germplasm.

【中文关键词】醇溶蛋白; 遗传多样性; 鹅观草
【英文关键词】gliadin; genetic diversity; Roegneria kamoji Ohwi
【中文摘要】以8 个地理类群的90 份鹅观草野生种质材料为研究对象, 采用A- PAGE(酸性聚丙烯酰胺) 凝胶电泳技术进行蛋白质水平遗传多样性检测. 研究结果表明, 来源于不同居群的鹅观草共分离出26 条谱带, 每个材料可以分离出5~ 26 条迁移率不同的谱带, 平均谱带数为16. 39 条, 其中平均多态性谱带为12. 65 条, 多态性比例为77. 22%; 基于供试材料醇溶蛋白每个位点谱带出现的频率, 分别计算了地理类群内多样性指数(0. 345) 和总多样性指数(0. 471) , 类群间的遗传分化系数为26. 8%, 表明鹅观草变异的73. 2% 来源于类群内; 90 份供试材料醇溶蛋白的Jaccard 遗传相似系数变异范围为0. 133 3~ 1. 000, 平均遗传相似系数为0. 395 7; 利用种子醇溶蛋白可将90 份材料分为12 类, 鹅观草种质资源之间的亲缘关系呈现出一定的地域性规律; 不同地理类群间的遗传多样性指数从高到低的排列顺序依次为云南> 四川> 内蒙古> 新疆> 山西> 甘肃> 宁夏> 河北. 因此在进行鹅观草种质资源收集和原地保护时, 建议对云南和四川地区的鹅观草种质资源应给予极大关注.
【英文摘要】The genetic diversity of Gliadin among 90 materials from 8 eco-regions was tested by A- PAGE.The results showed that a total of 26 gliadin genotypes were separated through elect rophoresis, and each material could obtained different gliadin bands from 5 to 26. T he mean bands obtained from each material were 16. 39 and po lymorphic bands were 12. 65 (amount to 77.22%) . The total genetic diversity index (Ht= 0.471) and genetic diver sity index within populat ion (Hs= 0.345) were calculated based on g liadin f requency of 30 locus about 90 mater ials. T he mean gene differentiation coefficient (Gst) was 0.268, indicat ing that approx imately 73.2% of to tal g liadin variation occurred within populations. The Jaccar d ø s genetic similarity (Gs) coeff icient s rang ed f rom 0. 1333 to 1.000 w ith average of 0.3957, Clustering analy sis w as made w ith unw eighted pair gr oup method for arithmet ic averages (U PGMA) using the symmet ric mat rix of similarity co ef ficient s. T he 90 materials w ere gr ouped into 12 g roups. T he dendrogr am revealed that the relat ionships amo ng materials show ed correlat ion w ith the lo cat io ns of the materials. T he genet ic div ersity of Roeg ner ia k amoj i Ohw i g ermplasm reso urces f rom differ ent reg ions w ere differ ent , and their array sequences from high to low w er e Yunnan> Sichuan> Inner Mongo lia> Xinjiang> Shanx i> Gansu> Ning xia > Hebei. Therefore, high emphasis should be put on R . kamoji population distributed in Yunnan and S-i chuan Province for the germplasm resources collect ion.

【题目】披碱草属4种植物叶下表皮微形态特征

【中文关键词】披碱草属;叶下表皮;微形态
【英文关键词】Elymus L.; leaf lower epidermis; micro morphology
【中文摘要】披碱草属!!"#$%& 01"是禾本科小麦族中一个重要的多年生属#借助光学显微镜对披碱草属/ 种植物的叶下表皮微形态特征进行分类鉴别$ 结果表明#脉间长细胞为近长方形#垂周壁形状为浅波状%深波状&有短细胞存在#呈椭圆形%孪生&气孔器副卫细胞呈圆屋顶形%平屋顶形&硅质乳突存在于脉间长细胞上&表皮细胞大小%垂周壁式样%气孔器大小和硅质乳突等特征在种间存在一定的差异#可以作为本属种间分类鉴别的参考依据#从而为该属种质资源的合理利用及开发提供解剖学依据$
【英文摘要】Elymus L. is an important perennial genus within the tribe Triticeae. The micro morphology of leaf lower epidermis of 4 species of Elymus L. were examined under light microscope(LM). The results show that the leaf lower epidermis of Elymus L. were characterized by long rectangle cells, sinuolate or sinuat anticlinal wall, presence of short cells in shape of an ellipse and in twins, round or plat tectiform subsidiary cells, silica bodies in intercostal long cell. But some characteristics were different among these species, including the size of surface cells and the pattern of its anticlinal wall, the size of stomas,silica cells,which can be used for their identification. The study on the micro morphology of leaf lower epidermis could provide some anatomy evidences, useful in reasonable utilization and esploitation of the germplasm resource.

【题目】披碱草与老芒麦苗期抗旱性综合评价
【中文关键词】披碱草; 老芒麦; 苗期抗旱性; 生理生化指标
【英文关键词】Elymus dahuricus Turcz. ; Elymus sibiricus L. ; Drought resistance at seedling stage; Physiological and biochemical index
【中文摘要】盆栽模拟土壤干旱条件, 对采自我国不同生境的披碱草(E lymus d ahur icus T ur cz.) 与老芒麦(Elymus s ibir i cus L.) 10 份野生种质材料苗期形态学和生理生化指标进行研究, 旨在了解干旱胁迫下苗期抗旱特征及其抗旱能力, 为披碱草属种质材料抗旱新品种选育、种质资源的开发利用提供理论依据。结果表明, 随干旱胁迫日数增加,植株高度、叶面积、相对含水量和叶绿素都明显下降, 而电导率、脯氨酸、SOD 和POD 都明显上升。经抗旱隶属度分析, 10 份材料抗旱性可分为3 类: 第一类为相对抗旱, 包括SXD1、XJD2、NMD3、NMD4、GSD5、GSS1 和JLS2 共7 份材料; 第二类为中等抗旱, 包括NMD6 和SXS3 共两份材料; 第三类NMS4 为相对易感。经相关分析筛选出对抗旱性影响显著的指标为: 相对含水量、叶面积、相对电导率和叶绿素含量。
【英文摘要】Elymus d ahur i cus T urcz. and Elymus sibir i cus L. , as the major forag es in the w orld, of ten suf fer f rom drought to some deg ree during their grow ing season. Therefor e, the dro ug ht resistant breeding and dr oug ht resistant culture of them should be paid w ith hig h attent ion. A t present , the resear ches in such f ield mainly co ncent rate on the co llect io n, identif icat io n of the materials and so on, w hile seldom on the ability of dro ug ht r esistance. In this study, the drought resistance of 10 w ild E. dahur icus and E. sibir i cus germplasms from different habitat s were inv est ig ated using pot ted plants to simulate soil drought condit ion. T he dynamic indicators related to drought resistance w er e comprehensive evaluated by the juris dict ion of funct io n law under 21 d of st ress. T he result s show that the plant height, leaf area, relat ive w a ter content and chloro phyll decreased significant ly along w ith the day s of dr oug ht st ress increased, while the r elat ive elect rical conduct ivity, pr oline content , SOD, and POD increased distinct ly. Accor ding to the values of jurisdict ion degree, the 10 germplasms were divided into the fol low ing three catego ries. The germplasms w ith st rong dro ug ht resistance included SXD1, XJD2, NMD3, NMD4, GSD5, GSS1, and JLS2; the germplasms w ith medium dro ug ht resistance included NMD6 and SXS3; the dro ug ht sensit ive one was NMS4. Co rrelation analy sis indicate the indices w hich had significant impact on drought resistance were the relat ive w ater content , leaf area, chlorophyll content , and relat iv e elect rical conduct ivity . The re sults of this ex periment could help us under stand the character ist ics and abilit ies of their drought resistance and also provide a basis for new species select ion and the ex plo itat ion and utilizat ion of E lymus germplasm.

【题目】披碱草属六种野生牧草苗期抗旱胁迫的生理变化
【中文关键词】披碱草属; 干旱胁迫; 生理生态; 苗期; 抗旱性
【英文关键词】Elymus; Drought stress; Eco- physiological; Seedling stage; Drought resistance
【中文摘要】采用干旱胁迫处理不同来源的披碱草属六种野生牧草幼苗, 对其生长高度、相对含水量(RWC) 、丙二醛(MDA) 、脯氨酸(Pr o) 和叶绿素(Chl) 含量进行测定。结果表明: 供试材料幼苗生长明显受到干旱胁迫的抑制, 在水分条件较好情况下老芒麦株高生长迅速, 明显高于其它材料, 但随着干旱胁迫的加强, 干旱对幼苗生长的影响较大,而肥披碱草和紫芒披碱草受到的抑制较小。叶片RWC 和Chl 均随着干旱胁迫的加强呈下降趋势, 其中叶片RWC下降幅度较小的为披碱草, 下降较多的为肥披碱草和紫芒披碱草, 而Chl 含量降低较多的为麦宾草和紫芒披碱草, 降低较少的为老芒麦和垂穗披碱草。MDA 含量和Pro 含量均随胁迫的加强呈上升趋势, MDA 增加幅度较大的材料为麦宾草和紫芒披碱草, 增加幅度较小的为披碱草和垂穗披碱草; Pro 增幅较大的材料为紫芒披碱草和垂穗披碱草。恢复供水以后, 除Pro 含量持续升高外, 其它指标都有不同程度的恢复。经层次聚类分析, 6 份材料的抗旱性可分为3 类: 相对抗旱材料为垂穗披碱草, 中等抗旱的为肥披碱草和披碱草, 相对敏感的为老芒麦、麦宾草和紫芒披碱草。
【英文摘要】The seedlings of six wild species in E lymus were treated with dr ought stress, and their height,MDA, proline, and chlorophyll content were investigated1 The results showed that the height was obvi2ously reduced by dr ought stress1 T he growth rate of E1 sibir icus was higher than other s under no water stress1 Fur thermor e, the drought stress had gr eater impact on the seedling growth of E1 sibir icus and had less impact on the E1 escelsus and E1 p ur pur ar istatus1 With incr easing drought stress, the relative water content and the total chlorophyll of all the materials decreased, while the MDA and Pro content in2 creased1 T he leaf relative water content in XZD4 from Tibet decreased the lessest, E1 escelsus and E1 pur 2 p ur ar istatus from Xinjiang decreased the most; T he MDA content in E1 tang utor um and E1 p ur pura rista2 tus increased mor e, while E1 d ahur icus and E1 nutans increased less than other s1 T he Pro content in E1 purp ur ar istatus and E1 nuta ns increased more1 After r ewater ing, Pro content continued increasing, others restorated in different degrees1 Through the hier archical cluster analysis, the r elative high resistance mate2 r ial was E1 nuta ns, the moderate materials were E1 escelsus and E1 d ahur icus, the low resistance materialswere E1 sibir icus, E1 tangutorum and E1 pur pur ar ista tus1

【题目】披碱草属四种植物主要形态特征的变异性比较
【中文关键词】披碱草属; 形态变异; 居群; 聚类分析
【英文关键词】Elymus L. ; Morphological variation; Population; Cluster analysis
【中文摘要】应用变异系数、主成分分析、系统聚类分析方法, 对披碱草属四种不同生境来源的18 个居群的180 份材料进行形态特征比较分析。变异系数分析结果表明: (1) 披碱草属4 种植物的不同居群在形态特征上具有变异性; (2)不同居群内及居群间的形态特征存在一定程度的变异; (3) 穗部形态特征中的颖及稃特征是种间和种以下分类的重要依据。主成分分析结果表明: 颖长、颖脉数、外稃长、内稃长、小穗长、小穗宽等是种间分类的重要特征指标。系统聚类分析法分析表明: 在欧式距离等于5 时可将来自不同生境的18 个居群分为3 类, 经鉴定第一类为披碱草和老芒麦, 第二类为麦宾草, 第三类是圆柱披碱草; 其中麦宾草的归类清晰。
【英文摘要】Morphological variation of Elymus L. populations which come from different environments was studied with the method of numerical statistics. The statistical methods of coefficient of variance, principal component analysis and the cluster analysis

were used. The results showed that there were some differences in the phenotypic characters within and among populations, meanwhile it was proved that the glumes and lemma took important roles in the morpholog ical identif icat io n. Thro ug h the principal compo nent analysis, the result indicated that the spike characterist ics including length of glumes and palea, glume vein, leng th of lemma and leng th and w idth o f spikelet w ere important to measure g enetic variance. Applied the hierarchical clustering analysis, w hen Euclidean distance w as f ive, the 18 different po pulations were classified into three groups: group one included tw o species Elymus d ahur icus T . and Elymus sibir i cus L. , group 2 included E lymus ex celsus T. , g roup 3 included E lymus cy lindr i cus(Franch.) Honda; a mong them the Elymus ex cel sus T. had a clear classif icat ion.

【题目】冰草叶片光合日变化研究
【中文关键词】冰草;净光合速率;蒸腾速率;叶绿素;环境因子
【英文关键词】Agrogyon cristatum; Net photosynthetic rate; Transpiration rate; Chlorophyll; Environmental factors
【中文摘要】利用Li-6400便携式光合测定仪,测定旱作条件下引种栽培的3份冰草材料光合日变化。结果表明,不同来源冰草净光合速率(Pn) 日变化均为双峰型,第一峰值均出现在10：00左右,第二峰值均出现在14：00,在中午12：00,3份材料都出现不同程度的“午休”现象,“午休”现象最明显的是来自山西的冰草,而当地冰草净光合速率日均值和最大值均高于其它两种材料;蒸腾速率(Tr)、气孔导度(Gs)、叶片水压亏缺(VPD) 均为单峰曲线,峰值时间不一致,综合比较上述参数的日均值或最大值,表现为NMC3>HBC1>SXC2;3份材料叶绿素a和叶绿素b含量呈现出一致的变化趋势;对光合速率日变化影响较大的环境因子是PAR和Ca,生理因子是叶绿素b含量和VPD,对蒸腾速率日变化影响较大的环境因子是RH和Ca,生理因子是VPD和叶绿素a含量;地理来源较近的材料,引种栽培表现出较好的光合特性和较强的适应性。
【英文摘要】Photosynthetic diurnal variations of three materials of A.cristatum was determined by Li-6400 portable photosynthesis analyzer under dry conditions, which had been introduced and cultivated. The results showed that the diurnal variations of photosynthetic rates presented double peak, and the first peak of the materials were in 10:00, and the second were in 14:00, and the phenomenon on “ noon break ” were obvious, and especially the material from Shanxi had evident “ noon break ” phenomenon, while the net photosynthetic rate of the local A.cristatum was higher than the mean and the maximum of the two other materials; the

diurnal variations of transpiration rate, stomatalconductance and leaf water pressure deficit were single peak, and the peak time were not inconsistent, and the mean or maximum of these parameters expressed as NMC3> HBC1> SXC2 by comprehensive comparison; chlorophyll a and chlorophyll b among three materials showed consistent trend; PAR and Ca had the greater effect on the diurnal dynamics of Pn, and its physiological factors were chlorophyll b and VPD, while RH and Ca had the greater effect on the diurnal dynamics of Tr, and its physiological factors were VPD and chlorophyll a. The materials from similar eco-geographicalsituations, which had been introduced and cultivated, had better photosynthetic Characteristic and strong compatibility.

【题目】肥披碱草叶片光合特性研究

【中文关键词】肥披碱草;光合作用;净光合速率;蒸腾速率;光饱和点;光补偿点

【英文关键词】Elymus excelsus ; photosynt hesis ; net photosynt hetic rate ; transpiration rate ; light saturation point ;light compensation point

【中文摘要】以大田生长的肥披碱草为试验材料,利用Li26400 型光合作用测定系统监测其叶片光合生理生态特性及其环境因子日变化,并利用相关分析和逐步回归分析法探讨了净光合速率和蒸腾速率与生理生态因子间的关系. 结果表明: (1) 肥披碱草叶片的净光合速率(Pn) 、蒸腾速率(Tr) 和气孔导度(Gs) 的日变化均呈双峰曲线,具有明显的光合“ 午休"现象;叶片水气压亏缺(V PD) 和Tr 及Gs 的峰值出现时间不同步,胞间CO2 浓度(Ci) 不随气孔的降低而减小,抑制其光合速率的因子为非气孔限制;水分利用率(WU E) 的变化呈单峰型,并且其上午WU E 明显高于下午. (2) 自然条件下,影响肥披碱草叶片Pn 的主要因子是Tr 和Ca (大气CO2 浓度) ,影响Tr 的主要因子是Gs 和Ta(气温) . (3) 在干旱与半干旱自然条件下,肥披碱草的光补偿点(12. 45 μ mol! m- 2 ! s - 1) 、光饱和点(1 750 μ mol! m- 2! s - 1) 、最大净光合速率(65. 125 μ mol! m- 2 ! s - 1) 、表观光量子效率(0. 128 9 μ mol! mol - 1)都较高,表现出较强的光环境的适应性和光能利用能力,是典型的阳性植物.

【英文摘要】The ecop hysiological p hotosynthetic characteristics of El ymus excelsus leaves and their environ2mental factor s were measured using Li26400 portable p hoto synt hesis system. The relationship between the net p hoto synt hetic rate (Pn) and leaf t ranspiration (Tr) and it s p hysio-ecological factor s were studied by correlation and stepwise regression equation. The result s showed that : (1) t he diurnal change of Pn presen-ted a bimodal pat tern ,and had a clear midday depression. The diurnal variation pat terns of Tr and stomatal conductance (Gs) were al so bimodal . The peak values of water deficit (V PD) , Gs and Tr appeared asyn-chronous. Intercellular CO2 concent ration (Ci) did not decrease wit h t he dropping of stomatal conductance.The mainly cont rolling factor of p hotosynthetic rate was non2stomatal limitation. The diurnal variation ofwater use efficiency (WU E) was one-peak curve ,and t he WU E of morning was significantly higher than that of the af ternoon. (2) Under t he nat ural condition , Tr and Ca (air CO2 concent ration) were the key fac-tors that affected t he changes of Pn and t he main factor s t hat affected Tr were Gs and Ta (air tempret ure) .(3) The light compensation point (LCP) of p hotosynthesis of El ymus e xcelsus in leaves was 12. 45 μ mol · m- 2 ! s - 1 . The light saturation point (L SP) of p hotosynt hesis was 1 750 μ mol! m- 2 ! s - 1 ,t he maximum Pnwas 65. 125 μ mol! m- 2 ! s - 1 . The apparent quant um yield was 0. 128 9 μ mol! mol - 1 . El ymus ex celsus is a-daptable widely to p hoto flux density and is a typical heliop hyte.

【题目】两种冰草属植物光合生理特性研究

【中文关键词】蒙古冰草;沙生冰草;净光合速率;蒸腾速率
【英文关键词】Agropyron mongolicum; Agropyron desertorum; net photosynthetic rate; transpiration rate
【中文摘要】采用Li-6400 便携式光合测定系统,测定旱作条件下引种栽培的两种冰草属植物光合生理特性。结果表明,净光合速率Pn日变化均为双峰型,第1 峰值均出现在10:00 左右,第2 峰值均出现在16:00。在午后14:00,由于气孔限制因素所致,出现了不同程度的光合“ 午休 ”现象,PAR 是引起“ 午休 ”的间接因素。蒸腾速率Tr 和气孔导度Gs 日变化均为双峰曲线,峰值时间与净光合速率一致。胞间CO2浓度Ci 日变化近似V 字形,14:00 左右降至最低。两种植物叶片水压亏缺VPD 变化趋势一致,而水分利用效率WUE日变化相反。上述各光合生理参数日均值大小表现为蒙古冰草高于沙生冰草。环境因子Ca 和Ta 对蒙古冰草的Pn 日变化影响较大;Ca 和RH 对沙生冰草的Pn 日变化影响较大,同时对两种植物的Tr 日变化影响也较大;两种植物的Pn 和Tr 的主要生理影响因子是Gs 和VPD。
【英文摘要】The photosynthetic physiological characteristics of two species of Agropyron introduced and cultivated under dry conditions were measured by Li-6400 portable photosynthesis system. The results show that the diurnal variations of net photosynthetic rates have double peaks, with the first peak at 10:00, and the second at 16:00, with "noon break" at 14:00 obviously because of constraints caused by stomata, and with PAR as an indirect factor; the diurnal variations of transpiration rate and stomata conductance also have double peak,with the same peak times as the net photosynthetic rate; the diurnal variation of intercellular CO2 concentration is roughly in a V-shape,with the minimum at 14:00; the diurnal variations of leave's water pressure deficit of two species are in the same trend, while the diurnal variations of water use efficiency are in the opposite trends; the averages of these photosynthetic physiological parameters of Agropyron mongolicum are higher than those of Agropyron desertorum. Ca and Ta have a greater effect on the diurnal dynamics of Pn of A.mongolicum, Ca and RH have a greater effect on the diurnal dynamics of Pn of Agropyron desertorum, while Ca and RH have a greater effect on the diurnal dynamics of Tr of two species, Gs and the VPD have a greater physiological effect on the diurnal dynamics of Pn and Tr of two species.

【题目】围封年限对典型草原群落结构及物种多样的影响
【中文关键词】典型草原;围封年限;群落结构;物种多样性
【英文关键词】Typical steppe;growing season exclosure;community structure;species diversity
【中文摘要】针对退化草地恢复与合理利用问题,选取生长季围封调制干草,其他时间轻度放牧利用的草地为研究对象,同时选取自由放牧草地为对照,进行不同围封年限群落结构及植物多样性的比较研究。结果表明,重度退化草地采用生长季围封措施后,群落生产力与物种多样性增加,群落结构和各物种的优势地位发生较大改变。随围封年限的延长,群落盖度与密度增加,到14年达最大,之后降低,高度和产量持续增加,围封25年达最大。草地由星毛委陵菜+冷蒿+克氏针茅演替为羊草+ 糙隐子草+ 麻花头。经5 年围封,物种的丰富度、均匀度和多样性增加。随围封年限的延长,物种丰富度继续增加,到围封14 年达最大,但由于围封14 年后形成以羊草为单优势种的群落,物种均匀度及多样性降低。之后,随围封年限的继续延长,群落逐步趋于稳定,均匀度和多样性增加。群落相似性分析证明,采用生长季围封措施后,围封样地与未围封对照间的相似性降低,表明围封在改变群落的环境条件上也具有较好的效果。生长季围封调制干草,其他时间轻度放牧利用的管理方式可保证退化草地在一定程度上得到恢复,综合考虑群落结构、产量及物种多样性,认为14年是较适宜的围封年限。
【英文摘要】To investigate the restoration process and reasonable utilization of degraded grassland. We chose as research objects natural grasslands which were esclosed during the growing season for hay production then sub-jected to light grazing for the rest of the year. Continuous grazing land was used as a control. Comparative re-search on the influence of different exclosure years on the community structure and species diversity was carried out. The plant species and diversity of dergraded grassland increased and the community structure and domi-nance of species changed greatly after seasonal exclosure. With increased periods of exclosure. Coverage and density reached a maximum at year 14 then declined. Community yield and height continued to increase up to year 25. The community changed from Potentilla acaulis+Artemisia frigida+Stipa krylovii to Leymus chinensis+Cleistogenes squarrosa+Serratula centauroides. After 5 years of exclosure, the species richness, evenness and diversity increased. With increased periods of esclosure, the species richness increased continu-ously and reached its highest after year 14. but the community was mainly dominated by L. chinensis and the species evenness and decreased. Along with the increase of exclosure year, the community gradually

stabilized, the species evenness and diversity increased, The analysis of community similarity showed that the similarity between the exclsed sites and the control decreased, which showed that seasonal exclosure had a great impact on changing the encironment of the community. We concluded that growing season exclosure for hay production followed by grazing through the rest of the year enabled the grassland to recover to some ex-tent. After comprehensive consideration of the community structure, yield and species diversity, we consider that 14 yeats of seasonal exclrsure appears a reasonable compromise.

【中文关键词】典型草原; 季节性围封; 演替阶段; 群落结构; 物种多样性
【英文关键词】typical steppe; seasona l exclosure; succession stage; commun ity structure; spec ies diversity
【中文摘要】针对退化草地恢复进程及恢复过程中的合理利用问题, 选取生长季围封(4至9月) 收获干草, 其它时间轻度放牧利用的草地为研究对象, 同时选取自由放牧草地为对照, 开展典型草原围封演替过程中群落结构与物种多样性变化的研究。研究结果表明: 典型草原不同演替阶段群落的物种组成基本一致, 但主要物种的优势地位发生了显著改变。在自由放牧草地, 以星毛萎陵菜、冷蒿、糙隐子草为优势物种, 采用生长季围封恢复措施后, 优良牧草羊草、克氏针茅的优势地位增加, 退化草地正向演替, 群落的盖度、密度、地上、地下生物量及优良牧草比例增加, 群落结构优化, 物种多样性增加。但若围封后连续多年(13年以上)刈割利用, 容易导致群落的盖度、密度、地上、地下生物量再次下降, 草地发生2次逆行演替。研究认为: 季节性围封的管理方式既可保证退化草地在一定程度上得到恢复, 也能避免全年围封禁牧所带来的饲草资源浪费。季节性围封在我国牧区是可行的草地管理方法, 但适宜的围封季节及围封后的合理利用问题(如合理的割草制度等)有待进一步研究。
【英文摘要】In order to d iscuss the restorative process and reasonable utilization of degraded typ ica l steppe, natu2ra l grasslands fenced in growing season (April to September) for hay production then light grazing in the rest of the yearwere chose as the research ob jects. At the same time open grazing landwas chose as the con trol to carry out the research on the changes of community structure and species diversity in different succession stage in typ i2 ca l steppe. The resu lts were as follows: The species composition of typ ical steppe in different succession stage was basically identica,l but the dominant position ofma in species changed sign ificantly. In open grazing land,the dominan t spec ies wereP otentilla a caulis, Artemisia frigida and Cleistogenes squa rros; after the utilization of seasonal exclosure, the dominant position of exce llent forages such as Leymus chinensis and Stipa klmenzii in2 creased, the degraded typ ical grassland developed positive, the coverage, density, biomass and proportion of pa latable forage increased, the structure of commun ity optimized and the spec ies d iversity increased. But if hay production was con tinued formany years (13 years ormore), and then the recovered grasslandmight appear the second retrogressive succession. Through the research we concluded that seasonal fenc ing cou ld ensure the resto2 ration of degraded grassland to some exten,t and it also cou ld avoid the waste of forage resources caused by com2plete ly fencing at the same time. Seasonal fenc ingwas one of the feasiblemanagementmethods in Chinese pasto2 ra l areas, but some problems such as suitable forb idd ing season and reasonable mowing systems need further study.

【题目】围封年限对典型草原植被与土壤特征的影响

【中文关键词】典型草原;生长季围封;群落结构;土壤理化性状
【英文关键词】Typical steppe;growing season exclosure;community structure;soil physicochemical properties
【中文摘要】针对典型草原退化草地恢复与合理利用问题,选取生长季(4-9月)围封收获干草,其他时间轻度放牧利用的天然草地为研究对象,同时选取自由放牧草地为对照,进行不同围封年限草原植物群落与土壤特征的比较研究。结果表明,1)与自由放牧草地相比,重度退化草地采用生长季围封恢复措施后群落地上现存量、盖度、密度、根系生物量、地表凋落物现存量及土壤养分含量显著增加,土壤容重、紧实度及>0.25 mm 的粗颗粒含量显著降低,群落结构优化,土壤环境改善,植被与土壤间形成一个相互作用的良性循环系统,退化草地正向演替。2)草地在围封恢复过程中若连续多年刈割利用,容易导致生产性能降低,群落盖度与密度下降,草群矮化,土壤养分含量下降,草地发生2次逆行演替。3)季节性围封的管理方式既可保证退化草地在一定程度上得到恢复,也能达到充分利用草地资源的目的。季节性围封在我国牧区是可行方法之一,但适宜的围封季节及围封后的合理利用问题(如合理的割草制度等)有待进一步研究。
【英文摘要】To disuss the restoration and reasonable utilization of degraded typical steppe, we chose natural grasslands which were exclosed during the growing season(Apr. to Sep.)for hay production then lightly grazed for the rest of the year. Continuously grazed land was chosen as the control to carry out comparative research on the influence of exclosure on plant and soil characteritics in typical degraded steppe. 1)Compared with continuous grazing, the above-ground biomass, coverage, density, under-ground biomass, litter biomass, and soil nutrients of degraded steppe increased after exclosure, while the soil bulk density , soil compaction, and coarse particle(>0.25mm)content decreased. The community structure and soil encironment inproved. The plants and soil formed a reciprocal interactions benign circulatory system, and the typical degraded grass-land improved.2)If the land was used continuously for hay production over many years then the process of recovey, Productivity, coverage, density, and soil nutrients decreased, and the recovered grassland underwent a second retrogressive succession. 3)Seasonal exvlosure could allow full use of grassland resources while ensu-ring that the degraded grassland recovered to some extent. Seasonal exclosure was a feasible grassland manage-ment method in pastoral areas, but some problems such as suitable exclosure season and reasonable mowing systems require further study.

【题目】农牧交错带开垦年限对土壤理化特性的影响
【中文关键词】农牧交错带;开垦年限;土壤养分;土壤质地
【英文关键词】cropland age; soil nutrient; soil texture
【中文摘要】为研究农牧交错带天然草地转变为农田后,开垦年限对土壤理化特性的影响,按照邻近样地的取样原则,于2007年10月选择位于内蒙古东部农牧交错带太仆寺旗的天然草地和邻近的6个不同开垦年限的农田样地(垦殖年限为5、10、15、20、35、50 a)作为研究对象分析其土壤理化性状。结果表明:在0~30 cm土层中,天然草地转变为农田后,开垦年限对土壤养分含量和物理性状均有显著影响。土壤的有机碳含量、全氮含量、速效钾含量均随农田开垦年限的延长而降低,草地土壤的养分含量最高。与天然草地相比,0~10 cm土层,有机碳含量分别下降36%、47%、43%、57%、68%、68%;速效钾含量分别下降33%、55%、39%、65%、60%、40%。开垦年限对土壤物理性状也有明显影响,草地土壤的粘粒含量最高,砂粒含量最低;开垦年限越长的农田,土壤砂粒含量越高,粘粒含量越低;农田土壤的容重显著高于草地,随农田开垦年限的延长,土壤容重增加;而土壤pH值显示降低趋势。研究表明在研究区域天然草地具有较好的土壤养分保持能力,开垦年限越长越易导致土壤养分的缺乏和土壤的酸化和沙化,影响整个农牧交错带生态系统的稳定性和持续性。
【英文摘要】The study investigated the long time effect of a conversation from grasslands to croplands on soil physical-chemical properties in the farming-pastoral ecotone of Inner Mongolia using direct field samplings. We determined a land use history for the 1955—2002 from field survery. This land use history was used to build a chronosequence of cropland sites with a different age since theconversation from grassland. Results showed that 50 years of reclamation induced a reduction of soil organic carbon (SOC) content,total nitrogen (TN) content, soil available kalium content, pH levels, clay content and soil bulk density. It was founded that there was clear dependency of soil properties (dissolved organic carbon content; soil available kalium content; pH levels; clay content and soilbulk density) on cropland age. It was expected that this research would provide information for suitably using land and avoiding environmental degradation.

【题目】内蒙古农牧交错带土地利用对土壤性质的影响
【中文关键词】农牧交错带;土地利用;土壤养分
【英文关键词】Farm-grazing transition belt ; Land use ; Soil nutrient
【中文摘要】为研究农牧交错带土地利用方式对土壤特性的影响,于2007 年7 月选择位于内蒙古东部农牧交错带太仆寺旗的3 种土地利用类型,野外采集土样并进行分析。结果表明:在0~30 cm 土层中,土壤有机碳含量、全氮含量、速效钾含量均表现为草地> 榆树林地> 农田;土壤水溶性有机碳含量表现为草地最高,农田次之,林地最小;土壤速效磷含量变化与上述趋势不同,为农田> 草地> 榆树林地。土地利用方式对土壤质地也有影响,与农田土壤和林地土壤相比较,草地土壤的粘粒含量最高,砂砾含量最低。本研究表明在研究区域天然草地具有较好的土壤养分保持能力,是最适合的土地利用类型,可为改善生态环境和当地的可持续发展提供依据。
【英文摘要】The effect s of grassland conver sion to cropland and woodland on soil properties were studied inJ uly 2007 in Taip usi County located in t he farm2grazing Transition Belt of t he Inner Mongolia Autonomous Region using direct field sampling methods. The result s show t hat the influence of land use types on soil properties was significant . Soil organic carbon (SOC) , total nit rogen (TN) , and available potassium (A K) in t he 0~30 cm dept h were highest in grassland and lowest in cropland. Soil dissolved organic car-bon (DOC) in t he 0~30 cm dept h was highest in grassland and lowest in elm woodland. The changing trend of available phosp horus (AP) in the 0~30 cm dept h was different from the above and highest in cropland and lowest in elm woodland. Land use had significant effect s on soil text ure too. Grassland soil contained more clay and less sand than ot her land use types. In summary , grassland in t he investigated ar-eas had better maintenance ability of soil nut rient s and should be the most appropriate land use type for lo-cal environmental amelioration and sustainable development .

【题目】干扰方式对典型草原土壤理化性质的影响
【中文关键词】干扰方式;典型草原;土壤理化性质
【英文关键词】Disturbance; typical steppe; soil physical and chemical properties
【中文摘要】在内蒙古太仆寺旗典型草原开展不同干扰方式对土壤理化性质影响的比较研究,结果表明:放牧地与季节性封育草地土壤的容重显著高于割草地(P<O.05),而含水量显著低于割草地(P<O.05),分析原因为放牧对草地土壤具有明显的压实作用,从而增加土壤的容重,降低土壤对水分的渗透与蓄积能力;季节性封育草地土壤的有机质、全N、全P、全K、速效P、速效K含量显著高于放牧地与割草地,说明目前普遍采用的长期重度放牧利用及连年割草利用都不利于土壤肥力的蓄积及草地资源的可持续利用,而季节性围封禁牧的管理方式能促进家畜粪便的归还及地表凋落物的分解,有利于土壤肥力的增加,但围封时间段的选择有待进一步研究。
【英文摘要】The effects of different disturbance ways on soil physics and chem ical properties.were researchedon the typical steppe of Taipusi,Inner M ongolia.The results showed:the soil bulk of grazing and season—al exclosure grassland was obviously higher than that of mowing grassland(P< 0.05),but the moisture content was on the contrary(P< 0.05).The reason is press effect of grazing,thus the sol 1 bulk was in—ceased and the ability of infiltration and accum ulation was reduced. The content of soil organic matter,tO—tal N ,total P,total K ,available P and available K in seasonal exclosure grassland was obviously higher than that in the grazing grassland and mowing grassland. It showed that the two utilization manners, heavy grazed and m owing in successive years,were bad tO grassland resource and fertility accum ulation for sustainable utilization. The management of seasona1 exclosure can promote 1ivestock excrementitious re—cession and decompose litter on soil surface and increase soil fertility.The choice of exclosure date and du—ration should be investigated further.

【题目】放牧强度对土_草_畜系统的影响研究进展
【中文关键词】放牧强度;草地;植物;土壤;家畜
【英文关键词】grazing intensity ; grassland ; plant ; soil ; animal
【中文摘要】针对我国草地存在严重的退化问题,重点阐述了对国内外学者关于放牧强度对草地生态系统中植物、土壤、家畜影响的研究。研究者认为,适度的放牧,有利于植物物种的延续,植物群落生产力的提高及生物多样性的增加;有利于土壤C、N 的积累;有利于家畜生产性能的提高。因此,寻求当前不同退化程度草地最适放牧强度是持续利用草地,保护草地生态、提高草地经济效益的必要措施。
【英文摘要】Aimed at status of serious grassland degradation in China , the scientific issues involved in re-search progress and conclusions related to the impacts of grazing intensity on soil ,grass and animal in grassland ecosystem were analyzed and discussed. Moderate grazing intensity was benefit to grass species development , community productivity and community diversity ,accumulation of soil C and N ,and imp rovement of animal p ro-ductivity. So ,the optimal grazing intensity in different degradation grasslands was the key to improve the ecolog-ical and economic benefit of grassland.

【题目】不同天然草地开垦年限下土壤特性对CH_4吸收的影响
【中文关键词】天然草地; 开垦年限; 土壤性质; CH4 吸收
【英文关键词】Natural grassland ; Reclamation years ; Soil properties ; CH4 uptake
【中文摘要】通过培养实验,称取过2 mm 筛的风干土样50 g 于300 mL 的培养瓶中,调节含水量至25 %(W/ W) 后密封,在(25 ±1) ℃条件下恒温培养一周,探讨内蒙古锡盟太仆寺旗典型草原天然草地转变为农田后,在相同的水分温度条件下,不同开垦年限(5 、10 、50 年) 农田的土壤特性对CH4 吸收的影响。结果表明:天然草地转变为农田后降低了土壤吸收CH4 的能力,开垦年限对CH4 吸收有显著影响(F = 20. 998 , P < 0. 001) ,CH4 的吸收量随开垦年限的增加而逐渐降低,4 个样地土壤CH4 的吸收量按大小顺序为:天然草地> 开垦5 年的农田> 开垦10 年的农田> 开垦50 年的农田,以天然草地为对照,开垦5 年、10 年、50 年后农田土壤CH4 的吸收量分别降低了17. 1 %、44. 1 %、50.1%;CH4 的累积吸收量随土壤有机碳、全氮含量和微生物生物量碳、氮的降低而降低,单因子相关分析表明,土壤有机碳含量、全氮含量、土壤微生物量碳、氮是影响土壤CH4 吸收的主要因子。
【英文摘要】The effects of reclamation years (5 , 10 ,50 year s) on CH4 absorption of t he cropland convertedf rom nat ural grassland were st udied using a laboratory incubation met hod in Taip usi County of t he Inner Mongolia Autonomous Region. The CH4 uptake was reduced significantly af ter grassland was changed into cropland. Reclamation years influence significantly soil CH4 absorption (F = 20. 998 , P < 0. 001) , the lon2 ger the reclamation years , the less the absorption. Soil CH4 uptake was the highest in grassland and the lowest in 50 years cropland. Wit h natural grassland as cont rol , soil CH4 uptake of five years cropland , ten years cropland , fif ty years cropland decreased by 17. 1 % , 44. 1 % , and 50. 1 % , respectively . Cumulative CH4 uptake decreased wit h soil organic carbon (SOC) , total nit rogen (TN) , microbial biomass carbon (BC) and microbial biomass nit rogen (BN) . Correlation analysis indicated t hat t he main influencing factors of soil CH4 absorption were SOC , TN , BC and BN .

【题目】内蒙古典型草原优化放牧管理模拟研究_以内蒙古太仆寺旗为例
【中文关键词】公共放牧; 生态经济模型; 载畜率; 牧民收入
【英文关键词】Public grazing; ecological economic model; stocking rate; herdsman income
【中文摘要】针对太仆寺旗公共草地全年连续放牧的传统放牧方式, 通过控制性试验, 并结合太仆寺旗多年的草地、家畜、经济和气象等数据, 建立中国西部草地生态经济模型, 对太仆寺旗典型草原公共放牧系统进行模拟分析。以草原生态恢复和牧民收入增加为目的, 对典型草原的最适载畜率、家畜在冬春季节的合理补饲等问题进行探讨, 提出了典型草原放牧管理优化模式。研究结果表明, 从当年10月到翌年5月份, 家畜能量需求与放牧、补饲能量供给严重不平衡, 家畜体重下降; 随着载畜率的增加, 牧民年均净收入先增加后降低, 在载畜率为2. 275羊单位/hm2时, 收入达到最高; 太仆寺旗最适载畜率为每公顷1. 55- 21275羊单位。降低载畜率、加强补饲、提高草地质量都有利于提高牧民收入。
【英文摘要】The degradation of grass land in China is serious, the area of degradat ion accounting for 90% available grassland in China. Serious grassland degradation has brought great mi pact on local ecological environment, biodiversity conservation and anmi al husbandry development. In Taipusi Banner, Inner Mongolia, severe over2grazing resu lted in the area of degradat ion account ing for 90% of the 150 000 hm2 of typical steppe. To evaluate the public grazingmanagement of typical steppe in this region, the condition of grassland, anmi a,l farm income, clmi ate and some control expermi ent datawere used in th is b ioeconomicmodel ofChina to analyse public grazing system in Taipus iBanner. These analyseswere used two farm models. Onewas feeding balancemodelwhich was used to analyse the livestock product ion system and the secondwas farm systemsmodel thatwh ich was used to analyse the optmi al solution for net financial returnswith in spec ified constraints. The farm surveys resu lts showed the current practice of high stocking rates in Taipusi directly leads to grass land degradation, low anmi al productivity and net incomes. Smi ulat ions of the feed balancemodel ind icated that therewere b ig energy demand deficit from October toMay at anmi a l growth tmi e, net income of farm was inclined to decreased when stock ing rate was more than 2. 275sheep/hm2. The farm systemsmodel showed that net financial returns could be mi proved through reducing stock ing rates closer to 2. 275sheep/hm2 for the current predominatelymutton sheep system. And further ga ins cou ld result from changing to finewool sheep at the same lower stocking rate. At the same tmi e, reduce goat number could enhance the grass land product ivity, especially when combinew ith an early summer grazing ban that enables the grassland to re2establish afterw inter. Estmi ates of grass condition demonstrated that a different ratio of desirable and undes irab le grass land species has no s ignificant effect on net income and feed ing cost when stocking rate is less than 1. 55sheep/hm2. A h igher composit ion of desirable species resu lted in lower feeding costs and greater net income when the stocking rate was more than1. 55sheep /hm2. Net income can bemaintained at the highest stocking rate when des irab le species exceeded 75% of the grassland compos ition. Consequently, the optmi al stocking rate ofTaipusi Banner is between 1. 55- 2. 275sheep /hm2. Sustainable grassland and livestock production requires a systems analys is of current farm practices and options. The analys is of a typicalTaipus i farm model showed that individual farmer can adopt grazingmanagement changeswere realistic and potentially. Importantly, the potentialmanagement options are compatiblew ith current farm ing systems. The direct ions of change are usefu l for achieving benefits for grassland productivity mi provement, though further research w ill be needed to proved whether rate of change is sustainable or not. Our study tested that mi provement product ivity of farm and net farm financ ial returns could be achieved at the same tmi e by reducing stocking rates, mi proving supplement condition, mi proving des irab le grass rat ion and changing enterprise types. Our study was expected to provide meaningful data for preventing grass land from degradat ion, restoring grass land, grassland optmi al utilization, mi proving grazingmanagement and livestockproduction aswel.l

【题目】内蒙古典型草原家庭牧场暖棚舍饲养羊效益分析
【中文关键词】典型草原;放牧;舍饲;生态经济模型;牧民收入
【英文关键词】public grazing; bioeconom icmodel; stock ing rate; net income

【中文摘要】对内蒙古太仆寺旗典型草原全年连续放牧的家畜饲养方式,通过绵羊冬春暖棚舍饲饲养与放牧饲养对比试验,利用中国西部草地生态经济模型对太仆寺旗家畜饲养方式进行研究和分析。结果表明:家畜能量供需不平衡是导致家畜在当年10 月至次年5 月,体重下降、生产性能降低的主要因素,而舍饲可以缓解家畜能量需求不平衡状况。从当年12 月至次年4月,暖棚日平均温度和夜平均温度分别比室外温度提高10 ℃和5 ℃,且差异显著(P <0. 05) ;在此阶段对家畜进行暖棚舍饲饲养,可减少母羊掉膘量3 kg/ 只,羔羊可增重1. 25 kg/只。冬春季节实施暖棚舍饲对提高典型草原家畜圈舍的温度,减少家畜体能消耗,减少家畜掉膘量和促进草地畜牧业可持续发展具有重要意义。

【英文摘要】A bioeconomic model and abenefit analysis on warm shed sheep breeding were used in thisexperiment to analyzse the t raditional animal breeding system in Taip usi Banner typical steppe , Inner Mon-golia. Result s showed that the big energy demand deficit from October to May is t he primary reason for de-creasing body weight and productivity of animal . The average temperat ure inside the greenhouse was 10 ℃ and 5 ℃warmer than out side in t he day time and at night , respectively (P < 0. 05) , while ewes inside the greenhouse lost on average 3. 00 kg less body weight and lambs increased 1. 25kg more body weight than those out side from Dec to April (P < 0. 05) . Warm shed sheep breeding is a bet ter management style for increasing the shed temperat ure , improving the productivity of animal and grassland.

【题目】鹅观草表型性状变异与生境间的相关性

【中文关键词】鹅观草; 表型性状; 生态因子; 相关性

【英文关键词】Roegneria kamoji Ohwi; Phenotypic traits; Ecological and geographic factors; Correlation a-nalysis

【中文摘要】根据鹅观草(2n= 6x= 42) 资源的地理分布特点, 采用T 检验、变异系数、主成分分析、相关分析和聚类分析法对来自四川、新疆、宁夏、内蒙古、甘肃和山西的40 个居群进行表型多样性分析。结果表明, 表型性状无论在居群内还是居群间均表现出显著差异(p< 0 01) 。主成分分析显示, 株高、穗长、旗叶长、旗叶宽、小穗数、小花数穗下第一节间长和穗轴第一节长等8 个性状是引起鹅观草表型性状变异的最主要因素; 这8 个表型性状与海拔高度、年平均温度和纬度的相关程度较高。聚类分析结果表明, 以遗传距离18 72 为分界线可将40 个居群分为三类, 第一类只包括1 个居群, 其株高、穗长和穗下第一节间长为40 个居群中最高、最长的植株; 第二类包含20 个居群, 具有植株矮小、穗短、叶片窄小、小穗数少等特点; 第三类包含19 个居群, 该类植株与第二类植物相比较, 具有植株高大、叶片较长、较宽、小穗数和小花数较多、穗下节间长等特点。

【英文摘要】Based on the natural distribution of R oegneria k amoj i Ohw i in China , by means of T Test, coef f icient variat ion, principal component , UPGMA cluster and part ial co rrelation analy sis, 40 po pulations of Roegneria kamoj i Ohw i f rom Sichuan, Xinjiang, Ning xia, Inner Mongolia, Gansu and Shanx i were evalu ated by their pheno typic diversit ies The result s show ed that w hether among po pulatio ns or w ithin popula t ions, phenotypic char acters div ersities of R oegneria kamoj i Ohw i were significant dif ferent ; The eight phenoty pictrait s such as plant hig h , spike length, flag leaf leng th, flag leaf width, spikelet number, f loret number, the first internode length under spike and rachis internode leng th were the main factor s affect ingphenoty pic characters; T he correlat ions betw een the eight phenotypic t rait s and ecolo gical and geographic facto rs such as altitude, AMT and lat itude were sig nif icant The 40 populat ions were divided into 3 groups based on genet icdistance of 18 67 by cluster analysis the first cluster was composed of one population whose plant heigh, spike length and the first internode leng thunder spike were the longest of 40 populations, the second groups contained 20 populations with shor ter plants hig hand shorter spike length and fewer spikelet number, the third cluster contained 19 populations with higher plant , wider leaf width, longer leaf leng th, more spikelet number, more floret number

【题目】鹅观草居群表型多样性的研究
【中文关键词】鹅观草; 居群生物学; 表型多样性; 多样性分布
【英文关键词】Roegneria kamoj i Ohw i; populat ion biolog y; phenotypic diversity; dist ribut ion center
【中文摘要】应用居群生物学的原理和方法, 对分布于中国7 个地区、4 0 个鹅观草(Roegner ia kamo j i Ohw i) 居群的表型多样性进行了分析。结果显示: 鹅观草15 个表型性状的总遗传多样性指数为1. 825, 表明鹅观草具有丰富的遗传多样性; 居群内多样性指数为1. 453, 居群间为0. 372, 表型分化系数为28. 38%, 表明居群内的遗传变异是引起鹅观草变异的主要因素; 在7 个不同分布区, 鹅观草的多样性存在较明显的差异, 多样性指数从大到小的顺序为四川(1. 583) > 云南(1. 392) > 新疆(1. 372) > 甘肃(1. 351) > 内蒙古(1. 284) > 宁夏(1. 235) > 山西(0. 890) 。因此在进行鹅观草种质资源收集时, 建议对四川和云南地区的鹅观草种质资源应给予较大关注。
【英文摘要】According to the populat ion bio logy theor ies and statistical metho ds, Phenotypic div er sity of 40 populat ions of R oegneria k amoj i Ohw i dist ributed in 7 r eg io ns of China w as studied. The result s show ed as fo llow s: the to tal genet ic div ersity index of 40 R. kamoj i populat ions about 15 pheno ty pic t rait s w as 1. 825,this means there was an abundant phenotypic diversity amo ng these po pulations. The diversity index amo ng and w ithin populat io ns w ere 0. 372 and 1. 453 respect iv ely . The mean phenoty pic dif ferentiat ion coef f icient (Vst= 28. 38%) show ed that the variat io n w ithin po pulation w as the main factor that resulted in the genet ic v ar iat ion of R. k amoj i; Phenotypic diversity of this specie dist ributed in the 7 r eg io ns w as dif ferent,whose or der is Sichuan r eg io n (1. 583) > Yunnan region(1. 392) > Xinjiang region(1. 372) > Gansu region(1. 351) > Inner Mongolia reg ion (1. 284) > N ingx ia reg ion (1. 235) > Shanxi region(0. 890) . So high em phasis should be put on R. kamoj i populat ion dist ributed in Sichuan and Yunnan for the germplasm re sources co llect ion.

【题目】披碱草属穗型下垂类种质的形态学鉴定及其聚类分析
【中文关键词】披碱草属; 分类、鉴定; 聚类分析; 生态型
【英文关键词】Elymus,classify; identify; cluster analysis; ecotype
【中文摘要】对采自8个不同地区的49份花序下垂的披碱草属种质材料进行了形态学鉴定和分类。利用25个形态学特征对其进行了系统聚类和主成分分析。结果表明, 这些种质材料属于老芒麦、垂穗披碱草和短芒披碱草3个种, 而且在同一种内不同居群间具有较大的形态变异, 根据这些形态变异, 可将老芒麦分为典型老芒麦、粗壮多花老芒麦、分枝型老芒麦和密穗老芒麦4个类群(生态型) ; 垂穗披碱草分为典型垂穗披碱草、高大多小穗垂穗披碱草和分枝型垂穗披碱草3个类群(生态型)。
【英文摘要】In this paper, 49 spike drooping E lymus germap lasm samples co llected from 8 d ifferen t re g ions w ere morpho log ically identified and c lassif ied, and 25 mo rphological characteristics w ere also stud ied by cluster ana lysis and principa l components ana lysis. The resu lt indicated that these germ plasm samples belonged to E lymus sibiricus, E lymus nu tans and E lymus breviaristatus, respect ive ly,and there w ere obv ious variations among different popu lations o f the sam e species. Therefore,E sibiricus w as div ided into 4 d ifferen t groups (eco types): typ ica lE.sibiricus, strong mu lti flower E.sibiricus, sp ike ramosed E sibiricus and spike let densing E sib iricus; E.nu tans w as div ided into 3 different groups (eco types): typica l E.nutans, h igh mu lt i spike let E.nutans and sp ike ramosed E.sibiricus base on the irmorpho log ica l variations

【题目】胡枝子属植物40个野生居群种子蛋白谱带多样性研究
【中文关键词】胡枝子属; 种子蛋白; 多样性; 野生居群
【英文关键词】Lesp edez a; seed protein; diversity ; wild population
【中文摘要】利用SDS 聚丙烯酰胺凝胶电泳技术, 对采自内蒙古、河北、山西、宁夏和甘肃5 个省3 种2 变种的40个胡枝子属植物野生居群种子蛋白进行遗传多样性研究。结果获得32 条谱带, 有4 条谱带为稳定表达带,其余28 条谱带均有不同程度的多态性, 多态率901 6%, 分子量1081 1~ 101 3 kDa, 各居群间遗传相似系数变异范围为01 42~ 11 00, 遗传变异较大, 多态性较高。遗传相似系数为01 581 时聚为4 类: 第Ⅰ 类包括二色胡枝子Lesp ed ez a bicolor 的3 个居群; 第Ⅱ类包括23 个居群, 即牛枝子L1 p otaninii 的11 个居群和达乌里胡枝子L1 davur ica 的12 个居群; 第Ⅲ类包括牛枝子的2 个居群; 第Ⅳ类包括尖叶胡枝子L1 hedy saro ides 的4个居群和细叶胡枝子L1 hed y sar oides var1 subser icea 的8 个居群。其中第Ⅲ类的牛枝子2 个居群单聚一类,表明与其它牛枝子居群遗传差异大。从种的水平看, 绝大部分来自于相同或相似的地理生态环境的居群聚为一类。达乌里胡枝子与牛枝子亲缘关系较近, 尖叶胡枝子与细叶胡枝子亲缘关系较近, 这与形态学鉴定结果相一致。由此认为, 胡枝子属植物是种间、种内具有丰富的蛋白质多态性的种群, 可作为研究种内变异和生态型的重要依据。
【英文摘要】Genetic diversity of seed storage protein was est imated on 40 wild Lesp edez a populations (3species and 2 varied species) from Inner Mongolia, Hebei, Shanxi, Ning xia and Gansu provinces, using SDS- PAGE techniques. Total 32 bands were found varing in mo lecular weight from10. 3KDa to108. 1KDa; among which, 4 bands were shar ed by all the populat ions and other 28 showed (90. 6%) .The genet icsimilarity coeff icient varied from 0. 42 to 1.00, giving greater genetic variation and higher po lymor phism. Clustering w ith UPGMA using g enetic similarity coef ficient at 0. 581 show ed the existence of 4 different groups. Three populations of L . bicolor were classified as the first gro up. The seco nd group consisted of 23 populations, including 11 po pulations of L . p otaninii and 12 populations of L . davurica. Two populations of L . potaninii w ere included in the third group. The fourth group was made up of 4 populat ions of L . hedysaroides and 8 populations of L . hedysaroides. var. subser-icea. At species level, a majority of populations f rom the same or similar ar eas were gathered tog ether.L. davurica was genet ically close to L . potaninii ; while L . hedy saroides was close to L . hedysar-oides var. subsericea, indicat ing that cluster analy sis coincided w ith the results of morpholog icidentif-ication. Therefore, abundant protein diversity among Lesp edeza species could be an important r eference to intraspecies variation and ecological type research.

【题目】小麦族鹅观草属植物研究进展
【中文关键词】小麦族;鹅观草属;分类
【英文关键词】Triticeae; Roegneria; classification;
【中文摘要】鹅观草属Roegneria 是小麦族中最大的一个属,对于鹅观草属的归属问题,不同时期的学者拥有各自的看法和观点。根据国内外的研究资料,综述了鹅观草属植物的分类历史及围绕这一问题而展开的有关鹅观草属形态学标记、细胞学标记、生化标记和分子标记的研究进展情况,从几方面研究的结果来看,我国的大多数学者认为披碱草属和鹅观草属植物之间遗传差异较大,应把鹅观草作为一个独立的属对待,但也有少数人认为把鹅观草属和披碱草属合为1 个属处理。此外,还对鹅观草的形态特征及地理分布进行了详细的描述。
【英文摘要】Roegneria is the biggest genus in Triticeae Damort . There were different views and pointsregarding whet her Roegneri a belonging to Elymus or not . This paper summarized taxonomy history ,research p rogress on phonological , cytological , bio-chemical and molecular markers of Roegneri a.Viewing from different aspect sresults , it was generally considered that there was a big genetic

differ-ence between Roegneria and Elymus ; Roegneri a should be regarded as aseparate genus. However ,some people still thought Roegneria and Elymus are the same genus. The phonological traits and geo-logical dist ribution of Roegneria was also described in detail.

【题目】不同利用方式对草甸草原抗风蚀能力的影响
【中文关键词】草甸草原;土壤风蚀;利用方式;风洞实验
【英文关键词】meadow grassland;soil wind erosion;land use pattems;wind tunnel experimen
【中文摘要】为了解不同利用方式对呼伦贝尔草甸草原抗风蚀能力的影响,采用植被调查结合风洞实验的方法对不同利用方式条件下的草甸草原植被变化和草甸草原原状土的抗风蚀能力进行了研究.结果表明,草甸草原不同利用强度条件下临界风蚀风速( )随植被盖度(Cover)的变化基本服从二次幂函数关系.随着利用强度的增加,植被盖度降低,在同样风速条件下(大于临界风蚀风速),风蚀率迅速增加 较轻的利用强度下,当植被盖度保持在63% 时,在风速为25 m/s条件下风蚀率也很小,而当植被盖度<35%时,在风速为20~25 m/s条件下,风蚀率随植被盖度的下降迅速上升.草甸草原区的免耕农田由于完全失去植被的保护,每分钟狂风(25 m/s)造成的土壤风蚀量达到682.1 kg/hm ,接近1 a的土壤平均生成量(1 000 kg/hm。).
【英文摘要】Abstract:In order to analyse the efects of the human disturbances to the ability of anti—wind erosion of the Hulunbuir meadow grassland.the methods of vegetation investigation and the wind tunnel experiment were made to research the changes of vegetation and the abilities of anti—wind erosion of meadow grassland under diferent using patterns of meadow grassland.The results indicate that, under diferent grazing intensities of meadow grassland,the critical wind velocity of soil erosion (υ)changes with the vegetation cover according to the relation ofsecond power function.Along with the grazing intensities increasing and the vegetation cover reducing,the velocity of soil erosion rapidly increased on the condition of similar wind velocity which is speedier than the critical wind velocity of soil erosion。 When the meadow grasslandis mildly grazed which the vegetation cover maintains 63% .the velocity of soil erosion is small even there is gale that the wind velocity reach 25 m/s.When the vegetation cover of meadow grassland reduced to less than 35% .the velocity of soil erosion rapidly increased with thevegetation cover ’S reducing on the condition of the wind velocity is among 20—25 m/s.And owing to the no—tillage cropland of meadow grassland is completely far from the protection of the vegetation,the soil wind erosion quantity achieves 682.1 kg/hm in a minute when the wind velocityis 25 m/s,which approaches the average formation quantity of soil(1 000 kg/hm)in a year.

【题目】内蒙古草地NPP变化及其对气候的响应
【中文关键词】NPP;光能利用率;年际变化;气候因子;内蒙古
【英文关键词】NPP;light use eficiency;annual variation;climatic factors;In er Mongolia
【中文摘要】植被净初级生产力(Net Primary Productivity,NPP)是衡量植物群落在自然环境条件下生产能力的重要指标,NPP的变化直接反映了生态系统对环境气候条件的响应,因此可以作为生态系统功能对气候变化响应的研究指标。本文利用卫星遥感资料和地面气象观测资料,利用光能利用率模型估算了内蒙古地区1982-2003年4—10月草地NPP,并计算了与NPP密切相关的几个气候因子,分析了1982-2003年内蒙古地区草地NPP年际性变化规律、气候因子的年际变化规律,以及草地NPP对主要气候因子的响应关系。结果表明:1982-2003年内蒙古草地生长季的NPP呈波动中增加趋势,NPP的年平均递增

率为C 0.0036 g · m-2.Gr一;草地NPP的空间分布与生物温度(BT)及可能蒸散率(PER)呈显著负相关,与降雨量(RAIN)、湿润度( )及实际蒸散(AE)呈极显著正相关。内蒙古地区,草地NPP受降雨量(RAIN)及生物温度(BT)的影响较大,但NPP的变化受RAIN的影响更为明显;内蒙古地区不同草地类型的NPP变化对气候因子的响应略有不同。

【英文摘要】Net Primary Productivity is a key indicator to evaluate the productivity of vegetation community in natural environment.The variation of NPP,which directly reflects the ecosystem response to climate,could be an indicator of the ecosystem response to climate changes.Using remote sensing data and ground meteorological station data,we estimated NPP of grassland during the grow—ing season from 1 982 to 2003 in Inner Mongolia using the light use efi ciency model proposed by Montieth in 1 972,and calculated several climatic factors which are closely related to NPE We analyzed the annual NPP variations of grassland in Inner Mongolia from1982 to 2003,as the climate factors,and analyzed the relations between the NPP and climate factors.The results showed that the NPP of grassland was increased fluctuations during growing season in Inner M ongolia from 1 982 to 2003.and the average increase rate is 0.003 6 g C ‘ m-2.Gr~.The spatial correlation between NPP,Biological Temperature(BT)and Potential Evapotranspiration Rate (PER)is significant negatively,and significant positive with rainfall(RA IN),moisture humid(K)and Actual Evapotranspiration (AE).In Inner Mongolia,The NPP of grassland was most impacted by RAIN and B T,more obviously by RA IN .Diferent type grass—land ’ s NPP responded slightly diferent to climate changes in Inner Mongolia.

【题目】呼伦贝尔草原MODIS NDVI的时空变化特征

【中文关键词】呼伦贝尔草原 MODIS 时空特征

【英文关键词】Hulunber grassland; MODIS; spatial-temporal characteristics

【中文摘要】基于2000—2008年的MODIS NDVI数据,研究了期间呼伦贝尔草原4种主要草原类型(低地草甸、温性草原、温性草甸草原和山地草甸)年NDVImax的空间变化趋势、波动程度、出现时间。结果表明:2000—2008年间,呼伦贝尔草原植被趋于恶化的形势较严峻;研究区四类草原NDVImax平均值的年际波动明显,特别是温性草原NDVImax平均值的年际最大波动接近50%;在各等级草原面积的变化上,尽管NDVImax在(0.4,1]之间的草原平均面积约占研究区总面积的91%,说明呼伦贝尔草原植被状况总体较好,但NDVImax值在(0.2,0.4]、(0.8,1]之间的草原面积趋于减少,NDVImax在(0.4,0.8]之间的中高盖度草原面积趋于增加,总体形势不容乐观;66.25%的研究区草原植被状况趋于恶化,33.75%趋于好转;62.85%研究区的NDVImax出现在每年第193天至225天期间(即7月中旬至8月初),该时期是呼伦贝尔草原植被最重要的生长季节。

【英文摘要】Time-series MODIS NDVI datasets for 2000-2008 were used in this study to investigate the characteristics of spatial-temporal changes in annual NDVImax for four typical grassland types, i.e., low-land meadow, temperate steppe, temperate meadow steppe and up-land meadow in Hulunber grassland. The analysis focused on the spatial change trends, the standard deviations and the occurrence time point of annual NDVImax for the period of 2000-2008. The results indicated that grassland vegetation in Hulunber presented an obvious degrading trend over the past several years. The mean of annual NDVImax in four grassland types showed a clear fluctuation, in particular in temperate steppe where the maximum changes in mean of annual NDVImax approximate to 50%. For the changes in grassland areas over different grades, the areas with NDVImax between 0.4 and 1 account for about 91% of the total grassland area which suggests its good vegetation coverage in Hulunber grassland. However, it should be noted that although the areas with NDVImax values in (0.4, 0.8] show an increasing trend, the areas with NDVImax values in (0.2, 0.4] or (0.8, 1] are decreased largely for the study period. Overall, the deteriorating grassland takes up about 66.25% of the total area; the restoring grassland takes the rest. The study also showed that there is about 62.85% of grassland where the NDVImax occurs between the 193rd day and the 225th day in each year, indicating that this period is the most important growing season for Hulunber grassland.

【题目】呼伦贝尔草甸草原不同土壤水分梯度下羊草的光合特性
【中文关键词】羊草;土壤水分梯度;干旱胁迫;光合作用;光响应
【英文关键词】Leymus chinensis;soil moisture grades;drought stress;photosynthesis;photosynthetic response
【中文摘要】为探索气候变化JJI起的干旱可能对呼伦贝尔草甸草原生产力造成的影响,利用Li一6400便携式光合测定系统对呼伦贝尔草原4个土壤水分梯度下羊草的光合生理指标进行测定。结果表明:羊草叶片净光合速率的日变化在土壤质量含水量为(40±1)%、(20±1)%及(10±1)%的条件下呈双峰曲线,峰值分别出现在8:00和16:0o,有明显的光合午休现象,在干旱胁迫(土壤质量含水量为(5 4-1)%)条件下变化趋势平缓,曲线双峰特征不明显,净光合速率大幅下降;叶片蒸腾速率和气孔导度的日变化趋势均呈双峰曲线;不同土壤水分梯度下羊草叶片胞间CO 浓度的日变化与净光合速率日变化趋势相反。通过光响应的研究表明,土壤水分胁迫使最大净光合速率、光饱和点、表观量子效率以及水分利用效率降低,而光补偿点升高。干旱胁迫降低了呼伦贝尔草甸草原植被的光合生产能力,从而可能导致草地生产力大幅下降。
【英文摘要】Abstract:In order to understand the influence of drought stress on hulunber grassland productivity,the photosynthetic characteristics of Leymus chinens~ with four soil moisture grades were measured with Li · 6400 Portable Photosynthesis System in hulunber prairie.The results indicated that the diurnal patterns of net photosynthetic rate(P)of Leymus chinensis presented two peaks curve under moisture treatments of(40±1)% ,(20±1)% and(10±1)%.The first peak appeared at 8:00,and the sub-peak at 16:00,with an obvious mid—depression.Under drought stress conditions((5±1)%),thenet photosynthetic rate reduced greatly with unobvious diurnal variation. The diurnal variations of transpiration rate and stomatal conductance presented double peak curves.The diurnal variation of intercellular CO2 concentration was opposite with that of net photosynthetic rate.Under soil water stress conditions,maximum photosynthetic rate,light saturation point,apparent quantum yield and water use eficiency of Leymua ch.inensis decreased,and light compensation point increased.Therefore,drought stress could reduce the photosynthetic ability of grassland vegetation,and result in a large decline of Hulunber meadow ecosystem productivity.基

【题目】围封对草地的影响研究进展
【中文关键词】围封;群落演替;多样性;生产力;种子库;土壤;时间尺度
【英文关键词】Enclose; community succession; diversity; productivity; soil seed bank;; time scale
【中文摘要】围封是草地管理的重要手段。围封通过排除家畜的践踏、采食及排便等干扰,从而使其群落向着一定方向演替。由于草地生态系统本身的复杂性和放牧历史、环境因子等的迭加作用导致退化草地群落围封后出现3种可能的演替模式,即单稳态模式、多稳态模式和滞后模式。由于围封后种群的消长、某些种群的消失及新种的进入导致草地在围封后的植物多样性也发生变化。从“中度干扰”理论、对放牧敏感性植物种消失、以及特殊环境因子下群落恢复缓慢等方面总结了草地围封后植物多样性的3种可能变化方向。总结了围封对土壤种子库的影响及其在草地恢复中的作用。阐述了围封对草地土壤理化性质的作用机制。总之,围封对草地的作用具有两面性。对围封作用要有全面的科学认识,把握好围封的时间尺度,以充分发挥其在退化草地恢复中的作用,避免由于利用不当而对草地产生的负面影响。建议加强对已有相关研究成果的总结与分析,对不明确和有争议的课题进一步深入研究,并建立长期的围封研究项目,增加围封研究的站点建设。
【英文摘要】Exclosure plays an important role in grassland management.The effects of exclousure on grassland ecosystems were reviewed from the following aspects such as plant community diversity and productivity,seed bank and soil properties.Grassland community would change toward certain direction after exclosure by eliminating trample,feed intake,dejection of domestic animals. Degraded grassland followed three succession patterns after exclosure,that is mono-stale—state model,multi—stable-state model and lag mode1. The plant diversity of the grassland would be changed after exelosure due to population growth and decline,disappearance

of some species and immigrant of new species.Three change trends of the degraded grassland community diversity were identified as the theory of “ moderate disturbance ” .elimination of some species and the slow process of community restoration under specific environment.The effects of exelosure on the recovery ofdegraded grassland by influencing seed bank were reviewed.The effects of exclosure on soil properties were analyzed.In short,exclosure has different influence on grasslands under different situation.Therefore,we should control the exclosuretime scale well to exert its positive effects on recovery of degraded grassland and avoid the negative influences on grassland due to the improper utilization of exclosure measure.W e suggest that the summarization and analysis for present research results should be enhanced,the more intensive study should be conducted for the disputed issue,the long term exclosure research programs should be maded,and the exclosurc research station should be increased.

【题目】基于MODIS NDVI和NOAA NDVI数据的空间尺度转换方法研究
【中文关键词】空间尺度转化;草原遥感;MODIS;NOAA
【英文关键词】Spatial scaling, grassland remote sensing, MODIS, NOAA
【中文摘要】选择内蒙古自治区的主要草原植被类型区作为研究区域,分析了2000-2003年生长季(4-10月)内月NOAA NDVI和MODIS NDVI数据之间相关性的年季变化规律。采用统计学方法,探讨了在大尺度空间范围内进行不同分辨率遥感数据之间的空间尺度转换方法,并利用2002年7、8月的NOAA NDVI和MODIS NDVI数据建立NOAA NDVI空间尺度上推模型,对该模型进行了时间尺度外推和精度验证。结果表明:针对NOAA NDVI和MODIS NDVI数据建立的空间尺度转化模型具有较好的应用效果,能够用于时间尺度外推,使MODIS和NOAA NDVI数据之间的分析比较具有科学性和有效性。
【英文摘要】The dominant grassland types in Inner Mongolia were selected as research area and and the annual variation pattern of the relationship between MODIS NDVI and NOAA NDVI was analyzed in growing seasons from 2000 to 2003. The spatial scaling methods between different resolutions datum of remote sensing in large-scale spatial extent were studied. At the same time, The MODIS NDVI and NOAA NDVI datum in july and August in 2002 were used to build the spatial scaling model and the model was applied to validate the precision of the model. The result indicated that this spatial scaling method was effective, and the model could be applied to other time quantum. This method could sci-entifically and effecticely analyze and compare the datum of NOAA NDVI and MODIS NDVI.

【题目】基于MODIS数据的内蒙古草地光能利用率时空变化分析
【中文关键词】MODIS; 草地; 光能利用率; 内蒙古
【英文关键词】MODIS; grassland; light use efficiency (LUE) ; Inner Mongolia
【中文摘要】光能利用率(常以ε表示) 直接影响草地植被的能量分配和光合速率, 是影响NPP 形成的重要参数之一。论文以MODIS 数据及地面气象数据为数据源, 在GIS 和RS 的支持下, 研究了2003 年内蒙古地区生长季草地的光能利用率(ε) 及时空变化。结果表明, 内蒙古地区生长季草地光能利用率(ε) 在0 ~0. 292 9 gC · MJ- 1 之间, 平均值为0. 220 4 gC · MJ- 1 。该地区草地生长季光能利用率空间分布规律明显, 总体上呈由高纬度的东北部地区向低纬度的西南部地区逐渐降低的趋势, 与该地区降雨空间分布相同。内蒙古地区生长季所有草地类型的平均光能利用率(ε) 季节变化呈明显的单峰变化, 其增长速率从5 月开始为单调递减。

【英文摘要】Light use efficiency (LUE, ε is often used to express LUE) impacts on the energy distributionof grassland vegetation and photosynthetic rate directly, and it ' s one of the key essentialparameters that monitors grassland NPP using remote sensing model. In this article, with the aidof GIS and RS processing software, based on MODIS and in situ meteorological data, we studiedthe spatial distribution of ε and its spatiotemporal variations in growing season in Inner Mongoliain 2003. The results show that ε varied between 0 - 0. 2929 gC · MJ- 1 , and the average ε was0. 2204 gC · MJ- 1 in growing season in Inner Mongolia. The ε spatial distribution rule was graduallydeclining fromnortheast to southwest, which is the same as the rainfall spatial distribution.The seasonal variation of average ε was obviously in a single peak, the growth rate of ε declinedfrom May.

【题目】基于生态系统服务功能的中国北方草地及农牧交错带区划

【中文关键词】北方草地;农牧交错带;生态功能区划;“ 3S ”技术;生态系统服务功

【英文关键词】north grassland; agro-pastoral transitional zone; ecological function regionalization; “ 3S ” techniques; ecosystem service function

【中文摘要】本文以北方草地和农牧交错带草地类型区域分异为基础,重点考虑不同草地类型的生态系统服务功能,在综合分析了北方草地和农牧交错带生态环境基本特征的基础上,确定了草地生态功能区划的原则、依据、方法及命名,然后在“ 3S ”技术的支持下,将北方草地和农牧交错带分为北方草原区、北方荒漠区和农牧交错区三个一级区及10个二级区,对各个功能区的区域范围、主要生态环境问题、主要的生态服务功能及为了功能区的保护与可持续发展而需要采取的措施都进行了详细论述。区划结果对认识北方草地与农牧交错带不同草地类型生态系统服务功能的重要价值,对草地资源的合理利用和农业生产的合理布局、对生态环境保护与建设规划及对维护区域生态安全、实现区域的可持续发展都具有重大意义。

【英文摘要】With a primary consideration of the ecosystem service function of different grassland types, and basing on the principles of regional planning, methodology,nomenclature, the features of regional eco-environment, as well as “ 3S ” techniques,The grassland and agro-pastoral transitional zone in northern China was classified into 3 ecological regions and 10 eco-function regions. Then, the elaborations were carried out in detail regarding the territory of each function region, primaryeco-environment issues, core ecological service functions and means to be adopted for protection and sustainable development of each specific function region. We believe that the developed regionalization result is very helpful in understanding the ecological service function value of different grassland types, facilitating effective use of grassland resources, promoting optimal layout of agricultural production,improving the regional ecological security, as well as strengthening the regional sustainable development in the grassland and agro-pastoral transitional zone of northern China.

【题目】塔里木河中游景观格局与生态水文过程的耦合分析

【中文关键词】景观格局;生态水文;耦合;遥感;干旱区;塔里木河中游

【英文关键词】Landscape pattern; ecological hydrology; coupling; remote sensing; arid zone; the middle reaches of Tarim River

【中文摘要】在遥感、GIS及地统计学和景观格局分析软件的支持下,处理了塔里木河中游1986、1999及2005年的三期遥感影像,而后对中游景观格局动态变化及生态水文过程的基本特征进行了系统分析。在此基础上,在生态系统耦合关系理论

与方法的指导下,重点对景观格局和生态水文过程的相互影响进行了探讨。分析表明,景观格局和径流的变化之间存在相关性。与径流相关性最大的是景观多样性指数,它们之间呈正相关关系。景观的优势度与径流量也呈正相关关系,而景观形状与流域径流之间不存在必然联系,景观破碎度与流域径流也有较大的相关性,但它们之间呈负相关关系。同时水文过程对宏观景观格局的变化起指导作用。

【英文摘要】Based on the techniques and tools of RS, GIS, geo - statistics and landscape pattern analysis software, the remote sensing images of the middle reaches of Tarim River in 1986, 1999 and 2005 were processed, and charac-teristics of landscape pattern changes and eco - hydrology p rocess were analyzed. Then under the instruction of theory and method of ecosystem coup ling relation, the mutual influence between landscape pattern and eco - hy-drology p rocesswere analyzed. The results showed that there is relativity between landscape pattern and runoff change. Landscape diversity index has the biggest relativity with the runoff. The landscape dominance index, landscape fragmentation also has correlation with runoff. There is no correlation between the landscape shape in-dex and the runoff. The eco - hydrology process also influence landscape pattern

【题目】近5O年来呼伦贝尔草原沙漠化主要影Ⅱ向因素的定量分析

【中文关键词】呼伦贝尔草原;沙漠化;影响因素;定量分析

【英文关键词】Hulun Buir Grassland; desertification; influencing factor; quantitative analysis

【中文摘要】选取气温、降水因子以及反映人类社会经济活动的人口、耕地、牲畜等影响因子的相对指标为分析因子。利用主成分分析与相关分析相结合的方法,定量分析近50年(1953—2004)来各影响因子与综合影响因素对内蒙古呼伦贝尔草原沙漠化的作用强度。结果表明:在当地近5o年的沙漠化过程中。驱动因素 抑制因素与影响因素的综合作用力与沙漠化指数的相关系数分别为0.8899,- 0.403以及0.600 5;草原沙漠化程度呈现出随人类活动强度增加目益加剧的趋势。其中牲畜结构对草原沙漠化变化趋势的改变有着重要作用;影响因素的综合作用力与沙漠化指数的相关系数只有0.600 5。这是由于生态经济系统各因素之间存在非线性作用机制。相关分析的线性假设在一定程度上低估了其作用强度,同时人类活动和自然因子的波动对草地生态系统的影响存在一个滞后期。

【英文摘要】Looking from the present literature about the influencing factors of grassland desertification,it can be concluded that the response mechanism and sensitive degree of ecological and economic system to human activity and natural factors is diferent in diferent geography unit.Using method of principal components analysis and regression analysis,taking Hulunbeier grassland of Inner Mongolia as study region,the paper analyzed the efect intensity of main influencing factors including population density,cultivated land index,1ivestock density,livestock composition and their weights intotal livestock, average annual air temperature and rainfall and integrated influencing factor to grassland desertification 0n data in 1953—2004.The results are as follows:tl1e correlation coeficients of the promotion factor,the inhibiting factor an d the total influencing factor with the grassland desertiflcation index re.spe tively are 0.8899. -0.4030.6005.The grassland ’sdesert degree raises with the increasing human activities ’intensity.and sheep and goat weights in total livestock is~aying a comparatively major role on grassland desertion trend changing.The correlation coeficients of the total influencing factor with the grassland desertification is just 0.6005,because there is nonlinear interplay mechanism among these factors in ecology economical system,linear hypothesis of corelation analysis hasn derestimated its fun ction to a certain extent,and the emerging of grassland desertification lags the fluctuation efect of influencing factors.Key words grassland of Hulunbeier;sandy desertification;influential factors;quantitative study

【题目】旱作条件下披碱草属植物叶的生理生化特征分析
【中文关键词】披碱草属;生理生化;渗透调节;保护酶系统;干旱与半干旱区
【英文关键词】Elymus ; physiological and biochemical ; osmotic adjustment ; antioxidative enzymes ; arid and semi-arid region
【中文摘要】在无控制的野外旱作条件下,比较了披碱草属6 种野生植物在内蒙古干旱与半干旱区生理生化特性,并对同一地区引种的不同种及分布于不同地区的同一种植物进行了对比分析。结果表明,材料XJ E1 和XJ P5 能够保持较好的水分状况,具有较高的相对含水量,而GSD4 保水能力不及其他几种材料;BJ T3 和XJ P5 叶绿素含量较高,而GSD4 叶绿素含量较低。渗透调节物质Pro 以BJ T3 、XJ P5 和GSS2 显著高于其他材料,而MDA 含量以BJ T3 相对较高,比XJ E1 高近3 倍;保护酶SOD 活性以材料GSD4 较高,其次为BJ T3 ,GSS2 较低,POD 活性以XJ P5 较高,其次为BJ T3 ,NMN6 较低。经隶属函数综合分析发现,披碱草属6 种植物中,除GSD4 和NMN6 之间隶属函数值差异不显著外,其他材料之间都比较显著,其隶属度值由大到小的顺序为XJ P5 > BJ T3 > XJ E1 > GSD4 > NMN6 >GSS2 。并且来自同一地区的披碱草属2 种不同植物的生理特征表现一定的趋同,而来自不同地区的同一种植物表现出一定适应性分化。这些结果都表明,植物为了适应不同的生态环境,各种生理生化指标都会进行相应的调节,共同起作用来保护植物免受伤害。
【英文摘要】Physiological and biochemical characteristics of t he leaves of six El ymus species were determined un-der the natural dry farming conditions of the arid and semi-arid regions of Inner Mongolia , different species f rom same regions were compared as well as t he same species f rom different regions. There were significant differences in t he p hysiological and biochemical characteristics of different El ymus. The species of XJ E1 and XJ P5 maintained a good water stat us and had a high relative water content (RWC) , whereas the RWC of GSD4 was the lowest . BJ T3 and XJ P5 had a high chlorop hyll content , while that of GSD4 was low. The osmotic con-tent of Pro of BJ T3 , XJ P5 and GSS2 was significantly (P < 0. 05) higher than that of the other species. The MDA of BJ T3 was nearly three times higher than that of XJ E1. GSD4 had the most SOD antioxidative enzymeactivity , followed by BJ T3 and then GSS2. POD activity of XJ P5 was high , followed by BJ T3 , while NMN6 was lower . Multivariate membership function analysis indicated that except for GSD4 and NMN6 , there were some significant differences in adaptation to arid and semi2arid environmens of the El ymus species. The order of subordinate function values from st rong to weak was XJ P5 > BJ T3 > XJ E1 > GSD4 > NMN6 > GSS2. We also found that there were some homologies between different species from the same region. The same species in different regions appeared

to be differentiated in their adaptability. These results indicate that the p hysiological and biochemical indexes were all adapted to different ecological environments.

【题目】法律政策对生物多样性及草原生物多样性保护影响评估
【中文关键词】政策;法律;法规;生物多样性;草原
【英文关键词】Policy;law;regulation;biodiversity;grassland
【中文摘要】本研究针对国际国内关于生物多样性法律法规及政策的相关文件,分别进行了梳理、分析和研究,探讨了生物多样性相关法律法规的发展进程及其存在问题,深入了解和明确了生物多样性保护的国际原则、发展方向和本质。揭示了中国关于生物多样性保护特别是草原生物多样性保护法律法规发展现状及存在问题。根据中国具体国情出发,借鉴美国、欧盟和印度等国家经验,作为探寻中国制定生物多样性保护法律法规的思路和原则。基于此,对中国生物多样性保护法律政策的制定提出了几点建议。
【英文摘要】Biodiversity-related documents, including international and domestic laws, regulations and policies, have been listed systematically, for study and analysis. The development process and problems of biodiversity-related laws and regulations are discussed; the international principles, direction and essence of biodiversity peotection are in-depth and clearly understood. The development status and existing problems of laws and regu-lations on the conservation of biodiversity, especially grassland biodiversity conservation in China are persen-ted. Ideas for devdloping Chinese spevific, national conditions, were drawn from the experiences in the United States, the European Union,and India. The ideas are explored as a basis for the principles of Chinese enact-ment of laws and regulations for biodiversity conservation and several suggestions for formulation of laws and policies in Chinese biodiversity conservation are offered.

【题目】Genetic diversity among tea cultivars from China, Japan and Kenya revealed by ISSR markers and its implication for parental selection in tea breeding programmes

【中文关键词】无
【英文关键词】Camellia sinensis; genetic diversity; genetic relationship; inter-simple sequence repeat
【中文摘要】无
【英文摘要】Tea plant [Camellia sinensis (L.) O. Kuntze] is an important beveragecrop in the world. In recent years many clonal tea cultivars have beenreleased, and they play major roles in improving the production andquality of tea. It is important to understand the genetic diversity andrelatedness of these cultivars to avoid inbreeding and narrow geneticbasis in future tea breeding. In the present study, genetic diversity andrelationship of 48 tea cultivars from China, Japan and Kenya wereevaluated by inter-simple sequence repeat (ISSR) markers. A total of382 ISSR bands were scored, of which 381 (99.7%) were polymorphic.The ISSR primers showed high ability to distinguish between teacultivars according to their high Resolving Power (RP) with an averageof 7.4. The mean of Nei s gene diversity (H) and Shannon sinformation index (I) were 0.22 and 0.35, respectively. More abundantdiversity was revealed among cultivars in China than those in Japanand Kenya. Within Chinese populations, the level of diversity in eastChina was higher than that in other regions. The coefficient of geneticdifferentiation (GST) was 0.202, which indicates a high degree ofgenetic variation within populations. This result was further confirmedby analysis of molecular variance, which revealed the variancecomponent within the populations (92.07%) was obviously largerthan that among populations (7.93%). The level of gene flow (Nm) wasestimated to be 2.0. This could be explained by frequent natural crosspollinationand seed dispersal among tea populations. The pairwisesimilarity coefficient between the cultivars varied from 0.162 to 0.538.A dendrogram of 48 tea cultivars was constructed where all the tested cultivars were divided into two groups. Our data show that the genetic relationship among tea cultivars can be determined by the ISSR markers. This will provide valuable information to assist parental selection in current and future tea breeding programmes.

【题目】超高压对茶鲜叶的细胞结构、多酚氧化酶活性及主要化学成分的影响
【中文关键词】超高压;茶鲜叶;细胞结构;多酚氧化酶;茶多酚;氨基酸;叶绿素
【英文关键词】ultrahigh pressure;fresh tea leaves;cell structure;PPO;tea polyphenols;amino acids;chlorophyll
【中文摘要】系统研究了超高压处理对茶鲜叶的细胞结构、多酚氧化酶活性及主要化学成分的影响,结果表明:①超高压处理可导致茶鲜叶细胞形态发生变化,600MPa压力下,细胞形态溃缩明显,出现细胞液溶出;②在处理温度为37°C,处理时间为10min条件下,经500MPa以上超高压处理的茶鲜叶,多酚氧化酶比活性显著下降;③压力为600MPa,保压时间为5min时,茶多酚和游离氨基酸的总量分别为鲜叶质量的9.14%和1.35%,分别比对照样提高24%和42%;④超高压能增加叶绿素和类胡萝卜素的溶出,但压力过高和处理时间过长又会造成一定程度的减少。
【英文摘要】The effect of the ultrahigh pressur eprocessing(UHPP) on the cells tructure, PPO activity and mainchemical composition of fresh tea leaves was studied. Result sshowed that: ① Under the 600MPa pressure, the cellular structure of fresh tea leaves shrink obviously, and the cell sap over flow distinctly. ② The relative activity of PPO was remarkably decreased under the UHPP over 500MPa holding for 10min at37 °C. ③ Under the treatment of 500MPa holding for 5 min, the content of tea polyphenols and amino acids in fresh tea leaves was 9.14% and 1.35% respectively, increased 24% and 42% compared with the control. ④ UHPP can also accelerated the overflow of chlorophyll and carotenoids from the chloroplast, but the excessive high pressure and the longer process time would cause the content decrased to some extent.

【题目】Changes in antimicrobial resistance among Salmonella enterica subspecies enterica serovar Pullorum isolates in China from 1962 to 2007
【中文关键词】/
【英文关键词】Salmonella enterica subspecies enterica serovar
Pullorum
Antimicrobial resistance
China
【中文摘要】/
【英文摘要】There are few data available for the trends of antimicrobial resistance of Salmonellaenterica subspecies enterica serovar Pullorum (S. Pullorum) in China and other parts ofthe world. Thus, the objective of this study was to evaluate the changes in antimicrobialresistance of S. Pullorum isolated from diseased chickens in China from 1962 to 2007. Atotal of 450 S. Pullorumisolates were tested for their susceptibility to 17 antimicrobials ina disk diffusion method. 39 – 95% of the isolates displayed a high level of resistance,particularly against ampicillin, carbenicillin, streptomycin, tetracycline, trimethoprimand sulfafurazole. Isolates exhibited increased resistance to carbenicillin, spectinomycin,trimethoprim, trimethoprim/sulfamethoxazole and nalidixic acid during the studyperiod. Moreover, 56.2% of the isolates exhibited multiple drug resistance (MDR;resistance 4 antimicrobials) and showed an increasing trend between 1970 – 1979 and2000 – 2007. Therefore, the results suggest that certain measures, including continuedsurveillance of antimicrobial resistance and the rational use of antimicrobials, arenecessary and important in order to control the rapid increase in antimicrobial resistancein S. Pullorum.

【题目】Priming with a DNA vaccine delivered by attenuated Salmonella typhimurium and boosting with a killed vaccine confers protection of chickens against infection with the H9 subtype of avian influenza virus
【中文关键词】/
【英文关键词】Avian influenza virus (AIV)
DNA vaccine
Salmonella typhimurium
Prime and boost
【中文摘要】/
【英文摘要】Control of the circulation of H9 low-pathogenic avian influenza virus (LPAIV) is a major concern forboth animal and public health. To improve vaccine efficacy against H9 LPAIV, we have utilized a novelprime – boost vaccination strategy. Specific-pathogen free (SPF) chickenswere first orally immunized witha hemagglutinin (HA)DNA vaccine delivered by attenuated Salmonella

typhimurium, followed by boostingwith a killed avian influenza (AI) vaccine. Chickens in this combined vaccination group were completelyprotected against both oropharyngeal and cloacal virus shedding after intranasal challenge with H9N2AIV, while viruseswere detected from these sites in other vaccination groups. Prior to challenge, chickensin the prime – boost group also had higher ($P < 0.05$) serum hemagglutination inhibition (HI) titers andintestinal mucosal IgA ELISA titers against AIV, and higher lymphoproliferation stimulation indices thanthose from other groups. Thus, we have demonstrated the efficacy of a novel prime – boost vaccinationstrategy against H9N2 avian influenza virus, which could be also applied for the development of vaccinesagainst other mucosally infectious pathogens.

【题目】重组产单核细胞李斯特菌溶血素的应用研究
【中文关键词】重组LL0蛋白;ELISA;免疫;保护性
【英文关键词】/
【中文摘要】李氏杆菌溶血素(Listeriolysin,LLo)是产单核细胞李斯特菌的主要毒力因子,为探索I。I。0的免疫保护性和作为诊断抗原的可行性,本研究用重组LLO抗原和单核细胞增多性李氏杆菌(Listeria monocytogenes,LM)全菌分别免疫BAI,B/e小鼠和家兔,定期采血。ELISA检测抗LLO的抗体水平,并分别对免疫和对照动物攻毒致死剂量的LM,分析重组LLO抗原的免疫保护性。结果表明,小鼠和家兔在二免后10~20 d内LLO的抗体即可达到峰值。而且免疫动物能有效抵抗I。M的感染。因此,重组l。I。o不仅可以用作动物LM的诊断抗原,而且具有作为基凶工程疫苗的潜力。

【题目】出血性大肠杆菌0157:H7 Stx2B-Tir-Stxl B多价融合蛋白表达及免疫原性研究
【中文关键词】:EHEC 0157:H7;转位紧密素受体;志贺毒素;融合基因;免疫原性
【英文关键词】Key words:EHEC 0157:H7;Tir;Stx;Fusion gene;Immunogenicity
【中文摘要】:为了更好防治由出血性大肠杆菌0157:H7引起的疾病,尝试研制基因工程疫苗,其中亚单位疫苗时具有很大优势。构建表达Ifr和stxlb的融合基因,将衍基因中间295个氨基酸残基(Tir295)与stxlb亚基基因72个氨基酸串联构建pGEX·stx2b—tir-stxlb重组质粒,将其转化于BL21(DE3),用IPTG进行诱导表达,经SDS.PAGE电泳检测,该融合蛋白获得了高效表达,目的蛋白表达量占菌体总蛋白含量的30%左右。重组蛋白纯化后皮下途径免疫小鼠,能够诱导高滴度(105)的IgG,鼻腔内途径免疫小鼠不仅能够诱导高滴度(104)的IgG,还能诱导高达102的IgA。二免后攻击50LD50的EHEC 0157:H7,相对于对照组,免疫组粪便中排菌量明显降低、排菌时间明显缩短。结果表明:该融合蛋白免疫原性良好,并且由Tir、Stx2b和Stxlb三部分抗原组成,可刺激机体产生针对转位紧密素受体(Tir)和志贺毒素(Stx)的抗体,在EHEC 0157亚单位疫苗设计或单克隆抗体抗制备中具有重要价值。
【英文摘要】In order to prevent and cure EHEC 0157:H7,genetically engineering vaccine,especially subunit VflX3-cine,has significant dominance over others.To construct tir—stx fusion gene,the DNA fragments encoding middle 295 aminoacids(Tir295)of tir and 72 amino acids(stx72)of stxlb and stx2b were fused in turn in frame with the multiple cloning sites of pGEX and the recombinant plasmid of pGEX.stx2b—tir.stxl b Was transferred to host cells E.coli BL21 strain(DE3).Then,the protein Was induced and expressed with induction of IPTG.The expression quantities and style of fusion protein were determined by SDS.PAGE and thin layer scanning results showed that amount of expressed fusion protein Was 30%in total of bacteria protein.Purified recombinant Stx2B-Tir-StxlB protein can elicit high titer IsG(10 ’)by subcutaneous immunization BALB/c mice,also,elicit high titer IgG(104)and IgA(102)by intra nasal immunization.More · over,compared to non-immunized mice still shed EHEC 0157:147 on 14th day,immunized mice shed no bacteria in the fecal samples 8 day later after challenged with 0157:H7.All results shows that stx2b—tir—stxlb protein has good antigeni—city,and tir295,and stxb72 antigens can evoke immune responses against tir295 and stxb72,reseptively.The tir—stxb fusion protein expressed in E.coli could offer an important ingredient that should be consider in construction of recombinant EHEC 0157 vaccine or preparation of experimental material for the monoclonal antibody.

【题目】重组蛋白P60 与LLO对单核细胞增多性李斯特菌灭活疫苗的免疫增强效果
【中文关键词】单核细胞增多性李斯特菌; 重组蛋白P60; 白介素-4; C干扰素; 疫苗; 保护性
【英文关键词】L i st er ia monocy togenes ; recombinant pro tein P60; IL-4; IFN- C; vaccine; protect ion
【中文摘要】为增强单核细胞增多性李斯特菌(简称单增李斯特菌) 灭活疫苗的免疫效果, 对单增李斯特菌入侵相关蛋白(P60) 基因进行了克隆、表达及纯化, 分别与低剂量李斯特菌溶血素O(LLO) 、单增李斯特菌灭活菌混合, 以Mo ntanide ISA206 为佐剂制成疫苗, 皮下接种家兔, 并设灭活疫苗免疫组和PBS 对照组, 定期检测3 组家兔的血清抗体、I L-4 和IFN-C水平的变化; 二免后第21 d 每只家兔腹腔注射2 @ 108 CFU 单增李斯特活菌攻毒, 观察各组家兔的发病情况, 每隔24 h 检测一次细菌在各组家兔体内的繁殖率。结果表明, 添加P60 和低剂量LLO 重组蛋白的单增李斯特菌灭活疫苗免疫组家兔二免后抗体水平明显高于其他各组,且能诱导T h 细胞向T h1 型分化, 抑制Th2 型细胞的分化, 调节抗原特异性免疫应答, 能有效抵抗单增李斯特菌的感染, 使细菌在家兔体内(外周血、脾) 的几何增长率从64. 69%降到24. 06% , 免疫效果明显优于灭活疫苗单独免疫组。证明P60 和低剂量LLO 能增强灭活疫苗的免疫保护效果。
【英文摘要】T o enhance immune ef ficacy of the inact ivated L i ster ia monocy togenes (LM) vaccine, the invasion-associated protein p60 recombinant protein, low do ses of LLO w ere added to the inact ivated L.monocy togenes, w ith Montanide ISA206 as adjuv ant . T he inact ivated L . monocy togenes vaccine w as used asnegat ive cont ro l and PBS as blank cont ro l. T he serum ant ibodies, IL-4 and IFN- Cin rabbits w ere detectedregular ly af ter subcutaneous inoculat ion w ith the abo ve vaccines. On day 21 after the second immunizat ion,2 @ 108 CFU of L . monocy togenes w ere injected into each rabbit by int raperitoneal inject ion. The patholog-ical changes w er e observed and the grow th o f the L. Monocy togenes in vi vo w as detected ev er y 24 h. Ant-ibody level in r abbit s injected w ith P60 and the LLO-addit iv e vaccine w as sig nif icant ly hig her compar ed w iththe o ther 2 g roups, w ith induction o f conversio n fr om Th to T h1 and inhibit io n of co nv ersion f rom Th to Th2, and the ant ig en-specific immune responses were regulated. The geomet ric grow th rate(in blood andspleen) decreased f rom 64. 69% to 24. 06% , indicat ing that the immune ef fect of p60 and LLO-addit iveinact ivited v accine w as significant ly superior to others. T he study show ed that p60 and low dose o f LLOcould sig nif icant ly enhance immune effect o f inact ivated L . Monocy togenes vaccine.

【题目】肠出血性大肠杆菌O157:H7 toxB基因缺失株的构建

【中文关键词】肠出血性大肠杆菌O157:H7;toxB基因;缺失株;

【英文关键词】enterohemorrhagic Eschedchia coli O157:H7;toxB gene;knockout strain;mouse;adherence

【中文摘要】为了明确肠出血性大肠杆菌(Enterohemorrhagic Escherichia coli)O157:H7大质粒p0157编码的蛋白质ToxB与O157:I-I7在肠道黏附、定殖的关系,构建含有toxB基因同源臂的重组自杀性质粒pMEG375一BN—Kan—Bc,转化SM10宿主菌获得重组SM10(pMEG375一BN—Kan—BC)。将SM10(pMEG375一BN—Kan—BC)与O157:H7进行混合培养,通过同源重组,获得杂交toxB基因缺失株。用体外接种的HEp一2细胞和体内感染链霉素处理的小鼠,明确缺失株黏附定殖能力。经PCR和Western blot鉴定,toxB基因被卡那霉素(Kan+)选择标记基因表达盒所代替。0157:H7(AtoxB)生长特性与亲本株相比无明显差异。O157:H7(AtoxB)与亲本株相比,对HEp-2细胞的黏附能力降低了2倍。 口服感染小鼠后,O157:H7(atoxB)第3 d粪便排菌量仅为3.1x10 CFU,持续排菌11 d;而亲本株排菌量高达4.03x10 CFU,持续排菌时间超过14 d。

【英文摘要】In order to definite the correlation between ToxB,a large protein encoded by pO157 of enterohemorrhagicEscherichia coli O157 :H7,and intestinal adherence and colonization of O157 :H7,the recombinant suicide plasmidpMEG375・-BN・・Kan—BC was construted by cloning homologous arnls of toxB upward and downward genes into suicide plas-・mid,and was transformed into host bacterium SM10 complement cells to obtain recombinant SMIO(pMEG375一BN—Kan—BC).The SM10(pMEG375一BN—Kan—BC)was incubated with O157:H7 to construct O157:H7(AtoxB)through homol—ogous recombination.HEp一2 cells inoculated in vitro and streptomycin—treated mice in vivo were used to identify O157:H7(AtoxB)a~herence and colonization.The resuhs from PCR and Western blotting showed that toxB gene was successfully replaced with the kanamycin gene cassette by an allelicexchange.No differences were found between the O157:H7(AtoxB)and the parent O157:H7 in growth feature.O157:H7(AtoxB)was two-times attenuated in adher—ence to HEp一2 cells.For Balb/c mice,the fecal sheddingofO157:H7 (AtoxB)was only 3.1 x10 CFU on thethird day after oral infection,whereas the parent O157 :H7 was 4.03xlO CFU.The mice infected with O157:H7(AtoxB)shed the bacteria for 11 d,while with the parentO157:H7,the mice shed for 14 d.

【题目】Development and evaluation of an indirect enzyme-linked immunosorbent assay for the detection of antibodies against Campylobacter fetus in cattle
【中文关键词】/
【英文关键词】Campylobacter fetus
Enzyme-linked immunosorbent assay
Prokaryotic expression
Purification
SapA gene
【中文摘要】/
【英文摘要】Campylobacteriosis is a zoonosis that occurs worldwide. Infection with Campylobacter fetus (C. fetus)causes infertility and abortion in sheep and cattle. The current study focuses on the SapA gene of C. fetusthat encodes surface array proteins and plays an important role in the virulence of C. fetus. The SapA-N(1398 bp) and SapA-C (1422 bp) fragments were amplified from the C. fetus SapA gene using polymerasechain reaction (PCR), and the corresponding recombinant proteins rSapA-N and rSapA-C were expressedin Escherichia. coli BL21 cells. Results of Western blotting and enzyme-linked immunosorbent assay(ELISA) showed that the immunological activity of rSapA-N was higher than that of rSapA-C ($P < 0.05$).Therefore, rSapA-N was selected to establish an indirect ELISA for detecting antibodies against C. fetus.The diagnostic criteria were as follows: S/PP0.45: positive; S/P < 0.4: negative; 0.45 > S/PP0.4: suspected.The specificity and sensitivity of our method were 94.3% and 88.6%, respectively. Moreover, nocross-reactions were observed between rSapA-N and serum samples that were positive for other bovinebacterial pathogens diseases such as Mycobacterium avium subspecies paratuberculosis. One hundred andtwo serum samples from cows that had experienced abortion were tested. Four and 2 C. fetus-positiveserum samples were found among the 70 bovine brucellosis-positive samples and the 32 infectiousbovine rhinotracheitis (IBR)-positive samples, respectively. The findings suggest that the rSapA-N-basedELISA method has immense potential in future applications.

【题目】Subcutaneous and intranasal immunization with Stx2B-Tir-Stx1B-Zot reduces colonization and shedding of Escherichia coli O157-H7 in mice
【中文关键词】/
【英文关键词】O157:H7
Translocated intimin receptor
Shiga toxin
Zot
Vaccine
【中文摘要】/
【英文摘要】The type III secretion system of Escherichia coli O157:H7 is involved in colonization of mammalian hostsby the organism. The translocated intimin receptor (Tir) is inserted into the mammalian host cell plasmamembrane in a hairpin loop topology with the central loop of the molecule exposed to the host cell surfaceand accessible for interaction with an LEE-encoded bacterial outer membrane adhesin called intimin.Shiga toxin type 1 and 2 produced by E. coli O157:H7 are responsible for hemolytic uremic syndromeand able to promote intestinal colonization. Zonula occludens toxin (Zot) is a single polypeptide chainencoded by the filamentous bacteriophage CTX of Vibrio cholerae. Zot binds a receptor on intestinalepithelial cells and increases mucosal permeability by affecting the structure of epithelial tight junctions.Because of these properties, Zot is a promising tool for mucosal drug and antigen (Ag) delivery.In the current study, we constructed a novel fusion protein carrying both of the immunogenic B subunitsderived from the two toxins, Tir and Zot, designated Stx2B – Tir – Stx1B – Zot, expressed in the E. coliBL21 and harvested the purified protein by a simple GST · Bind Resin chromatography method. We used astreptomycin-treated mouse model to evaluate the efficacy of subcutaneous vs. intranasal administrationof the vaccine. Following immunization, mice were infected with E. coli O157:H7 and feces were monitoredfor shedding. Immune responses against Stx2B – Tir – Stx1B – Zot, Stx2B – Tir – Stx1B and control agent(GST/PBS) were also monitored. Subcutaneous immunization of mice with Stx2B – Tir – Stx1B – Zot inducedsignificant Stx2B – Tir – Stx1B – Zot-specific serum IgG antibodies but did not significantly induce anyantigen-specific IgA in feces, whereas intranasal immunization elicited significant Stx2B – Tir – Stx1B – Zotspecificserum IgG antibodies with some animals developing antigen-specific IgA in feces. Mice thatwere immunized intranasally with Stx2B – Tir – Stx1B – Zot showed dramatically decreased E. coli O157:H7shedding compared to those of Stx2B – Tir – Stx1B and control agent following experimental infection.Mice immunized subcutaneously with Stx2B – Tir – Stx1B – Zot or Stx2B – Tir – Stx1B both showedreduced shedding in feces, moreover, Stx2B – Tir – Stx1B – Zot did better. These results demonstratethe perspective for the use of Stx2B – Tir – Stx1B – Zot to prevent colonization and shedding of E. coliO157:H7.

【题目】肠出血性大肠杆菌O157H7鞭毛可变区基因片段的克隆、表达与免疫原性
【中文关键词】肠出血性大肠杆菌O157 颐H7; flic 基因; 表达; 小鼠
【英文关键词】enterohemorrhagic Escherichia coli O157 颐H7; flic gene; expression; immunogenicity; mouse

【中文摘要】肠出血性大肠杆菌(Enterohemorrhagic Escherichia coli, EHEC)O157 颐H7 是食源感染的人兽共患病原菌。鞭毛蛋白(H7)是EHEC O157 颐H7 重要的毒力因子,其编码基因为flic。该研究在体外克隆和表达flic 基因的可变区,并检测其免疫原性,旨在为EHEC O157 颐H7 疫苗的研制提供候选抗原。PCR 扩增到flic 基因538 ~ 1 483bp 的可变区,成功克隆入冷诱导表达载体pCold玉中,构建重组表达质粒。重组菌BL21(pCold I鄄flic)0郾5 mmol/ LIPTG 过夜诱导,SDS鄄PAGE 和Western blotting 进行鉴定。Balb/ c 小鼠免疫和攻毒试验评价重组H7 蛋白的免疫原性。结果显示:H7 基因(flic)片段945 bp 在pCold玉中成功表达,大小为31 000,能够与天然EHEC O157 颐H7 全抗血清反应;免疫小鼠存活率可以达到80%,而非免疫小鼠存活率仅为20%;免疫组粪便排菌数量显著低于对照组(P<0郾05)。以上结果说明,H7 鞭毛的可变区与菌体黏附密切相关,并且其诱导产生的抗体具有一定的抑制黏附作用,可以作为亚单位疫苗研制的候选抗原,在EHEC O157 颐H7 早期黏附时,协同芋型分泌系统蛋白降低菌体在肠道内的黏附。

【英文摘要】Enterohemorrhagic Escherichia coli O157 颐H7 (EHEC O157 颐H7) is a foodborne and zoonotic patho鄄gen. Flagella, encoded by flic gene, is one of the major virulent factor of EHEC O157 颐H7. This study aimed to clone the variable fragment of flic gene and research its expressionand immunogenicity. The 945 bp fragment located on538-1 483 of flic gene was amplified by PCR and wastransformed into pCold玉to construct a recombinant plas鄄mid, named BL21(pCold I鄄flic). The BL21(pCold I鄄flic)was induced by 0. 5 mmol/ L IPTG for 24 h, and then wasanalyzed by SDS鄄PAGE and Western blotting. Experiments of immunization and challenge to Balb/ c mice were performed to evaluate immunogenicity of recombinant H7 protein. Allthe results showed that BL21(pCold I鄄flic) successfully encoded a protein with the molecular weight of 31 000. The proteinwas able to work with natural anti鄄O157 颐H7 serum. Eighty percent of inoculated mice survived, while only twenty percentsurvived for control. The microorganism of fecal from immunized mice had a significant decrease, compared with that ofcontrol (P<0郾05). All these results indicated that the variable H7 protein had an affinity with bacterial adherence andcould induce inhibitive antibody. It might be a candidate immunity antigen to develop subunit vaccine of EHEC O157 颐H7and able to decrease early adherence.

【题目】肠出血性大肠杆菌O157：H7 Intimin和Tir-Tccp蛋白质对小鼠的免疫保护性

【中文关键词】肠出血性大肠杆菌O157:H7;Intimin蛋白质;Tir—Tccp蛋白质;免疫原性;小鼠

【英文关键词】enterohaemorrhagic Escherichia coli O157:H7;intimin protein;Tit—Tccp protein;immunogenicity;mouse

【中文摘要】为了研究不同浓度的肠出血性大肠杆菌(EHEC)O157:H7 Intimin和Tir—Tccp蛋白质对接受10 CFUEHEC O157:H7dx鼠的免疫保护作用,将Intimin和Tir—Tccp蛋白质和佐剂充分乳化后,通过皮下多点注射免疫小鼠,对照组注射等量的磷酸盐缓冲液。共免疫2次,间隔14 d,末次免疫后14 d攻毒1只小鼠EHEC O157:H7 10CFU。每次免疫后的14 d通过断尾采血,用间接ELISA法检测血清抗体。攻毒后,观察小鼠精神状态,记录死亡数并检测排菌量。ELISA检测结果表明,Tir-Tccp蛋白质诱导小鼠产生IgG抗体水平明显升高,而Intimin诱导产生的IgG抗体升高不明显。攻毒后,各免疫组小鼠均死亡1只,存活l4只,存活率为93.3% ;对照组小鼠死亡4只,存活6只,存活率为60.0% 。免疫组在攻毒后6 d,粪便中检测不到EHEC O157:H7,对照组在攻毒后13 d仍有较高的排菌量。表明Intimin和Tir—Tccp蛋白质对小鼠起到了有效的免疫保护作用,能够减少EHEC O157:H7在小鼠体内的定殖。

【英文摘要】The objective w as to evaluate the protective efficacy against 10 。 CFU of enterohaemorrhagie Escherichi coli(EHEC)O157:H7 after subcutaneously immunizedwith intimin and Tir—Tccp recombinant protein at differentconcentrations. After emulsifying intimin and Tir—Tccpproteins with adjuvant,the Balb/e mice of experimentalgroups were subcutaneously immunized twice(on days 0and 14)with the protein,while the Balb/c mice of controlgroup were subcutaneously immunized twice with equiva—lent phosphate bufered saline(PBS).On the 14th day following the second immunization。 all the mice were orally infected with 10 ” CFU of EHEC O157:H7. Serum sampleswere collected via cutting of the tail on day 14 after every immunization and IgG antibody was determined by ELISA.Themental states of all the mice were observed,and the mortality and shed bacteria quantity were monitored after challenge.The result of ELISA demonstrated that the Tir-Tccp protein elicited high titrc antibody but the levels of antibody induced byintimin was low.After challenge,one mouse died in each of the immunized groups and the survival rate was 93.3% ,whilethe survival rate of the control group was 60.0% .There was no EHEC O157:H7 in the fecal samples of two immunizedgroups on the 6th day after challenged,but control group mice still shed h J gh level of the organism on 13th day.The resultsdemonstrated that

Intimin and Tir · Tccp recombinant protein significantly reduced shedding of EHEC O157:H7 from exper—imentally infected mice.

【题目】肠出血性大肠杆菌0157:H7AhlyAstxAtoxB基因缺失株的构建
【中文关键词】:肠出血性大肠杆菌0157:H7;hly;stx;toxB;缺失株;小鼠;粘附
【英文关键词】:Enterohemorrhagic Escherichia coli O157:H7;hty,stx,toxB gene;Knockout strain;Mouse;Adherence
【中文摘要】:肠出血性大肠杆菌(Enter0hemo ” hagic Escherichia coli)O157:H7是食源感染的人兽共患病原菌。志贺毒素(Shiga toxin,Stx)、溶血素(haemolysin,Hly)和ToxB是0157:H7重要的毒力因子。选用自杀性质粒pMEG375,体外构建具有同源臂的重组自杀性质粒,借助于sml0宿主菌获得O157:H7杂交菌株,通过同源重组,依次获得O157:H7(AhlyA stxAtoxB)基因缺失株,AhlyA stxAtoxB接种HEp一2细胞和感染链霉素处理的Balb/c小鼠,明确缺失株粘附定植的能力。经PCR鉴定,hly、stx和toxB基因分别被壮观霉素(Spc+)、庆大霉素(Gm +)和卡那霉素(Kan+)基因表达盒所代替,Western blot鉴定结果显示,0157:H7(AhlyA stxAtoxB)检测不到相应的Stx、Hly和ToxB蛋白。0157:H7(AhlyA stxAtoxB)生长特性与亲本株无明显差异。对于HEp-2细胞的粘附能力明显降低。Balb/c小鼠排菌时间和排菌量明显减少和降低。本研究成功获得O157:H7(AhlyA stxAtoxB),并且明确Stx、Hly和ToxB的缺失导致了0157:H7对HEp一2细胞和Balb/c小鼠的粘附和定植能力降低。本研究旨在为研制EHEC O157:H7基因缺失疫苗奠定物质基础。
【英文摘要】Abstract:Enterohemorrhagic Escherichia coli 0157:H7 is a foodborne and zoonotic pathogen.Shiga toxin(Stx),haemolysin(Hly)and ToxB are the major virulent factors of 0157:H7.Therefore,the objective of this studyis to construct the stx,hly,toxB—knockout strain for develop O157:H7 attenuated vaccine.The 0157:H7(A hlyA stx A toxB)was constructed by choosing the smlO complement cells and the suicide plasmid pMEG375 containinghomologous arms of stx,hly and toxB upward and downward genes to study their effect on 0 1 57:H7 intestinal colo—nization of streptomycin—treated mice and adherence to HEp一2 cells.The results from PCR and W estern blottingmethods showed that stx,hly and toxB genes were successfully replaced with the Gentamicin,Spectinomycin and Ka—namycin gene cassettes by allelic exchanges.Also,the 0 1 57:H7(A hly A stx A toxB)was found to be no differencescompared with the parent 0157:H7 in growth feature.For Balb/c mice,the fecal shedding of 0157:H7(A toxB)was on1y 1.1×10 CFU on the third day after oral infection,whereas the parent 0157:H7 was 4.03×10 ’ CFU. A1一SO,the mice infected with 0157:H7(△hlyA stXAtoxB)shed the bacteria for 9days,whereas the parent O157:H7for above 14 days.O157:H7(△hly△stx△toxB)successfully constructed in this study was found to be attenuated inHEp一2 cells of adherence for four times and in mouse models of colonization for shortened and lower fecal sheddingin contrast with the parent O157:H7.

【题目】Prevalence and antimicrobial resistance of Salmonella spp.isolated from domestic animals in Eastern China
【中文关键词】/
【英文关键词】Antimicrobial resistance, domestic animals,eastern China,Salmonella spp..
【中文摘要】/
【英文摘要】A total of 163 Salmonella spp.isolates representing 15 serotypes recovered from faecal samples of domestic animals(chicken, duck ,goose and pig) in eastern China during 2008 to 2009 were tested for antimicrobial susceptibilities.S.Senftenberg, S.Typhimurium,S.Pullorum and S.Enteritides were the most prevalent serovars.Resistance was most often observed to carbenicillin(65.4%),followed by nalidixic acid(48.8%),tetracycline(46.9%),sulfafurazole(45.7%),ampicillin(43.2%),streptomycin(38.3%)and trimethoprim/sulfamethoxazole(33.3%).With regards to the source of isolates, chicken Salmanella spp.isolates displayed the highest rate of resistance, being resistant to at least one antimicrobial(100%),followed by those recovered from pig (93.4%),goose (90.7%)and duck(80%).Serovars commonly showing multidrug resistance(MDR)to 〉 9 antimicrobials were S.Enteritidis(55.6%).S.Pullorum(17.9%)and S.Typhimurium(17.2%).This study has revealed the prevalence and antimicrobial resistance patterns of Salmonella spp. in domestic animals in eastern China and provides the important information for better controlling these pathogens.

【题目】Construction of a new food-grade expression system for Bacillus subtilis based on theta replication plasmids and auxotrophic complementation
【中文关键词】无
【英文关键词】Bacillus subtilis;Food-grade;Expression system
【中文摘要】无中文摘要。
【英文摘要】A new food-grade expression system was constructed for Bacillus subtilis based on replicative food-grade expression plasmids and auxotrophic complementation. The food-grade B. subtilis host FG01 was created by knockout of the dal locus from the chromosome of B. subtilis 168. Two food-grade expression plasmids pXFGT03 and pXFGT05 were constructed by combining a novel theta-type Bacillus replicon with the B. subtilis endogenous gene dal and P43 promoter; while pXFGT05 was derived from pXFGT03 by deletion of two open reading frames (ORFs) from the original replicon. Upon transformation of FG01 with pXFGT03 or pXFGT05, the host phenotype was complemented on Luria-Bertani agar plates by the plasmid-coded dal gene, which served as a food-grade selection marker for recombinants. Results showed that deletion of the two ORFs had no impact on plasmid replication. A reporter gene bgaB was cloned into pXFGT03 and pXFGT05, respectively, under control of the P43 promoter, and it was successfully expressed in this food-grade expression system. Segregational stabilities of two recombinant plasmids were investigated, and they were fully stable.

【题目】Production purification and characterization of a potential thermostable galactosidase for milk lactose hydrolysis from Bacillus stearothermophilus
【中文关键词】无
【英文关键词】thermostable β-galactosidase; lactose; purification; hydrolysis
【中文摘要】无中文摘要
【英文摘要】Beta-galactosidase, commonly named lactase, is one of the most important enzymes used in dairy processing; it catalyzes the hydrolysis of lactose to its constituent monosaccharides glucose and galactose. Here, a thermostable beta-galactosidase gene bgaB from Bacillus stearothermophilus was cloned and expressed in B. subtilis WB600. The recombinant enzyme was purified by a combination of heat treatment, ammonium sulfate fractionation, ion exchange, and gel filtration chromatography techniques. The purified beta-galactosidase appeared as a single protein band in sodium dodecyl sulfate-PAGE gel with a molecular mass of approximately 70 kDa. Its isoelectric point, determined by polyacryl-amide gel isoelectric focusing, was close to 5.1. The optimum temperature and pH for this beta-galactosidase activity were 70 degrees C and pH 7.0, respectively. Kinetics of thermal inactivation and half-life times for this thermostable enzyme at 65 and 70 degrees C were 50 and 9 h, respectively, and the K(m) and V(max) values were 2.96 mM and 6.62 micromol/min per mg. Metal cations and EDTA could not activate this thermostable enzyme, and some divalent metal ions, namely, Fe(2+), Zn(2+), Cu(2+), Pb(2+), and Sn(2+), inhibited its activity. Thiol reagents had no effect on the enzyme activity, and sulfhydryl group blocking reagents inactivated the enzyme. This enzyme possessed a high level of transgalactosylation activity in hydrolysis of lactose in milk. The results suggest that this recombinant thermostable enzyme may be suitable for both the hydrolysis of lactose and the production of galactooligosaccharides in milk processing.

【题目】Immobilization of recombinant thermostable beta-galactosidase from Bacillus stearothermophilus for lactose hydrolysis in milk
【中文关键词】无
【英文关键词】β-galactosidase, thermostable, immobilization, lactose hydrolysis
【中文摘要】无中文摘要
【英文摘要】A recombinant thermostable beta-galactosidase from Bacillus stearothermophilus was immobilized onto chitosan using Tris(hydroxymethyl)phosphine (THP) and glutaraldehyde, and a packed bed reactor was utilized to hydrolyze lactose in milk. The thermostability and enzyme activity of THP-immobilized beta-galactosidase during storage was superior to that of free and glutaraldehyde-immobilized enzymes. The THP-immobilized beta-galactosidase showed greater relative activity in the presence of Ca(2+) than the free enzyme and was stable during the storage at 4 degrees C for 6 wk, whereas the free enzyme lost 31% of the initial activity under the same storage conditions. More than 80% of lactose hydrolysis in milk was achieved after 2 h of operation in the reactor. Therefore, THP-immobilized recombinant thermostable beta-galactosidase from Bacillus stearothermophilus has the potential for application in the production of lactose-hydrolyzed milk.

【题目】Extracellular secretion in Bacillus subtilis of a cytoplasmic thermostable beta-galactosidase from Geobacillus stearothermophilus
【中文关键词】无
【英文关键词】Bacillus subtilis, secretion, thermostable β-galactosidase
【中文摘要】无中文摘要。
【英文摘要】Beta-Galactosidase catalyzes the hydrolysis of beta-galactosides into monosaccharides and is widely used in dairy processing. This study reports the extracellular secretion of a cytoplasmic thermostable beta-galactosidase from Geobacillus stearothermophilus IAM11001 in Bacillus subtilis. This enzyme has potential applications in the dairy industry. It was not secreted in B. subtilis by mediation of 3 general secretory signal peptides, but was secreted extracellularly when it was fused to a twin-arginine signal peptide of B. subtilis phosphodiesterase. Defined and rich culture media were used for recombinant enzyme production, and the extracellular target enzymatic activity reached about 44% of the total enzymatic activity synthesized at 18 h of cultivation in Luria-Bertani medium. As a control of secretion, when the signal peptide coding sequence was absent from the N terminus of the target gene bgaB, the extracellular target enzymatic activity obtained under the same condition of cultivation accounted for less than 7% of the total enzymatic activity synthesized. Results also showed that coexpression of the B. subtilis proteins TatAd and TatCd was indispensable for the secretion of the target enzyme.

【题目】不同信号肽对脂肪酶A在枯草芽孢杆菌中分泌表达的影响
【中文关键词】信号肽;脂肪酶;lipA基因;枯草芽孢杆菌;重组菌株;分泌表达
【英文关键词】signal peptide; lipase; lipA gene; Bacillus subtilis; recombinant strain; expression and secretion
【中文摘要】本文以 B. subtilis 168 来源的脂肪酶 A 为报告基因,构建一系列枯草芽孢杆菌分泌表达载体,研究不同信号肽对脂肪酶分泌效率的影响。从 B. subtilis 168 基因组 PCR 扩增带自身信号肽的 lipA 基因,克隆入载体 pUCX08,经定点突变在其信号肽与结构基因之间引入酶切位点 EcoR I,利用突变后的 lipA 序列(含信号肽)克隆入穿梭质粒 pMA5△MCS,构建分泌载体 pMA5△MCS-lipA。PCR 扩增 AprE, LipB, WapA, WprA 信号肽序列,替换pMA5△MCS-lipA 中 lipA 基因信号肽序列部分,构建一系列分泌载体,均转化枯草杆菌WB600,得到重组菌株 WB600(pMA5△MCS-lipA),WB600(pMAaprE-lipA),WB600(pMAlipB-lipA),WB600(pMAwapA-lipA),WB600(pMAwprA-lipA)。各重组菌株脂肪酶分泌表达情况有显著差异,具有自身信号肽的重组菌株 WB600(pMA5△MCS-lipA)脂肪酶分泌表达最好,摇瓶发酵 20 h,最高酶活可达 7.64 U/mL,更换信号肽的重组菌株脂肪酶分泌表达均不如原始信号肽,但仍显示不同的结果,各自最高酶活分别为 0.55 U/mL,1.38 U/mL,0.18 U/mL 和 0.77 U/mL。不同信号肽对脂肪酶 A 在枯草芽孢杆菌中的分泌表达有显著影响。
【英文摘要】In this study, we constructed a series of expression-secretion vectors for Bacillus subtilis in which thelipase A gene origining from B.subtilis 168 was used as the reporter. Then, the effects of differentsignal peptides on the secretion efficiency of lipase were investigated. lipA with its signal peptide wasamplified through PCR from B.subtilis 168 genome, and cloned into pUCX08. Then we madesite-direct mutation between the signal peptide and structural gene of lipA creating a EcoR I site. Themutated lipA gene was cloned into the shuttle plasmid pMA5△MCS generating secretion vectorpMA5△MCS-lipA. AprE, LipB, WapA, WprA signal peptides were amplified, then the signal peptideof lipA was replaced by these four in order to construct a series of secretion vectors. Finally, thesevectors were transformed into WB600, getting WB600 (pMA5△MCS-lipA) , WB600(pMAaprE-lipA) , WB600 (pMAlipB-lipA) , WB600 (pMAwapA-lipA) , WB600(pMAwprA-lipA) .There were obvious lipase secretion efficiency differences from these recombinants. The recombinant WB600 / pMA5△MCS-lipA with its own signal peptide secreted best.After culturing for 20h, the highest enzyme activity reached 7.64 U/mL, and that of WB600(pMAaprE-lipA),WB600 pMAlipB-lipA) ,WB600(pMAwapA-lipA) ,WB600(pMAwprA-lipA) showed different results, reaching 0.55 U/mL,1.38 U/mL,0.18 U/mL and 0.77 U/mL separately, no matter they could not compare with the original signal peptide.There were notable effects of different signal peptide on the secretion of lipase in Bacillus subtilis.

【题目】耐热乳糖酶基因bgaB的克隆及其在毕赤酵母中的 表达
【中文关键词】耐热 β-半乳糖苷酶;毕赤酵母;重组表达
【英文关键词】thermostable beta-galactosidase; Pichia pastoris; recombinant expression
【中文摘要】耐热 β-半乳糖苷酶以其良好的热稳定性和较高温度下的水解特性使之具有常温乳糖酶无法比拟的优越性。本文主要研究来源于嗜热脂肪芽孢杆菌的耐热 β-半乳糖苷酶基因在毕赤酵母真核系统中的表达。将耐热 β-半乳糖苷酶 bgaB 基因克隆到大肠杆菌-毕赤酵母穿梭质粒 pPIC9k 中,经测序证实插入的外源基因读码框正确后,电转化到毕赤酵母 GS115 中构建重组菌株 GS115-pPIC9k-bgaB,经 MD 和遗传霉素平板筛选得到 3 株阳性转化菌株,甲醇诱导后,可表达相对分子质量约为 70 kDa 的蛋白,与预期值一致。所表达的半乳糖苷酶活力最高为 0.26 U/mL。
【英文摘要】Thermostable beta-galactosidase is more attractive than normal galactosidase for its thermal stabilityand hydrolysis property under relatively higher temperature. In this work, we studied the expression ofthe thermostable beta-galactosidase gene bgaB from Bacillus stearothermophilus in Pichia pastoris.bgaB gene was inserted into the shuttle expression vector pPIC9k and the recombinant plasmid wastransformed into Pichia pastoris GS115 by electroporation. Three transformants were obtained throughMD plate and G418 plate screening. After the induction of methanol, the enzyme activity ofrecombinant Pichia pastoris strain reached 0.26 U/mL, and the SDS-PAGE showed that the molecularweight was about 70 kDa.

【题目】Secretion of a heterologous cytoplasmic beta-galactosidase in Bacillus subtilis
【中文关键词】无
【英文关键词】Bacillus subtilis; protein secretion; β-galactosidase; twin-arginine translocation; signal peptide; enzymatic activity
【中文摘要】无
【英文摘要】A cytoplasmic β-galactosidase (BgaB) from Geobacillus stearothermophilus IAM11001, which can not be secreted in Bacillus subtilis by mediation of two general secretory signal peptides, was secreted in Bacillus subtilis when it was fused to atwin-arginine signal peptide. The extracellular BgaB enzymatic activity accounted for about 39% of the total enzymatic activity at 18 h of cultivation in Luria-Bertani medium. As a control of secretion, the extracellular BgaB enzymatic activity obtained at the same time of cultivation accounted for less than 3% of the total enzymatic activity when the signal peptide coding sequence was absent from the N-terminus of the target gene bgaB.

【题目】一种枯草芽孢杆菌食品级表达系统的构建
【中文关键词】枯草芽孢杆菌;食品级;表达系统
【英文关键词】Bacillus subtilis; Food-grade; Expression system
【中文摘要】枯草芽孢杆菌(Bacillus subtilis)是一个对人畜安全的菌种,通常被认为是食品发酵和酶生产菌种的良好选择。本文采用枯草芽孢杆菌的丙氨酸消旋酶基因dal构建了一种枯草芽孢杆菌食品级表达系统, 其中dal基因作为同源重组序列以及高效的重组菌筛选标记。采用来自于嗜热脂肪芽孢杆菌(Bacillus stearothermophilus)的耐热β-半乳糖苷酶(BgaB)作为报告蛋白质试验了所构建表达系统的实用性。遗传稳定性研究显示,重组片段稳定且不容易丢失,耐热β-半乳糖苷酶在这一体系中成功地实现了表达
【英文摘要】Bacillus subtilis is a natural candidate that may be utilized for production of enzymes and fermented foods becauseof its status of Generally Recognized As Safe and other advantages. In order to develop an entirely food-graderecombinant B. subtilis expression system for food industry, a food-grade integrative vector was constructed byexploiting the B. subtilis endogenous alanine racemase gene dal as both a homologous sequence for integration and anefficient complementary marker for selection of recombinant B.subtilis strain. A thermostable β-galactosidase codingsequence (bgaB) from Bacillus stearothermophilus was fused downstream to the B. subtilis endogenous promoter P43on the vector to monitor the expression of the final system. The food-grade recombinant B. subtilis expression systemwas constructed by integration of this vector into host chromosome. Results revealed that this system was geneticallystable. The thermostable β-galactosidase was expressed successfully in this system.

【题目】The extraction and purification of theanine
【中文关键词】无
【英文关键词】China,extraction,Purification,Theanine
【中文摘要】无
【英文摘要】Theanine is a unique amino acid in the tea plant, which makes up 0.4%-3% of the solid matter in a tea shoot. It was found recently that theanine has many physiological activities and can be widely used in food and beverage industries as a new type of functional food ingredient.Theanine has become a new value added product followed by the tea polyphenols in tea industy. To develop the extraction technique of theanine, the effects of several factors on extraction rate including volume of water, temperature and time of extraction have been investigated.The extraction conditions have been optimized by method of orthogonal design, then the optimal condition of extraction was determined and the purification of crude theanine was further researched. Results showed that the optimal condition of extraction was 1:20(tealeaf/water) at 90°C for 30 min. The product of theanine content >50% could be prepared by using 732 cation resin and WA-2 resin.

【题目】培养基营养成分对香蕉枯萎病尖孢镰刀菌生长的影响
【中文关键词】香蕉枯萎病; 生物学特性; 菌落生长; 产孢量; 培养基营养成分
【英文关键词】fusarial wilt; biological characteristics; colony growth; spores; nutrients in culture medium.
【中文摘要】通过对香蕉枯萎病发病株病组织的分离、纯化,得到香蕉枯萎病病原菌———尖镰孢菌古巴专化型[Fusarium oxysporum f. sp. cubense(E. F. Smith)Snyder et Hansen]。该病原菌在不同pH 值培养基上培养4 d 后,发现尖孢镰刀菌菌落在pH 值4.0~9.0 范围内均可生长, pH 值为6.0~7.0 时最适, 菌落直径平均在3.7~3.9 cm 之间。尖孢镰刀菌在不同营养成分的培养基上培养, 结果表明, N 源对尖孢镰刀菌菌丝的生长影响大于C 源。生长到第6 天时, 全糖型培养基产孢量最大, 且小型分生孢子的产孢量也最大, 可使香蕉苗发病率达到100%。而大型分生孢子的产生最佳培养基为低氮型培养基。
【英文摘要】A specialized form race 4 of fungus Fusarium oxysporum f.sp. cubense (E.F.Smith) Snyder ETHansen was isolated and purified from the tissues of banana infected with fusarial wilt disease. The race 4 fungus was cultured in medium with different nutrients and different pH value. The colonies of the fungus grew in the medium with the pH 4.0~9.0 after 4 days of culture, and did well at the pH 6.0~7.0, withthe average colony diameter being 3.7~3.9 cm, and N source in the medium had greater impact on themycelial growth of the fungus than C source. Maximum spores of the race 4 were produced in the sugarbased medium at day 6, and also by microconidia in the same medium, which resulted in 100% of incidence of fusarial wilt. However, the best medium for producing macro conidia contained low nitrogen.

【题目】拮抗香蕉枯萎病镰刀菌木霉菌株的分离筛选
【中文关键词】尖孢镰刀菌古巴专化型:木霉:筛选:拮抗作用
【英文关键词】Fusurium oxysporum ,f.sp. cuben; Trichoderma spp.; screening; antagonistic.
【中文摘要】香蕉枯萎病是由尖孢镰刀菌古巴专化型引起的,目前尚缺乏有效的防治方法,木霉菌是重要的植物病害防治菌,广泛分布于自然界。木霉菌具有广泛的适应性,能杀伤多种重要的植物病原菌且作用机制多种多样。笔者从广东湛江、海南檐州等地152份土样中分离出330株木霉,通过对峙法对木霉菌进行体外拮抗作用测定及评价,选出10株对尖孢镰刀菌有较好拮抗效果的木霉菌;并测定无菌上中木霉与病原菌的种群动态变化,结果表明木霉在上壤中对病原菌有一定的抑制作用。
【英文摘要】Banana fusarium wilt disease is a soil born disease caused by the pathogen Fusarium oxysporumf.sp.cubense Owen.At present,effective control methods for this disease are not available.The fungus Trichoderma, ubiquitous in the environment, is an important microorganism in the biological control of plant diseases. As a biocontrol agent, the advantages of Trichoderma spp. lie in its excellent adaptability, broad spectrum of activity and diversified mechanisms. A total of 330 strains of Trichoderma spp. were isolated from 152 soil samples collected from Zhanjiang, Hainan and other locations. Further screened by dual-cultureand antagonistic test, 10 strains of the 330 strains were found to have strong antagonism against the pathogen of the disease. Observation of the dynamic population changes in Trichoderma spp. and the pathogen of the disease showed that Trichoderma spp. had some inhibitory effect on the pathogen of the disease in the soil.

【题目】香蕉镰刀菌枯萎病拮抗放线菌的分离筛选及其抑制效果的初步评价
【中文关键词】香蕉枯萎病菌;拮抗放线菌;抑制效果
【英文关键词】Fusarium oxysporum f.sp. cubense; antagosnistic Antinomyces;inhibition effect
【中文摘要】香蕉镰刀菌枯萎病是一种由尖抱镰刀菌占巴专化型Fusarium axyporum f. sp. cubense侵染引起的维竹束系统性病害。本试验对从海南省东方、八所、黄流、二亚和广东省湛江、徐闻、海安等香蕉种植地采集的根际土样进行拮抗放线菌的分离纯化得到放线菌菌株139个。通过纸片扩散法,筛选出对香蕉枯萎病4号生理小种具有拮抗作用的菌株8个。进一步试验表明,其中4个菌株不仅对香蕉枯萎病生理小种4号的菌兹生长有良好稳定的抑制作用,目对另外14个不同专化型病原菌也有一定的抑制作用。另外,分别将这8株放线菌发酵上清液与香蕉枯萎病病原菌抱了悬浮液混合12h后,有6株放线菌发酵上清液对病原菌抱了萌发的抑制率超过85%.盆栽试验结果表明,2株放线菌对香蕉枯萎病防效达86%以上,极显著地高于恶霉灵药剂处理。
【英文摘要】Banana Fusarium wilt disease is one of the External Quarantine Disease, one kind of Systemic vascular disease caused by Fusarium oxysporum f.sp. cubense, also named Panama disease or Chlorosis. In this paper, 139 strains of Antagonism Antinomyces were separated and purified from the rhizosphere soil samples which collected from Dongfang, Basuo, Huangliu, Sanya in Hainan Province and Zhanjiang, Xuwen, Hai an in Guangdong province. Through Disc diffusion method,8 strains that can antagonize against F. oxysporum f.sp.cubense No.4 race were selected. Further experiments showed that 4 strains could not only stably inhibit the mycelium growth of No.4 race, but also inhibit the other 14 different F. oxysporum f.sp. glycinea. In addition, mixed the fermentation supernatant from the 8 antinomyces strains with spores of F. oxysporum for 12 h, inhibition rates of 4 strains were more than 80%.

【题目】固相微萃取-气相色谱-质谱联用法分析香蕉球茎象甲虫体挥发物
【中文关键词】香蕉球茎象甲;挥发物;固相微萃取;气相色谱-质谱联用仪
【英文关键词】the banana corm weevil;Cosmopolites sordidus (Germar); volatile;solid-phase microextraction
【中文摘要】:为了探明香蕉球茎象甲虫体挥发物的各种成分,采用固相微萃取技术(SPME)提取香蕉球茎象甲的虫体挥发物,进行气质联用仪(GC-MS)分析鉴定。结果表明:香蕉球茎象甲雌虫、雄虫、雌雄虫(雌虫和雄虫等数量混合)分别鉴定出9 种、8 种和9 种成分,各占总峰面积的61.05%,39.46%和17.43%。香蕉球茎象甲雌虫、雄虫和雌雄虫三种虫体挥发物共有成分有3,7-二甲基-1,3,6-辛三烯、α-荜澄茄油烯、(1,1-二甲基乙基)-2-甲氧基苯酚、邻苯二甲酸二乙酯、3,3',5,5'-四甲基联苯和邻苯二甲酸二异丁酯6 种,而3,7-二甲基-1,3,6-辛三烯是香蕉球茎象甲雌虫、雄虫和雌雄虫三种虫体挥发物中含量最高的成分,为19.15%。香蕉球茎象甲虫体挥发物各成分种类多样,相对含量差异较大。
【英文摘要】In order to investigate body volatiles of the banana corm weevil,Cosmopolites sordidus (Germar),solid-phase microextraction (SPME) was applied to trap body volatiles ofC. sordidus , and the trapped bodyvolatiles were analyzed using gas chromatography-mass spectrometry (GC-MS). The results showed that: therewere 9, 8 and 9 body volatiles ofC. sordidus females, males, females and males(females : males = 1:1),representing 61.05%, 39.46% and 17.43% of the total peak area, respectively. The same body volatiles wereOcimene, à-Cubebene, Phenol,(1.1-dimethylethyl)-2-methoxy-, 1,2-Benzenedicarboxylic acid diethyl ester,3,3',5,5'-Tetramethylbiphenyl, Phthalic acid,diisobutyl ester, and relative content of Ocimene (19.15%) was the highest in three body volatiles. There were all kinds of constituents, and relative contents were significantly different inC. sordidus .

【题目】16个陆地棉染色体置换系产量与纤维品质性状遗传效应的初步分析
【中文关键词】16个陆地棉染色体置换系产量与纤维品质性状遗传效应的初步分析
【英文关键词】TM-1 CSB
【中文摘要】【目的】评估16个陆地棉染色体置换系的遗传效应。【方法】采用部分双列杂交试验,以16个陆地棉染色体置换系和TM-1为父本,中棉所41、中棉所43、SG506为母本配制51个F1杂交组合,2006年在河南安阳和山东夏津两地种植,获得产量、纤维品质性状数据。利用AD模型软件分析各性状的加性和显性效应。【结果】产量性状比较,铃重加性方差比率最大,铃数最小;显性方差比率籽棉产量最大,铃重最小。纤维长度主要表现出加性效应和显性效应,显性效应稍大于加性效应,整齐度、麦克隆值、比强度的加性方差比例较大,未检测到显性效应。CSB06和CSB12Sh对铃重的正向加性效应显著,CSB14Sh、CSB01对纤维品质的4个或3个性状加性效应显著,CSB01对产量性状的显性效应最大.纤维长度的显性均表现为

正值。【结论】CSB06和CSB12Sh可作为改良铃重的亲本利用,CSB14Sh、CSB01可作为改良纤维品质性状的亲本利用。在杂种优势利用时,CSB01可作为改良产量性状的亲本,CSB01、CSB11Sh和CSB06可作为改良纤维长度的亲本。

【题目】利用陆地棉置换系进行海岛棉主要性状基因的染色体定位
【中文关键词】陆地棉 海岛棉 农艺性状 置换系 染色体定位 纤维品质 主要性状 减效基因 纤维长度 染色体臂
【英文关键词】no
【中文摘要】利用海岛棉染色体置换陆地棉一对染色体或染色体臂的置换系,进行主要农艺性状、抗黄萎病性和纤维品质基因染色体定位。结果表明,海岛棉1号染色体可以增加株高;16、17、18、4号染色体携带降低铃数基因;22Lo、22Sh、16、11Sh、26Lo号染色体可以提高衣分;大部分染色体降低铃重。16、26Lo染色体可以增强抗黄萎病性。对纤维品质性状分析表明,14Sh、26Lo号染色体可以提高纤维长度;14Sh、15Sh号染色体可以提高强度;4号染色体可以降低麦克隆值;22Sh、16、22Lo、11Sh号染色体可以提高伸长率。推测这些染色体上可能具有对应性状的基因。

【题目】QTL遗传效应正反交差异研究
【中文关键词】QTL遗传效应正反交差异研究
【英文关键词】QTL
【中文摘要】应用改良AD模型对转基因棉花QTL突变体系进行遗传效应的正反交比较分析,结果表明,农艺性状的主要遗传方差组分分解正反交表现一致,除铃重存在显著的遗传背景加性效应(A2)外,子棉产量、皮棉产量、衣分和铃数均存在显著或极显著的dQTL加性效应(A1)和显性效应(D1),农艺性状均有显著或极显著的遗传背景显性效应(D2);棉花纤维性状的主要遗传效应正反交之间无显著差异。铃重的dQTL的加性和显性效应与环境的互作存在显著差异。对转基因系、受体及三个品系的dQTL加性效应分解结果也表明,正反交对不同材料各性状的加性效应估计也是一致的。本文还对不同组合正反交时的纯合及杂合显性效应进行预测比较。

【题目】大豆亚麻酸相关基因的标记和验证
【中文关键词】大豆;亚麻酸;分子标记
【英文关键词】Soybean;Linolenic acid;Molecular marker
【中文摘要】大豆油脂组分决定着大豆品质和加工特性,其中亚麻酸含量关系到大豆油加工的成本和大豆油的品质特性。以哈89016和黑河18作为杂交亲本创造遗传群体,利用BSA方法,找到与亚麻酸含量相关的标记Satt286,根据Satt286在大豆杂交后代群体中的池子个体带型和表型性状,计算得到控制亚麻酸位点的引物Satt286与控制低亚麻酸的基因连锁。分析结果表明,控制亚麻酸的位点和引物距离9.5cM;t 测验分析Satt286引物标记分组的高、低亚麻酸个体的实际亚麻酸含量,得到的平均值分别为3.91%和6.36%,二者差异达到极显著水平,说明Satt286引物作为筛选低亚麻酸品种的标记是有效的。在哈89016和黑河18后代(F4)群体中挑选出亚麻酸含量最低个体13个和最高个体9个,这些个体的带型和表型性状对亚麻酸含量控制基因符合率为82%,这表明引物Satt286与控制亚麻酸的基因是真实连锁的,可以作为群体后代的筛选标记。利用实时定量荧光PCR技术分析了大豆哈 89016和黑河18品种亚麻酸相关基因Fad3c的基因表达量,结果表明,在发育的籽粒中,低亚麻酸品种哈 89016的Fad3c的基因转录量明显低于黑河18,证实了大豆亚麻酸Fad3c基因的表达量与品种亚麻酸含量的高低有关。
【英文摘要】Oil composition is one of critical factors affecting the qualities and processing propertiesof soybean,and linolenic acid content is closely related to the processing cost and qualities of soy bean oil. In the experiment,Ha 89016 and Heihe 18 were used as parents to develop F2genera tions,and bulked segregant analysis (BSA)method was adopted to detect SSR markers conferringlinolenic acid content. Satt286 was found to closely link with genes controlling linolenic acid content,with a genetic distance of 9.5 cM. The average content of lower and higher linolenic acid individuals differentiated by Satt286 was 3. 91% and 6. 36%, respectively, and their differencereached 0.01 significant level. From the filial 4 generation of hybridization between H89016 andHeihe 18,13 individuals with lower linolenic acid content and 9 with higher linolenic acid contentwere selected and the accuracy betweenmolecular marker and phenotypic value of each individualreached 82%,which confirmed the primer Satt286 closely linked with genes controlling linolenicacid content and could be used to select individuals differed in linolenic acid content. The expres sion level of geneFad3c,which was related to linolenic acid content,were analyzed by rea l timequantitative PCR method between soybean Ha 89016(lower linolenic acid content)and Heihe 18(higher linolenic acid content),and results showed the transcription rate of Ha 89016 was signif icantly lower than that of Heihe18,which further confirmed that the expression level of theFad3cgene was related to the final linolenic acid content in different soybeans.

【题目】大豆接种疫霉根腐病菌后苯丙氨酸解氨酸活性变化的研究
【中文关键词】大豆疫霉根腐病;苯丙氨酸解氨酶;酶活性
【英文关键词】Phytophthora RootRot;L phenylalanin ammo nialyase;Enzymatic activity
【中文摘要】大豆疫霉根腐病是一种危害严重的疫霉病害,对于抗病性的生理生化机制研究很少。苯丙氨酸解氨酶是联系初级代谢和次级代谢的关键酶,对于植物抗病性具有重要意义。为探讨苯丙氨酸解氨酶活性变化与大豆对疫霉根腐病抗性的关系,对不同抗、感病大豆品种接种疫霉根腐菌1号生理小种前及接种24、48、72、96 h后测定叶片中苯丙氨酸解氨酶活性的变化特点进行分析,探讨苯丙氨酸解氨酶在抗大豆疫霉根腐病中所起的作用。结果表明:接种大豆疫霉菌1号生理小种后,抗、感病品种叶肉细胞中苯丙氨酸解氨酶活性都呈现出规律性变化趋势,但在抗、感病大豆品种中峰值变化幅度不同,表明大豆对疫霉根腐病的抗性与苯丙氨酸解氨酶活性有关。
【英文摘要】Soybean Phytophthora root rot is a serious Phytophthora disease. L phenylalanin ammo nialyase(PAL)as a keymetabolic enzyme that linked the primary and secondarymetabolism, is important to disease resistance of plant.To discussthe relationship between PAL activity and Phytophthora root rot resistance in soybean. Soybean cultivars resistantor sensitiveto Phytophthora root rotwere inoculatedwithPhytophthora sojaerace 1, and the PAL activity before inoculation and 24, 48,72 and 96 h after inoculationwas determined.The result showed that the PAL enzymatic activity changed regularly afterbeing inoculated byPhytophthora sojaerace 1,while the changing rangeswere different in resistantand sensitive soybean cult ivars.Therefore, there is some relationship between the PAL activity and the resistance of soybean to Phytophthora root rot.

【题目】收获期对大豆生育期高油大豆油分及产量影响
【中文关键词】大豆;收获期;油分;产量
【英文关键词】soybean, harvest time, oi1, yield
【中文摘要】利用不同生育期高油大豆品种的收获期试验,来研究收获期对不同生育期高油大豆品种油分及产量的影响。采用分期收获的方法对6个不同生育期高油大豆品种进行处理,利用近红外谷物品质分析仪进行油分分析,DPS数据处理系统进行数据处理。试验表明,收获期对大豆油分含量和产量有显著的影响。从初熟期开始,随着收获期的延迟,各品种油分含量呈先上升后下降有规律的变化趋势,6个品种的油分含量变化幅度为0.37~0.87个百分点,每个品种都有一个最佳的收获时期以获得最高的油分含量,但油分含量变化情况和品种的生育期相关性不大,是由品种本身的遗传特性决定的。播期对产量也有较明显的影响作用,四个生育期相对较长的品种黑农44、垦农19、合丰48号和合丰47号产量变化较大,达到了极显著水平,而两个早熟品种的产量变化较小,不显著,产量变化总体趋势是晚熟品种>中熟品种>早熟品种。不同生育期的高油品种适期收获能获得较高的油分和产量。
【英文摘要】The research showed that harvest time had the significant effect on oil content and yield of high-oilsoybean. With the delaying of the harvest time, the content of oil increased the maximum value at first, andthen dropped. The ranges of oil content of the six varietiesvariedfrom 0.37 to 0.87 percentage point, the oilcontent variation of Heinong44 reached very significant different level, Hefeng48 and Hefeng40 reachedsignificant different level. The harvest time had the significant effect on the yield. The yield of fourlate-

maturing varieties increased first, then decreased, and reached very significant different level, but theharvest time have little effect on the two early-maturing varieties.

【题目】大豆油分蛋白质含量相关 QTL的实用性验证
【中文关键词】大豆, 油分含量, 蛋白质含量, QTL
【英文关键词】Soybean (Glycine max L. Merrill), Oil content, Protein content, QTL
【中文摘要】本文利用已发表的一些与油分、蛋白质含量主效 QTL 相连锁的 SSR 标记,对 72 份全国各地高油、高蛋白种质资源进行蛋白质和油分含量的分析。通过对9个SSR位点各等位变异的蛋白质和油份含量的方差分析,检测到4个与油分含量相关的等位变异,以及4个与蛋白质含量相关的等位变异。其中satt193satt491、satt030和satt331分别在DNA片段长度为210~280 bp之间检测出与油分含量相关的等位变异。Satt523、satt321、satt231和satt578在DNA片段长度为170~320 bp之间检测出和蛋白质含量相关的等位变异。实验证实了与这些位点相连锁QTL的通用性及实用性。
【英文摘要】Analysis oil and protein content of 72 different areas in China soybean cultivars by some reported SSRloci of main QTL for oil and protein content. Analysis of variance is used to detect the oil and protein content ofevery allele of 9 SSR loci, the result shows that four alleles correlative with oil content and four alleles correlativewith protein content have been found. Between the 210~280 bp of DNA fragment, satt193, satt491, satt030,satt331 indicate the representative relationship with oil content. Satt523, satt321, satt231, satt578, between the170~320 bp of DNA fragment, indicate the representative relationship with protein content. The versatility andpracticability of these main QTL for oil and protein content have been confirmed.

【题目】中俄大豆种质遗传多样性分析
【中文关键词】SSR;野生大豆;栽培大豆;遗传多样性
【英文关键词】SSR;W ild soybean;Cultivated soybean;Genetic diversity
【中文摘要】种质资源的扩增、改良和创新是解决大豆遗传基础狭窄的主要途径。利用SSR分子标记技术对来自俄罗斯和黑龙江省的82份野生大豆和东北四省区的39份栽培大豆材料进行遗传多样性分析,为种质资源利用和创新提供分子依据。在所合成的45对SSR引物中, 12对引物扩增结果表现出良好的多态性,多态性位点共检测50个等位基因,每个位点2~7个,平均4. 17个,平均多态性信息量为0. 595。聚类分析结果表明,在遗传相似系数0・734处,野生大豆和栽培大豆被明显的分开,与以往大豆属Soja亚属的形态学分类结果相一致,为野生大豆和栽培大豆分为两个种提供了分子水平上的依据。野生大豆和栽培大豆的平均遗传距离分别为0. 2595和0. 1895,表明野生大豆的遗传多样性比栽培大豆丰富。因此,可以利用俄罗斯和东北地区的野生大豆特有等位变异来扩大东北栽培大豆遗传多样性,进而拓宽东北大豆遗传基础。
【英文摘要】The collection, improvement and innovation of germplasm resources are main ways to enrich the genetic basis ofsoybean.The genetic diversity of84 accession ofwild soybean from Russia andHeilongjiang province,China, and 39 acces sion of cultivated soybeanfromNortheastChina,was studied by SSR technique.Forty five SSR primerswere synthesized according to published data, and 12 outof them had polymorphic alleles.A totalof50 alleleswere observed, the numberof a lleles in different loci ranged from 2 to7, averaging4. 17 per locus, the average polymorphism information content(PIC) was0. 595.Cluster analysis showed thatwild and cultivated soybean belonged to two species from the dendgrom at the site ofge netic similarity coefficient0. 734,which conformed to phenotypic results.The average genetic distance ofwild soybean andcultivated soybean were 0. 2595 and 0. 1895 respectively,which suggested thatwild soybean had more polymorphism thanthat of cultivated soybean.Hence,wild soybean from Russia andNortheastChina could be used to broaden the genetic basisof cultivated soybean in NortheastChina.

【题目】大豆高蛋白基因分子标记及其在大豆育种中的应用,
【中文关键词】大豆;高蛋白;分子标记辅助育种;QTL; SSR
【英文关键词】Soybean;High protein;Molecularmarker assistantbreeding;QTL; SSR
【中文摘要】选用高蛋白大豆黑农35和高油大豆黑农45作为亲本杂交获得F2分离群体,进行大豆高蛋白基因SSR分子标记。共筛选覆盖大豆全基因组的251对SSR引物,其中40对SSR引物在亲本间具有多态性,用这40对SSR引物分别对F2分离群体进行扩增,用MapmakerExp3. 0和MapmakerQTL1. 1软件进行作图和定位分析。定位得到高蛋白QTL 1个,与satt532连锁,遗传距离为0. 2 cM,贡献率为32. 7%,位于大豆公共遗传图谱的D1a+Q连锁群。利用该引物在不同大豆材料中进行高蛋白材料检测和筛选,在56份高蛋白材料中筛选到47份,检出率达到83・93%。说明引物satt532具有一定的检测通用性,可以利用它筛选高蛋白大豆材料。
【英文摘要】Soybean protein content is a quantitative traitcontrolled bymult i genes, and tagging these genes by usingmolecu larmarkers has strong applied values. F2population made from Heinong 35×Heinong 45 were used to map high proteingenes. 251 pairofSSR primers covering thewhole soybean genomewere screened, and 40 pairof them were polymorphic between the parents.The genetic linkage map was constructed withMapmakerExp3. 0 and QTL analysiswas done by usingMapmakerQTL1. 1.One high protein QTL linkingwith satt532 in the LG D1a+Q of soybean consensusmap was tagged,the genetic distancewas 0. 2 cM, the variance ratiowas 32. 7%.The primer satt532 was used to exam and screen the highprotein soybeanmaterials, 47 shareswere screened from 56 ones, and the ratio of the examination reached 83. 93%.The result suggests that the primer of satt532 has the common identity and can be used to screen the high protein soybeans.

【题目】高产大豆新品系哈交 5337 和哈交5489再生条件的优化
【中文关键词】大豆;子叶节;分化率
【英文关键词】Soybean;Cotyldonary nodes;Rate of shooting
【中文摘要】为了拓宽大豆受体材料基因型,提高转基因大豆的应用价值,对两个综合性状较好的新品系大豆哈交5337和哈交5489进行子叶节器官发生途径再生条件的优化研究。在芽诱导培养基中添加不同浓度6　BA和IBA,采用正交法进行分析,取含6　BA(G1)萌发培养基中的大豆子叶节与不含6　BA(G2)萌发培养基中的大豆子叶节做平行对照,结果表明:哈交5337最适的萌发培养基与芽诱导培养基的组合为G1S7(萌发培养基中不添加6　BA,芽诱导培养基中添加1. 7 mg・L-16　BA和0. 1 mg・L-1IBA)和G2S4(萌发培养基中添加1. 0 mg・L-1的6　BA,芽诱导培养基中添加1. 1mg・L-16　BA和0. 1 mg・L-1IBA);哈交5489最适的萌发培养基与芽诱导培养基的组合为G1S4(萌发培养基中不添加6　BA,芽诱导培养基中添加1. 1mg・L-16　BA和0. 1mg・L-1IBA)和G2S4(萌发培养基中添加1. 0 mg・L-1的6　BA,芽诱导培养基中添加1. 1 mg・L-16　BA和0. 1 mg・L-1IBA);同时确定两个品系大豆在丛生芽分化阶段采用延迟筛选方法,草铵膦筛选浓度为3. 5 mg・L-1。
【英文摘要】Plant transformation is an importantapproach in genetic engineering breeding, greatadvances have been achievedin soybean transformation recently. In order to broaden soybean receptor genotypes and enhance the application value oftransgenic soybean, new soybean linesHajiao 5337 andHajiao 5489 were used to optimize the regeneration of the cotyledonnode organ. Differentconcentration of6　BA and IBAwere used in the shoot inductionmedium, the ratio ofshootingwas analyzed using the orthogonal analysis. The cotyledon node grown in the germinatedmedium with 6　BA(named G1)and thegerminated medium without6　BA(namedG2)were used as controls, respectively. It indicated thatG1S7 andG2S4 was theoptimum combination for the cotyledons ofHajiao 5337 in germinatingmedium and shooting inductionmedium,whileG1S4and G2S4 forHajiao 5489. The adoption of the delay screening, the optimal screening concentration ofGlufosinate　ammon　ium toHajiao 5337 andHajiao 5489 was 3. 5 mg・L-1in shooting inductionmedium.

【中文摘要】The glycation of rice proteins with reducing sugars was investigated in an attempt to improve their solubilityand functionality. Rice proteins isolated from a Chinese milled medium-grain rice were glycatedwith glucose, lactose, maltodextrin, or dextran in 2% aqueous dispersions. The sugar that provided themost improvement of the solubility, emulsification activity (EA) and emulsification stability (ES) of theMaillard reaction products was glucose. The optimum reaction conditions were at pH 11, 100 C, andreaction time 15 min, which increased the solubility, EA and ES of rice protein from 20%, 0.46 and 11.1to 92%, 0.64 and 18.2, respectively. Extending the reaction time beyond 15 min continued the developmentof latter-stage Maillard browning products without improvements in the functional properties ofthe Maillard reaction products. SEC – HPLC analysis with light scattering detection showed a decrease ofthe weight-averaged molecular weight from 500 to 100 K during the initial 15 min.

【题目】Effects of Alcalase/Protease N treatments on rice starch isolation and their effects on its properties

【中文关键词】Rice starch;Starch isolation;;Alcalase/Protease N;Pasting;Rheology

【英文关键词】Rice starch;Starch isolation;;Alcalase/Protease N;Pasting;Rheology

【中文摘要】The effects of different protease treatments on rice starches and their properties were studied. The rice starches produced from protease N exhibited higher pasting viscosities than those produced from alcalase.The hot pastes of the starches produced from protease N also showed higher elastic moduli, zeroorder Newtonian viscosities and yield stresses than those produced from alcalase. No differences were found in the crystalline pattern, thermal properties, granules appearance, and average molecular weight (Mw) of the rice starches between the two protease treatments. But the Mw of the pasted starch produced from protease N was higher than that produced from alcalase. When additional protease was added to the isolated starches and the mixture pasted, the Mw of the starches pasted with added alcalase was significant lower than that of the starches pasted with added protease N. The reduction in molecular weight suggested that alcalase had modified the starch molecules during pasting.

【题目】播期、密度对高油高产大豆合丰50脂肪含量及产量影响研究

【中文关键词】播期;密度;大豆;脂肪;产量

【英文关键词】Sowing date;Density; Soybean;Oil content;Yield

【中文摘要】以合丰50为材料,分7个播期、5个密度,研究不同播期及密度对其品质、产量及农艺性状的影响。结果表明:播期及密度对高油高产大豆品种合丰50的产量有较大的影响,随播期的延迟和密度的增加,该品种的产量呈先上升后下降

的变化趋势,差异达到极显著水平;播期对油份含量的影响较大,而且规律性极强,即随播期的延迟各密度处理合丰50的油份含量下降。不同密度处理对油份含量的影响较小,而且规律性也不强。合丰50的最佳播种时期为5月9日左右,而最适密度为25万株·hm-2,此时可获得最高产量和较高的含油量。

【英文摘要】New soybean varietyHefeng 50 was used to study the response of oil content and yield to different sowing dates(25thApri,l 2ndMay, 9thMay, 16thMay, 23thMay, 30thMay, 6thJune)and densities(20, 25, 30, 35 and 40 104plants · ha-1).Results showed that sowing dates and densities had great influence on yield ofHefeng 50,with the sowing date delayed anddensity increased, the yield ofHefeng 50 showed increase and then decrease trend, and significantdifferencewere observedamong treatments; sowing dates had significant influence on oil content, with the sowing date delayed, the oil content decreased regularly; planting densities had no obvious influence on oil content.Results suggest thatunder the planting densityof25×104plants · ha-1and the sowing date of9thMay, soybean varietyHefeng 50 had highestyieldwith higheroil content.

【题目】Structure-viscosity relationships for starches from different rice varieties during heating

【中文关键词】Rice starch; Viscosity; Particle size; Amylose; Short-range order

【英文关键词】Rice starch; Viscosity; Particle size; Amylose; Short-range order

【中文摘要】The effects of starch particle size and leached amylose on the viscosity of rice starch dispersions and changes of short-range structure and amylose content in starch granules of different rice varieties during heating were investigated. It was found that starch granule swelling increased rice starch dispersion viscosity during heating. The viscosities of the starch dispersions during heating were principally dependent on granular volume fraction and independent of starch variety. A distinct correlation between the amount of leached amyloseand swelling of starch granules was also found. High initial amylose concentrations in starch granules reduced swelling during heating, thereby reducing rice dispersion viscosities. Fourier-transform IR spectroscopy indicated that the loss of short-range order was significantwhen the temperature reached the pasting onset temperature. The short-range order of waxy and medium grain rice starches was higher than that of long grain rice starches before gelatinization. The loss of order of waxy and medium grain rice starches was greater than that of long grain rice starches during heating, which was due to the presence of amylose, restraining the swelling and disruption of starch granules during heating.

【题目】The isolation of rice starch with food grade proteases combined with other treatments

【中文关键词】rice starch; proteases; proteins; isolation

【英文关键词】rice starch; proteases; proteins; isolation

【中文摘要】The efficiency of starch isolations from milled rice with six food-grade protease preparations and combinations with ellulase, high-intensity ultrasound or defatting treatments were investigated. Alcalase and protease N 'Amano' (Protease N) were found to provide for a better separation of the rice starch from protein. Protease hydrolysis of the rice flour proteins combined with cellulase and defatting treatments lower residual protein content further to values which were similar to the conventional alkaline steeping method. Protein removal by hydrolysis with the two proteases was found to be most enhanced with a Cellulase pretreatment followed by initial pH adjustments of 10.5 for the alkaline protease Alcalase, and 8.5 for the neutral protease N. There were differences between the trough to final viscosities of the starches prepared with alcalase and protease N. There were no notable differences among different treatments of the isolated starches from the differential scanning calorimetry measurements. Most rice starch granules treated with protease showed no apparent surface damage as observed from scanning electron micrographs. Particle size distribution analysis revealed that the flour displayed bi-model size distribution. The higher sized fraction (10 to 100 mu m) decreased rapidly when protease treatments were applied. The isolation of rice starch with proteases combined with other treatments could produce rice starch with native structure, limit the waste products from the separation process and provide a prospective for the design of a commercial process.

【题目】The effect of rice variety and starch isolation method on the pasting and rheological properties of rice starch pastes
【中文关键词】Rice Starch; Pasting; Rheology; Starch isolation
【英文关键词】Rice Starch; Pasting; Rheology; Starch isolation
【中文摘要】The effect of rice variety and starch isolation method on the pasting and theological properties of rice starches was evaluated. One waxy and three non-waxy rice varieties from California with a range of amylose contents of 1.6-26.5% and four methods of isolation were evaluated. A rotational rheometer (RR) was used to measure the pasting and theological properties of starch dispersions (8% w/w). The RR pasting curves had similar shapes to those from a rapid visco-analyzer (RVA). The four treatments used for isolating starch were a protease, NaOH (0.1% and 0.4%), or sodium dodecyl sulfate (SDS) (1.0%). The NaOH (0.4%) and SDS treatments were found to reduce the peak pasting temperatures of the non-waxy starches as compared with the protease and NaOH (0.1%) treatments. The same trend of the treatments was found with the elastic moduli, low shear viscosities, and yield stresses of the non-waxy starch pastes measured at 65 degrees C, immediately after pasting. The elastic moduli of the waxy starch pastes appeared to be least affected by method of starch isolation, but the low shear viscosity and yield stress of the protease starch paste was significantly higher than the paste from the other three treatments. Overall, the method of rice starch isolation was found to affect the gelatinization and theological characteristics of hot rice starch paste

【题目】Paste viscosity of rice starches of different amylose content and carboxymethylcellulose formed by dry heating and the physical properties of their films
【中文关键词】dry heating; rice starch; rice starch-based film; pasting viscosity; particle size; physical properties
【英文关键词】dry heating; rice starch; rice starch-based film; pasting viscosity; particle size; physical properties
【中文摘要】Starch modified by combination with sodium carboxymethylcellulose (CMC) has been reported to have improved film properties. In this study, rice starches with different amylose content were heat-treated in a dry state after being impregnated with low or medium-viscosity CMC. Noticeable change was found in pasting properties of the starches after dry heat treatment with CMC. It indicated that crosslinkage occurred between the starch and CMC. The waxy starch showed significant change in viscosity throughout pasting after dry heating with CMC, suggesting that the ester bonds were mostly formed between the hydroxyl groups in amylopectin branches of rice starch and carboxylate acid groups of CMC. Particle size also increased after heat treatment with CMC. The modified starch-based films showed improvement in the tensile strength. Both water vapor and oxygen permeability reduced for the modified starch-based films. Dynamic mechanical analysis (DMA) study showed that the values of G' of modified starch-based film were higher than those of native starch-based film over the temperature range -40 to 60 degrees C. The heating process with CMC could be used as

a modification method for starch and provide desirable properties of starch-based films.

【中文关键词】Rice protein;Maillard reaction;Enzymatic hydrolysis;Emulsifying properties;Solubility
【英文关键词】Rice protein;Maillard reaction;Enzymatic hydrolysis;Emulsifying properties;Solubility
【中文摘要】The Maillard reaction was carried out under wet reaction conditions using rice protein product from limited hydrolysis to conjugate with various mono-, oligo- and polysaccharides. The Maillard reaction products (MRPs) prepared with rice protein hydrolysates at 5% degree (hydrolysed by Protease N) and dextran T20 (20 min at 100 _C) showed the greatest improvement in functionality. The solubility,emulsification activity (EA), and emulsification stability (ES) of the MRPs increased by factors of 3.5, 5.3 and 7.3 times, respectively as compared to MRPs formed with native rice proteins and dextran T20. Amino acid analysis indicated that lysine and arginine decreased significantly in the MRPs. Formation of MRPs reduced the surface hydrophobicity, which was in agreement with the change of solubility. However, further decreasing of the surface hydrophobicity resulted in lower EA and ES during the late stage of the reaction. Fluorescence analysis suggested that formation of late stage MRPs occurred after 20 min of the Maillard reaction. The molecular weight distributions showed that the functional properties of MRPs and the mechanisms of formation were affected by the peptide chain length.

【题目】黑河市秋季热量资源及逃逸积温在大豆生产上的利用
【中文关键词】大豆;秋季活动积温;逃逸积温;逃逸积温利用
【英文关键词】无
【中文摘要】对黑河市1982~2006年秋季气温分析表明,黑河市秋季日平均气温为13·48℃,极差为3·29℃;秋季热量资源年平均为552·86℃,极差为134·7℃;秋季活动积温平均为420·05℃,极差达449·9℃。秋季热量资源呈增加趋势,但活动积温却呈减少趋势,并且年际间变幅均有加大趋势,原因是逃逸积温大幅增加。提出三点预防途径,一是加强短、中、长期气象预报;二是研制应用有效的抗低温制剂;三是做好烟雾防低温工作,要注重材料布置的科学性。

【题目】大豆遗传群体选择与品质QTL获得
【中文关键词】遗传群体, QTL 定位, 等位变异

【英文关键词】Genetical population, QTL tagging, Equipotential line variation
【中文摘要】本文以高油品种哈交 97-5404-1 为母本,以哈交 99-5448-4 为父本,建立重组自交系群体。应用SSR 技术,对不同世代 F2:3、F2:6、F2:9遗传群体中的油份 QTL 定位进行了分析,不同世代大豆分离遗传群体中油份含量均接近于正态分布,油份含量性状表达偏向于母本哈交 97-5404-1,F2:3代获得了对油份贡献率较高的 QTL,F2:9代则获多个与油份相关的 QTL,大豆 F2:3和 F2:9代的遗传群体适宜用做品质性状的 QTL 定位,不同世代定位的油份 QTL,均与 SSR 位点 Satt193 有关,通过对来自全国不同品种的 SSR 进行了分析和方差分析证实,Satt193 在第一等位变异下(即 DNA 片段长度为 270 bp)做为油份的筛选标记具有实用性,而在第三等位变异下(即 DNA 片段长度为 220 bp)做为蛋白质材料的筛选标记具有应用性。
【英文摘要】In this study, the RIL population was formed from a cross between high oil content cultivar hajiao97-5404-1 as female parent and Hajiao99-5448-4 as male parent. SSR technology wasutilized, genetic maps wereconstructed and QTL tagging of oil content trait was alsoanalyzed in three different generations F2:3, F2:6, F2:9. The oilcontent in the different generations was all close to normal distribution. The expression of the oil content trait in thepopulation had trend to that of the female parent hajiao97-5404-1. We obtained the QTL spaces point from F2:3population which has high contribution rate about oil content, and multiple QTL spaces pointsabout oil content inF2:9population. The F2:3and F2:9were both suitable for genetic map study for some agronomic traits. The QTL spacespoints in different populations were all related with SSR locus Satt193. We did some analysis and variance analysisto the SSR from different nationwide cultivars. On the first equipotential line variation (the DNA fragment length270 bp), Satt 193 appeared to be a practical selective marker for oil content. However, the third equipotential linevariation (the DNA fragment length 220 bp), the satt193 was the selective marker for protein materials.

【题目】大豆内源基因调控与籽粒不饱和脂肪酸的形成
【中文关键词】大豆;亚油酸;荧光定量;fad2;fad3
【英文关键词】Soybean;Linoleic acid;Rea　l time PCR;fad2;fad3
【中文摘要】大豆亚油酸主要的合成途径是在大豆内源基因fad2调控下由油酸生成亚油酸。与此同时,在内源基因fad3作用下,亚油酸又部分转化成为亚麻酸。采用7个国内外具有一定代表性的栽培品种,对大豆籽粒成熟过程中不同时期的样本

进行定量PCR分析。结果表明:不饱和脂肪酸的合成过程是一个连锁反应,单独一个基因的表达不但影响与其相关的代谢途径,而且连带影响其他脂肪酸成分的积累。fad3的高量表达,促进不饱和脂肪酸积累总量的增加。籽粒发育后期,油酸含量下降,亚油酸,亚麻酸含量稳步上升。当fad2表达受抑制时,亚油酸含量也较低。

【英文摘要】Linoleic acid is one of the helpful composition in soybean forhuman health. Itsmain synthesis approach is from o leic acid under the regulation of endogenous genefad2.At the same time,endogenous genefad3 plays some effect on thesynthesis of linoleic acid. Seven soybean cultivars(lines)were planted and soybean podswere sampled every5 days from fullflowering, and the dynamic accumulation of unsaturated fatty acid and expression offad2 andfad3 gene in soybean seedswere determined.Result suggested that the synthesis ofunsaturated fatty acidswas a chain reaction, the expression of singlegene influenced both its relatedmetabolic pathway and the accumulation ofotherunsaturated fatty acid.The high expressionoffad3 promoted thewhole synthesis process.During the final stage of seed development, oleic acid contentdecreasedwhlielinoleic and linolenic content increased steadily.The linoleic contentwas lowerwhen the expression offad2 was inhibited.

【题目】Coordinating Control for an Agricultural Vehicle with Individual Wheel Speeds and Steering Angles

【中文关键词】略

【英文关键词】Agricultural machinery;Automatic control;Automation;Global Positioning System;Humans;Machine vision;Navigation;Prototypes;Vehicle driving;Wheels;
【中文摘要】略
【英文摘要】Automatic navigation of agricultural vehicles, such as tractors and harvesters, can increase the level of automation in the agricultural process, thereby lessening the human workload. In the agricultural environment, where vehicles move on uneven terrain, achieving maneuverability and mobility can be difficult, particularly when the path curvature is small or vehicle orientation and path tracking must be independently controlled. To obtain the desired maneuverability and mobility, one approach is to individually actuate the drive and steering functions of each wheel on a four-wheeled vehicle. For sensing and navigation, this prototype vehicle uses a combination of machine vision, a differential global positioning system (DGPS), and an inertial measurement unit (IMU). The focus of this work, however, is on path-following control. Although the vehicle is highly maneuverable due to its eight independent actuators, precise control is difficult due to the overconstrained nature of the actuation.

【题目】Dominant bacterial communities in the rumen of Gayals(Bos frontalis), Yaks (Bos grunniens) and Yunnan Yellow Cattle(Bos taurs) revealed by denaturing gradient gel electrophoresis
【中文关键词】Dominant bacterial communities Gayals Yaks Yunnan Yellow Cattle DGGE

【英文关键词】Dominant bacterial communities Gayals Yaks Yunnan Yellow Cattle DGGE

【中文摘要】The dominant rumen bacteria in Gayals, Yaks and Yunnan Yellow Cattle were investigated using PCRDGGE approach. The analysis of DGGE profiles, identification of dominant bands and phylogenetic analysis 16S rDNA sequences in DGGE profiles were combined to reveal the dominant bacterial communities and compared the differences between those cattle species. DGGE profiles revealed that Gayals had the most abundant dominant bacteria and the lowest similarity of intraspecies between individuals than other two cattle species. A total of 45 sequences were examined and sequence similarity analysis revealed that Gayals had the most sequences appeared to uncultured bacteria, accounting for 85.0% of the total sequences, Yaks and Yunnan Yellow Cattle had 44.4 and 68.8% uncultured bacterial sequences, respectively. According to phylogenetic analysis, the rumen dominant bacteria of Gayals were mainly phylogenetically placed within phyla firmicutes and bacteroidetes, and the known bacteria were mainly belonged to the genera Lachnospiraceae bacterium, Ruminococcus flavefaciens and Clostridium celerecrescens. Moreover, the dominant bacteria of Yaks were also mainly belonged to phyla firmicutes and bacteroidetes, and the known dominant bacteria were including Ruminococcus flavefaciens, Butyrivibrio fibrisolvens, Pseudobutyrivibrio ruminis, Schwartzia succinivorans and Clostridiales bacterium, most of them are common rumen bacteria. In addition, the dominant bacteria in Yunnan Yellow Cattle were belonged to phyla firmicutes, bacteroidetes and Actinobacteria, and the known dominant bacteria containing Prevotella sp., Staphylococci lentus, Staphylococcus xylosus and Corynebacterium casei. Present study first detected Staphylococcus lentus and Staphylococcus xylosus in the rumen of cattle.

【题目】Molecular cloning, sequence identification and tissue expression profile of three novel genes Sfxn1, Snai2 and Cno from Black-boned sheep (Ovis aries)

【中文关键词】Black-boned sheep Sfxn1,Snai3 and Cno Tissue expression analysis

【英文关键词】Black-boned sheep Sfxn1,Snai4 and Cno Tissue expression analysis

【中文摘要】The complete coding sequences of three of Black-boned sheep (Ovis aries) genes Sfxn1, Snai2 and Cno were amplified using the reverse transcriptase polymerase chain reaction (RT-PCR) according to the conserved sequence information of the cattle or other mammals and known highly homologous sheep ESTs. Black-boned sheep Sfxn1 gene encodes a protein of 322 amino acids which has high homology with the Sfxn1 proteins of five species— cattle 98%, pig 95%, human 95%, rat 93%, and mouse 93%. Black-boned sheep Snai2 gene encodes a protein of 268 amino acids that has high identity with the Snai2 proteins of six species—cattle 99%, pig 94%, human 93%, dog 93%, rat 91%, and mouse 90%. Black-boned sheep Cno gene encodes a protein of 214 amino acids that has high homology with the Cno proteins of four species—cattle 97%, human 75%, mouse 67%, and rat 65%. The phylogenetic tree

analysis demonstrated that Black-boned sheep Sfxn1, Snai2 and Cno proteins have close relationship with cattle Sfxn1, Snai2 and Cno proteins. The tissue expression analysis indicated that Black-boned sheep Sfxn1, Snai2 and Cno genes were expressed in a range of tissues including leg muscle, kidney, skin, longissimus dorsi muscle, spleen, heart and liver. Our experiment is the first to provide the primary foundation for further insight into these three sheep genes.

【英文摘要】The complete coding sequences of three of Black-boned sheep (Ovis aries) genes Sfxn1, Snai2 and Cno were amplified using the reverse transcriptase polymerase chain reaction (RT-PCR) according to the conserved sequence information of the cattle or other mammals and known highly homologous sheep ESTs. Black-boned sheep Sfxn1 gene encodes a protein of 322 amino acids which has high homology with the Sfxn1 proteins of five species— cattle 98%, pig 95%, human 95%, rat 93%, and mouse 93%. Black-boned sheep Snai2 gene encodes a protein of 268 amino acids that has high identity with the Snai2 proteins of six species—cattle 99%, pig 94%, human 93%, dog 93%, rat 91%, and mouse 90%. Black-boned sheep Cno gene encodes a protein of 214 amino acids that has high homology with the Cno proteins of four species—cattle 97%, human 75%, mouse 67%, and rat 65%. The phylogenetic tree analysis demonstrated that Black-boned sheep Sfxn1, Snai2 and Cno proteins have close relationship with cattle Sfxn1, Snai2 and Cno proteins. The tissue expression analysis indicated that Black-boned sheep Sfxn1, Snai2 and Cno genes were expressed in a range of tissues including leg muscle, kidney, skin, longissimus dorsi muscle, spleen, heart and liver. Our experiment is the first to provide the primary foundation for further insight into these three sheep genes.

【题目】Two Immunoregulatory Peptides with Antioxidant Activity from Tick Salivary Glands
【中文关键词】Immunoregulatory Peptides Antioxidant Activity
【英文关键词】Immunoregulatory Peptides Antioxidant Activity

【中文摘要】Ticks are blood-feeding arthropods that may secrete immunosuppressant molecules, which inhibit host inflammatory and immune responses and provide survival advantages to pathogens at tick bleeding sites in hosts. In the current work, two families of immunoregulatory peptides, hyalomin-A and -B, were first identified from salivary glands of hard tick Hyalomma asiaticum asiaticum. Three copies of hyalomin-A are encoded by an identical gene and released from the same protein precursor. Both hyalomin-A and -B can exert significant anti-inflammatory functions, either by directly inhibiting host secretion of inflammatory factors such as tumor necrosis factor-_, monocyte chemotectic protein-1, and interferon-_ or by indirectly increasing the secretion of immunosuppressant cytokine of interleukin-10. Hyalomin-A and -B were both found to potently scavenge free radical in vitro in a rapid manner and inhibited adjuvant-induced inflammation in mouse models in vivo. The JNK/SAPK subgroup of the MAPK signaling pathway was involved in such immunoregulatory functions of hyalomin-A and -B. These results showed that immunoregulatory peptides of tick salivary glands suppress host inflammatory response by modulating cytokine secretion and detoxifying reactive oxygen species.

【题目】Artificial selection of the melanocortin receptor 1 gene in Chinese domestic pigs during domestication
【中文关键词】coat colour domestic animal population genetics evolution
【英文关键词】coat colour domestic animal population genetics evolution
【中文摘要】Black coat colour is common in Chinese indigenous domestic pigs, but not among their wild ancestors, and it is thus presumed to be a ‘domestication trait.’ To determine whether artificial interference contributes to morphological diversification, we examined nucleotide variation from 157 Chinese domestic pigs and 40 wild boars in the melanocortin receptor 1 (MC1R) gene, which has a key role in the coat pigmentation of Sus scrofa. Compared with a pseudogene GPIP, our results showed that the joint effects of demography and selection have resulted in markedly low genetic diversity of MC1R in Chinese domestic pigs. Coalescent simulation and selection tests further suggest that the fixation of two non-synonymous substitutions associated with black colour is the result of artificial selection. In contrast, a much higher genetic diversity and only a single non-synonymous substitution were found among the wild boars, suggesting a strong functional constraint. Moreover, our conclusion is consistent with the preference for black colour in the ancient Chinese sacrificial culture. This case provides an interesting example of a molecular evaluation of artificial livestock selection and its associated cultural impact in ancient China.

【题目】Isolation, nucleotide identification and tissue expression of three novel ovine genes—SLC25A4, SLC25A5 and SLC25A6
【中文关键词】Sheep SLC25A4 SLC25A5 SLC25A6 Tissue expression analysis
【英文关键词】Sheep SLC25A4 SLC25A5 SLC25A6 Tissue expression analysis
【中文摘要】The complete coding sequences of three of sheep genes SLC25A4, SLC25A5 and SLC25A6 were firstly amplified using the reverse transcriptase polymerase chain reaction (RT-PCR) according to the conserved sequence information of the cattle or other mammals and known highly homologous sheep ESTs. Sheep SLC25A4, SLC25A5 and SLC25A6 genes encode three corresponding proteins of 298 amino acids which contain the identically conserved putative mitochondrial carrier protein domain. Sheep SLC25A4 protein has high homology with the SLC25A4 proteins of six species—cattle (99%), human (95%), rat (95%), mouse (94%), dog (94%) and chicken (89%). Sheep SLC25A5 protein has high identity with the SLC25A5 proteins of five species—cattle (100%), dog

(99%), mouse (98%), rat (98%) and human (98%). Sheep SLC25A6 protein also has high homology with the SLC25A6 proteins of four species—cattle (99%), human (97%), pig (97%) and chicken (93%). The phylogenetic tree analysis demonstrated that sheep SLC25A4, SLC25A5 and SLC25A6 proteins share a common ancestor. Moreover, SLC25A4, SLC25A5 and SLC25A6 proteins present stronger interaction each other. The tissue expression analysis indicated that sheep SLC25A4, SLC25A5 and SLC25A6 genes were expressed in a range of tissues including leg muscle, kidney, skin, longissimus dorsi muscle, spleen, heart and liver. Our experiment is the first to provide the primary foundation for further insight into these three sheep genes.

【题目】Molecular cloning, sequence characterization and tissue transcription profile analyses of two novel genes: LCK and CDK2 from the Black-boned sheep (Ovis aries)

【中文关键词】Black-boned sheep LCK CDK2 Tissue transcription profile
【英文关键词】Black-boned sheep LCK CDK2 Tissue transcription profile

【中文摘要】The complete coding sequences of two sheep genes—LCK and CDK2 were amplified using the rapid amplification of cDNA ends method based on three sheep EST sequences whose translated amino acids contain the domain PTKc_Lck_BIk and S_TKc domain, respectively. The sequence analyses of these two genes revealed that the sheep LCK gene encodes a protein of 509 amino acids which has high homology with the lymphocyte-specific protein tyrosine kinase (LCK) of eight species: bovine (99%), human (96%), dog (96%), Aotus nancymaae (95%), mouse (94%), rat (91%), horse (91%) and chicken (81%). The sheep CDK2 gene encodes a protein of 298 amino acids which has high homology with the cyclin-dependent kinase 2 (CDK2) of ten species: bovine (100%), goat (100%), rat (99%), mouse (99%), Chinese hamster (99%), dog (98%), golden hamster (98%), human (98%), horse (98%) and rhesus monkey (98%). The tissue transcription profile analyses indicated that that the Black-boned sheep LCK and CDK2 genes are generally but differentially expressed in the detected tissues including in tissues including spleen, muscle, skin, kidney, lung, liver and heart. These data serve as a foundation for further insight into these two genes.

【题目】Phylogenetic analysis of 16S rRNA gene sequences reveals rumen bacterial diversity in Yaks (Bos grunniens)
【中文关键词】Yaks Rumen bacteria 16S rRNA gene Phylogenetic analysis
【英文关键词】Yaks Rumen bacteria 16S rRNA gene Phylogenetic analysis
【中文摘要】Six matured male Yaks (Bos grunniens) with a mean live weight of 450 ± 23 kg (mean ± SD), were housed indoors in metabolism cages and fed pelleted lucerne (Medicago sativum). After an adjustment period of 24 days of feeding the diet, samples of rumen content were obtained for analysis of the bacteria in the liquor. The diversity of rumen bacteria was investigated by constructing a 16S rRNA gene clone library using the general bacterial primers F27 and R1492. A total of 130 clones, comprising nearly full length sequences (approx. 1.5 kb) were sequenced and submitted to BLAST and phylogenetic analysis. Using the criterion that similarity of 97% or greater with the sequences of cultivated bacteria, 16 clones were identified as Butyrivibrio fibrisolvens, Pseudobutyrivibrio ruminis, Ruminococcus flavefaciens, Succiniclasticum ruminis, Selenomonas ruminantium and Prevotella ruminicola, respectively. A further 10 clones shared similarity ranging from 90 to 97% with cultivated bacteria but the similarity in sequences for the remaining 104 clones were less than 90% of those of cultivated bacteria. Using a phylogenetic analysis it was found that the majority of the clones identified (63.8%) were located in the Low G ? C Subdivision, with most of the remainder (35.4% of clones) located in the Cytophaga-Flexibacter-Bacteroides phylum and one clone (0.8%) was identified as a Proteobacteria. It was apparent that Yaks have a large and diverse range of bacteria in the rumen content which differ from those of cattle and other ruminants.

【题目】Genetic diversity and origin of Gayal and cattle in Yunnan revealed by mtDNA control region and SRY gene sequence variation
【中文关键词】Cattle gayal genetic diversity mtDNA SRY
【英文关键词】Cattle gayal genetic diversity mtDNA SRY

【中文摘要】There are hump, humpless cattle and gayal distributed in Yunnan province, south-west China, but their genetic background remains unclear. To determine the origin and genetic diversity of Yunnan gayal and cattle (Diqing, Nujiang and Wenshan cattle), we analysed mtDNA control region sequences of 71 samples and SRY gene sequences of 39 samples, together with the available sequences in GenBank. The neighbour- joining phylogeny and the reduced median network analysis showed that Yunnan gayal originated from the hybridization between male Bos frontalis and female Bos taurus or Bos indicus, and that Yunnan cattle mostly originated from B. indicus, also containing some hybrids of male B. indicus and female B. taurus. The phylogenetic pattern of Yunnan cattle was consistent with the recently described cattle matrilineal pool from China and indicated more contribution to the Yunnan cattle from B. indicus than from B. taurus.

【题目】The role of MC1R gene in buffalo coat color
【中文关键词】Buffalo coat color MC1R
【英文关键词】Buffalo coat color MC1R
【中文摘要】Melanocortin-1 receptor (MC1R) plays a major role in pigmentation in many species. To investigate if the MC1R gene is associated with coat color in water buffalo, the coding region of MC1R gene of 216 buffalo samples was sequenced, which included 49 black river buffalo (Murrah and Nili-Ravi), 136 swamp buffalo (Dehong, Diandongnan, Dechang, Guizhou, and Xilin) with white and gray body, and 31 hybrid offspring of river buffalo Nili-Ravi (or Murrah) and swamp buffalo. Among the three variation sites found, SNP684 was synonymous, while SNP310 and SNP384 were nonsynonymous, leading to p.S104G and p.I128M changes, respectively. Only Individuals carrying homozygote EBR/EBR were black. The genotype and phenotype analysis of the hybrid offspring of black river buffalo and gray swamp buffalo further revealed that the river buffalo type allele EBR or the allele carrying the amino acid p.104S was important for the full function of MC1R. The in silico functional analysis showed that the amino acid substitutions p.G104S and p.M128I had significant impact on the function of MC1R. Above results indicate that the allele EBR or the allele carrying the amino acid p.104S was associated with the black coat color in buffalo.

【题目】Molecular cloning and characterization of two genes -PHKG2 and IRAK4 from black-boned sheep (Ovis aries)
【中文关键词】Black-boned sheep PHKG2 and IRAK4 tissue transcription profile
【英文关键词】Black-boned sheep PHKG2 and IRAK4 tissue transcription profile
【中文摘要】The complete coding sequences of two sheep genes-PHKG2 and IRAK4 were amplified using the rapid amplification of cDNA ends (RACE) method based on three sheep expressed sequence tags whose translated amino acids contain the mitochondrial carrier domain. The sequence analyses of these two genes revealed that the sheep PHKG2 gene encodes a protein of 406 amino acids which has high homology with the phosphorylase kinase, gamma 2 protein of five species: Cattle (99%), human (96%), mouse (92%), rat (91%) and chicken (63%). The sheep IRAK4 gene encodes a protein of 456 amino acids which has high homology with the interleukin-1 receptor-associated kinase 4 protein of six species: Cattle (94%), pig (88%), human (87%), mouse (79%), rat (79%) and chicken (54%). The tissue transcription profile analyses indicated that the Black-boned sheep PHKG2 and IRAK4 genes are generally but differentially expressed in the detected tissues including spleen, muscle, skin, kidney, lung, liver, heart, fat and small intestine. These data serve as a foundation for further insight into these two genes.

【题目】Matrilineal Components and Genetic Relationship of Silkies from China and Japan
【中文关键词】d-loop genetic diversity matrilineal origin mtDNA silkies
【英文关键词】d-loop genetic diversity matrilineal origin mtDNA silkies

【中文摘要】Silkie is a famous black-bone chicken breed with beautiful silky feather. The unique medical property of this chicken was recorded in Chinese traditional medicine dictionary about years ago. In this study, we analyzed the mtDNA D-loop sequence variation of Bairong Silkies from Fujian Province, China, together with reported Silkie mtDNAs from China and Japan, and studied their matrilineal components and genetic relationship. A total of haplotypes were detected, which could be assigned to six haplogroups (A-E, G). Among them, haplogroups D and G were exclusively presented in Japanese Silkies and Chinese Silkies, respectively. Chinese Silkies had higher frequency of lineages belonging to haplogroups A, B, and E, and lower frequency of haplogroup C than Japanese Silkies. For the four Chinese Silkie populations, most of samples of Taihe, Chengdu, and Hubei Silkies were grouped in haplogroups A, B, and C, whereas most of Bairong Silkies were grouped in haplogroup E. Five haplotypes were shared by Japanese and Chinese Silkies. The genetic diversity of each Silkie population varied, but the overall diversity of Chinese Silkies was similar to that of Japanese Silkies. Taken together, our results confirmed the genetic connection between Chinese and Japanese Silkies, but also clearly showed that the matrilineal genetic structures of Chinese and Japanese Silkies had some di erences.

【英文摘要】Silkie is a famous black-bone chicken breed with beautiful silky feather. The unique medical property of this chicken was recorded in Chinese traditional medicine dictionary about years ago. In this study, we analyzed the mtDNA D-loop sequence variation of Bairong Silkies from Fujian Province, China, together with reported Silkie mtDNAs from China and Japan, and studied their matrilineal components and genetic relationship. A total of haplotypes were detected, which could be assigned to six haplogroups (A-E, G). Among them, haplogroups D and G were exclusively presented in Japanese Silkies and Chinese Silkies, respectively. Chinese Silkies had higher frequency of lineages belonging to haplogroups A, B, and E, and lower frequency of haplogroup C than Japanese Silkies. For the four Chinese Silkie populations, most of samples of Taihe, Chengdu, and Hubei Silkies were grouped in haplogroups A, B, and C, whereas most of Bairong Silkies were grouped in haplogroup E. Five haplotypes were shared by Japanese and Chinese Silkies. The genetic diversity of each Silkie population varied, but the overall diversity of Chinese Silkies was similar to that of Japanese Silkies. Taken together, our results confirmed the genetic connection between Chinese and Japanese Silkies, but also clearly showed that the matrilineal genetic structures of Chinese and Japanese Silkies had some di erences.

【题目】Bacterial diversity in the rumen of Gayals (Bos frontalis), Swamp buffaloes (Bubalus bubalis) and Holstein cow as revealed by cloned 16S rRNA gene sequences
【中文关键词】Bacterial diversity 16S rRNA gene sequences Gayals Swamp buffaloes Holstein cow
【英文关键词】Bacterial diversity 17S rRNA gene sequences Gayals Swamp buffaloes Holstein cow
【中文摘要】Libraries of rumen bacterial 16S rRNA gene sequences of Gayals (Bos frontalis) and Swamp buffaloes (Bubalus bubalis) were cloned and sequenced in the present work to compare the bacterial diversity with the third published library of Holstein cow. Sequence similarity of 97% was used as the definition of operational taxonomic unit (OTU). The majority of the 470 sequences retrieved fell into the phyla of low G ? C subdivision (329 sequences) and Cytophaga – Flexibacter – Bacteroides (CFB, 123 sequences) with the percentages of 70 and 26.2, respectively. The remaining clones belonged to the phyla of Proteobacter, high G ? C gram positive bacteria (HGCGPB) and Spirochaetes, accounting for 3.8% totally. Only 73 clones (25 OTUs, 15.5%) could be closely related to cultured representatives. However, a larger fraction was related to uncultured representatives. Holstein cow may have more representatives of cultural bacteria and there were more uncultured clones for Gayals. The percentage of cultural representatives was 24, 13.3 and 9.5 for Holstein cow, Swamp buffaloes and Gayals, respectively. Twentythree OTUs of the 236 ones appeared in more than one library, five of which were cultural. Selenomonas ruminantium, Ruminococcus flavefaciens and Butyrivibrio fibrisolvens were found in two different libraries, while Succiniclasticum ruminis and Pseudobutyrivibrio ruminis were found in all three libraries. Some of the animalspecific bacteria that had not been described previously in the ruminal ecosystem, e.g. Allisonella histaminiformans for Gayals and Staphylococcus sciuri for Swamp buffaloes were also recovered.

【题目】Association of FATP1 gene polymorphisms with chicken carcasstraits in Chinese meat-type quality chicken populations

【中文关键词】FATP1 gene Association analysis Carcass traits Chicken SNP
【英文关键词】FATP1 gene Association analysis Carcass traits Chicken SNP
【中文摘要】In this study, we aimed to detect the single nucleotide polymorphisms (SNPs) of the chicken FATP1 gene and discern the potential association between FATP1 SNPs and chicken carcass traits. A total of 620 meat-type quality chickens from six commercial pure lines (S01, S02, S03, S05, S06 and D99) and two cross lines (S05 9 S01 and S06 9 S01) were screened by using the single-strand conformational polymorphism analysis (SSCP) and DNA sequencing. Five SNPs [g.49360G[A, g.48195G[A, g.46847A[G, g.46818A[G, and g.46555A[G] were identified in chicken FATP1 gene. SNP g.46818 A[G was a rare variant and was not considered in the subsequent analysis. Sixteen haplotypes were reconstructed on the basis of the other four SNPs. The linear regression model analysis indicated that there were significant associations of certain diplotypes with part of carcass traits, such as live weight (LW), carcass weight (CW), and semi-eviscerated weight (SEW) (P\0.05). In particular, diplotype H2H4 had a negative effect on LW, CW, SEW, and abdominal fat weight (AW); diplotype H6H10 had the highest reducing effect on subcutaneous fat thickness (SFT). Our results suggested that FATP1gene polymorphisms were associated with chicken carcass traits or was linked with the major gene. The SNPs in this gene may be utilized as potential markers for marker-assisted selection (MAS) during chicken breeding.

【题目】Molecular diversity of bacteria in Yunnan yellow cattle (Bos taurs) from Nujiang region, China
【中文关键词】16S rRNA Rumen bacteria Diversity Yunnan yellow cattle
【英文关键词】16S rRNA Rumen bacteria Diversity Yunnan yellow cattle
【中文摘要】The rumen content of four Yunnan Yellow Cattle (Bos taurs) were collected to determine the bacteria diversity by using 16S rRNA gene sequence analysis. A total of 129 sequences were examined and the sequences were referred as 107 OTU (Operational Taxonomy Unit) according to the similarity level of 97% in gene sequence. Similarity analysis revealed that Yunnan Yellow Cattle had 12 sequences (10 OTU) shared 97% or greater similarity with cultured rumen bacteria Butyrivibrio fibrisolvens, Succiniclasticum ruminis, Ruminococcus bromii, Clostridium proteoclasticum, Ruminococcus flavefaciens, Pseudobutyrivibrio ruminis, Jeotgalicoccus psychrophilus, and Prevotella ruminicola, which accounting for 9.3% of the total clones (9.2% of the total OTU). The further 12 sequences (9 OTU) shared 90 – 97% similarity with cultured bacteria Clostridium aminobutyricum, butyrate-producing bacterium, Schwartzia succinivorans, Prevotella ruminicola, Eubacterium ruminantium, Ruminococcus albus, and Clostridium termitidis, also accounting for 9.3% of the total sequences (8.3% of the total OTU). The remaining 105 sequences (90 OTU) shared less than 90% similarity with cultured bacteria, accounting for 81.4% of the total sequences (82.5% of the total OTU). According to the phylogenetic analysis, all sequences were phylogenetically placed within phyla of low G?C subdivision (accounting for 72.1 and 72.5% of the total clones and OTU, respectively) and CFB subdivision (Cytophaga-Flexibacter- Bacteroides; accounting for 27.9 and 27.5% of the total clones and OTU, respectively). Among the examined clones, rare bacteria Jeotgalicoccus psychrophilus was detected in the rumen of cattle.

【题目】Molecular cloning, sequence characteristics analysis and tissue expression profiles of three novel genes RhoB, RhoF and RhoH from the Black-boned sheep (Ovis aries)

【中文关键词】Black-boned sheep RhoB RhoF RhoH

【英文关键词】Black-boned sheep RhoB RhoF RhoH

【中文摘要】The complete coding sequences of three of the Black-boned sheep (Ovis aries) genes - RhoB, RhoF and RhoH were amplified using the reverse transcriptase polymerase chain reaction (RT-PCR) according to the conserved sequence information of the mouse or other mammals and known highly homologous sheep ESTs. The Black-boned sheep RhoB gene encodes a protein of 196 amino acids which contains the conserved putative RhoA_like domain and has high homology with the RhoB proteins of six species − cattle (100%), goat (100%), human (100%), pig (100%), mouse (100%) and chicken (97%). The Black-boned sheep RhoF gene encodes a protein of 215 amino acids that contains the conserved putative Rho4_like domain and has high homology with the RhoF proteins of five species − bovine (100%), human (94%), pig (93%), mouse (92%) and chicken (58%). The Black-boned sheep RhoH gene encodes a protein of 191 amino acids that contains the conserved putative Rho domain and has high homology with the RhoH proteins of four species − bovine (99%), human (96%), pig (96%) and mouse (96%). The phylogenetic tree analysis demonstrated that the Black-boned sheep RhoB, RhoF and RhoH proteins share a common ancestor. The tissue expression analysis indicated that the three genes were expressed in a range of tissues including small intestine, large intestine, liver, muscle, fat, lung and spleen. Our experiment is the first to provide the primary foundation for further insight into these three sheep genes.

【题目】Study on Association of Singe Nucleotide Polymorphism of MC3R and MC4R Gene with Carcass and Meat Quality Traits in Chichen
【中文关键词】chicken carcass traits MC3R/ MC4R meat quality polymorphism
【英文关键词】chicken carcass traits MC3R/ MC4R meat quality polymorphism
【中文摘要】Body composition, fat deposition and meat quality are important traits in chickens. Melanocortin receptor (MCR) plays an important role in central melanocortin system (CMS) and muscle cells. The purpose of the present study was to analyze association of the MC3R and the MC4R genes with chicken carcass and meat quality traits. Using eight meat-type chicken populations constructed with 5 pure lines (developed from Chinese local breeds) and 3 crossbreeds (S01×D99, S01×S05, S01×S10), the association of single nucleotide polymorphisms (SNP: MC3R – A1424G, MC4R – G923T and MC4R – C944T) of MC3R and MC4R gene with carcass and meat quality traits was studied. The results showed as follows: ( ) the -A G genotypes were significantly associated with most carcass traits except for semi-eviscerated percentage and leg muscle percentage (LMP), the MC4R-G 923T genotypes were significantly associated with live weight, carcass weight, leg muscle weight (LMW) and LMP, and the MC4R-G 923T genotypes were not significantly associated with most carcass traits except for LMW and LMP; (2) to meat quality, the MC3R – A1424G genotypes significantly a ected muscle crude protein (GP) value, and the allele A had positive additive e ects on slaughter traits. The MC4R-G 923T and the MC4R – C944T sites significantly a ected muscle GP value and glutamic acid (Glu) value; (3) the haplotypes based on the 2 SNP of MC4R gene were also significantly associated with meat quality traits, but had no significant associations with carcass traits. The research built the base for further analysis on relation between genetic variation of MC3R and MC4R genes and the carcass and meat quality traits, and molecular marker ’s application in breeding.

【题目】Sequence Characterization of the MC1R Gene in Yak (Poephagus grunniens) Breeds with Different Coat Colors
【中文关键词】MC1R Yak Coat Colors
【英文关键词】MC1R Yak Coat Colors
【中文摘要】Melanocortin 1 receptor (MC1R) gene plays a key role in determining coat color in several species, including the cattle.However, up to now there is no report regarding the MC1R gene and the potential association of itsmutations with coat colors in yak (Poephagus grunniens). In this study, we sequenced the encoding region of the MC1R gene in three yak breeds with completely white (Tianzhu breed) or black coat color (Jiulong and Maiwa breeds). The predicted coding region of the yak MC1R gene resulted of 954 bp, the same to that of the wild-type cattle sequence, with >99% identity. None of the mutation events reported in cattle was found. Comparing the yak obtained sequences, five nucleotide substitutions were detected, which defined three haplotypes (EY1, EY2, and EY3). Of the five mutations, two, characterizing the EY1 haplotype, were nonsynonymous substitutions (c.340C>A and c.871G>A) causing amino acid changes located in the first extracellular loop (p.Q114K) and in the seventh transmembrane region (p.A291T). In silico prediction might indicate a functional effect of the latter substitution. However, all three haplotypes were presented in the three yak breeds with relatively consistent frequency distribution, despite of their distinguished coat colors, which suggested that there was no across-breed association between haplotypes or genotypes and black/white phenotypes, at least in the investigated breeds. Other genes may be involved in affecting coat color in the analyzed yaks.

【题目】A homogenous nature of native Chinese duck matrilineal pool
【中文关键词】duck matrilineal pool mtDNA phylogenetic tree
【英文关键词】duck matrilineal pool mtDNA phylogenetic tree
【中文摘要】Background: China, with around 30 unique breeds, has a diverse duck genetic pool. Currently, there is no systematic report which investigates the genetic diversity, phylogenetic relationship, and matrilineal genetic structure of these domestic breeds and wild mallards (Anas platyrhynchos). Results: In this study, we sequenced the mitochondrial DNA (mtDNA) control region segments in 278 domestic ducks (Anas platyrhynchos domestica) from 19 indigenous breeds/populations and 70 wild mallard samples and analyzed them together with the 101 control region sequences from published sources. Fifty-two samples were then sequenced for a cytochrome b (Cyt b) gene fragment to solidify the pattern emerged from the control region sequences. All domestic duck and wild mallard haplotypes were essentially indistinguishable and were clustered together in the phylogenetic tree. There was no geographic differentiation and breed/population-specific distribution of duck lineages. Conclusion: Our results showed that unlike other domesticated farm animals in China such as chicken, cattle, goat, and yak with multiple matrilineal components, the matrilineal pool of Chinese ducks was homogenous.

【题目】随机留种下闭锁群体近交系数和基因杂合度的世代变化
【中文关键词】近交系数 基因频率 多样性
【英文关键词】inbreeding coefficient genetic frequency divercity Strain breeding
【中文摘要】在假定不发生基因突变、群体间无个体迁移的情况下,采用Monte Carlo计算机模拟方法模拟了不同群体规模、性 别比例和初始基因频率下闭锁群体近交系数和基因杂合度的变化。10个双等位基因座位分别位于1O条不同的常染色体上, 群体内实行随机留种,随机交配,世代不重叠,且每代参与繁殖的个体数相同。模拟试验共进行了5O个世代,i00次重复。结 果表明,群体规模较大、公畜数较多时,群体近交系数上升缓慢,基因杂合度较高;当初始基因频率处于中等水平时,群体内可 保持较高的基因杂合度;群体规模太小、公畜比例过低及基因的初始频率过低或过高,均不利于群体内遗传多样性的保持。
【英文摘要】On the assumption that there was no mutation, no individual migration between populations case, using Monte Carlo computer simulation method to simulate different population size, sex ratio and initial gene frequency locking the inbreeding coefficient and gene heterozygosity changes. 10 biallelic seat at 1O different autosomal, groups within the random selection, random mating, generation do not overlap, and each generation is involved in the propagation of individual numbers of the same. Simulation tests were carried out in 5O generations, I00 repeated. The results show that, the bigger population, sire number is large, the inbreeding coefficient rises slowly, gene heterozygosity is higher; when the initial gene frequency in the middle level, groups can be maintained in a higher gene heterozygosity; population size is too small, the low proportion of males and initial gene frequency is too low or too high, is not conducive to the population genetic diversity maintain.

【题目】4个黄牛群体黑素皮质素受体1(MC1 R)基因变异研究

【中文关键词】牛 云南 黑素皮质素受体1基因 毛色 PCR—RFLP

【英文关键词】Yunnan melanocortin receptor 1(M C1 R)gene coat color PCR—RFLP

【中文摘要】为了评价E(extension)座位对牛毛色性状的影响,采用DNA序列分析和PCR—RFLP技术对云南地区4 个黄牛群体(3个本地群体和1个引进品种)的黑素皮质素受体1(MC1R)基因的编码区进行了基因特征分析和群 体变异检测。结果,在文山黄牛、昭通黄牛和短角牛中发现E 和e 2种等位基因,检测到E ’。/E 、E /e和e/e 3种 基因型。在文山黄牛中E。和e等位基因的频率分别为0.54和0.46,在昭通黄牛中分别为0.70和0.30;而在迪庆 黄牛中共检测到E 、E。和e 3种等位基因,它们的频率分别为0.76、0.14和0.10,该群体存在E /E 、E。/E。、 E /E。、E /e和E。/e 5种基因型,未发现e/e型个体。与所研究个体的毛色性状相联系,发现E座位对牛的毛色 有重要影响,E 和 等位基因与黑色表型有关,而e等位基因与红色表型有关,但黄色、棕色和红色表型还与其 它座位基因相关联。

【英文摘要】In order to evaluate the influence of the extension(E)lOCUS on the color of cattle S coat, the genetic characteristic and variations of the encoding region for melanocortin一1 receptor (MC1 R)gene in four cattle populations sampled in Yunnan Province,including three indigenous populations and an imported breed,were assayed and analyzed by using DNA sequencing and PCR—RFLP techniques.The alleles E ,e and genotypes E /E ,E /e,e/e were identified in W enshan Yellow cattle,Zhaotong Yellow cattle and Shorthorn cattle.The frequencies of E and e alleles were 0.54 and 0.46 in W enshan Yellow cattle,0.70 and 0.30 in Zhaotong Yellow cattle. The alleles E ,E。and e were identified in Diqing Yellow cattle with the frequencies of 0.76, 0.14 and 0.10,respectively.The genotypes E /E ,E。/E。,E。。/E。,E。‘ /e and E。/e were iden— tifed in Diqing Yellow cattle,with the only exception of e/e.In contact with the coat color of the selected samples,it was found that E 1OCUS had an important influence on determinating the color of the cattle S coat.E and E。alleles were associated with black coat,and e allele was connected to red coat.W hereas yellow,brown and red fur were also influenced by other 1oci.

【题目】利用微卫星DNA 标记进行黄牛的亲子鉴定
【中文关键词】DNA标记 微卫星DNA 亲子鉴定
【英文关键词】DNA markers microsatellite DNA parentage identification Parentage identification
【中文摘要】亲子鉴定在畜牧业生产中具有重要实际应用价值, 常见其用于建立准确的系谱档案和家畜归属的诉讼 案件。其中标准的三联体(即在母子关系是已知的情况下, 鉴定假设父亲与子畜是否有亲生关系) 和单亲 [即父子(女) 或母子(女) 亲生关系的确定] 两种情况下的亲子鉴定在畜牧生产中具有普遍意义。以云南 文山黄牛为试验材料, 采用10 对常染色体微卫星DNA 标记对这两种情况下的亲子关系进行了检测分析。结 果表明, 常染色体微卫星DNA 标记在标准的三联体和单亲两种情况下都能用来进行亲子鉴定, 结果较准确, 但标准三联体情况下的亲子鉴定更准确。确定的不同模式下亲子鉴定的方法, 可为家养动物亲子鉴定标准方 法和流程的建立提供依据。
【英文摘要】Parentage identification is of the important application in animal husbandry. It is normally applied in establishing accurate pedigree archives and attributive lawsuit for livestock. Standard triplet (viz. female parent, her offspring and alleged father parent) and single parent (viz. offspring and alleged female or male parent) testings are the familiar cases in the parentage identification of domestic animals. In this study, standard triplet and single parent testing cases in Wenshan cattle (Bos taurus) were carried out by using microsatellite DNA markers. The results indicated that the autosomal microsatellite DNA marker can be used to examine the parenthood in the two cases, but the triplet testing was more precise than single parent testing. The protocol and methods established in this study can be used as the reference for the parentage identification and analysis in other domestic animals in the future.

【题目】12个水牛群体催乳素基因第4外显子遗传特征分析
【中文关键词】河流型水牛 沼泽型水牛 催乳素 Exon 4 测序 PCR—SSCP
【英文关键词】River buffaloSwamp buffalo Prolactin Exon 4 Sequencing PCR—SSCP
【中文摘要】催乳素对水牛乳腺发育、泌乳和乳蛋白基因的表达有明显的调控作用。该研究采用直接测序并结合 PCR SSCP技术,分析沼泽型水牛和河流型水牛12个群体385个个体的催乳素基因(PRL)第4外显子(exon 4)的遗 传特征。结果表明:水牛PRLexon4由180个核苷酸组成,在不同物种中具有高度保守性。序列分析发现水牛中 该外显子的第109位碱基处有C>T替换,为沉默突变,与泌乳性状之间无显著相关性。在9个沼泽型水牛群体中 均检测到该突变位点,其中P矿基因在7个沼泽型水牛群体中为优势基因,P 基因在德宏和富钟群体中为优势基 因,沼泽型水牛群体中船 基因频率在0.400~0.917之间,群

体平均值为0.629+0.049,具有地域分布特征。在3个 河流型水牛群体中.第109位核苷酸处均为C,未检测到多态。提示河流型水牛与沼泽型水牛已有较大的遗传分化。

【英文摘要】Effect of prolactin on buffalo mammary gland development, lactation and milk protein gene expression has obvious regulation function. The study of using direct sequencing combined with PCR SSCP technology, analysis of swamp buffalo and the Buffalo River 12 groups of 385 individuals and the prolactin gene (PRL) in exon fourth (exon 4) genetic characteristics. The results showed that: Buffalo PRLexon4 is composed of 180 nucleotides, highly conserved in different species. Sequence analysis showed that the buffalo in exon 109th base with C>T replacement, as the silent mutations, and there was no significant correlation between lactation traits. In 9 swamp type buffalo populations are detected in the mutant sites, where P mine gene in 7 swamp type buffalo populations for the dominant gene, P gene in Dehong and the rich bell group advantage gene, swamp type buffalo populations ship gene frequency in 0.400~0.917 between group 0.629+0.049, the average, with regional distribution characteristics. In 3 the river buffalo groups. 109th nucleotides are C, did not detect polymorphism. Tips for river and swamp buffalo has been significant genetic differentiation.

【题目】不同初始基因频率下闭锁群体遗传漂变的模拟

【中文关键词】群体规模 性别比例 基因频率 遗传漂变 计算机模拟

【英文关键词】population size male—female ratio gene frequency genetic drift computer simulation

【中文摘要】在假定不发生基因突变、群体间无个体迁移的情况下,群体内实行随机留种,随机交配,世代不重叠, 且每代参与繁殖的个体数相同。采用计算机模拟方法研究了不同初始基因频率、群体规模和公母比例下闭锁群体 内单个双等位基因座位的遗传漂变。模拟试验共进行了50个世代,100次重复。结果表明:群体规模较大,公畜数 较多以及初始基因频率处于中等水平时,基因频率在世代间发生随机波动的幅度较小,基因由于随机遗传漂变而 发生丢失或固定的概率也较低。群体规模太小、公畜比例过低以及基因的初始频率过低或过高,均会增加基因丢 失或固定的风险。

【英文摘要】Computer simulation was used to determine the random genetic drifts of a biallelic gene locus in closed populations under different initial gene frequencies,population sizes and male—female ratios,based on the assumption that there was no gene mutation and individual immigration between populations.Random selection and mating were implemen— ted in all generations,the generation was non—overlapping and the number of breeding animals was kept equal in each gen— eration.The simulation experiment was carried out for 50 generations and 100 replications.The results showed that the smaller random fluctuation of gene frequency,the lower probability of gene loss or fixation resulted from random genetic drift were gained for larger size population,more males and medium level of initial gene frequency.The danger of gene loss or fixation would be increased for smaller population,fewer males and lower or higher initial gene frequency.

【题目】鲁禽B1、B3系麻鸡体尺及屠宰性能的比较分析

【中文关键词】麻鸡 屠宰性能 体尺 表型相关

【英文关键词】Spotty plumage Carcass traits Body size Phenotypic correlation

【中文摘要】本试验以120日龄鲁禽B1系、B3系专门化品系为研究素材,测定其屠宰性能和体尺性状,分析 各性状间的相关性,并对部分指标进行产品质量分级。结果表明:除胸肌率外,鲁禽B3系在各项屠体指标和 分割性状上都高于鲁禽B1系,其中

品系间活重、半净膛重和全净膛重差异显著(P<0105),半净膛率差异极 显著(P<0101)。产品质量分级结果表明,鲁禽B3系的全净膛率、腿肌率和鲁禽B1系的全净膛率均高于 GB/T 19676-2005规定的一级标准,两品系的胸肌率和B1系的腿肌率略低于一级标准而远高于二级标准。 鲁禽B3系麻鸡的各项体尺指标均高于鲁禽B1系,其中品系间龙骨长差异显著(P<0105),体斜长和胸深差 异极显著(P<0101)。相关分析结果表明,各屠宰指标和体尺指标间呈中度或高度表型正相关,相关系数在01354~01992之间。

【英文摘要】Body size and carcass traitsweremeasured in B1 and B3 strains ofLuqin spotty plumage aged 120 days and their correlations were also analyzed1The results showed that all the carcass traits values of strain B3 chickenswere higher than those ofB1 chickens except the breastmuscle percentage; the differences between strainsB1 and B3 in liveweigh,t semi-eviscer atedweightand eviscer atedweightwere significant(P <0105), while the difference in semi-eviscerated percentage was significant (P<0101)1The eviscerated percentage and legmuscle percentage ofB3 chickens and the eviscerated percentage ofB1 chickenswere high- er than the first class standard ofGB/T 19676-2005; the leg muscle percentage of B1 chickens and the breastmuscle percentage ofbothB1 and B3 chickenswere higher than the second class standard but little low- er than the first class standard; the body size traits ofB3 chickenswere higher than B1 chickens, inwhich, the difference of fossilbone length between strainswas significant(P<0105), and the body slope length and breastdepthwere extremely significant (P<0101)。Middle or high phenotypic correlationswere found be- tween body size and carcass traits of strains B1 and B3 chicken with the correlation coefficient ranging from 01354 to 019921

【题目】宁夏滩羊·小尾寒羊及滩寒杂交群体BMP15基因和GDF9基因多态性
【中文关键词】滩羊 BMP15基因 GDF 9基因 PCR-RFLP PCR-SSCP
【英文关键词】Tan sheep BMP15 gene GDF9 gene PCR-FRFLP PCR-SSCP
【中文摘要】[目的]研究宁夏滩羊、小尾寒羊及杂交群体的骨形态发生蛋白15(BMP 15)和生长分化因子9(GDF9)基因多态性, 为宁夏滩羊的 保种及育种工作提供科学依据。[方法]以宁夏滩羊、小尾寒羊及滩寒杂交群体为研究对象, 分别设计2对引物, 采用PCR-RFLP方法和 PCR-SSCP检测方法, 检测BMP15基因和GDF9基因在宁夏滩羊、小尾寒羊及滩寒杂交群体中的多态性。[结果] BMP15基因的2对引 物扩增结果的RFLP分析表明, 不存在多态性位点; GDF 9基因的2对引物扩增片段的SSCP分析结果表明, 只有引物1扩增片段存在多 态性位点, 但未发现碱基序列发生改变。[结论]GDF9基因可能是控制小尾寒羊多胎性能的1个主效基因或是与之存在紧密遗传连锁 的分子标记。
【英文摘要】[Objective] To investigate the polymorphism of bone morphogenetic protein 15 (BMP15) and grow th differentiation factor 9 (GDF9) gene in Ningxia Tan sheep, Small tailHan sheep and hybrid population so as to prov idea scientific basis for breed ing and conservation. [Method] Ningxia Tan sheep, Small tailHan sheep and hybrid population were used as expermi ental anmials. Two pairs of prmiers were designed and the polymorphism of BMP15 gene and GDF9 genewere detected using PCR-RFLP and PCR-SSCP. [Results] The RFLP analysis results of BMP15 gene showed that therewas no polymorphism in three kinds of sheep. The SSCP analysis of GDF9 gene showed that only the fragment am plified by prmier I showed polymorphic sites, but base sequence changewas not found. [Conclusion] GDF 9 gene maybe a major gene controlling sheep fecundity or amolecularmarker.

【题目】生长激素基因多态性与滩羊生长性状关联性研究
【中文关键词】滩羊; PCR-RFLP;基因型; 生长性状; 关联性
【英文关键词】Tan sheep PCR-RFLP Genotype Growth traits Relevance
【中文摘要】[目的]探讨生长激素基因多态性与滩羊生长性状关联性,以提高滩羊整体生长速度和经济效益。[方法]选取69只宁夏滩羊为 研究对象, 运用PCR-RFLP 技术, 对已证实控制绵羊生长速度的主效基因生长激素(GH)基因进行检测, 统计各基因型与滩羊初生重、二 毛重、3月龄及6月龄体重之间的关联性。[结果]共检测到2种GH 基因型, 即AB和BB型, 基因型频率分别为0. 348 1和0. 651 9, A等 位基因频率为0. 181 1, 而B等位基因频率为0. 818 9。通过关联性统计分析, AB基因型与滩羊生长性状的关联性达到极显著水平(P < 0. 01)。[结论]AB基因型是影响滩羊生长速度的优势基因型。
【英文摘要】[Objective] To explore the relevance between sheep growth horm one (GH) gene po lymorphism and growth traits, so as to mi prove the overall growth rate and economic benefits. [M ethod] A total of 69 sheep in Ningxia Provincew ere used as expermi enta l anmials. TheGH gene polymorphism s o f Tan sheep were geno typed by PCR-RFLP. The association between the GH gene and growth traits including birth weight 35-dayw eight three-month weight and the six-month weightw as also analyzed. [Result] Two kinds of GH genotypes, nam ely, AB and BB w ere detected. The genotype frequencies were 0.3481 and 0.6519, respectively. The frequencies of A and B allele were 0.1811 and 0.8189, respectively. The resu lts o f corre lation statistical ana lysis showed that the re levance between AB genotype and growth traits in Tan sheep reached a significant level (P < 0.01). [Conc lusion] AB genotype was the preponderant genotype affecting the growth rate of Tan sheep.

【题目】沼泽型与河流型水牛Y染色体性别决定基因(SRY) 编码区序列的比较分析
【中文关键词】沼泽型水牛 河流型水牛 牛科 SRY基因 编码区序列
【英文关键词】swamp buffalo riverbuffalo bovidae sex-determiningregion Y(SRY)gene coding region sequence
【中文摘要】采用PCR产物直接测序技术对56头沼泽型水牛和26头河流型水牛Y染色体性别决定基因(SRY) 的 完整编码区及部分侧翼区序列进行了测定和比较分析,结果显示所有沼泽型水牛的SRY基因编码序列一致, 所有河流型水牛的SRY基因编码序列也一致;但沼泽型水牛和河流型水牛之间SRY基因编码区序列相比在 c.202位点存在一个G>C替换,这个碱基差异属于错义突变,导致了p.G68R,即编码的第68位氨基酸在沼 泽型水牛为甘氨酸G,而在河流型水牛为精氨酸R;经群体检测确定SRY基因c.202G>C变异为沼泽型水牛 和河流型水牛之间普遍存在的现象,而其他牛科物种在此位置不存在差异。本研究使用的PCR引物可以作为水牛性别鉴定的特异性引物,而发现的差异位点也可以作为区分沼泽型与河流型水牛和水牛群体雄性介导基因流检测的分子标记。
【英文摘要】The complete coding region and partial flanking regions of the sex-determining region Y (SRY)gene from 56 swamp buffaloes and 26 river buffaloes were sequenced bidirectionally using PCR products directly. There was no polymorphism in the SRY gene with in swamp and river type buffalo populations,where as there was onec. 202 G>C nucleotide variation between swamp buffalo and river buffalo. This resulted in the p.G68R difference in the 68th amino acid,and its encoding amino acid change from glycine(G)in swamp buffalo to arginine(R)in rive rbuffalo. The population genetic de-tection proved the variation of c.202 G>C was wide spread between swamp and riverbuffaloes,but not found in other bovidae species. The primers used in this study can be employed in the sex identification of buffalo. The variation of c. 202G>C difference of the SRY gene can also be used as a molecular marker to distinguish water buffalo from river buffalo and identify the introgression of patrilineal buffalo.

【题目】福安水牛线粒体DNA D-loop区遗传多样性分析
【中文关键词】福安水牛 mtDNAD—loop 遗传多态性 遗传分化
【英文关键词】Fu ’an buffalo mtDNA D-loop genetic diversity genetic divergence
【中文摘要】采用PCR产物直接测序的方法对20头福安水牛的线粒体DNA(mtDNA)D—LOOP区全序列进行了测定,并对所得数据进行了比对和分析。结果共检测到16种单倍型,48个核苷酸多态位点,其中单一变异位点9个,简约信息位点39个。在所分析的序列中,T,C,A和G的平均含量分别为27.9%,25.6%,31.9%和14.6%,核苷酸多样度为0.01946±0.00288,单倍型多样度为0.957±0.032,序列间平均核苷酸差异数是17.238,结果 显示福安水牛线粒体DNA遗传多样性丰富。系统发育和遗传距离分析显示:福安水牛与河流型水牛存在较大差 异,其自身聚为支持率极高的两大支,即世系A和世系B,揭示福安水牛存在两个母系血统来源。
【英文摘要】In this study,the D-loop region sequences of mitoehondrilaDNA(mtDNA)of 20Fu ’an buffalo samples were determined direct sequencing of PCR product.The seuqences were laigned and anlayzed to investigate the genetic variation and genetic divergence with in Fu ’an bfufalo population. Sixteen mitoehon- drial haplotypes and 48 polymorphic sites included 9 singleton polymorphic sites and 39 parsimony informative sites were detected. The average percentage vlaues of base composition of T,C,A and G were 27.9%,25.6%,31.9% and 14.6%,respectively.The nucleotide diversity,haplotype diversity and the average number of nucleotide differences within the population were 0.01946±0.00288. 0.957±0.032 and 17.238, respectively. The results indicated there were rich variations in Fu ’an bufflao population.Genetic distance and phylogenetic anlaysis showed that there was remarkable genetic divergence between Fu'an buffalo and river buffalo , and Fu ’an bufflao composed of two lineages,viz.lineageA and lineageB. This indicated that the re might be two matenral origins for Fu ’an buffalo.

【题目】鸡基因MC3R 和MC4R 的 RFLP 多态性及其与胴体性状的相关性
【中文关键词】鸡 MC3R 基因 MC4R 基因 胴体性状
【英文关键词】chicken MC3R gene MC4R gene carcass traits
【中文摘要】采用PCR-RFLP 方法,检测黑素皮质素受体3 基因(MC3R)和受体4 基因(MC4R)在济宁百日鸡、汶上芦花 鸡和莱芜黑鸡中的多态性,并分析各多态位点不同基因型与鸡胴体性状的相关性,在3 个供试群体中共检测到2 个 突变位点,分别在MC3R 基因1 424 nt 处(A→G)和MC4R 基因923 nt 处(G→T),并据此分别建立了2 个基因的Dde Ⅰ 和Fbr Ⅰ限制性内切酶检测体系.MC3R 基因多态位点对活体重(P=0.041 8)和胸肌重(P=0.012 6)有显著影响;MC4R 基因多态位点对肌间脂宽(P=0.036 6)有显著影响.多重比较结果表明,在MC3R 基因多态位点产生的3 种基因型中, MN 基因型个体的活体重和胸肌重均显著高于基因型MM 个体和NN 个体(P<0.05),屠体重和半净膛重均显著高于 MM 个体,全净膛重显著高于MN 个体;MC4R 基因多态位点产生的3 种基因型中,AB 基因型个体的屠体率和肌间 脂宽均显著高于基因型BB 个体(P<0.05).
【英文摘要】The SNPs of MC3R and MC4R genes in Jining Bairi chicken, Wenshang Luhua chicken and Laiwu Black chicken were detected by PCR-RFLP method. And the correlation between the polymorphism loci and the carcass traits were analyzed. As a result, an A/G mutation at nt 1 424 in MC3R gene and a G/T mutation at nt 923 in MC4R gene were identified,and the corresponding detection systems of Dde Ⅰ and Fbr Ⅰ were established. The statistical analysis showed that the MC3R polymorphism locus had a significant association with live weight (P=0.041 8) and breast muscle weight (P=0.012 6). The MC4R polymorphism locus had a significant association with intermuscular fat width (P=0.036 6).The multiple – range test indicated that in MC3R polymorphism locus, the LSM of live body weight, carcass weight, semi-eviscerated weight, eviscerated weight and breast muscle weight of MN chickens were significantly higher than MM chickens or NN chickens (P < 0.05). In MC4R polymorphism locus, the percentage of LSM of carcass and intermuscular fat width of AB chickens were significantly higher than BB chickens (P < 0.05).

【题目】水牛催乳素基因第3外显子群体遗传特征分析
【中文关键词】河流型水牛 沼泽型水牛 催乳素 exon 3 PCR-SSCP
【英文关键词】river buffalo swamp buffalo prolactin exon 3 PCR-SSCP
【中文摘要】催乳素基因(PRL) 第3 外显子(exon 3) 对奶牛产奶量、乳脂产量和乳蛋白产量有显著影响,但在水 牛中该基因的遗传特征及其与产奶性状是否有遗传关联目前还不清楚。本研究采用PCR-SSCP 并结合PCR 产 物直接测序技术,分析了沼泽型水牛和河流型水牛共12 个群体275 个个体PRL exon 3 的遗传变异,结果表 明: 水牛PRL exon 3 由108 个核苷酸组成,编码36 个氨基酸,在水牛群体中未检测到单核苷酸多态性位点 (SNPs) ,PRL exon 3 与水牛产奶量之间没有直接相关性。通过序列比对发现在不同物种中PRL exon 3 具有高 度保守性。但在PRL 第2 内含子(intron 2) 的2 265 nt 和2 335 nt 分别检测到G > A 突变和C > T 突变,其中 2 335 nt 位点突变仅在2 头槟榔江水牛中检测到。
【英文摘要】The exon 3 of prolactin gene had significant effect on yield of milk,milk fat and milk protein in cow,but the genetic characteristics and the relevance between milk production traits and gene mutation on the exon 3 of prolactin gene in water buffalo are unclear. In the present study,the sequence features of the exon 3 in prolactin gene were examined in 275 individuals which came from 12 river and swamp type buffalo populations using PCR-SSCP and PCR production direct sequencing methods. The results showed that the sequence of exon 3 in prolactin gene was consists of 108 nucleotides, and the sequence coding for 36 amino acid residues,the SNPs loci wasn't detected in water buffalo, so there was irrelevance between milk yield traits and the exon 3 of prolactin gene in water buffalo. The fragment had high conservative character in different species by sequences alignment. Two substitution was detected in intron 2 of prolactin gene,one is G > A substitution at the 2 265 th nucleotide and another is C > T substitution at the 2 335 th nucleotide. Moreover,the C > T substitution at the 2 335 th nucleotide was only detected in 2 Binlangjiang water buffaloes.

【题目】水牛β-LG基因3,4外显子遗传特征分析
【中文关键词】河流型水牛 沼泽型水牛 β-LG基因 PCR-RFLP PCR-SSCP
【英文关键词】river buffalo swamp buffalo β-LG PCR-RFLP PCR-SSCP
【中文摘要】本文通过PCR产物直接测序法得到水牛口一LG基因第3,4外显子及其旁侧序列后,采用PCR—RFLP 和PCR—SSCP方法对属于10个群体的224头水牛该基因第4外显子进行了多态性检测,又从中随机抽取属于 9个群体的69头水牛采用PCR—SSCP结合测序的方法检测了其第3外显子的遗传多态性。结果显示:河流型 水牛和沼泽型水牛B—LG基因的第3外显子均为74 bp;它们的第4外显子均为111 bp;在所研究群体中,两 类水牛第3,4外显子序列完全相同,并未发现具有多态现象。与牛科物种同源序列比较显示:水牛口一LG基 因3,4外显子在进化上比较保守,相应于普通牛的B等位基因。由于产奶量有明显差异的河流型水牛与沼泽 型水牛的 一LG基因第3,4外显子序列问无差异,提示它们对水牛产奶量无直接影响。
【英文摘要】In this study,exon 3 and exon 4 plus their flanking segments of β-LG were amplified and sequenced in buffalo firstly.The polymorphisms of exon 4 of β-LG in 224 buffaloes belonging to 10 populations were investigated by means of PCR-RFLP and PCR-SSCP.Then we selected randomly 69 individuals from the 224 buffaloes to detect their polymorphisms of exon 3 of β-LG by PCR-SSCP and sequencing.The results showed that exon 3 and exon 4 of β-LG in both river and swamp buffalo were 74 bp and 111 bp long,respectively.The sequences of exon 3 and exon 4 of β-LG had 100% identity and monomorphism were observed for the buffalo populations studied.Compared with homologous sequence of bovine species,the sequences of exon 3 and exon 4 of β-LG are conservative,and the protein sequences in buffalo is the same with those coding by B allele in Bos taurus.There was no difference in the sequences of exon 3 and exon 4 of β-LG between both kind of buffalo,but they have significant difference in milking performance,this indicates that the exon 3 and exon 4 of β-LG have no direct effect on milk yield in buffalo.

【题目】BC1和F2设计下利用单标记信息检测QTL的效率
【中文关键词】QTL检测 BC1设计 F2设计 单标记分析 检测效率
【英文关键词】QTL detection BC, design F2 design single marker analysis detection efficiency
【中文摘要】本文采用计算机模拟方法研究了BC1和F2设计不同资源群体规模、性状遗传力、QTL效应(QTL方差占加性遗传方差的比例)和标记-QTL间图距下单标记分析对QTL的检测效率。结果表明:当资源群体的规模较大,目标性状的遗传力较高,QTL效应较大,所检测的标记距离QTL的距离较近时,无论是BC1设计还是F2设计,都可获得较高的QTL检测效率。但在其他条件相同时,F2 设计对QTL的检出率明显高于BC1设计。
【英文摘要】In this paper, an experiment of quantitative trait loci (QTL) detection in BCi and F2 de- signs was simulated by computer. The QTL detection efficiencies under different sizes of resource popu- lation, trait heritabilities, QTL effect (the ratio of QTL variance to additive genetic variance) and marker-QTL map distances were analyzed. The results showed that the detecting power of QTL was higher in BC, and F2 design in the following situations: larger size of resource population, higher heri- tability of target trait, larger QTL effect and shorter distance between the detected marker and QTL. However, the QTL detected ratios of F2 design were obviously higher than those of BC, design under the same condition.

【题目】槟榔江水牛体重及体尺生长规律的研究
【中文关键词】槟榔江水牛 生长曲线 累积生长 绝对生长 相对生长
【英文关键词】Binglangjiang buffalo growth curve cumulative growth absolute growth relative growth
【中文摘要】为了阐明槟榔江水牛的生长发育规律,分别利用Brody,Gompe~z和Logistic模型对其体重、体高、体斜 长、胸围、腹围、管围6个指标进行了累积生长曲线方程的拟合和比较分析,并利用日增重描述了该水牛的 绝对生长,进一步采用改进的计算方法对其相对生长规律作了分析。结果表明:3种曲线模型拟合的效果都 很好(r >0.95)。通过比较各个性状的拟合度,Brody模型的拟合度最大,最适合用于槟榔江水牛的生长发 育研究。由Gompertz模型计算出槟榔江水牛公牛的拐点月龄和拐点体重分别为7.1月龄和122.4 kg;母牛的 拐点月龄和拐点体重分别为6.0月龄和107.9 kg。公、母牛都在6月龄达到绝对生长高峰,而18月龄绝对生 长速度最慢。公牛的日增重呈先下降后上升的过程。母牛的臼增重出现了2个峰,一个在6月龄,另一个在 24月龄。公、母牛的相对生长曲线较一致,后期生长强度明显不如前期,整条曲线大致上呈下降趋势,表明在幼年时新陈代谢旺盛,生长发育的强度大,成年后趋于稳定。本研究提示应加强槟榔江水牛的饲养管理, 特别应重视其母牛和育成期牛的饲养管理。
【英文摘要】Abstract:To elucidate growth and development patterns of Binglangjiang buffalo,Brody,Gompertz and Logistic model were employed to fit its cumulative growth curves by using 6 experimental indexes (viz.body weight,body height,body slanting length,chest circumference,abdominal circumference, circumference of cannon bone).Meanwhile,average daily gain(ADG)was adopted to describe and analyse its absolute growth,and an improved method was used to analyse its relative growth.The re— sults revealed that three models could be fitted very well for all the indexes analyzed(r >0.95),and Brody model was the best model for studying growth and development patterns of Binglangjiang buffalo. The growth age and body height at inflection points estimated by using Gompe~z model were 7.1 months old and 122.4 kg for male,and 6.0 months old and 107.9 kg for female buffalo,respectively.Both of the male and female bufalo reached their absolute growth peak at 6 months old and their abso— lute growth rate became slowest at 1

8 months old.The ADG of male buffalo first descended,and then ascended,while the ADG of female buffalo was relatively complicated.There were two absolute growth peaks,one at their 6 months old,and the other at their 24 months old.The relative growth curve of male and female buffalo were basically similar,The growth intensity at later stage was significantly in— ferior to that of at early stage,The relative growth curve displayed generally downward trend,which in— dicated that the vigorous metabolism and the highest growth intensity for juvenile buffalo,and tending to be stable for the adult animals.The results in this study suggested that we should strengthen the feeding and management of Binglangjiang buffalo,especially its female buffalo and growing buffalo.

【题目】黑色素皮质素受体1基因对水牛毛色遗传的影响

【中文关键词】水牛 毛色 黑色素皮质素受体1

【英文关键词】buffalo color MC1R

【中文摘要】MC1R在很多动物的色素沉积过程中发挥关键作用。 为了阐明MC1R基因是否与水牛毛色性状相关, 本研究对216头遗传背景清楚的水牛进行了该基因编码区DNA序列测定。 研究的样品包括49头黑色河流型水牛(包括摩拉水牛和尼里-拉菲水牛), 136头毛色为灰色或白色的沼泽型水牛(包括德宏水牛、滇东南水牛、德昌水牛、贵州水牛和西林水牛)和31头尼里-拉菲水牛或摩拉水牛与沼泽型水牛的杂交后代。 序列分析发现在水牛群体中存在3个单核苷酸突变位点(SNPs), 其中SNP684是同义替换, 而SNP310和SNP384为非同义替换, 并分别导致p。G104S和p。M128I氨基酸的改变。 只有基因型为河流型等位基因纯合子EBR/EBR的个体毛色表型为黑色。 对黑色河流型水牛与灰色沼泽型水牛的杂交后代基因型和毛色表型的分析进一步揭示: 河流型等位基因EBR或编码p。104S的等位基因对保证MC1R具有正常功能起重要作用。 生物信息学功能分析显示, p。G104S和p。M128I两个氨基酸替换对MC1R的功能有显著影响, 进一步支持EBR等位基因或编码p。104S的等位基因与水牛黑色性状相关。

【英文摘要】MC1R in many animal pigment deposition processes play a key role in. In order to clarify whether MC1R gene and buffalo coat colour traits related to this study, the 216 head clear genetic background for the buffalo DNA gene coding region sequence analysis. The sample consisted of 49 head of black river (including buffalo Murrah buffalo and buffalo Nili - Rafi), 136 head of hair color is gray or white swamp type buffalo (including Dehong, buffalo, buffalo, Dechang, Southeast of buffalo buffalo buffalo Guizhou and Xilin) and 31 head of Nili - Rafi or Murrah buffalo and Buffalo swamp type buffalo hybrid offspring. Sequence analysis revealed in buffalo populations in the presence of 3 single nucleotide mutation (SNPs), where SNP684 is synonymous substitutions, and SNP310 and SNP384 for nonsynonymous substitutions, and led P. G104S and P. M128I amino acid change. Only the genotypes for river type allele homozygous EBR/EBR individual coat color phenotypes in black. The black river buffalo and grey swamp type buffalo hybrid offspring genotype and coat-color analysis further revealed: River type allele of EBR or P encoding. The 104S allele of that MC1R has played an important role in normal function. Bioinformatics analysis showed, P. G104S and P. M128I two amino acid substitutions on the MC1R function have a significant effect, further supporting the EBR allele or coding P. 104S alleles associated with Buffalo black characters.

【题目】利用微卫星DNA标记分析槟榔江水牛群体遗传特征

【中文关键词】槟榔江水牛 微卫星DNA 标记 遗传变异 基因渗入
【英文关键词】microsatellite DNA marker genetic variation gene introgression
【中文摘要】槟榔江水牛是近年在我国云南西部发现的第一个本土河流型水牛。为了揭示其群体遗传多样性、群体遗传组成、其与河流型和沼泽型水牛的遗传关系及沼泽型水牛对该水牛的基因渗入等重要遗传背景信息,本研究采用30个微卫星DNA 标记对141份槟榔江水牛样品和对照群体24份河流型水牛(摩拉水牛)样品、41份沼泽型水牛(滇东南水牛)样品进行了检测分析。结果,在槟榔江水牛群体中共检测到253个等位基因,其中,54个为3个群体所共享的等位基因,58个为只在槟榔江水牛与摩拉水牛间共享的等位基因,73个为只在槟榔江水牛与滇东南水牛间共享的等位基因,其余68个等位基因为该群体所独有。槟榔江水牛平均等位基因数、平均表观杂合度、平均期望杂合度和多态信息含量等参数均显著高于对照组群体,分别为8.4333、0.6405、0.6009和0.5947。该水牛群体近交系数犊辋犏值为0.0619。槟榔江水牛与摩拉水牛间的犜犪犵遗传距离为最小(0.1144),在NJ树上聚为一支;而滇东南水牛与槟榔江水牛和摩拉水牛间的遗传距离较大(分别为0.3829和0.5553),其在NJ树上单独聚为一支。群体遗传结构分析显示,槟榔江水牛遗传组分为河流型与沼泽型2种类型水牛混合的模式(当犓=2时),整个群体中有相当数量的个体存在沼泽型水牛的遗传渗入(群体中沼泽型水牛遗传组分为0.0672)。结果揭示,槟榔江水牛遗传资源独特,群体遗传多样性丰富,但该群体杂合子缺乏,且存在一定沼泽型水牛的基因渗入。
【英文摘要】Binglangjiang buffalo is the first indigenous river type buffalo which has been found in western Yunnan province of China in recent years. In order to elucidate genetic background infor- mation on its genetic diversity, genetic composition, genetic relationship with typical river and swamp buffalo, and the gene introgression from swamp buffalo, 141 random samples from Binglangjiang buffalo population and 24 samples from control river buffalo population (Murrah) and 41 samples from control swamp buffalo population (Diandongnan buffalo) were genotyped by employing 30 microsatellite DNA markers. The result showed that a total of 253 alleles were identified in Binglangjiang buffalo (including 54 alleles shared among the three populations assayed, 58 alleles only shared between Binglangjiang and Murrah buffalo, 73 alleles only shared between Binglangjiang and Diandongnan buffalo, and 68 alleles unique to Binglangjiang buffalo). The genetic diversity parameters in Binglangjiang buffalo were much higher than that in the con- trol groups, its mean number of alleles per locus, mean observed heterozygosity, mean expected heterozygosity and polymorphism information content(P/C) were 8. 433 3, 0. 640 5, 0. 600 9 and 0. 594 7, respectively. Inbreeding coefficient (Fis) in Binglangjiang buffalo was 0. 061 9. Genetic distance(D,\) between Binglangjiang and Murrah buffalo was the lowest(0. 114 4) , while genetic distance(D,\) between Diandongnan and Binglangjian buffalo(0. 382 9) or between Diandongnan and Murrah buffalo(0. 555 3) was much larger than that between the two formers, which make Binglangjiang buffalo and Murrah buffalo, grouped together and Diandongnan independently clus- tered in the NJ tree. Structure analysis revealed that Binglangjiang buffalo displayed a genetic mixed pattern by river buffalo and swamp buffalo, most of the individuals having some proportion of swamp buffalo component (membership coefficients - 0. 067 2). The results indicate that Binglangjiang buffalo is of high degree of genetic diversity and is unique genetic resource, but this buffalo is under the conditions of heterozygote deficit and genetic mixture with swamp buffalo.

【题目】水牛前脑锌指蛋白(FEZL)基因外显子1多态性研究
【中文关键词】河流型水牛 沼泽型水牛 FEZL基因 第1外显子 测序 多态性
【英文关键词】river buffalo swamp buffalo FEZL Gene Exon 1 sequence polymorphism
【中文摘要】前脑锌指蛋白(FEZL)可以通过FEZL-SEMA5A信号通路参与神经发育和先天免疫过程。已有的研究表明,在普通奶牛中FEZL基因第1外显子多个连续的甘氨酸残基编码区长度多态性与奶牛乳腺炎的抗性有关联,但关于水牛FEZL基因的研究还没有相关报道。根据已有的哺乳动物FEZL基因序列设计引物,采用PCR产物直接测序技术对河流型与沼泽型水牛共144头水牛(属于10个群体)的FEZL基因第1外显子进行了序列测定和比较分析。结果表明,水牛FEZL基因第1外显子长度为907 bp,水牛群体中FEZL基因第1外显子存在1个SNP(c.165G>A),属于同义替换,其buffaloG等位基因在群体中已接近固定;河流型和沼泽型两类水牛群体中FEZL基因第1外显子多个连续的甘氨酸残基编码区都为13G类型;水牛与普通牛、人、小鼠、马、猪和狗的FEZL基因第1外显子序列差异较大,推测水牛的FEZL在功能上可能与普通牛等其他物种存在差异;尽管两类水牛连续的甘氨酸残基编码区都为13G类型,但其可能与水牛乳腺炎易感性无直接关联。研究结果可为水牛乳腺炎的抗病育种提供遗传背景资料。

【英文摘要】Forebrain embryonic zinc finger-like (FEZL) plays an important role through the FEZL – SEMA5A signaling pathway in both neuronal development and innate immunity. Previous studies have shown that the length polymorphisms of the glycine stretch in FEZL have association with mastitis resistance in dairy cattle, but there are few studies on FEZL gene in buffalo. In the present study, the primers were designed according to the FEZL gene sequences of some mammalian Species, and the sequence variations of FEZL gene exon1 of 144 buffalo sampled from 10 populations representing river and swamp type buffalo were assayed and analyzed by the methods of PCR product direct sequencing and comparative genomics analysis. The results revealed that the FEZL gene exon1 in buffalo is composed of 907 nucleotides, which has a synonymous substitution (that is c.165G>A), and the buffaloG alleles is close to fixation in the buffalo populations. And the glycine stretch region of the FEZL exon1 is 13G type in swamp and river buffalo populations. According to the results of comparative genomics analysis, the sequence differences of FEZL exon1 are very large between buffalo and the other species, suggesting that the FEZL function in buffalo maybe different from other species. Although the glycine stretch region of the FEZL exon1 is 13G type in all 10 populations, but the glycine stretch region of the FEZL may not directly related to susceptibility to mastitis. Our results provide the genetic background information for the breeding of mastitis disease resistance in buffalo.

【题目】中国首例本土河流型水牛——槟榔江水牛的种质特征
【中文关键词】槟榔江水牛 遗传背景 生产性能 种质特征
【英文关键词】BLJ buffalo genetic background production performance germplasm characteristics
【中文摘要】槟榔江水牛在云南西部槟榔江上游的腾冲县饲养已有500年以上的历史。该水牛经过长期闭锁繁育和风土驯化,已适应当地亚热带气候环境,是我国发掘的首例本土河流型水牛类群。具有典型的河流型水牛体型外貌特征,但体型相对较小。遗传学分析表明:槟榔江水牛体细胞核型染色体数多为2n=50;其群体内遗传变异水平较高,遗传多样性丰富;该水牛与河流型水牛表现出较近的遗传关系,与沼泽型水牛遗传关系较远;确认在群体遗传组成和血统来源上,该水牛由差异十分明显的河流型和沼泽型两个世系所构成,但河流型水牛世系在该水牛群体中占主体,揭示该水牛存在一定的沼泽型水牛基因渗入。生产性能测定结果显示:该水牛一个泌乳期泌乳量为2,452.2±553.8kg,比河流型摩拉和尼里-拉菲水牛高8.4~15.0%,比沼泽型本地乳用水牛高124.4~140.3%;且其乳质佳,乳蛋白率和乳脂率分别为4.60%和6.82%。该水牛在2008年经国家畜禽遗传资源委员会颁布为我国遗传资源的牛种之一,发展前景看好,将有望培育成中国首个河流型乳用水牛新品种。
【英文摘要】Binglangjiang buffalo (BLJ buffalo) has been raising in Tengchong county located in the upper reaches of Binglangjiang river in Yunnan province more than 500 years. This buffalo has been adapted to local sub-tropical climate and ecological environment after long time closed breeding and acclimatization. It is the first indigenous group of river type water buffalo exploited in China. It has typical body figure and appearance of river buffalo, but is relatively smaller in size than the famous river buffalo breeds. The genetic background analysis revealed that most of BLJ buffalo possess the diploid chromosome number of 50 (2n=50) and there were high genetic variability and rich genetic diversity in its population. The genetic relationship between BLJ and river type buffalo was closer than that between BLJ and swamp type buffalo. There were two big distinct lineages identified in BLJ population in which one was river buffalo lineage, another was swamp buffalo lineage, but the lineage and bloodline of river buffalo was dominant. This indicates that there is some gene introgression from swamp type buffalo in the BLJ buffalo. The testing of production performance for BLJ buffalo showed that the milk yield in a lactation is 2,452.2 ± 553.8kg, which is 8.4~15% higher than river type Murrah and Nili-Ravi and 124.4~140.3% higher than Chinese local swamp buffalo. Its milk has good quality with protein and milk fat percentage of 4.60% and 6.82%, respectively. In 2008, China National Commission on the Genetic Resource of Animal and Poultry promulgated that BLJ buffalo is one of buffalo genetic resources in China. This buffalo has a promising future and is expected to be bred as the first new breed of river type milking buffalo in China.

【题目】叶绿体遗传转化研究中的选择标记
【中文关键词】叶绿体遗传转化 选择标记 甜菜碱醛脱氢酶 位点特异性重组
【英文关键词】Chloroplast genetic transformation Selective marker BADH Site-specific recombination
【中文摘要】与核遗传转化相同,叶绿体遗传转化研究需要有合适的选择标记作为辅助手段。多种选择标记已经在叶绿体转化中得到应用,但由于叶绿体自身的结构与遗传特点,选择标记的选择与使用与核遗传转化明显不同,所以正确的选择合适的选择标记对于成功的叶绿体遗传转化是非常重要的。目前叶绿体转化中常用的选择标记大多为抗生素选择标记,对人类存在潜在的威胁,如何摆脱对抗生素选择标记的依赖是当前研究的热点。综述了国内外叶绿体转化研究中主要使用的选择标记,并着重介绍了非抗生素选择标记——甜菜碱醛脱氢酶和选择标记的删除体系。
【英文摘要】Incorporation of a selectable marker gene during chloroplast genetic transformation is essential to obtain transformed chloroplasts, which is the same as nuclear transformation. Although many selective marker genes have been used in chloroplast transformation, it is obviously different from the nuclear transformation because of its specific structure and inheritance. Therefore, selection and utilization of the fight selectable marker genes are very important to chloroplast transformation. Since most selectable marker genes in chloroplast transformations are antibiotic resistance genes which might threaten the human beings, it is a hotspot to explore strategies for getting rid of the dependence on antibiotic resistance genes. Progress on selective marker genes of chloroplast genetic transformation is reviewed; especially the antibiotic-free selective marker--betaine aldehyde dehydrogenase (BADH) and the marker elimination system are discussed.

【题目】猪瘟病毒E2 基因在百脉根叶绿体基因组中定点整合载体的构建
【中文关键词】猪瘟病毒E2基因;叶绿体转化;同源重组;定点整合;百脉根
【英文关键词】E2 gene of Hog Cholera Virus; Chloroplast transformation; Homologous recombination; Site-specific integration; Lotus corniculatus
【中文摘要】构建猪瘟病毒主要抗原E2基因在百脉根叶绿体基因组中定点转化载体,为百脉根叶绿体的转化及用叶绿体生产动物可直接食用疫苗奠定基础.[方法]通过用BLAST、DNAMAN等分子生物学分析软件对百脉根叶绿体基因组序列进行分析选定同源重组片段,采用PCR、分子克隆技术进行载体构建和鉴定.[结果]在百脉根叶绿体基因组中选择合适的外源基因整合位点,设计引物用PCR扩增叶绿体同源片段,将同源片段克隆后,构建百脉根特异的叶绿体转化载体;构建的百脉根叶绿体定点转化载体pAKE2以扩增的1.35 kb psbA 和1.5 kb trnK两段相邻叶绿体 DNA为定点整合外源基因的同源重组片段,包含以叶绿体基因特异强启动子Prrn和终止子TpsbA为调控序列的E2基因表达盒和aadA壮观霉素抗性基因表达盒.[结论]经PCR和酶切验证,所构建的转化载体符合预期设计.叶绿体转化及后续工作目前正在进行之中.
【英文摘要】】In order to produce edible plant vaccines in forage legume, a site-specific integration vector harboring the E2 gene which codes for main antigen of Hog Cholera Virus was constructed to transfer chloroplast genome of Lotus corniculatus.【Method】 Homologous recombination sequences was selected by analyzing the chloroplast genome sequence of Lotus corniculatus with molecular biology software BLAST (Basic Local Alignment Search Tool) and DNAMAN. Plastid transformation vector was constructed and identified via PCR and molecular cloning.【Result】 An optimal site was selected to integrate exogenous genes into chloroplast genome of Lotus corniculatus. Primers were designed to amplify chloroplast DNA fragments. A plastid transformation vector of Lotus corniculatus was constructed based on cloned fragments. The constructed vector, pAKE2, contains two neighboring

DNA fragments of 1.35 kb and 1.5 kb as targeting sequences in the region of psbA and trnK genes respectively for chloroplast transformation of Lotus corniculatus. The E2 gene cassette, which was driven by strong chloroplast promoter Prrn and terminated by psbA gene terminator in tobacco, was inserted between the two neighboring DNA fragments. pAKE2 carries the aadA cassette that was used for spectinomycin resistance selection of transformants. 【Conclusion】PCR amplification results and restriction enzyme digestion analysis showed that the constructed vector is in full accordance with what was desired. The transformation and following works are in progress.

【题目】Recombination and expression of classical swine fever virus (CSFV) structural protein E2 gene in Chlamydomonas reinhardtii chroloplasts

【中文关键词】猪瘟病毒(CSFV);E2基因;叶绿体转化;抗体蛋白;植物基因工程

【英文关键词】Classical swine fever virus (CSFV);E2 gene;Chlamydomonas reinhardtii;Chloroplast transformation; Anti-disease protein;Biointerface; Plant gene engineering

【中文摘要】这里,我们报告一个衣藻叶绿体表达载体,P64E2,该载体含保守的猪瘟病毒E2基因结构蛋白,通过基因枪轰击法转化衣藻叶绿体。经Southern blotting杂交检测,该基因已整合到叶绿体染色体上,ELISA量化分析表明,E2蛋白质表达积累到总可溶性蛋白质的1.5 - -2%。在动物免疫检测中发现,衣藻叶绿体表达的该蛋白可以与抗原特异性结合。

【英文摘要】The expression of classical swine fever virus (CSFV) structural protein E2 in different vectors, which has been shown to carry critical epitopes, has been established. Here, we reported a Chlamydomonas reinhardtii chloroplast expression vector, P64E2, containing classical swine fever virus structural protein E2 gene, which was constructed and transferred to C. reinhardtii by biolistic bombardment method. The transformants were identified by PCR, Southern blotting, Western blotting after selecting on resistant media. ELISA quantification assay showed that the expressed E2 protein accumulated up to 1.5 – 2% of the total soluble protein. The results of the study on the immunological activity indicated that the protein E2 expressed in C. reinhardtii chloroplasts could elicit animal bodies to produce antibodies against protein E2.

【题目】The expression of classical swine fever virus structural protein E2 gene in tobacco chloroplasts for applying chloroplasts as bioreactors

【中文关键词】猪瘟病毒(CSFV);E2基因;叶绿体;免疫原性;生物反应器;植物抗体基因工程

【英文关键词】Classical swine fever virus (CSFV);E2 gene; Chloroplast; Immunogenicity; Bioreactor; Anti-disease plant-gene engineering

【中文摘要】据报道,基因编码抗原的细菌和病毒病原体可以表示在植物和显示诱导保护抗体。这个结构蛋白E2的古典猪瘟病毒(CSFV),这被证明能携带关键的抗原,已经表达了在不同的系统。这里,我们报告CFSV E2基因的表达在烟草叶绿体。老鼠注射了叶提取物引发特定抗体。这表明,蛋白质表达E2一定程度的免疫原性了。据我们所知,这是第一份显示感应的保护性抗体在回应古典猪瘟病毒(CSFV)通过免疫与抗原蛋白E2在烟草叶绿体表示,这将打开一个新方法CSFV保护由植物叶绿体作为生物反应器。

【英文摘要】It has been reported that genes encoding antigens of bacterial and viral pathogens can be expressed in plants and are shown to induce protection antibodies. The structural protein E2 of classical swine fever virus (CSFV), which has been shown to carry critical epitopes, has been expressed in different systems. Here, we report the expression of CFSV E2 gene in tobacco chloroplasts. Mice immunized with leaf extracts elicited specific antibodies. This indicated that the expressed E2 proteins had a certain degree of immunogenicity. To our knowledge, this is the first report showing induction of protective antibody in response to classical swine fever virus (CSFV) by immunization with antigen protein E2 expressed in tobacco chloroplasts, which will open a new way to protection from CSFV by plant chloroplasts as bioreactors.

【题目】盐胁迫下棉花基因组 DNA 表观遗传变化的 MSAP 分析
【中文关键词】棉花; 盐胁迫; DNA 甲基化; 甲基化敏感扩增多态性; RT-PCR
【英文关键词】Cotton; Salt stress; DNA methylation; MSAP; RT-PCR
【中文摘要】盐胁迫是非生物逆境中对作物危害比较严重的自然灾害之一, 严重影响和制约作物的产量和种植面积。本研究以陆地棉品系 YZ1 为材料, 调查不同 NaCl 浓度下棉花幼苗生长及根基因组 DNA 的甲基化水平和变化模式。结果表明, 对棉花幼苗的株高和根长生长 100 mmol L－1 NaCl 有促进作用, 200 mmol L－1 NaCl有显著抑制作用;100~200 mmol L－1 NaCl 胁迫严重抑制棉花幼苗的侧根数量。甲基化敏感扩增多态性(methylation-sensitive amplification poly-morphism, MSAP)分析表明,经100、150和 200 mmol L－1 NaCl处理后根基因组 DNA甲基化比率分别为 38.1%、 35.2%和 34.5%, 均低于对照(41.2%),同时棉花幼苗根 DNA 的甲基化水平与 NaCl 处理浓度呈显著负相关(r= －0.986)。与对照相比, 100、150 和 200 mmolL－1 NaCl 胁迫下棉花幼苗根基因组 DNA 的甲基化和去甲基化分别为 6.4%、7.6%、11.3%和 12.7%、11.1%、8.2%。此外, 序列和 RT-PCR 分析表明, 与 MSAP 差异片段高度同源的基因的表达在处理与对照间差异显著。
【英文摘要】Salinity is one of the important limiting factors in plant production worldwide. The objectives of the study were to assess the effect of salt stress on the plant growth and to determine if DNA can be methylated in cotton plants (Gossypium hirsutum) by methylation-sensitive amplified polymorphism (MSAP) technique. The results showed that 100 mmol L－1 NaCl obviously promoted plant height and root length of cotton seedlings, but 200 mmol L－1 NaCl significantly inhibited plant growth; 100－200 mmol L－1 NaCl inhibited the number of lateral root considerably. The analysis of MSAP showed that the level of global DNA methylation decreased from 41.2% to 34.5% as the salt concentrations increased; there was a significantly negative correlation (r = －0.986) between NaCl concentrations and the level of DNA methylation in cotton roots. Under stresses of 100, 150 and 200 mmol L－1 NaCl, methylation and demethylation of DNA were 6.4%, 7.6%, 11.3% and 12.7%, 11.1%, 8.2%, respectively. In addi-tion, the analyses of sequences and RT-PCR showed that expressions of genes homologous to MSAP fragments in roots were different between control and treated plants under salt stress, suggesting that these genes would play an important role in the cot-ton adaptation of salt stress.

【题目】SNAC1基因作为筛选标记基因用于棉花的遗传转化
【中文关键词】棉花;转化;SNAC1 基因;NaCl
【英文关键词】cotton; transformation; SNAC1 gene; NaCl

【中文摘要】以 SNAC1 基因作为筛选标记基因,NaCl 作为筛选剂,通过农杆菌介导法将 SNAC1 和 GUS 基因导入棉花细胞并得到胚性愈伤组织。经过 PCR 检测证实,外源基因已经整合到棉花基因组中,GUS 染色证明 GUS 基因得到表达。 研究了 NaCl 作为棉花转化细胞的筛选剂在农杆菌介导转化中的应用浓度及方法,即 NaCl 的筛选浓度在 1.1%~1.5%(W/V)之间,在愈伤组织诱导初期适当低一点,随着愈伤组织的生长而加大筛选浓度。由于 NaCl 不利于胚的分化,经过 2~3 次继代筛选后要及时去除 NaCl 以促进胚的分化

【英文摘要】Employing SNAC1 gene as a selection marker gene and NaCl as a selection agent, SNAC1 and GUS genes were introduced into cotton genome via Agrobacterium. Transgenic calli were confirmed by PCR analysis, and expression of the GUS gene was showed with GUS staining. The oncentration and method for employing NaCl as a selection agent had been studied.The reasonable selection concentration of NaCl should be 1.1%~1.5%(W/V). The start concentration of NaCl in callus induction medium should be lower and the concentration increased as calli proliferated. Because NaCl is not beneficial for embryo differ-entiation and development, NaCl should be removed from the culture medium after the calli were subcultured for 2~3 times.

【题目】Histological and Ultrastructural bservation Reveals Significant Cellular Differences between Agrobacterium Transformed Embryogenic and Non-embryogenic,Calli of Cotton

【中文关键词】细胞组织形态;叶绿体;胚性愈伤组织;陆地棉;组织学结构;遗传转化;亚显微结构。

【英文关键词】cell organization pattern; chloroplasts; embryogenic callus; Gossypium hirsutum; histological structure; transformation; ultrastructure.

【中文摘要】农杆菌介导法可以高效的将T-DNA插入棉花基因组中并能稳定遗传,在棉花的遗传转化中应用最为广泛。但农杆菌介导的棉花遗传转化必须以高效的棉花再生体系为基础,胚性愈伤组织诱导困难、非胚性愈伤组织大量发生以及畸形胚状体(畸形苗)高比率发生等问题制约着棉花遗传转化效率的提高。有鉴于此,本研究以绿色荧光蛋白(Enhanced Green Fluorescent Protein,EGFP)为报告基因确定转化体,利用扫描电镜、透射电镜等技术,系统的研究了农杆菌介导的棉花遗传转化过程中不同阶段和不同类型愈伤组织的细胞学和组织学差异。

【英文摘要】Over the past few decades genetic engineering has been applied to improve cotton breeding. Agrobacterium medicated transformation is nowadays widely used as an ef fi cient approach to introduce exogenous genes into cotton for genetically modi fi ed organisms. However, it still needs to be improved for better transformation ef fi ciency and higher embryogenic callus induction ratios. To research further the difference of mechanisms for morphogenesis between embryogenic callus and non-embryogenic callus, we carried out a systematical study on the histological and cellular ultrastructure of Agrobacteriumtransformed calli. Results showed that the embryogenic callus developed nodule-like structures,whichwere formed by small, tightly packed, hemispherical cells. The surface of some embryogenic calluswas coveredwith a fi brilar-like structure named extracellular matrix. The cells of embryogenic calli had similar morphological characteristics. Organelles of embryogenic callus cells were located near the nucleus, and chloroplasts degraded to proplastid-like structures with some starch grains. In contrast, the non-embryogenic calli were covered by oval or sphere cells or small clusters of cells.It was observed that cells had vacuolation of cytoplasm and plastids with a well organized endomembrane system. This study aims to understand the mechanisms of embryogenic callus morphogenesis and to improve the ef fi ciency of cotton transformation in future.

【题目】Isolation and Characterization of an ERF Transcription Factor Gene from Cotton (Gossypium barbadense L.)
【中文关键词】棉花转录因子;海岛棉;棉花转基因;抗病基因;棉花黄萎病
【英文关键词】transcription factors cotton;Gossypium barbadense;binding sites DNA;conserved sequences gene expression;roots leaves Verticillium wilt mycotoxins tobacco gene overexpression plant pathogenic fungi signal transduction resistance mechanisms
【中文摘要】本研究从海岛棉中克隆出乙烯反应调控因子EREB1,其氨基酸序列有一些典型特,包括核定位信号,一种酸性激活域,一个保守的DNA结合域。该调控因子在棉花基因组中呈单拷贝,接种黄萎病菌后EREB1在根和叶中的表达水平明显上升。在烟草中,过量表达EREB1,不影响烟草的正常生长。研究结果表明:EREB1可能是生物胁迫调控途径中的一个信号转录因子,其过表达可以增强棉花的抗病性。
【英文摘要】A pathogen-inducible ethylene-responsive factor gene, EREB1, was isolated and characterized in cotton (Gossypium barbadense L.). The deduced amino acid sequence of EREB1 had some typical features of transcription factors including nuclear localization signals, an acidic activation domain, and a conserved DNA binding domain. As a single copy gene in the cotton genome, the level of expression of EREB1 in roots and leaves was significantly elevated following treatment with Verticillium wilt toxin. Presence of a GCC box-binding ability motif indicated that the EREB1 protein was capable of binding to GCC box elements in vitro as a transcriptional activator. In tobacco, overexpression of EREB1 activated pathogenesis-related genes under normal growth conditions. These results suggested that EREB1 might play an important role in biotic stress signal transduction pathways and that the overexpression of EREB1 might serve as a viable approach to enhance disease resistance t in cotton.

【题目】Construction and analysis of cotton (Gossypium arboreum L.)drought-related cDNA library
【中文关键词】亚洲棉;干旱胁迫;抑制性消减杂交。
【英文关键词】Gossypium arboreum L;drought stress;SSH。
【中文摘要】干旱缺水等环境因素越来越威胁着棉花的生长发育。由于棉花耐旱性状的复杂性和缺乏有效的选择手段,常规育种对棉花耐旱性的改良进展较慢。本研究是国内外首次利用抑制消减杂交技术构建棉花耐旱相关基因文库,从分子水平上进行了棉花耐旱EST的筛选,为分离、克隆、转化棉花耐旱基因奠定了基础。 本研究通过抑制消减杂交技术成功的构建了高质量的亚洲棉石系亚1耐旱相关cDNA文库。经过蓝白斑筛选、菌落PCR、反向Northern、生物信息学、RT-PCR等分子生物手段分析和检验库了的质量。通过对随机挑选的、经过菌落PCR初步验证的960个有效克隆做反向Northern,最终筛选出阳性克隆392个。通过EST测序得到265个单一序列(unigene),其中41个为重叠群(contigs),224个为单拷贝(singlets)。生物信息学分析结果表明:该抑制差减cDNA文库中含有大量与耐旱相关的基因,且获得的耐旱相关基因可以分为两大类:一是功能蛋白类,如光合作用相关酶类、热激蛋白、铁蛋白、糖代谢相关蛋白、蛋白酶类等,它们在细胞内可直接发挥保护功能。另一类是调控蛋白类,如转录因子、蛋白激酶等,在各种胁迫反应信号转导或基因表达中起调节作用以及间接起保护作用。同时本研究还获得未知功能的EST序列46个,说明还有更多未知功能的基因有待被发掘。这些棉花耐旱相关基因EST的发现,为进一步克隆这类耐旱相关基因提供了研究依据,同时也为研究棉花耐旱机制以及分子育种奠定了工作基础。
【英文摘要】Background: Drought is one of the most important environmental factors causing water stressfor cotton, and it greatly limits cotton growth and crop productivity. So far only a few drought-tolerance genes have been functionally characterized in details, and most efforts on this topic have been made in model organisms. Therefore, to identify more drought-related genes in cotton plays a crucial role in elucidating the underlying mechanisms of drought tolerance as well as utilizing bioengineering techniques to improve the tolerance in this organism.Findings: Here we constructed a subtractive drought-tolerance cDNA library using suppressive subtractive hybridization (SSH). Through differential screening and bioinformatics analysis, we identified 392 positive clones with differential expression, corresponding 265 unique genes. By BLAST search against Genbank, we found that more than half of these EST sequences were homologous to those previously known drought-related genes and that there were 57 sequences with unknown functions, suggesting that many more genes are involved in this complex trait.Moreover, using RT-PCR, we examined the expression of nine representative candidate genes and confirmed that their expression levels were increased at different levels under drought

stress.Conclusion: Our results show that drought tolerance is a complex trait in cotton, which involves the coordination of many genes and multiple metabolism pathways. The candidate EST sequences we identified here would facilitate further functional studies of drought-related genes and provide important insights into the molecular mechanisms of drought-stress tolerance and genetic breeding in cotton

【题目】热带特色农产品物流跟踪编码管理系统的设计
【中文关键词】热带农产品; 编码系统; RFID
【英文关键词】tropical agricultural product; encoding system; RFID
【中文摘要】在基于RFID技术的热带特色农产品物流跟踪系统的构建中, 电子标签是管理系统的枢纽, 也是重要的信息载体。在向电子标签中写入信息的过程中, 需要对产品种植、加工、仓储和物流等各环节的信息进行编码,采用人工的方式进行编码效率很低, 且错误率比较高。为此, 设计了热带特色农产品物流跟踪编码管理系统,既可以满足以上的任务需求, 又可以解决存在的问题。
【英文摘要】In the construction of RFID-based logist ic material tracking encoding and managing system of characterist ic products in tropical agricultural RFID tag is the very important component part of managing system and information carrier. In the process of writing RFID tag, we need to encode, including the in formation of implantation, processing,storage, logistics and so on. It is inefficient and mistakes often to adopt traditional artificial encoding ways. This article mainly designs a logistic material tracking encoding and managing system of characteristic products in tropical aricultural,Which can optimize the quest requirement, and also can settle existing problems.

【题目】家养水牛催乳素基因编码区结构特征
【中文关键词】家养水牛 催乳素基因 编码区 PCR-SSCP
【英文关键词】domesticated buffalo; prolactin gene; coding region; PCR-SSCP
【中文摘要】催乳素具有促进生长发育及维持泌乳、进行免疫调节等生物学功能,但目前家养水牛PRL基因的变异特征及其与水牛性状间的关系还不清楚。本研究采用PCR-SSCP及PCR产物直接测序技术,检测不同沼泽型和河流型水牛群体PRL基因各外显子的遗传变异,将各外显子序列进行拼接得到编码区序列,对其进行生物信息学分析,结果表明:水牛成熟催乳素含199个氨基酸残基,其编码蛋白呈酸性,碱基使用率为A 25.96%,T 22.95%,C 28.14%,G22.95%,平均碱基组成差异较小,偏好性密码子占密码子使用总数的48.21%。在沼泽型水牛群体中检测到c.G192A、c.C427T和c.C606T共3种核苷酸替换,均为同义替换,产生8种单倍型,在河流型水牛群体中检测到c.C606T替换,为同义替换,产生2种单倍型,不同单倍型个体未产生表达差异。序列比对分析表明,水牛PRL基因编码区序列在进化过程中未受到人工选择的影响,可能是因为功能的约束使其编码区序列表现得十分保守。
【英文摘要】The prolactin gene is considered as the important candidate genes that correlated with hastening growth,maintaining lactation and immunoregulation in water buffalo,but the structural characteristics in coding region of prolactin gene and the relationship between gene structure and production traits are still unclear.In the study,the splicing sequence variation in coding region of prolactin gene was examined in buffalo populations of swamp type and river type by using PCR-SSCP and DNA direct sequencing

methods.The results showed that the mature peptide of prolactin consisted of 199 amino acid residues and the encoded protein was acidic,the usage rate of bases of A,T,C and G is 25.96%,22.95%,28.14% and 22.95%,respectively.The optimal codon accounted for 48.21% of the total codon.The c.G192A、c.C427T and c.C606T substitution was detected in swamp buffalo populations,which was synonymous and formed eight different haplotypes.A synonymous of c.C606T was detected in river buffalo populations and formed two different haplotypes.There was no expressive discrepancy in different haplotype in buffalo populations of swamp type and river type.Sequence analysis revealed the coding region of prolactin gene was highly conservative and not influenced in artificial selection,which might because of the functional constraints.

【题目】基于RFID的热带特色农业田间信息采集研究
【中文关键词】热带特色农业,信息采集,传感器,LabVIEW, RFID
【英文关键词】tropical agricultural, information collection, sensors, LabVIEW, RFID
【中文摘要】海南的农业生产相对比较落后,主要依靠人力,生产力比较低,科技含量不高,且生产和管理不规范,直接影响消费者的权益和热带特色农业的声誉。针对这些问题,本文提出将RFID 技术应用到海南热带特色农业中,结合传感器技术、LabVIEW 虚拟仪器技术和单片机技术等,实现对热带特色农业生产过程中的环境信息和农作物自身的特征信息进行实时数据采集,将采集到的数据以编码的形式存储到电子标签中,以达到实现农业生产的高效管理,保证农产品的品质,进行农产品的质量追溯的目的。该文通过对贴有电子标签的琼中绿橙的信息的成功识别试验,验证了构建系统的可行性。
【英文摘要】Tropical agriculture in Hainan is relatively lagged behind with low level of productive forces and technology,and mainly depends on manpower. What is more, manufacturing management is non-standard. So the reputation of product may be influenced. These may also harm the interests of consumers. In order to solve the problems, RFID technology was used to develop tropical agriculture, combining with sensor technology, virtual instrument (LabVIEW)technology and microcontroller technologies. The information of environmental and crops property can be acquired in process of tropical agriculture production and the data are stored to RFID tags in binary code. The eventual aim is toreach high efficiency management and high quality in agriculture production, and retrace the production in agricultural products supply chain by RFID. The system is verified feasible through an experimental study on identifying information of RFID tags on Qiongzhong green orange.

【题目】Histologicaland Ultrastructural Observation Reveals Significant Cellular Differences between Agrobacterium Transformed Embryogenic and Non-embryogenic Calli of Cotton
【中文关键词】无
【英文关键词】cell organization pattern;chloroplasts;embryogenic callus;Gossypium hirsutum;histological structure;transformation;ultrastructure
【中文摘要】无
【英文摘要】Over the past few decades genetic engineering has been applied to improve cotton breeding. Agrobacterium medicated transformation is nowadays widely used as an efficient approach to introduce exogenous genes into cotton for genetically modified organisms. However, it still needs to be improved for better transformation efficiency and higher embryogenic callus induction ratios. To research further the difference of mechanisms for morphogenesis between embryogenic callus and non-embryogenic callus, we carried out a systematical study on the histological and cellular ultrastructure of Agrobacterium transformed calli. Results showed that the embryogenic callus developed nodule-like structures, which were formed by small, tightly packed, hemispherical cells. The surface of some embryogenic callus was covered with a fibrilar-like structure named extracellular matrix. The cells of embryogenic calli had

similar morphological characteristics. Organelles of embryogenic callus cells were located near the nucleus, and chloroplasts degraded to proplastid-like structures with some starch grains. In contrast, the non-embryogenic calli were covered by oval or sphere cells or small clusters of cells. It was observed that cells had vacuolation of cytoplasm and plastids with a well organized endomembrane system. This study aims to understand the mechanisms of embryogenic callus morphogenesis and to improve the efficiency of cotton transformation in future.

【题目】来 源于耐旱荒漠植物蛋白CkND对棉花黄萎病的抑制作用及其抗旱性研究
【中文关键词】牛心朴子;蛋白CkND ;棉花黄萎病;抗旱性
【英文关键词】Cy nanchum komarovi i ;CkND protein ;V ert ici l l i um d ahl i ae Kleb ;drought2resistant
【中文摘要】利用蛋白组学策略分离了荒漠植物2牛心朴子(Cy nanchum komarovi i) 抗病、抗旱功能相关蛋白CkND。以棉花黄萎病菌为供试菌株,研究了蛋白CkND 对棉花黄萎病的抑制作用。结果表明:蛋白CkND 对棉花黄萎病菌菌丝生长及孢子萌发具有较好的抑制作用。离体试验中,100 mg ・L21的蛋白CkND 对棉花黄萎病菌菌丝生长抑制效果在24 h 、48 h 、72 h 分别为79. 53 %、83. 01 %、87. 50 % ,35 mg ・L21 的蛋白CkND 对孢子萌发抑制率为100 %;活体试验中,蛋白CkND 对棉花黄萎病具有显著的防治效果。另外,本研究将CkN D 基因构建到pCAMBIA1304 表达载体CaMV35S 启动子下游,将pCAMBIA13042CkN D 通过农杆菌介导转化法转入野生型拟南芥植株中。将33 个株系的转pCAMBIA1304 2CkN D 的T2 代拟南芥和21 株转pCAMBIA1304 的T2 代拟南芥,同时进行抗旱性试验。结果显示,转pCAM2BIA1304 的T2 代拟南芥14 个株系枯死,而转pCAMBIA13042CkN D 的T2 代拟南芥有24 个株系的转基因植株存活,且叶片保持绿色,植株生长良好,根系、须根发达,须根数目明显增多。转pCAMBIA13042CkN D 拟南芥株高增加了30 % ,显著提高了植物抗旱性。
【英文摘要】Protein CkND , a novel disease2resistant and drought2resistant protein , was ext racted formt he root s of Cy nanchum Komarovi i by met hod of proteomics. In this st udy , we tested the f ungicidal activities and resistance of protein CkND against V ert ici l l i um d ahl i ae. The result s showed that short protein CkND may have a good inhibition on t he spore germination and mycelial growt h of V ert ici l l i2um d ahl i ae. In vit ro test suggested that 100 mg ・L21 of protein CkND on mycelial growt h at 24 h , 48h , 72 h was 79. 53 % , 83. 01 % and 87. 50 % , respectively ,and 35 mg ・L21 of protein CkND on spore germination of V ert ici l l i um d ahl i ae was 100 %. I n vi vo test showed that protein CkND had good in2hibitory effect s against V ert ici l l i um d ahl i ae. In addition , t he CkN D gene was const ructed into t he downst ream of t he CaMV35S promoter of the pCAMBIA1304 exp ression vector and t ransfer

ofpCAMBIA13042CkN D was t ransferred into A rabi dopsis t hal i ana mediated by A g robacteri um t ume f a2 ciens . We tak e 33 pCAMBIA13042CkN D T2 t ransgenic plant s and 21 pCAMBIA1304 T2 t ransgenic plant s into drought2resistant experiment s at t he same time. The result s showed t hat 14 of the pCAM2BIA1304 T2 t ransgenic plant s died , but 24 pCAMBIA13042CkN D T2 t ransgenic plant s survived. The leaves kept green , t he plant growed well , root s and fibrous root s developed st rongly , and the number of fibrous root s increased obviously. The drought-resistant of pCAMBIA13042CkN D t ransgenic plant sincreased 30 % , which obviously enhance t he drought-tolerance of plant s.

【题目】亚洲棉(Gossypium arboreum L.)全生育期均一化全长cDNA文库的构建和鉴定

【中文关键词】亚洲棉;全生育期;均一化;cDNA 文库;EST

【英文关键词】asian cotton; whole-life cycle; normalization; cDNA library; EST

【中文摘要】:【目的】构建二倍体亚洲棉石系亚1 号全生育期均一化全长cDNA 文库,建立亚洲棉功能基因组学研究基础平台,发掘亚洲棉发育、抗逆等相关基因。【方法】取石系亚1 号子叶期、苗期、蕾期、花铃期不同组织器官,提取总RNA并分离纯化mRNA,采用SMART 技术反转录全长双链cDNA。用DSN(duplex-specific nuclease)法对全长双链cDNA 进行均一化,均一化的cDNA 连接到λZAPⅡ载体,包装蛋白包装后构建石系亚1 号全生育期均一化全长cDNA 文库。【结果】初级文库滴度4×106 pfu · ml-1,库容2×106 个独立克隆,重组率大于95%,插入片段平均长度大于1.5 kb。随机挑取192 个克隆进行EST(expressed sequence tags)测序,冗余度仅为3.49%。BLASTN比对结果显示:78.31%的EST 为新EST。【结论】文库均一化效果良好,质量符合要求,可能包含大量新基因,是进行EST 测序、发掘新基因等棉花功能基因组学的研究平台。

【英文摘要】【Objective】 In order to develop a functional genomics platform for diploid Asia cotton (Gossypium arboreum L.)and discover novel genes related to resistance and development, a normalized full-length cDNA library of Shixiya I (Gossypiumarboreum L.) in the whole-life cycle was constructed. 【Method】 Individual plant of Shixiya I at the stages of cotyledon andseedling, leaves at the stage of seedling, flowers, buds and bolls at various stages were used for library construction. Total RNA wasextracted from them with a modified CTAB method. Purified from total RNA, mRNA was reverse transcripted to double strands fulllength cDNA with the SMART technique. The cDNA from different tissues was normalized with the DSN method, then thenormalized cDNA was linked with λZAP II vector. The normalized full length cDNA library was constructed when the ligation waspacked with Gigapack III XL packaging extract. 【Result】 The titer of primary library was 4×106 pfu · ml-1, the capacity was 2×106clones, and the recombination ratio was more than 95%. The average insertion size was above 1.5 kb. Random selected 192 cloneswere sequenced, the redundancy was 3.49%. With BLASTN, sequences were compared against online nucleotide databases, 78.31%of the sequences were not found in GenBank, and 21.69% were found in existing nucleotide databases. 【Conclusion】 It is suggestedthat the cDNA library was well normalized with high quality. Most likely containing many novel genes, the library can be well usedfor cotton functional genomics, novel gene screening and high-throughput EST sequencing.

【题目】PEG 胁迫方法评价棉花幼苗耐旱性研究
【中文关键词】棉花 PEG胁迫 耐旱性 成活率
【英文关键词】无
【中文摘要】分别选用8个陆地棉、2个海岛棉、2个亚洲棉品种作为材料进行耐旱水平试验,以PEG6000作为水分胁迫剂,对棉花种子萌发期、芽期、子叶期和真叶期材料分别进行处理,得出了耐旱水平变化曲线,结果验证棉花耐旱性鉴定关键时期应在3~6片真叶幼苗。用不同浓度PEG6000对具有3~6片真叶的棉花幼苗进行12h连续处理后,统计其成活率。研究表明:PEG6000溶液浓度为17%(W/V)时,棉花幼苗的成活率与田间旱棚鉴定结果有较高的一致性。此方法简单、快速,易操作,基本可用于棉花品种的耐旱性评价与鉴定工作,并将为棉花耐旱分子生物学研究奠定基础。

【题目】High-density Linkage Map of Cultivated Allotetraploid Cotton Based on SSR, TRAP, SRAP and AFLP Markers
【中文关键词】无
【英文关键词】cotton; linkage map; target region amplification polymorphism.
【中文摘要】无
【英文摘要】A high-density linkage map was constructed for an F2 population derived from an interspecific cross of cultivatedallotetraploid species between Gossypium hirsutum L. and G. barbadense L. A total of 186 F2 individuals from theinterspecific cross of “ CRI 36 × Hai 7124 ” were genotyped at 1 252 polymorphic loci including a novel marker system,target region amplification polymorphism (TRAP). The map consists of 1 097 markers, including 697 simple sequencerepeats (SSRs), 171 TRAPs, 129 sequence-related amplified polymorphisms, 98 amplified fragment lengthpolymorphisms, and two morphological markers, and spanned 4 536.7 cM with an average genetic distance of 4.1cM per marker. Using 45 duplicated SSR loci among chromosomes, 11 of the 13 pairs of homologous chromosomeswere identified in tetraploid cotton. This map will provide an essential resource for high resolution mapping ofquantitative trait loci and molecular breeding in cotton.

【题目】Genotype and Planting Density Effects on Rooting Traits and Yield in Cotton(Gossypium hirsutum L.)
【中文关键词】无
【英文关键词】resource capture; root area index; root diameter; root length density.
【中文摘要】无
【英文摘要】Root density distribution of plants is a major indicator of competition between plants and determinesresource capture from the soil. This experiment was conducted in 2005 at Anyang, located in the YellowRiver region, Henan Province, China. Three cotton (Gossypium hirsutum L.) cultivars were chosen: hybrid BtcultivarCRI46, conventional Bt-cultivars CRI44 and CRI45. Six planting densities were designed, rangingfrom 1.5 to 12.0 plants/m2. Root parameters such as surface area, diameter and length were analyzed byusing the DT-SCAN image analysis method. The root length density (RLD), root average diameter and rootarea index (RAI), root surface area per unit land area, were studied. The results showed that RLD and RAIdiffered between genotypes; hybrid CRI46 had significantly higher ($P < 0.05$) RLD and RAI values than conventionalcultivars, especially under low planting densities, less than 3.0 plants/m2. The root area index(RAI) of hybrid CRI46 was 61% higher than of CRI44 and CRI45 at the flowering stage. The RLD and RAI werealso significantly different ($P = 0.000$) between planting densities. The depth distribution of RAI showed thatat

increasing planting densities RAI was increasingly distributed in the soil layers below 50 cm. The RAI ofhybrid CRI46 was for all planting densities, obviously higher than other cultivars during the flowering andboll stages. It was concluded that the hybrid had a strong advantage in root maintenance preventing prematuresenescence of roots. The root diameter of hybrid CRI46 had a genetically higher root diameter atplanting densities lower than 6.0 plants/m2. Good associations were found between yield and RAI in differentstages. The optimum planting density ranged from 4.50 plants/m2 to 6.75 plants/m2 for conventionalcultivars and around 4.0 – 5.0 plants/m2 for hybrids.

【题目】Somatic embryogenesis and plant regeneration in two wild cotton species belong to G genome,

【中文关键词】无

【英文关键词】G. nelsonii . G. australe . G genome .
Somatic embryogenesis . Plant regeneration

【中文摘要】无

【英文摘要】The present work describes the plant regenerationvia somatic embryogenesis in two wild cotton speciesbelonging to G genome: Gossypium nelsonii Fryx andGossypium australe F Muell. The role of plant hormonesand carbohydrates was also evaluated for somatic embryogenesisand somatic embryo development. Normal plantswere obtained from G. nelsonii Fryx; abnormal plants andsomatic embryos were obtained from G. australe F Muell.The best medium for callus induction for these G genomewild cotton species was MSB5 supplemented with0.1 mg L − 1 KT and 0.1 mg L − 1 2,4-D. For embryogeniccallus proliferation, the best medium used was MSB5supplemented with 0.2 mg L − 1 KT and 0.5 mg L − 1 IBA.The medium MSB5 supplemented with 0.15 mg L − 1 KTand 0.5 mg L − 1 NAA was used successfully for rootinitiation and plant growth. In addition, adding CuSO4 andAgNO3 in the callus-inducing and proliferation mediumresulted in a number of somatic embryos. Glucose andmaltose, the carbon sources in somatic culture, were usedfor callus induction, but maltose worked even better thanglucose for proliferation of embryogenic callus and developmentof somatic embryos.

【题目】Selection and characterization of a novel glyphosate tolerant upland cotton (Gossypium hirsutum L.) mutant (R1098)

【中文关键词】无

【英文关键词】Cotton (Gossypium hirsutum L.) — EPSPS —
glyphosate tolerance — shikimate — tissue culture

【中文摘要】无

【英文摘要】Stepwise selection approach was adopted to obtain glyphosate-tolerantupland cotton mutant (R1098) from the embryogenic calli of Coker312 (Gossypium hirsutum L.). The calli were transferred to the selectionmedium and multi-step selection pressure process was carried out untilthe calli could proliferate in the presence of 20 mM glyphosate. Theregenerated plants from the glyphosate-tolerant calli were analysed forglyphosate response, tolerance of progenies and shikimate accumulationon whole-plant basis. R1098 could tolerate 1.48 kg acidequivalent/ha glyphosate. Progeny tests demonstrated that glyphosatetolerance trait was controlled by one dominant gene. Shikimateaccumulation assay showed that significantly different amounts ofshikimate were

present between the mutant (R1098) and its wild parent(Coker 312) after glyphosate treatment. This indicates that R1098 hassufficient 5-enolpyruvylshikimate-3-phosphate synthase activity in thepresence of glyphosate, thereby maintaining normal carbon flowthrough the shikimate pathway. Moreover, R1098 offers a greaterpotential to improve the weed control system in cotton production.

【题目】Cadmium-induced ultramorphological and physiological changes in leaves of two transgenic cotton cultivars and their wild relative
【中文关键词】无
【英文关键词】Transgenic cotton
Wild relative
Leaf ultrastructure
Transmission electron microscopy
Cadmium stress
【中文摘要】无
【英文摘要】The present study describes cadmium-induced alterations in the leaves as well as at the whole plantlevel in two transgenic cotton cultivars (BR001 and GK30) and their wild relative (Coker 312) using bothultramorphological and physiological indices. With elevated levels of Cd (i.e. 10, 100, 1000 M), the meanlengths of root, stem and leaf and leaf width as well as their fresh and dry biomasses linearly decreasedover their respective controls. Moreover, root, stem and leaf water absorption capacities progressivelystimulated, which were high in leaves followed by roots and stems. BR001 accumulated more cadmiumfollowed by GK30 and Coker 312. Root and shoot cadmium uptakes were significantly and directly correlatedwith each other as well as with leaf, stem and root water absorption capacities. The ultrastructuralmodifications in leaf mesophyll cells were triggered with increase in Cd stress regime. They were moreobvious in BR001 followed by GK30 and Coker 312. Changes in morphology of chloroplast, increase innumber and size of starch grains as well as increase in number of plastoglobuli were the noticed qualitativeeffects of Cd on photosynthetic organ. Cd in the form of electron dense granules could be seen insidethe vacuoles and attached to the cell walls in all these cultivars. From the present experiment, it can bewell established that both apoplastic and symplastic bindings are involved in Cd detoxification in thesecultivars. Absence of tonoplast invagination reveals that Cd toxic levels did not cause water stress in anycultivars. Additionally, these cultivars possess differential capabilities towards Cd accumulation and itssequestration.

【题目】Cadmium-induced functional and ultrastructural alterations in roots of two transgenic cotton cultivars
【中文关键词】无
【英文关键词】Transgenic cotton
Cadmium stress
Electron microscopy
Root morphology

Gossypium spp.
【中文摘要】无
【英文摘要】The toxic effect of cadmium (Cd) at increasing concentrations was studied with special attention beinggiven to the root morphological and ultrastructural changes in two transgenic cotton cultivars viz. BR001and GK30 and their wild relative viz. Coker 312. In comparison to their respective controls, low concentration(10 and 100 M) of Cd greatly stimulated seed germination, while it was inhibited by highestconcentration of Cd (1000 M) in case of two transgenic cultivars. However, in Coker 312 the seed germinationpercentage progressively decreased over the control at all Cd levels. Various physiological andmorphological parameters of the root and whole plant in both transgenic cotton cultivars and their relativewild cotton genotype respond differently towards the Cd toxicity. Bioavailability of Cdwas concentrationdependentwhere seedling root captured more Cd as compared to shoot. BR001 accumulated more Cdfollowed by GK30, while Coker 312 was less Cd accumulator. The ultrastructural modifications in the roottip cells of both the transgenic cotton cultivars and their wild relative were also dose-dependent. Withthe increase in Cd levels, the fine structures of their root cells also invariably changed. Increase in plasmolysisof the plasma membrane, greater number of nucleoli and vacuoles and enlarged vacuoles couldbe observed in both transgenic cotton cultivars. In comparison to them, Coker 312 showed relatively welldeveloped ultrastructures of the root tips except enlarged vacuoles and greater number of mitochondria.Moreover, the accumulation of Cd in the form of electron dense granules and crystals both in vacuolesand attached to cell walls were visible in both transgenic cotton cultivars and their wild relative. Theseresults suggest that both transgenic cotton cultivars and their wild relative cotton genotype respondedpositively towards Cd stress at seedling stage, the internal Cd-detoxification might be through apoplasticand symplastic binding. Moreover, as a whole BR001 proved to be sensitive whereas; GK30 and Coker 312were found as tolerant.

【题目】Intron-targeted intron-exon splice conjunction (IT-ISJ) marker and its application in construction of upland cotton linkage map
【中文关键词】无
【英文关键词】IT-ISJ (intron targeted intron-exon splice junction), linkage map, upland cotton (Gossypium hirsutum L.)
【中文摘要】无
【英文摘要】To develop a new DNA maker, which could be used in genetic diversity analysis and genetic map construction in plants,IT-ISJ (intron targeted intron-exon splice junction) primer combinations, which were designed according to the intronexonsplice junction conserved sequences, were used to construct cotton genetic linkage map in the present study. 49 outof 704 IT-ISJ primer combinations showed polymorphism between upland cotton high quality cultivar Yumian 1 andmultiple dominant gene line T586, and the polymorphic primer combinations accounted for 7.0% of total primer combinations.49 IT-ISJ primer combinations were used to genotype 270 F2:7 recombinant inbred lines developed from (Yumian 1 × T586)F2, and 58 IT-ISJ loci were obtained. 58 IT-ISJ, together with 150 SSR and 8 morphological loci, were used to conductlinkage analysis, and a linkage map including 22 linkage groups and 113 loci (49 IT-ISJ, 62 SSR, and 2 morphological loci)was constructed. The linkage map covered 714.5 cM with an average interval of 6.3 cM between two markers, accountingfor 16.1% of cotton genome. The present study demonstrated that the polymorphism of IT-ISJ marker is high, and it couldbe effectively applied in plant genetic map construction.

【题目】Construction of a comprehensive PCR-based marker linkage map and QTL mapping for fiber quality traits in (Gossypium hirsutum L.)
【中文关键词】无
【英文关键词】Fiber quality　Genetic linkage map
QTL (Quantitative trait locus)
Upland cotton (Gossypium hirsutum L.)
【中文摘要】无
【英文摘要】To facilitate marker assisted selection,there is an urgent need to construct a saturatedgenetic map of upland cotton (Gossypium hirsutumL.). Four types of markers including SSR, SRAP,morphological marker, and intron targeted intron – exon splice junction (IT-ISJ) marker were used toconstruct a linkage map with 270 F2:7 recombinantinbred lines derived from an upland cotton cross(T586 9 Yumian 1). A total of 7,508 SSR, 740 ITISJand 384 SRAP primer pairs/combinations wereused to screen for polymorphism between the twomapping parents, and the average polymorphisms ofthree types of molecular markers represented 6.8, 6.6and 7.0%, respectively. The polymorphic primerpairs/combinations and morphological markers wereused to genotype 270 recombinant inbred lines, and amap including 604 loci (509 SSR, 58 IT-ISJ, 29SRAP and 8 morphological loci) and 60 linkagegroups was constructed. The map spanned 3,140.9cM with an average interval of 5.2 cM between twomarkers, approximately accounting for 70.6% of thecotton genome. Fifty-four of 60 linkage groups wereordered into 26 chromosomes. Multiple QTL mappingwas used to identify QTL for fiber quality traitsin five environments, and thirteen QTL weredetected. These QTL included four for fiber length(FL), two for fiber strength (FS), two for fiberfineness (FF), three for fiber length uniformity (FU),and two for fiber elongation (FE), respectively. EachQTL explained between 7.4 and 43.1% of phenotypicvariance. Five out of thirteen QTL (FL1 and FU1 onchromosome 6, FL2, FU2 and FF1 on chromosome7)were detected in five environments, and theyexplained more than 20% of the phenotypic variance.Eleven QTL were distributed on A genome, while theother two on D genome.

【题目】An efficient grafting system for transgenic plant recovery in cotton (Gossypium hirsutum L.)
【中文关键词】无
【英文关键词】Gossypium hirsutum L., grafting, somatic embryo, transgenic
【中文摘要】无
【英文摘要】A successful transformation program relies on the number of survival plants in soil that can be obtained.Low recovery of transgenic plants is still a key restrictive factor for transgenic cotton production. In orderto utilize genetic transformation in cotton breeding program effectively, an efficient grafting system forrecovering plants derived from somatic embryogenesis following Agrobacterium infection and kanamycinselection was developed. Various aspects of in vitro grafting were examined in efforts to improve theefficiency of transformant recovery. Using strong seedling rootstocks was the first important step to obtainhigh rate of successful grafts. Scion size >0.6 cm and seedling rootstock at age of 6 – 12 days wereappropriate for grafting. The successful grafting ratio was higher when using hypocotyls without radicle.Shoot-tip and shoot stem with axillary bud were also suitable for in vitro grafting, which meant we couldsignificantly improve the survival ratio of transgenic plantlets, because one plantlet has a shoot-tip butseveral axillary buds. Based on our data, the period from in vitro seedling rootstock germination totransplant of grafts to field usually takes one month. Over 90% successful grafting ratio could be obtainedunder optimal conditions, which represented a significant improvement over currently available methodsfor recovery of cotton plantlet from somatic embryogenesis after transformation. Ex vitro grafting couldalso be used for plant recovery, which gave an average of successful grafting ratio of 71.9%. However, thismethod was strongly affected by environmental factors.

【题目】Genes expression analyses of sea-island cotton (Gossypium barbadense L.) during fiber development
【中文关键词】无
【英文关键词】cDNA array ESTs Fiber development
Normalized cDNA library Sea-island cotton
【中文摘要】无
【英文摘要】Sea-island cotton (Gossypium barbadense L.)is one of the most valuable cotton species due to its silkiness,luster, long staples, and high strength, but its fiberdevelopment mechanism has not been surveyed comprehensively.We constructed a normalized fiber cDNA library(from − 2 to 25 dpa) of G. barbadense cv. Pima 3-79 (thegenetic standard line) by saturation hybridization withgenomic DNA. We screened Pima 3-79 fiber RNA fromfive developmental stages using a cDNA array including9,126 plasmids randomly selected from the library, and weselected and sequenced 929 clones that had different signalintensities between any two stages. The 887 high-qualityexpressed sequence tags obtained were assembled into 645consensus sequences (582 singletons and 63 contigs), ofwhich 455 were assigned to functional categories usinggene ontology. Almost 50% of binned genes belonged tometabolism functional categories. Based on subarrayanalysis of the 887 high-quality expressed sequence tagswith 0-, 5-, 10-, 15-, and 20-dpa RNA of Pima 3-79 fibersand a mixture of RNA of nonfiber tissues, seven types ofexpression profiles were elucidated. Furthermore our resultsshowed that phytohormones may play an importantrole in the fiber development.

【题目】Dissection of genetic variance of fibre quality in advanced generations from an interspecific cross of Gossypium hirsutum and G. barbadense.
【中文关键词】无
【英文关键词】cotton (Gossypium) — quantitative trait loci —
advanced-generation population — fibre quality — segregation
distortion
【中文摘要】无
【英文摘要】The interspecific genetic introgression approach has been shown tofacilitate the detection and dissection of quantitative trait loci (QTL).A population consisting of 121 F6 recombinant inbred lines wasdeveloped by crossing Gossypium hirsutum cv. Handan 208 and G.barbadense cv. Pima 90 via single-seed descent. Genotyping indicatedthat the mean Pima 90 allele frequency at each locus was 21%.Phenotyping and phenotypic distribution indicated a trend of return ofindividual lines characters to Handan 208 coupled with a widevariance for each trait. Significant loci influencing fibre quality weredetected by one-way analysis of variance (ANOVA; P < 0.005) andassociation analysis [)log10(P) ‡ 3]: five and three markers for fibrelength, four and one marker(s) for uniformity, two and one marker(s)for micronaire, 13 and 15 markers for strength, six and 10 markers forelongation, respectively. Two-way ANOVA based on genotypes of allmarker loci combination showed that 807 two-locus combinationswere significant, and two-way ANOVA based on marker genotypes ofQTL markers combination showed five significant digenic interactions(P < 0.01).

【题目】Detection of somaclonal variation of cotton (Gossypium hiesutum) using cytogenetics, flow cytometry and molecular markers.
【中文关键词】无
【英文关键词】Cotton (Gossypium hirsutum L.)
Somatic embryogenesis Somaclonal variation
Flow cytometry Cytogenetic analysis RAPD
SSR
【中文摘要】无
【英文摘要】Two protocols of plant regeneration for cottonwere adopted in this study, namely, 2, 4-D and kinetinhormone combination and IBA and kinetin hormonecombination. Twenty-eight embryogenic cell lines viasomatic embryogenesis and 67 regenerated plants fromthese embryogenic calli were selected and used for randomamplified polymorphic DNA (RAPD), simplesequence repeat (SSR), chromosomal number counting,and flow cytometric analysis. The roles of RAPD andSSR markers in detecting somaclonal variation of cotton(Gossypium hirsutum L.) were evaluated. Two clusteranalyses were performed to express, in the form ofdendrograms, the relationships among the hormonecombinations and the genetic variability. Both DNAbasedtechniques were able to amplify all of the cellclones and regenerated plantlets genomes and relativehigher genetic variation could be detected in the culturetype with 2, 4-D and kinetin hormone combination. Theresult suggested that 2, 4-D and kinetin hormone combinationcould induce relative high somaclonal variationand RAPD and SSR markers are useful in detecting somaclonalvariation of regenerated cotton plants viasomatic embryogenesis. Chromosome number countingand flow cytometry analysis revealed that the number ofchromosomes and ploidy levels were nearly stable in allregenerated plants except two regenerated plantlets (lost4 and 5 chromosomes, respectively) which meant thatcytological changes were not correlated with the frequencyof RAPD and SSR polymorphisms. This resultalso might mean that the cell lines with variation ofchromosome numbers were difficult to regenerate plants.

【题目】Molecular cloning and characterization of five genes encoding pentatricopeptide repeat proteins from Upland cotton (Gossypium hirsutum L.)
【中文关键词】无
【英文关键词】PPR Cotton Cloning Expression
【中文摘要】无
【英文摘要】The pentatricopeptide repeat (PPR) proteinfamily is one of the largest and most complex families inplants. These proteins contain multiple 35-amino acidrepeats that are proposed to form a super helix capable ofbinding RNA. PPR proteins have been implicated in manycrucial functions broadly involving organelle biogenesis andplant development. In this study, we identified many genesencoding PPR protein in Upland cotton through an extensivesurvey of the database of Gossypium hirsutum. Furthermore,we isolated five full-length cDNA of PPR genes fromG. hirsutum 0-613-2R which were named GhPPR1 – GhPPR5.Domain analysis revealed that the deduced amino acidsequences of GhPPR1 – 5 contained from 5 to 10 PPR

motifsand those PPR proteins were divided into two different PPRsubfamilies. GhPPR1 – 2 belonged to the PLS subfamily andGhPPR3 – 5 belonged to the P subfamily. Phylogenetic analysisof the five GhPPR proteins and 18 other plant PPR proteinsalso revealed that the same subfamily clustered together.All five GhPPR genes were differentially but constitutivelyexpressed in roots, stems, leaves, pollens, and fibers based onthe gene expression analysis by real-time quantitativeRT-PCR. This study is the first report and analysis of genesencoding PPR proteins in cotton.

【题目】Agrobacterium-mediated co-transformation of multiple genes in upland cotton

【中文关键词】无

【英文关键词】Upload cotton Agrobacterium tumefaciens
Co-transformation Transformation frequency

【中文摘要】无

【英文摘要】Two cotton genotypes, Simian 3 (SM 3) andWC, were co-transformed using a mixture of four Agrobacteriumtumefaciens cultures of strain LBA4404, eachcarrying a plasmid harboring the following genes, Bt ? sck(for Bacillus thuringenesis protein and modified Cowpeatrypsin inhibitor), bar (for glufosinate), keratin, and fibroin.The frequency of callus induction, embryogenesis, andplant regeneration were notably different between the twogenotypes. However, there were no differences between thetwo genotypes for number of plantlets carrying multiplegene copies of different gene combinations as well astransformation frequency for different gene combinations.PCR analysis indicated that more than 80% of plantletscarried the nptII gene for kanamycin resistance. Overall,the co-transformation frequency of two or more genes wasabout 35%. Southern blot analysis confirmed integration oftarget genes into the cotton genome, and the number ofcopies of the transgene(s) varied from one to four. Multipletransgene expression was confirmed by RT-PCR analysisin some transgenic lines. Further analysis of T1 plantsdemonstrated that multiple transgenes were inherited andexpressed in progenies.

【题目】Promoter of a cotton fibre MYB gene functional in trichomes of Arabidopsis and glandular trichomes of tobacco

【中文关键词】无

【英文关键词】Cotton fibre, glandular, MYB, promoter, tobacco,
trichome.

【中文摘要】无

【英文摘要】Cotton fibres are unicellular seed trichomes. Our previousstudy suggested that the cotton R2R3 MYBtranscript factor GaMYB2 is a functional homologue ofthe Arabidopsis trichome regulator GLABRA1 (GL1).Here, the GaMYB2 promoter activity is reported incotton (Gossypium hirsutum), tobacco (Nicotiana tabacum),and Arabidopsis plants. A 2062 bp promoter ofGaMYB2 was isolated from G. arboreum, and fused toa b-glucuronidase (GUS) reporter gene. In cotton, theGaMYB2 promoter exhibited activities in developingfibre cells and trichomes of other aerial organs, includingleaves, stems and bracts. In Arabidopsis thepromoter was specific to trichomes. Different fromArabidopsis and cotton that have unicellular nonglandularsimple trichomes, tobacco plants containmore than one type of trichome, including multicellularsimple and glandular secreting trichomes (GSTs).Interestingly, in tobacco plants the

GaMYB2 promoterdirected GUS expression exclusively in glandular cellsof GSTs. A series of 5#-deletions revealed that a 360 bpfragment upstream to the translation initiation codonwas sufficient to drive gene expression. A putative ciselementof the T/G-box was located at -233 to -214;a yeast one-hybrid assay showed that ArabidopsisbHLH protein GLABRA3 (GL3), also a trichome regulator,and GhDEL65, a GL3-like cotton protein, had highbinding activities to the T/G-box motif. Overexpressionof GL3 or GhDEL65 enhanced the GaMYB2 promoteractivity in transgenic Arabidopsis plants. A comparisonof GaMYB2 promoter specificities in trichomes ofdifferent plant species with different types of trichomes provides a tool for further dissection of planttrichome structure and development.

【题目】Development of Gossypium barbadense chromosome segment substitution lines in the genetic standard line TM-1 of Gossypium hirsutum

【中文关键词】无

【英文关键词】cotton
chromosome segment substitution lines
fiber qualities
leaf morphology
QTL

【中文摘要】无

【英文摘要】Chromosome segment substitution lines (CSSL) consist of a battery of near-isogenic lines that have been developed and cover the entire genome of some crops. With the exception of one homozygous chromosome segment transferred from a donor parent, the remaining genome of each CSSL line is the same as the recipient parent. It is an ideal material for genome research and particularly QTL mapping. In the present study, we first developed one set of CSSL lines using G. hirsutum acc. TM-1 (the genetic standard), as the recipient parent and G. barbadense cv. Hai7124 as the donor parent using molecular assisted-selection in BC5S1 – 3 generations. The CSSL consisted of 330 different lines, in which 1 – 4 different lines had the same or overlapping substituted segments. The genetic length of the substituted segments covered 5271.9 cM with an average segment distance of 10.9 cM, 1.5 times the total genetic length of Upland cotton (3514.6 cM). The substituted segments of each line varied in length, ranging from 3.5 cM for the shortest segment to 23.2 cM in the longest segment. Our CSSL have not yet to cover the entire tetraploid cotton genome, due to the absence of some donor parent interval segments

【题目】Somatic embryogenesis and plant regeneration of recalcitrant cottons (Gossypium hirsutum)

【中文关键词】无

【英文关键词】Cotton, callus induction, somatic embryogenesis, embryogenic callus, plant regeneration.

【中文摘要】无

【英文摘要】Many restrictive factors still remain in cotton tissue culture such as long duration, unpredictability anda high degree of genotype dependence. The main objective of this study was to develop a protocolallowing consistent somatic embryogenesis and plant

regeneration from five recalcitrant cottoncultivars. Our results showed that the best medium for calli induction is MSB (MS medium + vitamineB5) supplemented with indolebutyric acid (IBA, 0.1 mg.l-1), kinetin (KIN, 0.1 mg.l-1) and 2,4-dichlorophenoxyacetic acid (2,4-D, 0.1 mg.l-1). Embryogenic calli of all the five genotypes used weresuccessfully from MSB medium supplemented with IBA (0.3 mg.l-1) and KIN (0.05 mg.l-1). Somaticembryos and transformation of somatic embryos into plants were successfully induced on MSBmedium supplemented with ½×NH4NO3 (825 mg.l-1), 2×KNO3 (3800 mg.l-1), glutamine (2.0 g/l) andasparagines (0.5 g/l). The protocol developed in this study for cotton plant regeneration could beshortened to 4 - 5 months. Furthermore, the firstly-obtained regenerated plants of above five cultivarswill broaden the range of genotypes for in vitro manipulation for cotton improvement.

【题目】Isolation and molecular characterization of a novel homogalacturonan galacturonosyl- transferase gene (GbGAUT1) from Gossypium barbadense

【中文关键词】无

【英文关键词】Gossypium barbadense, fiber development, cDNA cloning, pectin polysaccharide, homogalacturonan galacturonosyltransferase.

【中文摘要】无

【英文摘要】A novel gene, designated as GbGAUT1 (Gossypium barbadense homogalacturonan galacturonosyltransferasegene 1), was successfully cloned from G. barbadense (GenBank accession No. EF552432)by bioinformatics methods, RT-PCR and RACE. The open reading frame (ORF) was 1797 bp long andputatively encoded a polypeptide of 598 amino acids, with a predicted molecular mass of 69 kDa.GbGAUT1 could be considered as a homogalacturonan (HG) galacturonosyltransferase protein sincethe conserved GAUT1-related supperfamily motif had been found and it was clustered into GAUT-Agroup in the phylogenetic tree. Semi quantitative RT-PCR showed that GbGAUT1 preferentiallyexpressed in the fiber secondary cell wall thickening, especially in the fibers of 35 day post anthesis(DPA). These results suggested that the novel cotton GbGAUT1 might play an important role in fiberdevelopment.

【题目】Molecular Cloning of Three UDP-Glucuronate Decarboxylase Genes That Are Preferentially Expressed In Gossypium Fibers From Elongation to Secondary Cell Wall Synthesis

【中文关键词】无

【英文关键词】Fiber development . Gossypium .
UDP-glucuronate decarboxylase

【中文摘要】无

【英文摘要】UDP-xylose (UDP-Xyl) is a nucleotide sugarused as substrate for producing non-cellulose materials, e.g., hemicellulose and pectic polysaccharide, in the fibers ofcotton (Gossypium). Its biosynthesis is catalyzed fromUDP-glucuronic acid (UDP-GlcA) by UDP-glucuronatedecarboxylase (UXS). Here, we first cloned GhUXS1 inGossypium hirsutum and Gossypium barbadense based ona transcript-derived fragment that originated from ourcDNA – AFLP transcriptome profiling in cotton. GhUXS2and GhUXS3 were also

isolated via homology-basedcloning. GhUXS nucleotide sequences were identicalbetween the two species, and the deduced amino acidresidues had the conserved motif of the UXS family, i.e.,GxxGxxG, Ser residues, and YxxxK. GhUXS1 wasexpressed in Escherichia coli and generated UXS activitythat converted UDP-GlcA to UDP-Xyl. SemiquantitativeRT-PCR results showed that GhUXSs transcripts werepreferentially expressed during fiber development, fromelongation through the stage of secondary cell wallsynthesis. Although at the same number of days postanthesisthey were more abundant in G. hirsutum, expressionwas sustained for a longer period in G. barbadense. Thesedifferent patterns of expression may affect quality andpartially explain why the latter species has better fiberstrength.

【题目】Mining cotton fiber strength candidate genes based on transcriptome mapping
【中文关键词】无
【英文关键词】cotton
fiber strength
candidate gene
cDNA-AFLP
transcriptome mapping
quantitative trait loci
【中文摘要】无
【英文摘要】Cotton fiber strength is mainly determined during the secondary cell wall (SCW) thickening stage. In 24 – 25 days post anthesis (DPA) of SCW thickening stage, cDNA-amplified fragment length polymorphism (AFLP) was carried out to construct fiber transcriptome groups. Based on these groups, cotton fiber strength candidate genes were detected by composite interval mapping (CIM) through quantitative trait locus (QTL) scanning. The mapping population was the interspecific backcross BC1 of Gossypium hirsutum × G. barbadense. One hundred and fifteen BC1 plants were used for group construction with 102 qualified absence/presence polymorphic transcript-derived fragments (TDFs) from G. barbadense, and 78 TDFs were assigned into eight transcriptome groups that gave a total length of 462.63 centimorgans (cM). Two significant QTLs, FS1 and FS2, were detected and explained 16.08% and 15.87% of fiber strength variance, respectively. Of the six TDFs co-segregating with FS1 and FS2, except one encoding an unknown protein, five targeted putative phosphatidylinositol kinase, trehalose-6-phosphate synthase, MADS transcription factor, cellulose synthase-like protein and phenylalanine ammonia lyase, respectively. These functional genes were involved in plant cell wall morphogenesis or cellulose synthesis metabolism processes, and were considered as the candidate genes controlling cotton fiber strength.

【题目】棉花分子遗传图谱构建和纤维品质性状QTL分析

【中文关键词】棉花, 遗传图谱, 分子标记 , 纤维品质

【英文关键词】无

【中文摘要】分子遗传图谱是进行棉花分子遗传和育种研究的有力工具。以海陆种间杂交BC1为作图群体,利用SSR、SRAP标记技术构建了四倍体栽培棉种高密度分子图谱。图谱具有802个标记位点, 总长4347.5 cM,基因组覆盖率为79.01%(Lacape et al,2003),标记间的平均距离5.4 cM.用涉及 52对引物的重复标记位点为四倍体棉花的13个同源转化群中的12个建立了联系。有52个偏分离标记构建到图谱上。偏分离标记只分布于部分染色体或连锁群上,而且存在明显的聚集现象。通过复合区间作图,在11条染色体或连锁群上检测到28个纤维品质性状的QTL,其中12个QTL的LOD ≥3.0。本研究为利用分子标记辅助选择向陆地棉杂交渗透海岛棉的优良纤维品质基因奠定了基础。

【题目】农杆菌介导法转化泗棉3号的研究

【中文关键词】泗棉3号 农杆菌介导法转化 再生

【英文关键词】Simian 3 Agrobacterium-mediated transformation Regeneration

【中文摘要】泗棉3号农艺性状优良,是20世纪90年代长江流域棉区的主栽品种,利用基因工程导入外源基因进行直接改良,可以迅速获得新的品种或育种材料。以陆地棉泗棉3号的下胚轴为外植体,建立了高效的转化体系,得到了大量的转基因植

株。泗棉3号的出愈率和分化率显著高于模式品种Coker 312,同时它出现分化中心的主要形态不同于Coker 312,其胚性愈伤组织主要来源于两类初生愈伤组织。对泗棉3号的胚性愈伤组织进行GUS检测,以及对再生植株叶片进行PCR检测后,阳性植株嫁接于温室。在温室用2 063.98 μmol L-1的卡那霉素点涂叶片检测nptⅡ基因的表达和取叶片进行gus基因的组织化学检测,同时通过Southern blot分析检测,证明目的基因成功地整合到泗棉3号基因组中。

【英文摘要】Simian 3 is one of major cultivars at the cotton-growing district in Yangtze River Valley in the 1990s. New breeding materials or varieties can be rapidly developed through direct transformation of exogenous genes. In this study, we generated transgenic plants from hypocotyl segments of Simian 3 by Agrobacterium-mediated transformation. The rates of callus induction and differentiation were higher in Simian 3 than those in Coker 312. And the major callus morphological characters of Simian 3 from which differentiation center could be formed differed from Coker 312. Histochemical GUS (β-glucuronidase) assay and PCR for nptⅡ (neomycin phosphotransferase) gene were carried out with the transgenic embryogenic callus and leaves of transgenic plantlets. The plantlets proved by histochemical GUS assay and PCR for nptⅡ were grafted and then cultivated in greenhouse. The application of kanamycin at the level of 2 063.98 μmol L-1 and Southern blot also proved that the target gene was successfully integrated into the genome of Simian 3.

【中文关键词】棉花; 农杆菌; 遗传转化; 植株再生; 移栽
【英文关键词】Cotton (Gossypium hirsutum L.) ; Agrobacterium; Genetic transformation; Plant regeneration; Transplanting
【中文摘要】以棉花胚性愈伤组织作受体, 用农杆菌介导法(农杆菌菌株为A1) 将质粒载体pSG529 上的异戊烯基转移酶(ipt)基因导入4 个陆地棉品种, 研究了不同基因型的遗传转化效率并建立了转基因再生植株的有效成苗技术体系。结果表明, 在相同的转化条件下, 不同基因型的转化效率差异较大, 豫早1 号和珂字201 的遗传转化效率及植株再生能力显著高于豫棉4 号和鄂棉23。降低培养基无机盐浓度, 用Phytagel 固化, 能够提高胚萌发成苗率, 降低畸形苗频率, 在生根培养中添加少量活性炭提高了根系活力。再生植株长到3~ 5 片真叶时, 可以切除发褐根系, 转移到新鲜的低盐培养基中,重新生根。在试管苗移栽过程中, 采用逐步揭开封口膜进行炼苗的措施, 可以提高试管苗的环境适应能力, 显著提高移栽成活效率。
【英文摘要】To study the effect of genotypes on the efficiency of genetic transformation. The embryogenic calli of fourcultivars YZ 1, Coker 312, Ym 4, and Em 23 were transformed by Agrobacterium strain A1 harbouring pSG 529 carryingisopentenyl transferase gene (ipt) . The results showed that the transgenic efficiency was different in four cultivars under thesame transgenic procedure. YZ 1 and Coker 201 showed higher genetic transformation and plant regeneration efficienciesthan Ym 4 and Em 23. To optimize the procedure of somatic embryos germination, rooting and transplant, several factorswere studied using somatic embryos of YZ 1 as material. The results showed that low concentration of inorganic salt in theembryo germination media, namely 1 2 MS inorganic salts, could increase the ratio of normal regenerated plant and helpbuild stronger root systems. Phytagel was a better for solidifying the medium than Agar. Activated carbon added in rootingmedium was proved to be helpful for root regenerat ion of somatic embryos. When the roots of some regenerated plantlets with3- 5 true leaveswere brown due to a long culturing period in solid medium. They could rebuild stronger after the brown rootswere removed and the plantlets were inoculated on fresh medium with low concentration of inorganic salt. The plantlets werestepwise opening the lids of culture bottles helped the regenerated plantlets accommodate the open circumstances.

【中文关键词】Bt 和GNA 双价抗虫棉, 新种质, 选育与利用
【英文关键词】Transgenic Bt+GNAinsect-resistant cotton, New germplasm, Selection and utilization
【中文摘要】本研究对转Bt 和GNA 双价基因后代植株,经南繁加代、抗虫检测、自交、单株和株系选择、纤维品质测定和产量比较试验,选育出双价转基因抗虫棉种质系BGsm16。该种质系高抗棉铃虫等鳞翅目害虫,对蚜虫有一定的抑制作用,抗虫性稳定且不随世代的增加而减弱,衣分高(48.0%左右),配合力好,结铃性强,通风透光,皮棉产量比受体材料苏棉16 号增产11.1%,品质两者相当。与其配置的杂交棉组合衣分高,丰产性好,品质高于对照南农8 号,有着很强的杂种优势。转Bt 和GNA 双价基因抗虫棉种质系BGsm16 的成功选育,加强转基因棉花的抗虫能力,拓宽了抗虫谱,并有助于延缓害虫对抗虫棉产生抗(耐)性;同时改变了传统对常规抗虫棉衣分低的认识,丰富了抗虫棉种质资源,对选育高衣分杂交抗虫棉有良好的应用前景。关键词Bt 和GNA 双价抗虫棉, 新种质, 选育与利用
【英文摘要】In the article, transgenic Bt+GNA insect-resistant cotton plants were studied and new transgenic Bt+GNA insect-resistant cotton germplasm line “ BGsm16 ” with high lint percentage was derived by speeding up generationin Hainan province, insect-resistant tests, selection of individual plants and lines, determination of fiberquality and comparative experiment of yield. It showed high resistance against bollworm larvae (Helicoverpaarmigera), inhibition effect on the development of aphid populations, and stability of insect resistance; it had highlint percentage (48%), good combining ability,many bolls, and good ventilation and light penetration; its lint yield was11.1% higher than Sumian16 (CK) and its quality showed on difference with Sumian16. F1 had high lint percentage,high yield and high heterosis. Cultivation of the newgermplasmline “ BGsm16 ” of transgenic Bt+GNAinsect-resistantcotton strengthened insect resistance, extended different insect resistance ranges, prolonged insect resistance timesof insect-resistant cotton, changed the cognitive idea of insect-resistant cotton with low lint percentage, enrichedgermplasm resources of insect-resistant cotton, and had well applied foreground in selecting hybrid insect-resistantcotton with high lint percentage.

【题目】新疆陆地棉主栽品种部分产量性状QTL的标记与定位
【中文关键词】陆地棉;遗传图谱;SSR;产量性状;QTL
【英文关键词】Upland cotton; Molecular linkage map; SSR; Yield traits; QTL
【中文摘要】:【目的】在新疆特有的“ 矮密早 ”陆地棉栽培技术体系下,利用不同主栽品种(Gossypium hirsutum L.)组配F2 组合筛选产量及其构成因素的QTL,为利用分子标记辅助选择提高新疆陆地棉育种效率提供理论依据。【方法】用新陆中10 号、中棉所35 号、军棉1 号和新陆早7 号4 个品种构建了3 个F2 作图群体,连锁群构建及QTL定位使用MAPMAKER/EXP(Version 3.0b)、MapQTL5 和WinQTLCartV2.5。【结果】3 个作图群体图谱覆盖了除D4和D12 外的棉花所有染色体,将筛选出皮棉产量、单铃重、衣分、籽指、结铃数等性状在位置、效应一致的QTL认为是一个QTL,共鉴定、筛选出产量构成因子QTL 11 个。其中与籽指有关的QTL 共3 个,分别位于A1、A5 和A7 上;与衣分有关的QTL 3 个,分别位于A7、A13 和连锁群6 上;与铃重有关的QTL 4 个,定位在A7 上有3 个、D3 上1 个;与皮棉产量有关的QTL1 个,定位在D3 上。涉及到单铃重、衣分和籽指等与产量性状相关的QTL 大部分都分布在A7 染色体上的同一区域。【结论】产量相关性状的QTL 分布在棉花染色体同一区域,并在不同群体或两年环境中稳定表达,这些QTL 可能有助于今后新疆陆地棉分子标记辅助育种的提高。部分籽指QTL 在染色体水平上的定位(A1 和A5)与前人研究相同,其余QTL 在染色体水平上的定位(A7、D3 和A13)与前人研究不同。
【英文摘要】【Objective】Four Xinjiang main upland cotton (Gossypium hirsutum L.) cultivars were used to construct threemolecular linkage maps for characterizing quantitative trait loci (QTL) determining cotton yield-related traits under the technology ofshort plant height, dense populations and earlier maturity (Short, Dense and Early), which can provide DNA molecular markers forusing in cotton improvement in the future. 【Method】 Four cultivars (Zhongmiansuo35, Xinluzhong10, Junmian1 and Xinluzao7)were employed to construct three F2 populations. Based on these populations three linkage maps were respectively constructed byMapmaker/Exp3.0. Possible QTL/loci were identified by composite interval mapping method on WinQTLcart V2.50 and MapQTL5software. 【Result】 The three molecular linkage maps covered all of the cotton chromosome except D4 and D12. Under thecondition of planting of Short, Dense and Early, ten possible QTL of yield related traits (lint yield, lint percentage, boll size, seedindex) were suggested with LOD>2.0. Three seed index QTL were located on A1, A5 and A7; Three lint percentage QTL werelocated on A7, A13 and LG6; Three boll size QTL were located on A7 and D3; One lint yield QTL was located on D3. As a

greaterpart of the yield related QTL were located on A7, it was clear that these correlated QTL were distributed on same or neighborchromosomal domain and would play important roles in breeding.【Conclusion】In this research some correlated QTL were clearlyassigned on same position, which could provide valuable information for marker assisted selection (MAS). The QTL of seed indexwere assigned to the chromosomes (A1 and A5) in this paper were the same as previously published reports. In addition, it was alsofound that the rest QTL on the level chromosomes (A7, A13 and D3) were different from previously published reports.

【题目】一个新的棉花MYB类基因(GhTF1)的克隆及染色体定位分析
【中文关键词】棉花; MYB 基因; 克隆; 表达; 基因定位
【英文关键词】Gossypium; MYB gene; cloning; expression; gene tagging
【中文摘要】MYB类转录因子是指含有MYB结构域的一类转录因子, 广泛参与植物发育和代谢调节。含2 个MYB结构域的R2R3 类MYB转录因子在植物体内主要参与次生代谢的调节和控制细胞的形态发生。从优质材料7235 不同发育时期的棉纤维混合cDNA文库中克隆了一个棉花MYB转录因子基因GhTF1(GenBank登录号: EF651783)。该cDNA序列长1 115 bp, 其开放读码框长度为771 bp, 编码256 个氨基酸。表达特征分析表明, 该基因在陆地棉7235 不同组织中均表达, 但表达量不

同, 特别在开花前1 d, 开花后8 d和11 d的纤维细胞中优势表达。该基因在二倍体棉种非洲棉和雷蒙德氏棉中开放读码框区的序列较保守, 但在非编码区差异较大, 在内含子区存在大片段插失和碱基替换现象。Southern杂交结果表明该基因在陆地棉基因组中存在2 个拷贝, 推测A、D亚组中各有1 个拷贝。利用海7124 和TM-1两亲本配置的BC1作图群体, 将GhTF1 定位在染色体10 上。

【英文摘要】Plant MYB transcription factors are characterized by containing a structurally conserved MYB domain, they playimportant roles in the regulation of plant development and metabolism. Of them, the R2R3 MYB proteins with two MYB domainsare involved in regulating secondary metabolism and cellular morphogenesis. Cotton fibers are single-celled seed trichomes. Sofar, the molecular process of fiber initiation is poorly understood. However, some transcriptional factors such as MYB genes areresponsible to fiber cell initiation. Just like in Arabidopsis, leaf trichome formation is mediated through positive and negativeregulators such as GL1 and GL2 encoding MYB transcription factors.In cotton, several MYB transcription factors have been cloned. Expression of type I genes (GhMYB1, 2, and 3) was detectedin all tissues tested, while type II genes (GhMYB4, 5, and 6) process involving many other pathways such as signal transductionand transcriptional regulation. Moreover, GhMYB109, a gene encoding a R2R3 MYB transcription factor, was expressed specificallyin fiber initials and elongating fibers. And over-expression of GaMYB2 complemented gl1 phenotype as well as inducedseed trichome development in Arabidopsis, suggesting a role of MYB-like transcription factors in cotton fiber cell differentiation.The objective of the study was to clone new MYB genes, further put a foundation to illustrate these genes function in cotton fiberdevelopmental stages. In this paper, a MYB transcription factor gene, GhTF1 was isolated from developmentally different cottonfiber pools of elite material 7235 library. GhTF1 (GenBank No.: EF651783) is a 1 115 bp cDNA, its open reading frame is 771 bp,and encodes a polypeptide containing 256 amino acids. GhTF1 was expressed constitutively in every tissue with different expressionlevels, e.g. with higher levels in fiber cells at initiation and elongations stages. GhTF1 had conserved coding region in A andD diploid cotton species, G. herbaceum and G. raimondii, however, there existed a large DNA fragment insertion/deletion and basesubstitutions in their corresponding intron region. Southern blotting analysis showed that there were two copies of GhTF1 in thegenome of upland cotton, deducing that the sub-genome A and sub-genome D contain each of them. Using the BC1 mappingpopulation derived from the hybridization between the upland cotton standard line TM-1 and G. barbadense cultivar Hai7124, andTM-1 as recurrent parent, GhTF1 was located on the chromosome 10.

【题目】陆 地棉优质纤维QTL的分子标记筛选及优质来源分析
【中文关键词】陆地棉; 纤维品质; QTL; 来源
【英文关键词】Gossypium hirsutum; Fiber quality; QTL; Source
【中文摘要】利用陆地棉优质品系7235、渝棉1 号做亲本, 以7235 × 渝棉1 号的F2 与F2:3 分离群体为材料, 开展不同来源棉花高强纤维QTL 微卫星标记筛选, 为进一步进行优质纤维QTL 聚合育种提供基础。通过5 514 对SSR 引物对亲本进行多态性筛选, 获得117 个多态性标记, 用其中80 个标记构建了总长为1 147.8 cM 的遗传图谱; 应用复合区间作图法分析了该组合的F2 单株和F2:3 家系纤维品质性状, 共检测到36 个纤维品质数量性状基因座(QTL), 其中与纤维长度、比强度、细度、伸长率及整齐度相关的QTL 各6、8、7、8 和7 个, 分别解释各性状表型变异的3.4%~14.4%、5.0%~42.4%、6.5%~11.7%、5.1%~19.4%和6.9%~14.0%。通过分析来源于7235 和渝棉1 号高强QTL 的染色体分布,表明两亲本在D7、D8、D9 染色体上都存在控制纤维比强度的QTL, 其中存在于D7 和D8 染色体上来自双亲的QTL紧密连锁, 成簇分布在染色体上的一定区间内。而在D7 和D9 染色体上也发现双亲完全相同的优质QTL, 其优质供体可能来自陆地棉优质品系PD4381。进一步分析了获得的QTL 在聚合育种中的应用潜力。
【英文摘要】With the development and application of molecular biology technology in recent years, several genetic maps developedfrom different combinations have been constructed and lots of QTL controlling fiber quality or yield components detected,which makes the breeding procedure more effective, immediate and time-saving. In this paper, both F2 and F2:3 populations wereconstructed using two elite upland cotton (Gossypium hirsutum L.) strains (variety), 7235 and Yumian 1 as parents. Linkageanalysis with SSR molecular markers revealed that 80 loci were mapped into 19 linkage groups that covered 1 147.8 cM geneticdistance. A total of 36 QTLs were detected by composite interval mapping method, including 6 for fiber length, 8 for fiberstrength, 7 for micronaire value, 8 for fiber elongation and 7 for fiber uniformity; and explained 3.4% – 14.4%, 5.0% – 42.4%,6.5% – 11.7%, 5.1% – 19.4%, and 6.9% – 14.0% of the corresponding phenotypic variations, respectively. Analysis of QTL distributionindicated that D7, D8, and D9 chromosomes were enriched with QTLs controlling fiber strength in both parents, among themthose existed in D7 and D8 chromosomes were closely linked and two QTLs controlling fiber strength located respectively in D7and D9 chromosomes were in the complete same position, which could be related with that both 7235 and Yumian 1 bear thepedigree of elite fiber accession PD4381. The utilization potential of the QTL of super quality in the pyramiding breeding wasalso discussed.

【题目】棉花腺苷高半胱氨酸水解酶cDNA的克隆、表达及染色体定位
【中文关键词】棉花; 腺苷高半胱氨酸水解酶; 克隆; 表达; 定位
【英文关键词】Gossypium hirsutum L.; Adenosyl-homocysteine hydrolase; Cloning; Expression; Localization
【中文摘要】腺苷高半胱氨酸水解酶是调节细胞内甲基反应的一个关键酶。通过对高品质纤维陆地棉品系7235 的棉纤维混合cDNA 文库随机测序, 得到一个棉花腺苷高半胱氨酸水解酶(编号: g073a03a,GhSAHH)的cDNA 序列。该cDNA序列长1

598 bp, 利用5′RACE 技术得到上游318 bp 的片段,序列拼接获得全长为1 916 bp 的cDNA 序列, ORF 为1 458bp, 编码485 个氨基酸, 其理论上的等电点pI=5.69, 分子量MW=53.2 kD。该基因在不同组织、器官中均表达, 在根、下胚轴和纤维发育早期优势表达。根据Southern 杂交结果推测GhSAHH 基因在陆地棉基因组中为单拷贝。利用本实验室陆地棉遗传标准系TM-1 和海岛棉海7124 培育的含140 个单株的BC1 作图群体, 将GhSAHH 基因定位在第20 号染色体上。

【英文摘要】S-adenosyl-L-homocysteine hydrolase (SAHH) is a key enzyme in the regulation of intracellular methylation reactions.Though the SAHH function has already been elucidated in various living creature bodies, it is still not explicit in growth and developmentof cotton fiber. Therefore, research of SAHH may provide effectively basis to clarify the mechanism of cotton growthand development. In this paper, we obtained a full length cDNA fragment of SAHH in cotton and further finished its expression,mapping and Southern blotting analyses. A cDNA clone encoding S-adenosyl-homocysteine hydrolase (Library No. g073a03a,GhSAHH) was isolated from cotton fiber cDNA library of 7235 germplasm line with elite fiber quality in Gossypium hirsutum L.The length of this cDNA clone was 1 598 bp. Further, a 318 bp-long-upstream fragment was obtained via 5′RACE technique. Thefull length of the cDNA clone was 1 916 bp with its open reading frame encoded 485 amino acids. The putative protein of thisgene had an isoelectric point of 5.69 and a calculated molecular weight of 53.2 kD. Judging from its expression characters,GhSAHH is expressed in cotton cells, especially in root, hypocotyl and at early stage of fiber developmental period. Southernblotting analyses showed there was only one copy of GhSAHH in the genome of upland cotton. Using the BC1 mapping populationwith 140 individuals derived from the hybridization between the upland cotton standard line TM-1 and the sea-island cottoncultivar Hai7124, and TM-1 as recurrent parent, GhSAHH was localized on the chromosome 20. We have already constructedplant express vector and RNAi vector of GhSAHH, the transgenic research on cotton is undertaking.

【题目】陆地棉衣分差异群体产量及产量构成因素的QTL标记和定位
【中文关键词】陆地棉; 衣分; 产量性状; 遗传图谱; QT Ls
【英文关键词】upland cot to n; lint percentage; y ield t rait s; genet ic linkage map; QTLs
【中文摘要】以衣分差异较大的陆地棉品种为材料, 构建了包含188 个F2 单株的作图群体, 应用6111 对SSR 引物对亲本进行了分子标记筛选, 结果仅获得了123 个多态性位点, 其中88 个位点构建了总长为666. 7 cM、平均距离为7. 57 cM 的遗传图谱, 覆盖棉花基因组的14. 9%。通过复合区间作图法对F2 单株和F2: 3家系进行QTL 检测, 共鉴定出了18 个控制产量及产量构成因素变异的Q TLs, 包括2 个衣分QT Ls、4 个子棉产量Q TLs、4 个皮棉产量Q TLs、2 个衣指QT Ls、3 个单株铃数Q TLs、2 个铃重QT Ls 和1 个子指Q TL。解释的表型变异分别为6. 9%~ 16. 9%、5 . 6% ~ 16. 2%、4. 8% ~ 15. 6%、7. 7%~ 13. 3%、8 . 2% ~ 11. 6%、6. 1%~ 7%和6. 6%。不同Q TLs 在相同染色体区段上的成簇分布表明与产量性状相关的基因可能紧密连锁或一因多效。产量及产量构成因素Q TLs 的遗传方式主要以显性和超显性效应为主。检测到的主效QTLs 可以用于棉花产量及产量构成因素的分子标记辅助选择。
【英文摘要】A g enetic linkage map w ith 88 loci f rom 6111 pair SSR primers w as const ructed using 188 F2plant s obtained from a cr oss betw een tw o upland co tton cult ivars, w hich differ remarkably in lint percentage and hav e relat ively high levels of DNA mar ker po lymo rphism. T he map covered 666. 7 cMw ith an average distance of 7. 57 cM betw een tw o markers, o r approx imately 14. 9% of the recombination leng th of the cot ton genome. Compo site inter val mapping w as used to ident ify the quantitat iv et rait loci (QT L) in F2 and F2: 3 family lines. Eighteen QTLs for yield and it s components w ere ident-if ied including tw o QT Ls for lint percentage, four Q TLs fo r seed yield, four QT Ls for lint yield, tw oQT Ls for lint index , three QT Ls for bolls per plant , tw o QT Ls fo r bol l size, and one QT L for seedindex. T hese QTLs separ ately ex plained 6. 9% ~ 16. 9%, 5. 6% ~ 16. 2% , 4. 8% ~ 15. 6% , 7. 7% ~13. 3% , 8. 2%~ 11. 6% , 6. 1%~ 7% , and 6. 6% of the phenotypic variance. Different QTLs af fectingy ield t raits w ere detected w ithin the same chromosome region, suggesting that genes co nt ro lling yieldt raits may be linked closely or the result of pleiot ropy. T he QT Ls co nt rol ling y ield and it s component sw ere mainly dominant and overdominant . T he molecular markers linked closely to the major QT Lsmay be used in MAS (marker-assisted selectio n) to impro ve co tton yield and its component s.

【题目】蛋白质组学研究中的质谱鉴定与生物信息学分析
【中文关键词】棉花; 胚珠; 纤维; 蛋白质; 质谱
【英文关键词】cot to n; ovule; fiber; protein; mass spect rometr y
【中文摘要】以陆地棉T M-1 开花后6 d 的胚珠为对照, 比较开花后6、10、14、18、22 d 纤维的蛋白质组双向电泳图谱, 从中选取了编号为37 的差异表达的蛋白质点。胶内胰蛋白酶酶切的多肽,用AB 4700 蛋白质组学分析仪进行MALDI-TOF/ TOF 分析, 获得了该点内蛋白质的高品质肽质量指纹图谱(PMF) , 从中挑出质量为1517. 9 的肽离子进行串联质谱分析, 获得碰撞后断裂片段离子的串联质谱(FFP) 。将获得的PMF 分别用MASCOT、ProFound、Aldente 和MSFit等常用软件对NCBInr 和UniProt 数据库中的绿色植物蛋白质数据库进行搜索, 并用MASCOT 搜索本地棉属EST 数据库。将获得的FFP 用MASCOT 软件的离子搜索模式和序列查询模式搜索数据库结合手工质谱解析推断序列, 最后确认该蛋白质是羟甲基转移酶。本文着重讨论了蛋白质组学研究中质谱分析和生物信息学软件的应用, 评价常用蛋白质组学PMF 检索工具及其检索结果。

【英文摘要】Using ovules of 6 days postanthesis (DPA) of the upland cot to n cult ivar T M-1 as the contro l, w e compared 2-dimensional electr ophoresis g el prof iles of the proteins f rom the f ibers at 6, 10,14, 18, and 22 DPA, and dug one of the different ial ly ex pr essed spot s of NO37 to digest-in-gel withtr ypsin, and subjected the recovered pept ides to AB4700 Proteomics Analyzer for MA LDI-TOF/ T OFmass spect rometry (MS) analy sis. We obtained a pept ide mass fingerprint (PMF) of hig h quality, accordingto the peak abundance and quality of this PMF, w e selected a peptide peak w ith mass of1517. 9 for tandem MS (MS/ MS) analysis, and acquired a fragment f ingerprint (FFP) in high quality.The PMF w as used to search against NCBInr viridiplantae protein database w ith MASCOT , Pro-Found, and MS-Fit engines, and ag ainst UniPro t v iridiplantae pro tein database w ith A ldente program, respectiv ely , this PMF w as also searched against a local Gossy p ium EST database dow nlo adedfrom N CBInr w ith MASCOT in-house versio n. Furthermore, the MS/ MS data w ere used to sear chNCBInr viridiplantae protein database w ith MASCOT in io n search and sequence query mode respectively, follow ed by manual MS interpr etatio n for de novo sequencing. T he protein in No 37 spot w as -ident ified as hydroxmethy lt ransferase. In this paper w e focus our discussion on MS analy sis and theapplication of bio informat ic to ols, w e also prov ide our comments on the typical PMF alignment toolsin pro teomics and their searching r esult s.

【题目】棉花6个小分子质量热激蛋白基因的序列、表达与定位

【中文关键词】棉花; 小分子质量热激蛋白; 表达; 基因定位

【英文关键词】Cotton; Low-molecular-weight heat-shock protein; Expression; Gene mapping

【中文摘要】利用棉花纤维cDNA 文库, 分离到6 个小分子质量的热激蛋白基因。序列结构分析发现, 它们分别属于3种不同类型的小热激蛋白。RT-PCR 分析表明, 它们在棉花体内具有不同的转录表达特征, 可能行使不同的功能, 它们的转录与棉花特定的发育阶段相关, 线粒体小热激蛋白和细胞质I 类小热激蛋白基因受纤维启始和分化的调控,而细胞质II 类小热激蛋白与棉花叶片的生长发育相关。利用本实验室的四倍体棉花遗传图谱, 对这6 个小热激蛋白基因进行定位, 其中3 个被定位在A4、D8 和A6 染色体上。

【英文摘要】Heat-shock proteins (HSPs), known as stress proteins, are created when cells are exposed to elevated temperatures, orto other kinds of environmental stress. Although HSPs were first characterized because their expression increased in response toelevated temperature, some of them are found in normal, nonstressed cells. HSPs have many biochemical functions in cell metabolismduring plant developmental process. The objective of the study was to isolate low-molecular-weight HSP genes, furtherput a foundation to illustrate them function in cotton fiber developmental stages. Six low-molecular-weight HSP genes were isolatedfrom cotton fiber cDNA library. Sequence analysis showed that they belong to three different types of low-molecular-weightHSP. RT-PCR analysis revealed that they exhibit different transcripional profile in cotton. The mitochondrial and cytoplasmic IHSP genes were regulateded by the fiber initiation; however, cytoplasmic II HSP genes were more closely correlated with thegrowth and development of cotton leaf. Using genetic map of the tetraploid cotton constructed by our laboratory, three of thesegenes, LMWHSP1, LMWHSP2, and LMWHSP3, were mapped on the cotton chromosomes A4, D8, and A6, respectively.

【题目】与棉纤维发育相关基因GhSAMS、GhNLP的克隆、鉴定与定位

【中文关键词】:陆地棉;基因芯片;S-腺苷甲硫氨酸合成酶;结瘤素
【英文关键词】Gossypium hirsutum; Genechips; S-adenosylmethionine synthetase; Nodulin
【中文摘要】:【目的】克隆陆地棉纤维伸长发育相关的基因,并做初步功能验证。【方法】以陆地棉李氏超短纤维突变体Li1li1 自交后代野生型li1li1 和超短纤维突变体Li1li1 开花后4 d 的胚珠纤维复合体为探针,通过基因芯片筛选优质材料7235 棉纤维伸长、次生壁加厚不同发育时期混合cDNA 文库,分离出两个在两种材料中差异表达的cDNA序列。【结果】测序结果表明,两个cDNA 均为完整的基因序列,分别命名为GhSAMS(GenBank 登录号:EF643509),GhNLP(GenBank 登录号:EF643508)。RT-PCR 分析表明:开花后4 d,GhSAMS、GhNLP 在陆地棉李氏野生型li1li1纤维中的表达量低于无纤维突变Li1li1。Southern 杂交结果表明两个基因在陆地棉基因组中都存在少数拷贝。利用本实验室陆地棉遗传标准系TM-1 和海岛棉海7124 培育的140 个BC1 作图群体,将GhSAMS 和GhNLP 分别定位在染色体14(D2)和19(D5)上。【结论】克隆了两个棉纤维伸长发育相关基因GhSAMS 和GhNLP,推测其高表达阻止纤维伸长生长,为进一步分析功能和用于分子育种打下基础。
【英文摘要】【Objective】The objective of this study was to clone new genes related with fiber development in upland cotton.【Method】Genechips were performed with wild line li1li1 and the Ligon lintless mutant line Li1li1 segregated from the self-crossingprogenies of the Ligon lintless mutant line Li1 to isolated genes preferentially expressed during elongating for providing themechanism of cotton fiber rapid elongation. Two cDNA clones differently expressed were separated from cotton fiber library of elitequality material 7235 during fiber elongation and the second wall synthesis by genechips with probes of the 4 DPA ovule-fibercompound from the wild line li1li1 and the Ligon lintless mutant line Li1li1.【Result】RT-PCR analysis indicated that the expressionquantity of two genes which named GhSAMS (GenBank accession: EF643509) and GhNLP (GenBank accession: EF643508) wereless in the wild line li1li1 than that in the Ligon lintless mutant line Li1li1 at 4 DPA. The result of Southern blotting indicated that thereare a few copies of both genes in the genome of upland cotton. The authors used the BC1 mapping population derived from thehybridization between the upland cultivar TM-1 and the island cultivar Hai7124, further TM-1 as recurrent parent. GhSAMS andGhNLP were localized on the chromosome D2 and D5, respectively.【Conclusion】 Two genes related with fiber development inupland cotton were cloned and characterizated with trancription level, genomic copies and genetic location. Future studies includinganalyses of these proteins function may shed light on the puzzles about the mechanism of cell elongation and excellent qualityformation for cotton fibers.

【题目】棉花纤维发育的分子机理及品质改良研究进展
【中文关键词】棉花; 纤维发育; 分子机理; 品质改良
【英文关键词】cot ton; f iber dev elo pment ; mo lecular mechanism; quality impro vement
【中文摘要】棉花纤维细胞的分化与发育是一个复杂有序的过程, 在不同的发育时期均有大量的基因表达, 参与纤维细胞发育的调控。转录因子和植物激素在棉纤维细胞分化起始过程中起重要的作用。纤维细胞壁结构、细胞骨架和糖类、脂类代谢相关的基因以及激素信号分子与纤维细胞的伸长密切相关。棉纤维次生壁合成时期主要是纤维素的合成及沉积过程, 蔗糖合成酶和纤维素合成酶等基因在这一时期起关键的调节作用。在棉纤维发育分子生物学研究的基础上, 利用基因工程改良棉花纤维品质也取得了一些研究进展。
【英文摘要】Co t to n fiber development usually consist s of four overlapping stag es: f iber init iat ion, cel l e long ation, seco ndar y cell w all fo rmat io n, and maturat ion. Fiber length and st reng th are bo th keytr ait s of it s quality, and mainly depends o n tw o biolog ical pro cesses: fiber elongat ion, secondary cellw al l format ion, respect ively. T ranscript io n factors and plant hormone play very impor tant roles in thestage of f iber differ ent iat ion and init iat io n. The R2R3 MYB t ranscription factor GaMYB 2 and WRKYtr anscript ion factors G hT TG 1, GhTT G3, have been demonst rated play ing significant roles in cont ro lcell fate determinat io n. T he g enes encoding predicted proteins inv olved in aux in, brassinosteriod(BR) , g ibberellin acid (GA) , abscisis acid (ABA) and ethylene signaling pathw ay are up reg ulated inthe period of f iber cell init iat io n. During f iber cell elongat io n period, many genes that represent threemajors funct ional g roups, including: cell w all st ructure and bio genesis, cytoskeleton, lipid and carbo hy drate metabolism, show higher ex pression level. Plant hormones also play some regulato ry r oles incot ton f iber elongat io n. BR and ethylene can promo te the f iber cell elongat io n in v it ro cultur e. T he in it iatio n and rapid elongat ion of f iber r equires the expression of sucrose synthase (SuSy) , suppr essionof this g ene repr esses fiber and seed dev elo pment. Cellulose synthesis is a predominant event in f ibercells during in the seco ndar y cell w all synthesis stage, cel lulose sy nthase genes and SuSy are key regu latory and play sig nif icant ro le in this per io d. Based on the research of cot ton fiber dev elo pment at mo lecular level, impr ovement of f iber quality through genet ic engineering has made some pr ogress. Fo rinstance, over producing spinach sucro se pho sphate sy nthase to enhance f iber quality; t ransformingthe acsA and acsB genes from A cetobact er x y l inum, w hich are involved in cellulose synthesis, intocot ton to improve the cot ton fiber st reng th, etc. Color is also a main t rait of cot ton f iber and somepro gress has been made in produce color fiber through g enetic engineering .

【题目】海岛棉遗传多样性的SRAP标记分析
【中文关键词】海岛棉; SRAP; 遗传多样性
【英文关键词】Sea-island cotton; SRAP; Genetic diversity
【中文摘要】利用SRAP 标记, 选用132 对带型清晰的多态性引物, 对我国引入海岛棉以来培育的36 个国内品种及20 个国外品种进行遗传多样性分析。共检测到419 个多态性位点, 每组合的多态性条带数从2~9 不等, 平均为3.17。利用NTSYS-pc 2.10e 软件采用Jaccard ’s 相似系数和UPGMA 方法进行聚类分析。结果表明, 大部分具有亲缘关系的品种聚在同类中, 说明其结果与系谱具有一定的相符性; 56 个品种的平均遗传相似系数为0.497, 变化范围在0.312~0.876之间, 说明我国海岛棉品种在分子水平上存在较大差异; 我国3 个育种时期育成品种的平均相似系数依次为0.501、0.507 和0.548, 表明我国现在育

成的品种相对于早期品种遗传多样性在逐渐降低。这些结果为我国海岛棉育种提供了有益的参考。
【英文摘要】Sea-island cotton (Gossypium barbadense) is important due to its fine fiber quality. However, genetic diversity analysisof this specie is still poorly documented, which is important for in situ and ex situ germplasm conservation and useful forbreeding programs. Using 132 out of 238 SRAP markers, genetic diversity of 56 sea-island cotton cultivars including 20 introducedfrom other countries was assessed, 419 polymorphism loci were detected. The number of polymorphic loci per primerranged from 2 to 9 with an average of 3.17. Jaccard ’s genetic similarity coefficients were calculated and dendrograms were constructedby the unweighted pair group method of arithmetic average (UPGMA) using the NTSYS-pc version 2.10. The most of theaccessions with relative relationship in their pedigrees were clustered into the same group. The genetic similarity coefficient of 56accessions ranged from 0.312 to 0.876, with an average of 0.497, indicating that there was high level of genetic variation in the G.barbadense collections. The average genetic similarity coefficients of the domestic accessions in the first, second and third breedingperiods were 0.501, 0.507, and 0.548, respectively, which implied that the genomic difference among the modern accessionshas been gradually decreasing compared to that among the early accessions. These results suggest an overview of the genetic diversityof the sea-island cotton accessions, and provide a reference for breeders to develop new cultivars efficiently.

【题目】陆 地棉产量相关性状的QTL定位
【中文关键词】棉花; 产量性状; QTL 定位
【英文关键词】Upland cotton; Yield traits; QTL mapping
【中文摘要】中棉所28 和湘杂棉2 号分别是以中棉所12×4133 和中棉所12×8891 配制而成的两个陆地棉强优势杂交种。以其F2 为作图群体, 筛选6 000 多对SSR 引物, 利用两群体间27 个共有多态位点, 通过JoinMap 3.0 软件整合了一张包含245 个多态位点、全长1 847.81 cM 的遗传图谱。利用Win QTLCart 2.5 复合区间作图法分别对两群体8 个产量相关性状在F2 和F2:3 中进行QTL 定位, 在中棉所28 群体多环境平均值的联合分析中检测到16 个QTL, 三环境分离分析中检测到43 个QTL; 在湘杂棉2 号群体分别检测到20 个和66 个QTL。在A3、D8、D9 等染色体上有QTL 成簇分布现象, 同时在两个群体中发现一些不受环境影响且稳定遗传的QTL。对考察的8 个性状在两个群体中发现12 对共有QTL, 控制果枝数、衣分和籽指的QTL 增效基因位点均来源于共同亲本中棉所12。综合分析推测中棉所12 的育种价值主要是通过提高后代的结铃性来实现的。研究结果为棉花产量性状的分子设计育种提供了有用的信息。

【英文摘要】As a major source of fiber and the world ’ s second-most important oil-seed crop after soybean, cotton plays an importantrole in the global economy. With the development of textile technology and social demand, it is urgent to breed and plant cottonvarieties with high yield and super fiber quality. If the marker tightly linked with major gene controlling desired traits was identified,the efficiency of selection for agronomic traits might improve greatly. To date, high-identity genetic linkage map derivedfrom upland cotton cultivars was lack because of their narrow genetic basis. Increasing the map density and tagging QTLs relatedwith agronomic traits in Upland cotton will accelerate the process of marker assisted selection (MAS) breeding. CRI28 and XZM2 are two cotton hybrids with high heterosis, which were bred by crossing CRI12, 4133, and 8891, respectively, with CRI12 asmutual parent. In this paper, two F2 mapping populations were respectively assembled by using the parents of CRI28 hybrid(CRI12 and 4133, their corresponding population named as Pop1) and the parents of XZM 2 hybrid (CRI12 and 8891, their correspondingpopulation named as Pop2), further, a joinmap linkage map which contained 245 loci and covered 1 847.81 cM wasintegrated with 27 mutual polymorphic loci in the two mapping populations by JOINMAP 3.0 software, after screening about6 000 SSR primers. By the composite interval mapping method (CIM), the QTLs for eight yield-related traits in F2 and F3 populationswere mapped. Of them, 43 QTLs were identified in the three environments by separating analysis and 16 QTLs by the jointanalysis in Pop1; similarly, 66 and 20 QTLs in Pop2 respectively. Some QTLs on chromosome A3, D8, and D9, and some stableQTLs not influenced by environment were also detected. Twelve QTLs for eight traits could be found simultaneously in the twopopulations, and additive QTLs for fruit branches per plant, lint percentage and seed index all were offered by CRI12, suggestingthat the value of CRI12 in breeding is mostly contributed by increasing the offspring ’ s bolls. These results will provide very importantinformation in Upland cotton breeding for yield by MAS.

【题目】南 疆棉花主栽品种优势研究
【中文关键词】南疆棉区; 棉花; 品种; 优势; 筛选
【英文关键词】无
【中文摘要】2 。。8 年以南疆生产上主要种植的9 个棉花品种进行比较试验, 进行生育进程、营养器官和生殖器官的发育动态、生理指标、蕾铃脱落等动态量化指标的研究, 目的是筛选适宜南疆棉区种植的棉花优势品种, 为生产推荐高产、优质、抗病品种。研究结果表明: 4 个棉花新品种在生育期、农艺性状、经济性状、产量、纤维品质和抗病性等方面都优于其它材料。这为推荐南疆棉区示范推广种植提供了理论依据。

【题目】陆地棉产量、品质相关性状主效QTL和上位性互作分析
【中文关键词】陆地棉;产量;纤维品质;主效QTL;上位性
【英文关键词】upland cotton; yield; fiber quality; major QTL; epistasis
【中文摘要】:【目的】为了能够较为全面地了解陆地棉产量和纤维品质相关性状的遗传基础,利用包含471 个标记、总长3 070.2 cM、覆盖棉花基因组65.88%左右的遗传图谱对其进行主效QTL 定位和上位性互作分析。【方法】以DH962×冀棉5 号的F2:3 家系为分析群体,用WinQTLCartV2.5 进行复合区间作图定位主效QTL,利用EPISTACY 软件对共显性标记进行两位点的上位性互作分析。【结果】共检测到9 个与产量相关性状的主效QTL,和5 个与纤维品质相关性状的主效QTL,整齐度和比强度在显著LOD 阈值下没有检测到相关QTL。共检测到75 对互作位点,大多数互作属于非QTL 位点与非QTL 位点之间的互作,互作类型以加性显性互作和显性加性互作为主。所涉及的性状中,影响衣分和纤维长度的互作位点最多,单株铃数和衣指的最少。在LG1 上检测到1 个同时控制单株籽棉重、单株皮棉重和籽指主效QTL。在两位点的互作对中也发现了同时影响单株籽棉重、单株皮棉重和马克隆值的互作位点1 对,同时影响衣分和纤维长度的互作位点4 对。【结论】除了主效QTL 外,上位性是陆地棉产量和纤维品质性状的重要遗传基础。主效QTL 的效应小和上位性互作将会使得棉花分子标记辅助育种更加困难和复杂。表型相关的性状是由相同的QTL/互作位点所控制,这有助于多个性状的同时选择。
【英文摘要】【Objective】 The aim of this investigation was to better understand the genetic base of yield and fiber quality traitsin upland cotton. Major quantitative trait loci (QTL) associated with yield and fiber quality and epistasis interaction in controllingthese traits were mapped using a genetic linkage map which comprised 471 loci, spanned 3 070.2 cM and covered 65.88% of thewhole cotton genome. 【Method】 An F2:3 population from DH962 × Jimian5 was used to evaluate yield and fiber quality. MajorQTLs were identified by composite interval mapping method on WinQTLCartV2.5. Two-way digenic interactions analysis wasconducted using

EPISTACY. 【Result】 Nine major QTLs were detected for six yield traits and five for fiber quality traits. No QTLswere detected for fiber uniformity ratio and fiber strength under the significant threshold LOD scores. A total of 75 significantdigenic interactions were detected, most of them were non-QTL × non-QTL interaction; most of the interaction types were additive ×dominance interaction and dominance × additive interaction. Many digenic interactions were detected for lint percentage and fiberlength, and only few for boll number and lint index. One common major QTL for SCW, LW and SI was detected on LG1. Commondigenic interactions were also found for some correlated traits: one for SCW, LW and MV; four for LP and FL. 【Conclusion】 Except for major QTLs, epistasis played an important role in the genetic basis of yield and fiber traits in upland cotton. The loweffect of major QTLs and the digenic interactions will make it more difficult and more complex for maker-assisted selection in cottonbreeding. Correlated traits were controlled by same QTLs/digenic interactions, which will be helpful to select these traits simultaneously.

【题目】棉花细胞初始脱分化的基因差异表达分析。
【中文关键词】棉花
脯氨酸丰富蛋白
SAM-dependent转甲基
抑制差减杂交
细胞脱分化
【英文关键词】无
【中文摘要】植物激素诱导初期是体细胞胚胎发生的关键时期, 它包含了一个通过细胞脱分化获得细胞全能性的过程. 为了揭示棉花细胞脱分化的分子机制, 利用抑制差减杂交方法建立了一个cDNA文库. 共有286个差异表达的cDNA克隆测序并鉴定, 112个独立的EST在激素诱导初期明显地上调表达, 其中有40.2%的EST是第一次被分离鉴定. GST在植物激素诱导初期的6~24 h高度表达, PRPs在不同的处理中优势表达并表现出不同的表达模式, 表明它们与棉花细胞脱分化关系密切. 棉花SAM代谢途径中假定的GhSAMS, GhSAMDC, GhSAHH和GhACO3被鉴定, qRT-PCR分析表明, 它们的表达水平在激素诱导初期出现两次明显的上升/下降过程, 且GhSAMS和GhSAHH表现出高度正相关, 高表达水平的GhSAMS可能与脱分化细胞重新进入细胞周期密切相关. 组织形态学观察进一步表明, 2,4-D处理条件下的部分细胞在72 h内完成脱分化和分裂过程, SAM-dependent转甲基途径可能通过两次转甲基活性的改变调控棉花细胞脱分化过程. 此外, 差异表达基因在不同处理中的表达模式表明了2,4-D和激动素之间存在着复杂互作关系.

【题目】草棉EST-SSRs的遗传评价
【中文关键词】草棉; 表达序列标签; 简单序列重复; 多态性信息含量; 遗传作图
【英文关键词】Gossypium herbaceum; EST; SSR; Polymorphism information content (PIC); Genetic map
【中文摘要】根据GenBank 中公布的247 条草棉EST 序列, 搜索SSR 并进行引物设计。其中的25 条序列含有27 个SSR,1~6 碱基重复类型都存在, 二碱基和三碱基重复的频率较高。为了明确在A、D 和AD 基因组中的可转移性, 依据25条序列共设计25 对EST-SSR 引物, 其中22 对引物扩增出清晰可辨的DNA 条带, 产生92 个多态性片段, 平均每对引物产生3.64 个多态性

片段。引物的多态性信息含量(PIC)在0.49~0.91 之间, 平均为0.81。6 对引物在BC1 种间作图群体[(鄂棉22 × Pima3-79) ×鄂棉22]中表现多态性, 产生7 个多态性位点, 其中5 个为共显性, 2 个为显性。除HAU230b 标记在BC1 分离群体中不符合孟德尔式分离比例, 其余引物表现正常分离。6 个位点被整合到陆地棉和海岛棉种间BC1 遗传连锁图谱上的6 条染色体: 有4 个位于A 亚基因组的4 条染色体上(Chr.6、10、11 和12), 2 个位于D 亚基因组的2 条染色体(Chr.19 和20)。

【英文摘要】Gossypium herbaceum (A genome) is generally regarded as the most closely relative of the progenitor at subgenomesof allotetraploid cotton, of which the evolution is necessary to study. In order to investigate the contribution of G. herbaceum tothe tetraploid genome, EST-SSRs were isolated from 247 EST sequences of G. herbaceum documented in GenBank.Twenty-seven perfect SSRs were identified from twenty-five unique ESTs. These SSRs contained 1 − 6 bp nucleotide motifs withhigh frequency for 2-bp and 3-bp nucleotide motifs. A total of 25 primers were developed and 22 of them could amplify 24 cottonaccessions including 7 diploids of A genome, 11 diploids of D genome and 6 allotetraploids of AD genome; only HAU217 couldspecifically amplified A genome and the other 21 primers could amplified both A and D genomes. The number of polymorphicfragments generated by each primer ranged from 1 to 9 with an average of 3.64. The PIC values ranged from 0.49 to 0.91 with anaverage of 0.81. Among the 25 EST-SSR primers, six primers revealed polymorphism between Emian 22 and Pima 3-79, andyielded seven polymorphic loci (five were codominant and two dominant) in the BC1 [(Emian22 × Pima3-79) × Emian22] population.Only HAU230b showed distorted segregation in the BC1 population. Six polymorphic loci were integrated into six chromosomesof our interspecific BC1 backbone genetic linkage map among which, four loci were mapped on four chromosomes of Asub-genome (Chr. 6, 10, 11, 12), and two loci on two chromosomes of D sub-genome (Chr. 19 and 20).

【题目】海岛棉EST-SSR引物的开发与应用研究

【中文关键词】海岛棉 表达序列标签(EST) 简单序列重复(SSR) 遗传多样性 遗传连锁图

【英文关键词】无

【中文摘要】现有的棉花EST-SSR 引物大都开发于中棉和陆地棉, 尚没有海岛棉EST-SSR 开发研究的报道.本研究从实验室构建的海岛棉纤维发育的cDNA 文库中先取98 条EST 序列设计了119 对EST-SSR 引物. 在这些SSR 中, 三核苷酸重复基序AAG 含量最为丰富, 达11.76%. 用36 份材料(13 份A 基因组二倍体材料, 11 份D 基因组二倍体材料和12 份AD 基因组异源四倍体材料)评价新EST-SSR 引物, 119 对引物中有76 对成功扩增, 共产生313 条多态性条带, 平均每对引物产生4.11 条. 这些引物的多态性信息含量(PIC)变化在0.17~0.95 之间, 平均0.53. 根据Jaccard ’ s 遗传相似系数对所用36 份材料进行了聚类分析, 聚类结果为3 大类, 分别为A 基因组材料、D 基因组材料和AD 基因组材料. 此外, 有21 对引物在本实验室的种间回交群体((鄂棉22 × Pima3-79) × 鄂棉22) DNA 中表现多态性扩增, 产生24 个多态性位点, 其中22 个被锚定于该遗传连锁图的12 条染色体. 本研究不仅详细地概括了这批新的EST-SSR 引物的特征, 而且有力地证明了其在遗传多样性分析及遗传连锁图构建方面的应用价值.

【题目】陆地棉遗传图谱构建及产量和纤维品质性状QTL定位

【中文关键词】陆地棉; 遗传连锁图谱; 产量; 纤维品质; QTL
【英文关键词】Upland cotton; Genetic linkage map; Yield; Fiber quality; QTL
【中文摘要】利用3 458 对SSR 引物筛选陆地棉中棉所35 和渝棉1 号间的多态性引物, 获得173 对。以多态性引物检测(渝棉1 号×中棉所35)F2 群体180 个单株的标记基因型, 共获得178 个标记位点。构建的遗传连锁图谱包括148 个标记, 36 个连锁群, 总长1 309.2 cM, 标记间平均距离8.8 cM, 覆盖棉花基因组的29.5%。36 个连锁群中的28 个分别被定位于20 条染色体, 8 个连锁群未定位于染色体。以渝棉1 号×中棉所35 的F2、F2:3 群体的产量、纤维品质性状鉴定结果, 利用区间作图方法, 检测到4 个产量性状QTL, 即2 个衣分(LP)、1 个铃重(BW)、1 个籽指(SD); 5 个纤维品质性状QTL, 即1 个纤维长度(FL)、2 个纤维比强度(FS)和2 个纤维细度(FF)。LP1、BW、SD、FL 和FS1 被定位于第7 染色体, LP2、FS2、FF1 和FF2 被分别位于第15、21、9 和20 染色体。5 个纤维品质QTL 的有利等位基因均来源于渝棉1 号。
【英文摘要】Cotton is the world ’s most important natural textile fiber. With the changes in spinning technology, the improvementof cotton fiber quality is becoming extremely important. The combination of conventional breeding techniques with MAS (molecular-assisted selection) will become a basic approach for cotton fiber improvement. In the present study, 3 458 SSR primerpairs were used to screen the polymorphic primers between Zhong 35 and Yumian 1, and 173 polymorphic primer pairs were obtained.The polymorphic primer pairs were used to genotype the 180 individual plants of F2 population derived from (Zhong 35 ×Yumian 1), and 178 loci were obtained. A genetic linkage map with 148 SSR loci and 36 linkage groups was constructed, and thelinkage map covered a whole length of 1 309.2 cM with an average interval of 8.8 cM between two markers, accounting for29.5% of the cotton genome. 28 out of 36 linkage groups were located on 20 chromosomes, and 8 linkage groups were not locatedon any chromosomes. The data of yield and fiber qualities of the 180 F2 plants and F2:3 family lines were used to detect QTLs byinterval mapping, and 9 QTLs controlling yield and fiber quality were identified, including two QTLs for lint percent (LP), one forboll weight (BW), one for seed index (SD), one for fiber length (FL), two for fiber strength (FS), and two for fiber fineness (FF). Thefive QTLs, LP1, BW, SD, FL, and FS1, were located on chromosome 7, and the other four QTLs, LP2, FS2, FF1, and FF2, on chromosome15, 21, 9, and 20, respectively. The favorable alleles of all five QTLs for fiber qualities originated from Yumian 1.

【题目】近红外反射光谱法(NIRS)测定棉仁粉中蛋白质和棉酚含量的研究
【中文关键词】近红外反射光谱(NIRS) ; 棉仁粉; 棉酚含量; 蛋白质含量
【英文关键词】无
【中文摘要】选用49 份不同蛋白质和棉酚含量的陆地棉种质资源和188 份陆地棉重组近交系为材料, 以多年份、多地点种植收获的种子材料组成原始样品集, 分别对棉仁粉中蛋白质含量和棉酚含量进行化学测定, 采用改进的偏最小二乘法(M odified PLS) 和(2, 4, 4, 1) 的数学转换方法建立近红外反射光谱(NIRS) 定标模型, 以寻找棉籽蛋白质含量和棉酚含量的快速测定方法。结果表明, 蛋白质含量的定标决定系数(RSQ=0 933) 和交叉检验决定系数(1-VR= 0 929) 较高, 定标标准误差(SEC= 0 623) 和交互校验标准误差(SECV= 0 638) 较小, 预测模型的建模效果较好, 可替代化学分析。棉酚含量预测模型的RSQ, 1-VR, SEC 和SECV 分别为0 836, 0 811, 0 074 和0 079, 模型预测效果略差于蛋白质模型, 但仍可用于棉仁粉中棉酚含量的测定。

【题目】扩增共有序列遗传标记(ACGM)及其在植物中的应用价值
【中文关键词】ACGM; 基因组进化; 基因定位
【英文关键词】amplified consensus genetic markers (ACGM); genome evolution; gene mapping
【中文摘要】扩增共有序列遗传标记(Amplified consensus genetic markers, ACGM)是建立在亲缘关系较近的物种间同源基因中编码序列(外显子)存在高度保守性, 而非编码区(内含子)存在潜在多态性基础之上的一种基于PCR的新型DNA分子标记技术。随着比较基因组学和生物信息学的迅猛发展, ACGM技术已成为物种间同源基因比较、系统发生关系分析和感兴趣基因定位的有效工具。文章就ACGM技术尤其是它在芸薹属和禾本科物种中的应用研究做详细介绍。同时, 对ACGM技术可能的应用前景进行了展望。
【英文摘要】Amplified consensus genetic markers (ACGM) is a novel PCR-based DNA molecular marker technique, which is based on the conservation of coding sequences and the potential polymorphism within non-coding sequences in homolo-gous genes among closely related species. Along with the rapid development of comparative genomics and bioinformatics, the ACGM technique has already become a powerful tool for comparing homologous genes, analyzing phylogenetic rela-tionships among species, and mapping of genes of interest. Here, an introduction to ACGM technique, especially its appli-cation in Brassica genera and Gramineae, was presented in detail. The prospects of ACGM were also discussed.

【题目】不同凝固剂对陆地棉体细胞胚胎发生和植株再生的影响
【中文关键词】陆地棉;体细胞培养;凝固剂;植株再生
【英文关键词】upland cotton; somatic culture; gelling agent; plant regeneration
【中文摘要】以陆地棉种质系珂字312 和陆地棉标准系TM-1 为材料,结合优化的陆地棉体细胞培养体系,系统地研究了琼脂、Gelrite 和Phytagel 3 种培养基凝固剂对愈伤组织的诱导、胚性愈伤的增殖、体细胞胚状体的发生和植株再生的影响。结果表明,用Phytagel 作为培养基的凝固剂,可显著改善陆地棉体细胞培养过程中的褐化问题,并具有提高胚性愈伤组织增殖

速度、体细胞胚胎发生和植株再生频率等作用。Gelrite 虽也能改善棉花体细胞培养中的褐化问题, 但因水化现象严重而影响胚性愈伤组织增殖和体细胞胚状体发生, 其效果不如Phytagel。因此,在陆地棉体细胞培养过程中的胚性愈伤组织诱导、体细胞胚状体发生和植株再生过程中,宜用Phytagel 作为培养基的凝固剂,而无菌苗培养和愈伤组织诱导仍可以选用琼脂凝固剂。

【英文摘要】The effects of the three different gelling agents, agar, gelrite and Phytagel, on callus inducing, embryogenic callus amplification,the somatic embryogenesis and plant regeneration of upland cotton (Gossypium hirsutum L.) germplasms, Coker 312and TM-1, were studied systematically, using the system of upland cotton somatic culture developed in our laboratory. The resultsshowed that the phytagel which used as the gelling agent for the medium of somatic culture could improve the browningproblem during the somatic culture, increase the amplification of embryogenic callus, and improve the quality of the callus andembryogenic callus, which led to significantly increasing in somatic embryogenesis and plant regeneration. So the phytagel is agood gelling agent for medium of somatic culture in upland cotton. Although the gelrite also can solve the problem of the browningduring the somatic culture, due to its hydrating process during the culture which may affect the amplification of embryogeniccallus and somatic embryogenesis seriously, the results of gelrite is not as good as phytagel. Combination with the method of somaticculture system optimized by our laboratory recently, the regeneration plants from 10 upland cotton genotypes, included thegenotypes called the recalcitrant nature in plant regeneration, were obtained in a relative short period of culture, using the Phytagelas the gelling agent. Therefore, it is suggested that Phytagel should be used as the gelling agent in the media for inducingembryogenic callus, somatic embryogenesis, and plant regeneration during the somatic culture of upland cotton, especially forthe genotypes with recalcitrant nature in plant regeneration. While for the culture of germ-free seedlings and callus inducing, theagar is still a good gelling agent because of the economic reason.

【中文摘要】采用石蜡切片法, 对一种来源于陆地棉的新型细胞质雄性不育材料的3 份转育材料(G22A, H109A 和1793A) 的花药发育过程进行了花器形态及细胞学观察。花器形态和细胞学观察结果表明, G22A, H109A 和1793A 三个不育系均花瓣小, 花丝短, 柱头明显外露, 败育彻底, 无花粉。败育时期主要发生在造孢细胞增殖时期至小孢子母细胞减数分裂前, 表明这3份不育材料不育性状不受细胞核基因的影响。对不育材料与其保持系细胞学观察发现, 不育材料与正常花药发育细胞学形态上主要差别是绒毡层发育。不育系绒毡层的着色不明显, 大小与中层细胞相似且在整个花药发育过程中不降解, 而保持系绒毡层的着色深, 在小孢子发育过程中逐渐降解。因此, 根据细胞学研究结果可以说明花药中绒毡层发育异常是该来源于陆地棉的新型细胞质雄性不育材料败育的细胞学基础。
【英文摘要】Morpholog ical and anatomic char acters of the f low ers and anthers in a new kind of cy toplas mic male sterile (CMS) of three accessions, named G22A, H109A, and 1793A , w ere studied in thispaper . As the results show n that all the thr ee new CMS accessio ns w ere completely male sterile, theirflowers w ere the characters of smaller petals, shorter f ilament s, and no pollens, w ithout any differ ence amo ng them. T he anatomical and cytolog ical observat ion show ed that the abor tio n o f auxo cytecells in the three CMS lines took place betw een the spo rogneous cell divisio n to the beg inning of PMCmeiosis. The most signif icant difference in anatomical and cytolog ical characters betw een the newCMS lines and their fert ile genet ic background lines, named G22B, H109B, and 1973B, w as the de v elo pment o f the tapetum cells. Comparing w ith the tapetal cells o f the fert ile lines, those o f the ster ile anthers w ere much smaller w ith lig ht ly stained af ter dyeing. The size of those cells w as almo st asbig as that o f middle layer cel ls. There w as no abort ion pro cess for the CMS tapetum cells during theanther development , w hile those of their fert ile g enetic backgr ound lines w ere darkly stained, big gerin size, and degener ated g radually during the anther development , w hich w as important for the devel o pment o f anther to pr oduce fer tile pollens. So the abnormal dev elo pment of tapetum cel ls w as proba bly the reason led to the sterility o f po llens fo r the new CMS lines.

【题目】陆地棉EPSPS基因的克隆及其组织特异性表达分析
【中文关键词】陆地棉; EP SP S; 草甘膦; 表达序列标签
【英文关键词】upland cot to n; EPSP synthase; gly phosate; EST
【中文摘要】5 烯醇式丙酮莽草酸 3 磷酸合成酶(EPSPS) 是莽草酸途径中的一个重要酶, 它是非选择性除草剂草甘膦的靶标酶, 在高等植物中定位于叶绿体质膜上。根据EST 拼接的序列设计引物, 从陆地棉品种珂字棉312 中获得了全长为1834 bp 的cDNA 序列, 其最大可读框为1565bp, 编码521 个氨基酸。陆地棉E PS PS 基因与其它植物中同类酶在氨基酸水平上有广泛的同源性。通过与已知的其它高等植物叶绿体转运肽剪切位点比对, 推断棉花EP SP S 基因含有74 个氨基酸叶绿体运输肽和447 个氨基酸组成的熟蛋白。该酶具有保守的PEP 结合位点及催化位点的特征序列。半定量分析表明, 该基因产物广泛存在于棉花根、茎和叶等各组织中, 在叶片中表达量较高。进一步扩增棉花核基因组获得了3344 bp 的

DNA 序列, 它包含8个内含子和7 个外显子。棉花E PS PS 基因的克隆为抗草甘膦棉花种质资源的创制提供了理论基础。
【英文摘要】5 Enolpyruvy lshikimate 3 phosphate (EPSP) sy nthase is an enzyme of the shikimate path w ay. It is the targ et enzyme of nonselect ive herbicide g lypho sate. This enzyme is located in the chlo r oplast s of the higher plants. Pr imer s w ere desig ned according to the assembled EST s of Gossy p iumhi r sutum, and a 1834 bp cDNA f ragment of G. hi rsutum cv. Coker 312 was obtained in this experi ment . T he f rafment co ntains an ORF compr ising of 1565 nucleot ides w hich encodes 521 amino acid. Acompariso n of the deduced amino acid sequences of cot ton and other hig her plant s genes rev eals hig hlyhomolo gy o ver the length of the ent ire mature protein. T he site of t ransit pept ides cleavage is deducedfrom a comparison to the know n cleavage site in other plants. T he enzyme, including 74 amino acidchloro plast t ransit pept ides and 447 amino acid mature proteins, comprises co nserv ed region of PEPbinding sites and the characterist ic sequence o f catalyt ic activity sites. Semi quant itat ive analy sis ofEPSP sy nthase expressio n show ed that the gene expressed ex tensively in cot ton root s, stems, leaves,and other org ans, and leaf is the most highly ex pressed t issue. A genomic DNA sequence w ith 3344bp clone co ntaining an EPSP synthase w as isolated fr om the upland co tton in this ex periment, and theEP SP S g ene contains eight int rons and seven exo ns.

【题目】中棉所12的黄萎病抗性遗传与育种应用研究
【中文关键词】棉花品种 中棉所 黄萎病性 遗传与育种 陆地棉 海岛棉 黄萎病抗性 杂交组合 正反交 分离规律
【英文关键词】无
【中文摘要】以2个海岛棉品种和5个陆地棉品种为材料与中棉所12进行正反交,配制14个杂交组合的F1和F2。采用纸钵育苗,撕底伤根接种方法对14个组合的F1和F2群体进行黄萎病抗性鉴定。结果表明,以中棉所12作父本与海岛棉抗黄萎病品种或陆地棉抗黄萎病品种进行杂交,F2抗(耐)病株与感病株的分离符合3:1的分离规律,说明海岛棉的抗黄萎病性对于中棉所12的耐黄萎病性为显性,中棉所12的耐黄萎病性对于陆地棉的感黄萎病性为显性,控制黄萎病抗性的基因为一个显性主基因。然而,以中棉所12为母本与海岛棉品种、抗病陆地棉品种和感病陆地棉品种进行杂交,F2群体中90%以上的个体为抗病类型,说明中棉所12的细胞质中存在着抗黄萎病的遗传成分,具有细胞质母体遗传的特点,在棉花抗黄萎病育种中具有重要的利用价值。

【题目】中 棉所48的SSR数字指纹图谱的构建
【中文关键词】中棉所48;SSR;数字指纹图谱
【英文关键词】Zhongmiansuo 48; SSR; digital fingerprint
【中文摘要】:利用25 对核心引物对中棉所48 及其亲本进行多态性检测,共有16 对引物在2 个亲本间具有多态性,其中,有14 对引物在两亲本间扩增出大小不同的带,且这些标记位点在F1中均表现为杂合带,为共显性标记;另外2 个引物的F1带型与母本或父本一致,为显性标记。以这25 对引物在不同材料间扩增得到的01(二进制)数据转换成十进制数据,构建了中棉所48的数字指纹图谱,为杂交种的真伪鉴定和纯度检测提供了方法。为了构建准确、稳定和实用的棉花DNA指纹图谱,指出了需要规范分子标记类型和数量,DNA、Taq 酶等试剂数量和质量,统一PCR反应,电泳和染色条件,统一提供标准品种和标准DNA,标准化电泳条带的识别、数据处理方式和编码方式

【英文摘要】Zhongmiansuo 48 and its parents were amplified with 25 pairs of core primers. Out of them, 16 pariswere detected to be polymorphic between the two parents. 14 pair ’s primers of the 16 pairs were codominantmarkers since they amplified the different fragments between the two parents and heterozygosis bands in F1.The other 2 pairs of primers generated the same bands between one of parents and F1, so they were dominantmarkers. Digital fingerprint of Zhongmiansuo 48 were constructed with the amplification result by changingbinary system into decimal system. It provides a method for seed genuineness and purity detection of hybrids.In order to construct the correct, high efficient, stable and practical fingerprint, it is necessary to make astandard criterion for the types and numbers of the molecule markers, the reagent quality of DNA, Taq enzymeet al.; to uniform the conditions of PCR reaction, electrophoresis and staining; to offer standard check varietiesand DNAs; and to standardize data treatment and the coding pattern of the electrophoresis bands.

【题目】棉花不同铃重种质主要纤维性状遗传及其变异
【中文关键词】棉花;大铃;中棉所48;纤维
【英文关键词】cotton; big boll; CCRI 48; fiber
【中文摘要】以中棉所48 的母本S9708 与不同铃重大小的父本杂交,配置6 个F2群体,采用SAS 8.0 软件对各组合亲本、F1和F2的铃重和衣分及纤维品质等数量性状进行统计分析。结果表明:在所有F2群体中纤维性状都有极显著差异。铃重和麦克隆值的变异系数较大,其次是衣分和纤维强度,而纤维长度、伸长率和整齐度变异系数较小。在杂交早代群体中,仍然表现亲本的铃大、衣分高、纤维长、强度高、整齐度好等优良特性。这表明,在杂种优势利用选择亲本时,选择大铃、高衣分、优质纤维材料仍较为重要
【英文摘要】Six F2 populations with same female parent S9708 as that of CCRI 48 and different male parents with different bollweight were made. Their parents, F1 and F2 populations were planted in 2006 while the F2 population of CCRI 48 was also grownin 2005. Traits of boll weight, lint percentage and fiber quality in these populations were analyzed by using SAS 8.0 software.The result showed: All fiber traits were highly significant in all F2 populations. The coefficients of variation for boll weight andmicronaire were higher among the six populations. It indicated boll weight and fiber micronaire had a greater degree of geneticvariation. The variation coefficients of lint percentage and fiber strength were 6%~9%. While the variation coefficients of fiberlength, elongation and fiber uniformity were less. So the selection method for offspring of boll weight, lint percentage and fiberquality should be different. It is important to select the germplasm with big boll, high lint percentage, better fiber quality duringthe procession of parent selection in the heterosis.

【题目】棉 花纤维发育相关基因表达谱的比较分析
【中文关键词】棉花, 基因芯片, 差异表达基因, 实时荧光定量PCR
【英文关键词】Cotton, Affymetrix microarray, Differential expressed genes, Quantitative RT-PCR
【中文摘要】本研究通过3 年4 环境的田间试验,在BIL (backcross inbred lines)群体中选取断裂比强度最大的材料NMGA-062 (32.5 cN/tex)和断裂比强度最小的材料NMGA-144 (26.67 cN/tex),利用Affymetrix 棉花基因芯片,比较分析NMGA-062 和NMGA-144 纤维发育10 d 时的基因表达谱。在24 029 条转录本中,两个基因型中差异表达的转录本6 504 条,占筛选转录本总数的27.07%;其中差异表达倍数在2 倍或2 倍以上的转录本有3 461 条,占筛选转录本总数的14.41%,对其进行功能分类。对8 个差异表达明显的基因(Ghi.10655.1.S1_s_at, ACO1, ARF1, SAHH, TUA6, TUA7, β -tub1, β -tub10)进行实时荧光定量PCR的检测,发现表达模式均与芯片结果一致,说明芯片数据具有生物学意义上的可重复性,结果是可信的。本研究为以后克隆及功能验证纤维发育相关基因提供了重要参考。
【英文摘要】In this research, we selected two extremely cultivars in backcross inbred lines through 3-year fieldtrial in 4 environment and variance analysis, NMGA-062 has the best breaking tenacity of 32.5 cN/tex and NMGA-144 has the lowest breaking tenacity of 26.67 cN/tex. Then, compared the gene expression profiling of NMGA-062 and NMGA-144 at 10 d by using Affymetrix microarrays. In the 24 029 transcripts, 6 504 transcriptsshowed significant differential expression (DE) and 3461 transcripts showed 2-fold or higher

levels of expressionchanges, occupied the total transcripts 27.07% and 14.41%, respectively. Classification of gene function wasdone of the transcripts which showed 2-fold or higher levels of expression changes. Through fluorescent quantitationRT-PCR analyses on different plant tissues and developing fibers of 10 d, of 8 selected DE genes includingGhi.10655.1.S1_s_at, ACO1, ARF1, SAHH, TUA6, TUA7, β-tub1, β-tub10, we found that all had similar results tothe microarray analysis. The results indicated that the comparative microarray results were biologically reproducible,and the results were bilievable. It provided important reference for further studies in cloning and identifyinggenes responsible for fiber-related genes.

【题目】利用基因芯片技术筛选棉纤维伸长相关基因
【中文关键词】基因芯片; 纤维伸长相关基因; 差异表达基因; 实时荧光定量PCR
【英文关键词】Affymetrix microarray; Fiber length-related genes; Differential expressed genes; Quantitative RT-PCR
【中文摘要】从回交近交系(backcross inbred lines, BIL)群体中选取纤维长度差异较大的两个系NMGA-062 (33.03 mm)和NMGA-140 (25.87 mm), 利用Affymetrix 棉花基因芯片, 分析其开花后10 d (DPA, days post anthesis)棉纤维伸长相关基因表达谱。在24 029 条转录本中, 两材料间差异表达的转录本有7 282 条, 占总数的30.31%; 其中差异表达倍数在2 倍或2 倍以上的转录本有3 993 条, 占筛选转录本总数的16.62%, 功能分类表明这些转录本主要包括功能预测基因(15.57%), 翻译、核糖体结构相关基因(13.54%)和翻译后修饰、蛋白质转换相关基因(9.29%) 3 大类。为了验证芯片数据的可信性, 8 个差异表达显著的基因(Ghi.10655.1.S1_s_at, ACO1, ARF1, SAHH, TUA6, TUA7, β-tub1, β-tub10)被用于实时荧光定量PCR。两种检测手段表现出一致性。随后, 利用实时荧光定量PCR 对3 个与棉纤维相关基因(ARF1, β-tub1, β-tub10)在纤维发育不同时期(5、10、15、20 和25 DPA)的表达模式进行了研究, 结果表明, 3 个基因在纤维伸长发育时期(10 和15 DPA)大量表达, 推测这3 个基因可能与棉纤维伸长有重要关系。
【英文摘要】Gossypium barbadense L. is known for its superior fiber quality including long fiber and their quantitative trait loci(QTL) have been reported. However, little is known about the molecular genetic basis of fiber quality traits. The objective of thepresent study was to identify differentially expressed genes in the rapid fiber elongation stage (10 days post-anthesis, 10 DPA)using a comparative microarray analysis between two backcross inbred lines (BIL) with contrasting fiber lengths. The two BILlines, NMGA-062 (33.03 mm) and NMGA-140 (25.87 mm), were selected based on a 3-year field trial in four environments.The Affymetrix Cotton GeneChip was then used to perform a transcriptome analysis of 24 029 transcripts in developingfibers (10 DPA). Among the transcripts 7 282 (30.31%) showed a significant differential expression (DE) and 3 993 (16.62%)showed 2-fold or higher levels of expression changes between the two BIL lines. Through quantitative RT-PCR analyses on differentplant organs and developing fibers of 10 DPA, eight selected DE genes, including Ghi.10655.1.S1_s_at, ACO1, ARF1,SAHH, TUA6, TUA7, β-tub1, and β-tub10, all displayed similar results to theses of the microarray analysis. This indicated that thecomparative microarray results were biologically reproducible. Quantitative RT-PCR analyses were also performed at five fiberdevelopment stages from 5 to 25 DPA on ARF1, β-tub1, and β-tub10. The results indicated that they were all highly expressed in aperiod of fast fiber elongation and primary cell wall synthesis (at 10 – 15 DPA), implicating their roles in fiber elongation. Thisstudy represents the first investigation using a microarray analysis to compare differential gene expressions between near-isogeniclines with contrasting fiber quality. It provided a list of putative candidate genes for further studies in identifying genes responsible for fiber traits and developing molecular markers for marker-assisted breeding.

【中文摘要】以2 个品种(系) T G41 和sGK156 以及3 个纤维品质优异的种质系7235、HS427 10 和0 153 为亲本, 配制了(sGK156 HS427 10) (0 153 7235) 、(TG41 HS427 10) (0 153 7235) 和(sGK156 0 153) (sGK156 HS427 10) 3 套组合的双交F1 及F2 群体, 利用3 个纤维长度不同QT Ls 相关的SSR 标记进行辅助选择。结果, 用3 个标记分别进行单标记辅助选择时, 有/ 无标记单株平均纤维长度之间的差异在3 个群体的F1 世代中都可以达到显著或极显著水平, 并且在F2 世代株行中也表现出一定差异, 可以稳定表达。当用2 个或3 个标记同时进行聚合选择时, 随着聚合到QTL 个数的增多, 单株平均纤维长度值增大, 选择效果越来越好, 但在不同群体中表现有差异。可见, 用分子标记辅助选择的方法对棉花纤维长度进行改良是有效的, 聚合多个QTLs 时, 可以达到更好的效果。有必要培育多个基因聚合并纯合的高代重组自交系材料, 进一步研究多基因聚合的遗传效应。
【英文摘要】T G41 and sGK156, tw o commercial cot ton cult ivars (lines) , and HS427 10, 7235 and 0 153, thr ee elite fiber quality g ermplasm lines, w ere used as par ent s to develop three double cr oss com binat ions, (sGK156 HS427 10) (0 153 7235) , (TG41 HS427 10) (0 153 7235) and(sGK156 0 153) (sGK156 HS427 10) . T hr ee SSR markers, NAU 1043, MUSS497 and CM67,w hich w ere linked w ith QT Ls of fiber leng th and derived fr om 7235 or 0 153, w er e used to study theef fect of molecular marker assisted select ion and py ramiding breeding in the three combinat ions, re spectively. As a r esult , the fiber leng th show ed significant dif ferences betw een plant s w ith and w ith o ut marker in the three combinat ions. T his indicated that the effect s o f the three QT Ls for f iberleng th w ere stable in dif ferent genet ic backgr ounds and dif ferent g enerat io ns. When selected theplants w ith tw o or three markers, the fiber leng th of plant s w ith tw o or three markers w ere bet terthan that of the plants w ith only one marker, and the f iber leng th w as the best in the plant s w ith allthe three marker s. In conclusion, it is effect iv e to increase f iber length through molecular marker as sisted select ion and the ef fect may be increased w hen mo re QTLs ar e pyr amided in plant s. It is neces sary to develop stable recombinant inbred lines of advanced generat ions w hich pyramid several f iber related genes to study the ef fect for pyramiding mor e genes.

【题目】利用陆海杂种BC1群体构建棉花遗传连锁图谱并并初步定位产量性状相关的QTL

【中文关键词】陆海回交群体;遗传图谱;产量性状;QTL

【英文关键词】G. hirsutum×G. barbadense backcross populations, genetic map, yield traits, QTL

【中文摘要】:利用陆地棉推广品种中棉所36 和海1 配制杂交组合,并用中棉所36 为轮回亲本构建回交群体(BC1F1,BC2F1和BC1S1)。用亲本和F1对新开发的2102 对SSR 引物进行多态性筛选,共筛选到317 对含有海1 显性带的引物,占筛选引物总数的15.08%;最终对其中的275 对引物进行了BC1F1群体扩增,获得306 个SSR标记差异位点。连锁分析表明(LOD=6.5),有254 个标记位点连锁,分布在42 个连锁群中,覆盖2252.36 cM,约占棉花基因组的50.05%;平均每个连锁群有6.08 个标记,覆盖53.63 cM;标记间平均间距为8.87 cM。利用BC1F1、BC2F1和BC1S1三个不同世代分离群体产量性状数据,共定位16 个产量性状QTL,解释表型变异5.77%~19.86%。其中,衣分6 个,铃重6 个,籽指4 个。有9 个增效基因来自陆地棉亲本中棉所36,7 个增效基因来自海岛棉亲本海1,说明了表型性状较差的品种同样可能含有可用于性状改良的增效基因。控制衣分的3 个QTL可在不同的世代稳定检测到,效应稳定,增效基因均来自高值亲本陆地棉,为进一步分子标记辅助选择奠定了基础。

【英文摘要】The G. hirsutum ZMS36 and the G. barbadense Hai1 were crossed to construct backcross populations(BC1F1, BC2F1, and BC1S1) with ZMS36 as recurrent parent. A total of 2102 pairs of SSR primer were used toscreen polymorphism among the parents ZMS36, Hai 1 and their F1, which resulted in 317 pairs of polymorphicprimer with the special band for Hai 1, and the polymorphism primer accounted for 15.08% of the total primer,and 275 of them were used to screen the BC1F1 population. Linkage test(LOD=6.5)indicated 254 of 306polymorphic locus derived from 275 pairs of primer could be mapped into 42 linkage groups and covered a totalThe G. hirsutum ZMS36 and the G. barbadense Hai1 were crossed to construct backcross populations(BC1F1, BC2F1, and BC1S1) with ZMS36 as recurrent parent. Linkage test(LOD=6.5)indicated 254 of 306polymorphic locus derived from 275 pairs of primer could be mapped into 42 linkage groups and covered a totalgenetic distance of 2252.36cM, approximately 50.05% of cotton genome. The number of the marker locus perlinkage

group was 6.08, which spanned 53.63cM of the cotton genome. And the average distance of theneighboring marker locus were 8.87cM. 16 QTLs for yield-related traits were detected from the threegenerations of BC1F1, BC2F1, and BC1S1 using CIM. QTL numbers for lint percentage, boll weight and seedindex were 6, 6 and 4, respectively, which accounted for 5.77%~19.86% of phenotypic variance. Among the 16QTLs, 9 with positive additive effect derived from ZMS36 and 7 QTLs with negative additive effect from Hai1,which indicates the materials with poor phenotypic characteristics, may contain the useful gene for improvingthe same traits. 3 QTLs for lint percentage could be stably detected in the different generations, and fromhigh-value parent of ZMS36, which should be useful for the marker-assisted selection.

【中文关键词】陆地棉曰重组自交系曰产量曰品质曰遗传变异
【英文关键词】Upland cotton(L.); recombinant inbred line; yield; fiber quality; genetic variation
【中文摘要】以陆地棉优质品系0-153 和大面积推广的双价转基因抗虫棉品系sGK9708 为亲本构建了含有196 个F6院8家系的重组自交系群体遥在4 个环境中袁纤维长度尧纤维强度尧麦克隆值尧伸长率尧整齐度指数尧单株结铃数尧铃重尧衣分尧子指尧单株子棉产量及单株皮棉产量等性状均呈正态分布袁且存在双向超亲分离遥多环境下变异分析表明袁各性状家系间及环境间存在极显著差异遥除纤维伸长率外袁其余各纤维品质及产量性状都具有较高的遗传力袁在0.75 以上遥共有6个家系在纤维长度尧细度和强度性状上均超过高亲袁可作为优质纤维种质遥相关分析显示袁有些家系可能打破了纤维品质和产量性状间的负相关遥通过聚类分析得出袁该群体各系分在了不同的组袁表明存在着一定的遗传差异遥该群体是进行优异纤维品质相关基础研究的良好材料遥
【英文摘要】A RIL population with 196 F6院8 lines was developed from an F2 population of Upland cotton (L.)cross of sGK9708伊0-153. sGK9708 is the commercial transgenic variety with + genes resistant to budworm, and 0-153with high fiber quality. The RIL population were normally distributed for fiber quality and yield related traits and the range ofdistribution exceeded the two parents. Analysis of genetic variability indicated that the effects of the genotypes and environmentswere significant for the fiber quality and yield related traits. With the exception of fiber elongation, heritability estimated for fiberquality and yield related traits measured in the RIL population were high with above 0.75. Six lines could be considered as excellentgermplasm with high fiber quality. A number of phenotypic correlations were observed among the fiber quality and yieldrelated traits of the RIL population, some lines may be with positive correlation between fiber quality and yield traits. The differentgenetic units for the RIL population were indicated by analysis of cluster. This RIL population will be the good materials forthe basic research related to fiber quality.

【题目】编码棉花胞质铜锌超氧化酶基因的克隆与表达分析
【中文关键词】棉花;铜锌超氧物歧化酶;基因;克隆
【英文关键词】Upland cotton; Copper/zinc superoxide dismutase; Gene; Cloning
【中文摘要】:【目的】克隆编码棉花胞质铜锌超氧化物岐化酶基因并分析其表达特性。【方法】采用 RACE 技术克隆基因,Northern blotting 检测基因的表达谱;采用氮蓝四唑(NBT)光下还原法测定不同生育期的酶活性。【结果】获得了棉花胞质铜锌超氧化物岐化酶基因cDNA 全长序列(GenBank 注册号:DQ445093);该基因cDNA 全长共682 bp,开放阅读框456 bp,编

码152 个氨基酸。分子结构预测结果:酶蛋白理论分子量约为15.03 kD,理论等电点为6.09,与其它植物的蛋白质氨基酸序列同源性在82%~87%之间。Southern blotting 显示不同棉种该基因的拷贝数基本一致,均属于低拷贝基因。Northern blotting 显示该基因在不同的组织、不同的生育期表达量不同;酶活性测定显示盛花期最高。【结论】棉花胞质铜锌超氧化物岐化酶基因在陆地棉中属于低拷贝数基因;在整个生育期中mRNA 的含量呈规律性动态变化,前期较低,后期较高,在盛花期达到顶峰;变化曲线与不同时期的酶活性变化一致;不同器官的基因表达检测结果显示:基因在根中表达量最高,叶片次之,花中的表达最低。

【英文摘要】【Objective】A gene encoding superoxide dismutase (SOD) was cloned from senescent leave of cotton (Gossypiumhirsutum), and its expressing profile was analyzed. 【Method】The gene was cloned by Rapid Amplification of cDNA Ends (RACE)method. Northern blotting was used to show the profile of the gene expression, and the enzyme activity was mensurated by NBTdeoxidization method in different growth periods. 【Result】The full length of the gene of cytosolic copper/zinc superoxide dismutaseCu/Zu-SODwas isolated from cotton (GenBank accession number.DQ445093). The sequence of cDNA contained 682 bp, theopening reading frame 456 bp, and encoded polypeptide 152 amino acids. The molecular construction was predicted includingmolecular mass of 15.03 kD and theoretical PI of 6.09, and amino sequence similarity with the other plants of 82% to 87%. Southernblotting showed that the gene had different number of copies in different cotton species. Northern blotting suggested that the genehad different expression in different tissues and development stages. The enzyme activity was the highest in peak flowering stage.【Conclusion】The cotton cytosolic copper/zinc superoxide dismutase had lower copies in the upland cotton. The copper/zincsuperoxide dismutase mRNA expressing level showed regular changing in the whole development stages: lower in the former stages,higher in latter stages and highest at the peak flowering stage. The curve of the copper/zinc superoxide dismutase mRNA expressinglevel was consistent with that of the copper/zinc superoxide dismutase enzyme activity. The copper/zinc superoxide dismutasemRNA expressing levels of different organs showed that the gene expression was high in root, medium in leaf, low in flower.

【题目】中国短季棉遗传改良研究进展及发展方向
【中文关键词】短季棉; 遗传改良; 进展; 方向
【英文关键词】short- season cotton, genetic improvement, research progress, direction
【中文摘要】短季棉品种遗传改良是实现麦棉两熟棉区粮棉双丰收的有效途径。从早熟种质资源金字棉的引进, 早熟短季棉品种中棉所10 号的育成, 抗枯萎病品种中棉所16、辽棉10 号的选育, 生化辅助育种技术育成早熟不衰品种中棉所24、27 和36, 转单价Bt 基因抗虫棉中棉所30、中棉所42 和鲁棉研19, 转双价Bt+CpTI 基因抗虫棉中棉所50、中棉所58 的培育, 到航天诱变特早熟品种中棉所64, 综述了中国短季棉品种选育的主要研究进展; 提出了短季棉育种应加强抗黄萎病材料创制、克服产量和早熟性负相关和解决特早熟品种早衰等遗传改良重点; 指出借助分子育种与常规育种技术相结合, 培育麦后直播特早短季棉和杂交短季棉是今后短季棉遗传育种的方向。
【英文摘要】The genetic improvement of short- season cotton is important for high yield of cotton and wheat inthe region of wheat - cotton double crop. Main research achievements were showed from the introduction ofearly mature King germplasm from America to the successful selection of the first short- season cotton varietyof CCRI10, the resistance to Fusarium wilt variety of CCRI16, the high yield, fine fiber quality and resistanceto disease varieties of CCRI24, CCRI27 and CCRI36 by biochemical assisted breeding technology and thetransgenic short- season cotton varieties CCRI30, CCRI42 and Lumianyan19 with Bt gene resistance to cottonboll worm, the transgenic CCRI50 and CCRI58 with double genes Bt+CpTI, the variety of CCRI64 by thespace mutation. Some important genetic improvement studies should be done in the future to increase the resistanceto Verticillium wilt, to improve the genetic negative correlation between lint yield and earliness andto select the special early mature varieties without premature senescence. The developing directions of shortseasoncotton were pointed out, which were the breeding of specially early short- season cotton varieties forsowing directly after the harvest of wheat, the usage of the heterosis to breed the hybrid cotton to increasecotton yield and the combination molecular breeding and conventional selection to improve yield, quality andmaturity of short- season cotton.

【题目】中棉所36均一化全长cDNA文库的构建与鉴定
【中文关键词】花发育; 均一化; cDNA 文库
【英文关键词】Flower development; Normalization; cDNA library
【中文摘要】以短季棉中棉所36 (CCRI36)顶端分生组织和花蕾为材料, 以DSN (duplex-specific nuclease)均一化技术与SMART(switching mechanism at 5 ′ end of RNA transcript)建库技术相结合, 构建CCRI 36 花发育期均一化全长cDNA文库。经检测原始文库滴度为1.7×106 cfu mL－1。随机挑取100 个克隆, 利用PCR 方法测得文库重组率达100%, 插入片段平均长度为1.2 kb。以两个高丰度表达基因Histon3 和UBQ7 为探针, 进行虚拟Northern blot 检测显示, 其丰度在均一化cDNA中均明显降低, 说明均一化效果显著, 为节约筛库成本和EST 有效测序奠定了基础; 同时, 利用常规PCR 扩增技术从cDNA 文库中筛选阳性信号, 获得了花发育相关蛋白基因。初步证实CCRI36 花发育期均一化全长cDNA 文库构建成功, 为深入研究棉花花发育机理及发掘与早熟相关的功能基因奠定了基础。
【英文摘要】Short season cotton (SSC) breeding plays an important role in solving the competition for more growing area betweencotton and food crops. To explore the premature mechanism of SSC, to clone genes that have a close relation with prematureflowering, and to speed process of premature cultivar breeding, we established a normalized full-length cDNA library using theflower and bud of CCRI 36 by DSN (duplex-specific nuclease)-normalization method combined with SMART (switching mechanismat 5' end of RNA transcript) technique. The titer of un-amplified cDNA library was about 1.7×106 cfu mL－1. The average sizeof cDNA inserts was 1 200 bp with a recombination rate of 100%. The abundance of transcripts Histon3 and UBQ7 decreasedobviously in normalized cDNA library comparing with that in non-normalized samples detected by Virtual Northern Blot. Meanwhile,protein genes associated with flower development were obtained on the basis of the positive signal of cDNA library byPCR. These results indicated that the normalized full-length cDNA library has been established successfully, which is convenientfor further study on the molecular mechanism and gene cloning of flower development.

【题目】棉花MADS-box蛋白基因(GhMADS-13)的克隆和表达分析
【中文关键词】棉花, MADS-box 基因, 表达分析
【英文关键词】Upland cotton (Gossypium hirsutum L.), MADS-box gene, Expression analysis
【中文摘要】一组具有MADS-box 结构域的转录因子在控制花器官的诱导与发育中起着重要作,以中棉所36(CCRI)均一化全长cDNA 文库为基础,结合EST 测序分析,分离获得一个棉花的MADS-box 基因全长cDNA。该基因cDNA 全长1 079 bp,包含一个732 bp 的完整的开放阅读框,编码234 个氨基酸,具有典型的MADS-box 结构域和完整的K 区,命名为GhMADS-13 (GenBank: FJ409870)。与拟南芥、葡萄等植物的AGL6类基因具有高度的同源性。实时定量RT-PCR 分析表明,GhMADS-13 在CCRI36 的花器官发育中早期表达量逐步增加,后期有下降趋势。推测GhMADS-13 可能在开花诱导和花器官发育过程中起着重要作用。
【英文摘要】A group of regulatory factors containing the MADS-box domain plays an important role in controllingfloral organ formation and development. A new cotton flowering-related MADS-box gene cDNA was isolatednamed as GhMADS-13 (GenBank accession number: FJ409870) on this basis of a normalized full-length cDNA libraryof CCRI 36 combination with the sequencing and analysis of expressed sequence tags (ESTs). The fragmentwas 1 079 bp long and contained an open reading frame of 732 bp coding a polypeptide of 234 amino acids. Thededuced protein contained conservative MADS domain and semi-conservative K domain. Homology analysisshowed that the deduced GhMADS-13 protein was highly homologous to the MADS-box genes AGL6 of Arabidopsisthaliana. Expression of GhMADS-13 was analyzed by the method of real-time PCR. Result showed thatGhMADS-13 was more highly expressed in flower buds than apical meristem, and then expressed as a downwardtendency after inflorescence, suggesting that the GhMADS-13 might play an important role in the transition fromthe juvenile to the adult stage.

【题目】Studies of new EST-SSRs derived from Gossypium barbadense
【中文关键词】无
【英文关键词】Gossypium barbadense
expressed sequence tag (EST)
simple sequence repeat (SSR)
genetic diversity
genetic linkage map
【中文摘要】无
【英文摘要】Existing cotton EST-SSR markers are mostly derived from Gossypium arboreum and Gossypium hirsutum, but EST-SSR markers from Gossypium barbadense are scarce. One hundred and nineteen EST-SSRs were developed based on 98 unique ESTs from a cDNA library constructed in our laboratory using developing fibers from G. barbadense cv. Pima3 – 79. Among the SSRs, trinucleotide AAG appeared at a high frequency of 11.76%. 36 accessions (consisting of 13 diploids of the A genome, 11 diploids of the D genome and 12 allotetraploids of the AD genome) were employed to test new EST-SSRs. 76 EST-SSRs were successfully amplified, and 313 polymorphic fragments were yielded, with an average of 4.11 fragments per primer pair. The PIC ranged from 0.17 to 0.95 with

an average of 0.53. Based on Jaccard ’ s genetic similarity coefficient, these 36 accessions were clustered into three groups. 21 EST-SSRs exhibited polymorphisms in BC1 population ((Emian22 × Pima3 – 79) × Emian22), 24 polymorphic loci were generated, while 22 of the 24 polymorphic loci were integrated with our interspecific BC1 backbone genetic linkage map, and anchored in 12 chromosomes. This study effectively proved that EST-SSRs from G. barbadense are valuable for genetic diversity analysis and genetic mapping.

【题目】Accumulation of copper in Trichoderma reesei transformants, constructed with the modified Agrobacterium tumefaciens-mediated transformation technique
【中文关键词】木霉菌
【英文关键词】Agrobacterium tumefaciens-mediated transformation Copper accumulation Internet resource.
【中文摘要】木霉菌
【英文摘要】A modified Agrobacterium tumefaciens-mediated transformation method was established for the construction of mutants with improved copper tolerance and accumulation capability in Trichoderma reesei. One transformant, AT01, exhibited the highest copper accumulation capability. With copper at 0.7 mM, AT01 removed 13 mg copper/g biomass (removal rate of 96%),

whereas the wild-type strain removed only 6 mg copper/g biomass (removal rate of 50%). Optimal conditions were a pH of 5.0 at 28pC. The pigment change of Trichoderma mycelia was a potential indicator of copper accumulation. Electron microscopy revealed that copper was mainly accumulated in cell vacuoles.

【题目】Agrobacterium-mediated transformation as a useful tool for the molecular genetic study of the phytopathogen Curvularia lunata
【中文关键词】遗传变异 色素沉着 毒素
【英文关键词】Genetic variance,Germination,Pigmentation,Toxin
【中文摘要】农杆菌介导转化为分子创一个有用的工具
【英文摘要】In order to explore themolecularmechanisms of virulence and genetic variance of Curvularia lunata in maize, an ATMT (Agrobacterium tumefaciensmediated transformation) system was established in order to create a wide range of insertional transformants of C. lunata. Our results showed that the germinating conidia were the ideal starting material for transformation.Based on our optimised transformation condition, the transformation efficiency of C. lunata with T-DNA was improved greatly, and the average transformation frequency was as high as 84±5 transformants per 1× 106 germlings. Southern blotting results of 39randomly-selected transformants showed a unique hybridisation pattern and predominant single-copy insertions. An ATMT library containing approximate 3000 transformants was generated, and four types of transformants were screened in terms of growth rate, sporulation, mycelial pigmentation, and toxin production in vitro. This library will be used to identify genesinvolved in the virulence of the pathogen.

【题目】2007年吉林省玉米主要病害调查及发生流行趋势预测
【中文关键词】玉米病害 发生趋势预测 预测预报 吉林省 玉米大斑病菌 玉米灰斑病 主要病害 叶斑病 病株率 生理小种
【英文关键词】Corn diseases; Catastrophic tendency; Forecast
【中文摘要】2007年8~9月对吉林省的长春、四平、延边和白城等9个地区25个市(县)、乡(镇)的生产田、吉林省区试和生试试验田玉米主要病害发生情况进行了调查和病样采集。结果表明,吉林省大部分玉米产区大斑病和灰斑病普遍发生,白城和松原地区部分玉米产区大斑病发病率高达100%,灰斑病发病率高达90%,未来几年可能成为吉林省主要玉米病害。2007年许多地区玉米弯孢叶斑病、茎腐病、纹枯病、瘤黑粉病、小斑病和丝黑穗病等病害发生也较为普遍,甚至在某些玉米产区成为主要病害。
【英文摘要】The August to September 2007, researched and collected the stylebook of main corn diseases of the districts in Jilin province including Changchun, Siping, Yanbian, Baicheng etc. The research showed that northern corn leaf blight and gray leaf spot occurred in large in Jilin province. Partly corn production- areas of Baicheng and Songyuan district northern corn leaf blight occurrence reached 100%, and gray leaf spot reached 90%, and will probably grew up main corn diseases years in the future. Some areas eyespot, maize stalk rot, corn sheath blight, common smut, southern corn leaf blight, heat smut, etc, will occur also widely, and even grewup the main corn disease in some corn production- areas in this year.

【题目】6种染色方法对玉米丝黑穗病菌不同发育阶段的染色效果比较
【中文关键词】玉米叶片 丝黑穗病 染色 组织学观察 真菌原位检测 玉米丝黑穗病菌 染色方法 组织透明 苯胺蓝 生长发育阶段 染色法
【英文关键词】Maize; Head smut; Staining; Histology observation; Detection fungi in situ
【中文摘要】比较了姬姆萨氏色素(Giemsa)、苯胺蓝-乳酚油、番红O-KOH、苯胺蓝-甘油、曲利苯兰酒精-乳酚酸和考马斯亮兰组织透明染色法对玉米丝黑穗病菌不同生长发育阶段的染色效果。结果表明,在一定的染液浓度条件下,6种染色方法均可进行冬孢子、芽管、先菌丝、担子、担孢子等寄主组织内部菌体的原位染色。曲利苯兰组织透明染色方法更稳定、简捷和易于观察,能观察玉米丝黑穗病菌的整个生长发育阶段,因此适宜胞间菌丝的染色。
【英文摘要】Fluorescence staining methods of Giemsa, aniline blue- lactophenol, SafraninO- KOH, aniline blue- glycerin, trypan blue and coomassie brilliant blue for different phases in life cycle of Sporisorium relianum were compared. The results showed that three kinds of fluorescence techniques can be used to stain teliospore, germ tube, promycelium, basidium and basidiophore of Sporisorium relianum in situ on the leaf internal. But staining with trypan blue was easier to handle, faster, and more reliable than the other two. Trypan blue was appropriate for staining of the intercellular hypha.

【题目】Ht2背景下玉米对大斑病菌1号小种抗性基因的表达差异研究
【中文关键词】玉米大斑病菌 cDNA-AFLP Ht基因 差异显示
【英文关键词】Exserohilum turc icum; cDNA-AFLP; Ht2 gene; d ifferent ia l expression
【中文摘要】以玉米自交系黄早四和黄早四Ht2近等基因型系为材料,利用cDNA-AFLP差异显示方法,分析玉米抗大斑病Ht2相关基因受大斑病菌1号小种胁迫后的差异表达情况。用筛选的70对引物在黄早四Ht2中扩增出76个差异显示片段,对差异条带回收、克隆和测序,并在NCBI上进行BLAST分析,有52个在GenBank中发现相似性较高、功能已知的EST序列,按其功能分为以下8类:基础能量代谢、跨膜运输蛋白、抗逆或抗病相关蛋白、蛋白质代谢、染色体组成蛋白及DNA复制和转录中的蛋白、信号传导、生长发育调控因子和转录因子,而其中以参与基础能量代谢的基因和抗逆或抗病相关基因所占比例较大。功能已知的52个差异表达片段在玉米1~9号染色体上均有分布,且在非亲和互作前期(6h)主要是一些信号相关基因的表达,12h表达的基因多属于抗病反应初期阶段的相关基因,与防卫有关的基因主要在48~72h表达,生长发育类基因在所检测的非亲和互作的不同阶段均表现作用,在非亲和互作后期主要是蛋白质代谢基因的表达。
【英文摘要】cDNA amplified fragment leng th po lym orph ism (cDNA-AFLP) w as conducted to ana lyze different tial expression o fH t2-re la ted genes be tw een near-isog enic lines (N ILs) Huangzao si (HZS) andHuangzao siHt2 (HZ SHt2) after ino culat ion w ith race 1 o fExseroh ilum turcicum. 【题目】mtDNA COⅡ基因序列应用于赤眼蜂分子鉴定的研究
【中文关键词】赤眼蜂 mtDNA COⅡ基因序列 分子鉴定 分子系统学
【英文关键词】Trichogramma spp.; mtDNA; COⅡ sequence; Molecular identification; Molecular systematics
【中文摘要】赤眼蜂(Trichogrammaspp.)是全世界害虫生物防治中研究最多、应用最广的一类卵寄生性天敌,赤眼蜂蜂种的正确鉴别是取得良好防治效果的关键。【方法】通过对松毛虫赤眼蜂(Trichogrammadendrolimi)、玉米螟赤眼蜂(T.ostriniae)、螟黄赤眼蜂(T.chilonis)、短管赤眼蜂(T.pretiosum)、卷蛾赤眼蜂(T.cacoecia)5种赤眼蜂,及松毛虫赤眼蜂(T.dendrolimi)、玉米螟赤眼蜂(T.ostriniae)、螟黄赤眼蜂(T.chilonis)的不同地理种群的细胞色素氧化酶Ⅱ(mtDNACOⅡ)基因序列片段的测定,并调用GenBank中微小赤眼蜂T.minutum、T.plantneri的同源序列,对不同种赤眼蜂的mtDNACOⅡ序列进行了多重排比和聚类,探讨了mtDNACOⅡ用于赤眼蜂不同种系统进化分析及分子鉴定的可行性。【结果】序列分析结果表明,不同地理种群赤眼蜂的遗传距离均小于0.66%,不同种赤眼蜂间的遗传距离在2%~7.6%之间。【结论】COⅡ基因序列在赤眼蜂种内非常保守,而种间存在明显的遗传差异,可以用作赤眼蜂种的分子鉴定。
【英文摘要】【Objective】Trichogramma spp. is the most widely studied and used egg parasitoids for biological control of insectpests in the world. Correct Trichogramm species identification is the first step for a successful biological control program. 【Method】The mitochondrial cytochrome oxidase Ⅱ(mtDNA COⅡ) of five Trichogramma species, i.e. Trichogramma dendrolimi, T. ostriniae, T. chilonis, T. pretiosum, T. cacoeciae and different populations of T. dendrolimi, T. ostriniae, T. chilonis were sequenced, and the homological sequences available in GenBank were retrieved for DNA alignment and clustering. Research focused on feasibility of the application of COⅡ sequences to the phylogenetic and molecular identification of different Trichogramma species and different geographical populations of the same Trichogramma species. 【Result】 Alignment of sequenced COⅡ showed genetic distanceswere less than 0.66% with Trichogramma speices and 2%-7.6% between Trichogramma speices. 【Conclusion】It can be concluded that COⅡ gene sequences were highly conserved within intraspecific taxa, but significant genetic difference existed between interspecific taxa, and COⅡ is suitable for molecular identification at the species level.

【题目】成团泛菌对玉米自交系PS056致病性基因fK的克隆
【中文关键词】成团泛菌 Tn转座子 玉米 细菌性干茎腐病 yhfK
【英文关键词】Pantoea agglomerans; Tn5 transposon; maize; bacterial dry stalk rot; yhfK
【中文摘要】【目的】通过克隆和鉴定成团泛菌(Pantoea agglomerans)的致病相关基因,阐明该种土壤习居细菌在玉米自交系PS056上引起细菌性干茎腐病的原因。【方法】利用转座子Tn5的随机插入突变特点,构建致病性菌株P.agglomerans XJ1突变体库;经对Tn5插入位点的侧翼扩增,确认突变体PA121的致病力相关基因;通过基因互补试验,证明yhfK与致病力的关系。【结果】通过对突变菌株的接种筛选,获得11个致病力丧失的突变体。Southern杂交和PCR扩增结果表明,Tn5在突

变体PA121中为单拷贝插入,插入位点为细菌编码内膜蛋白的yhfK(Tn5插入在yhfK的1 082 bp处)。将yhfK克隆到质粒pBBR1MCS上,并导入突变体PA121中进行互补,生物测定结果显示转化子完全恢复了正常的细菌生理功能,并能够在玉米自交系PS056上恢复致病力。RT-PCR试验证明,yhfK调控hrpA的转录【。结论】成团泛菌XJ1中yhfK是调控其对植物致病性的基因之一,具有在玉米自交系PS056上引起细菌性干茎腐病的功能。

【英文摘要】【Objective】 The purpose of this study was to clone and identify a pathogenicity gene of Pantoea agglomeranscausing bacterial dry stalk rot on maize.【Method】 A transposon mutant library was constructed in P. agglomerans by Tn5transposon mutagenesis. The mutants with defective pathogenicity were screened using the stalk-injecting inoculation on thesusceptible maize inbred line PS056. One mutant lost pathogenicity was obtained and designated as PA121.【Result】Southernblotting analysis indicated that the mutant PA121 had a single-copy Tn5 transposon which inserted into the yhfK at the site of 1 082bp upstream. The yhfK encodes a conserved inner membrane protein, identified by bi-directional sequencing based on Tn5 sequence.Phenotypic analysis indicated a complementary plasmid retained the pathogenicity on host PS056. The activities of extracellularenzymes, such as protease, amylase and cellulase, were not affected in mutant PA121. RT-PCR analysis demonstrated that the yhfKregulated the transcription of hrpA.【Conclusion】This study demonstrates that the yhfK affects pathogenicity of P. agglomerans,which is a critical element in the pathogenesis of P. agglomerans causing bacterial dry stalk rot on maize.

【题目】不同赤眼蜂品系ISSR-PCR条件优化及分子鉴定

【中文关键词】赤眼蜂品系 ISSR-PCR 品系鉴定和筛选 分子鉴定 优良品系 不同品系 引物 扩增程序 生物学特性 反应体系

【英文关键词】Trichogramma, ISSR- PCR, identification and screening of strain

【中文摘要】赤眼蜂Trichogramma不同品系在寄生能力等生物学特性上存在差异,而这些差异可能被用于优良品系的筛选。通过优化影响赤眼蜂不同品系ISSR-PCR的主要参数,建立适于鉴别赤眼蜂不同品系的ISSR-PCR反应体系和扩增程序。在20 μL反应体系中,各反应物的最适含量为10×PCR Buffer 2.0 μL,MgCl22.0 μL(25mmol/L),dNTPs1.6 μL(2.5mmol/Leach),正反向引物各1 μL(25 μmol/L),DNA模板1.0 μL,Taq酶0.4 μL(2.5U/ μL),和ddH2O。ISSR-PCR的扩增程序为:95℃预变性5min,94℃变性50s,52℃退火1min,72℃延伸1min20s,35个循环,72℃延伸10min。结果表明,在上述优化条件下,采用ISSR-PCR可实现对7个赤眼蜂优良品系的分子鉴定。该研究对于赤眼蜂优良品系的筛选具有潜在的应用价值。

【英文摘要】Different Trichogramma strains are differentiated from each other in biological characteristics, such asparasitic capability, which might be used for screening of superior Trichogramma strains. Here Inter- Simple SequenceRepeats (ISSR)- PCR was used to investigate the genetic variation of 7 candidate strains, and the molecular markersspecific to different strains were subsequently identified. By optimizing the main parameters, the optimal ISSR-PCRreaction conditions for Trichogr amma were firstly established. The results showed that the optimum concentrations ofdifferent reagents in a total of 20 L volume were: 2 0 L MgCl2 (20 mmol L) , 1 6 L dNTPs (2 5 mmol L each) ,1 L ISSR primer (10 mmol L) , 1 5 L genomic DNA and 0 4 L Taq DNA polymerase (2 5 U L) . The suitable 388 昆虫知识 Chinese Bulletin of Entomology 2009 46(3)PCR procedures were determined to be: pre- denaturing at 95 for 5 min, followed by 35 cycles of denaturing at94 for 50 s, annealing at 52 for 1min and extension at 72 for 1 min 20 s, with a final extension at 72 for 10min. Under the optimal conditions, the 7 Trichogramma strains tested could be discriminated by using ISSR- PCR. Itis therefore suggested that this technique is helpful in identification and screening of Trichogramma strains.

【中文关键词】麦蛾茧蜂 温度 成虫寿命 生殖力 发育

【英文关键词】Habrobracon hebetor , temperature, adult longevity, fecundity, development

【中文摘要】在15,20,25和30°C4个温度梯度下,测定了麦蛾茧蜂Habrobracon hebetor(Say)成蜂寿命、生殖力、发育历期等生物学参数。结果表明,在实验温度范围内,卵期在15°C最长,为(9.50±1.39)d;幼虫发育历期在20°C最长,为(6.60±1.41)d;蛹期在15°C最长,为(23.71±2.63)d。雌蜂的寿命在15°C时最长,为(50.15±6.9)d;30°C时最短,为(9.20±3.12)d雄蜂的寿命在15°C时最长,为(11.45±3.52)d;30°C时最短为(5.90±1.62)d。产卵量在25°C最大,为(208.50±40.12)粒;羽化数、羽化率在30°C最高,分别为(23.60±9.33)%和(35.87±13.87)%;温度变化对麦蛾茧蜂雌成蜂生物学参数具有显著影响。

【英文摘要】The adult longevity, development and fecundity of Habrobr acon hebetor (Say) were observed at 15, 20,25 and 30 in laboratory. The results showed that developmental rate increased with the temperature increasing from15 to 30 . The longest duration of egg stage was (9. 50 1. 39) days observed at 15 . The longest duration oflarval stage was (6. 60 1. 41) days at 20 ; The longest duration of pupal stage was (23. 71 2. 63) days at 15 ; 666 昆虫知识 Chinese Bulletin of Entomology 2006 43(5)The longest longevity for female adult was (50. 15 6. 96) days observed at 15 and the shortest was (9. 20 3. 12)days at 30 . The longest longevity for male adult was (11. 45 3. 52) days observed at 15 , the shortest was(5. 90 1. 62) days at 30 . In general, the adult longevity of female was longer than that of male. The max imumnumber of egg aid per female was 208. 50 40. 12 at 25 . The maximum emergence rate was (35. 87 13. 87) %observed at 30 . It could be concluded from the results that temperature shows a significant effect on biologicalparameters of H . hebetor .

【题目】常用土壤杀菌剂和肥料对绿色木霉菌T23的影响
【中文关键词】木霉菌 杀菌剂 肥料 定殖
【英文关键词】Trichoderma; fung icide; fert ilizer; co lonizat ion
【中文摘要】采用常规土壤微生物分离和真菌生物量测定等方法,检测6种常用土壤杀菌剂:多菌灵、甲基托布津、福美双、代森锰锌、百菌清和五氯硝基苯;3种肥料:尿素、过磷酸钙和硫酸钾;以及8种营养元素:铜、锌、铁、钼、钙、锰、镁和钾对绿色木霉菌菌株T23菌丝生长、产孢及其在土壤中定殖的影响。不同杀菌剂、肥料和营养元素及其不同处理浓度处理对木霉菌株T23菌丝生长、产孢和定殖的影响差异显著,多菌灵和甲基托布津、尿素、硫酸锌和硫酸镁具有明显的抑制作用,20μg/mL多菌灵、甲基托布津原药对菌株T23菌丝生长抑制率分别为100.0%和79.0%;0.23%尿素处理土壤21天后对根际定殖抑制率为35.6%;100mg/L硫酸锌和1000mg/L硫酸镁处理土壤21天后对木霉菌定殖的抑制率分别为31.1%和15.9%。适量应用代森锰锌、硫酸钾及二钼酸铵、硫酸钙、磷酸二氢钾等有利于木霉菌根际定殖。

【题目】赤眼蜂SSR反应体系的建立
【中文关键词】赤眼蜂 简单序列重复 反应体系
【英文关键词】Trichogramma spp.; SSR; reaction system
【中文摘要】以松毛虫赤眼蜂为试材,研究了单头赤眼蜂DNA的提取方法以及SSR反应体系的的主要成分对SSR扩增结果的影响。结果表明:在20μL PCR反应体系中,Mg2+的最适浓度为2.0mmol.L-1,dNTP的最适浓度为2.0mmol.L-1,引物的最适浓度为0.8μmol.L-1,Taq聚合酶的最适浓度为1.0U。利用此反应体系,对13个松毛虫赤眼蜂地理品系进行SSR反应,用6%变性聚丙烯酰胺凝胶电泳检测PCR扩增产物,不同品系间DNA谱带多态性丰富。
【英文摘要】Method of DNA extraction and factors influencing SSR- PCR reaction, including the concentration of Mg2+, dNTP,primer and Taq in Trichogramma spp. were studied. The optimal reaction conditions were as follows: Mg2+ 2.0mmol · L-1,dNTP2.0mmol · L- 1, primer 0.8 μmol/L, Taq DNA polymerase 1.0 U. The total volume of reaction was 20 μL. Using the SSR-PCRreaction system,SSR fragments of 13 different geographical populations of Trichogramma dendrolimi were obtained.

Polymorphismbetween different geographical populations was abundant detected by 6% Polyacrylamide gel.

【题目】赤眼蜂防治玉米螟的持续效果分析
【中文关键词】赤眼蜂 玉米螟 危害率
【英文关键词】Trichogramma ostriniae; Ostrinia furnacalis; Damage rate
【中文摘要】利用松毛虫赤眼蜂连续3年进行大面积防治玉米螟研究。结果表明:放蜂对当代玉米卵平均寄生率为75.1%,平均防效62.8%,玉米平均被害率减少62.3%。对二代玉米螟的持续效果为蛀孔率下降44.6%,折茎率下降51.9%,平均防效为48.3%。秋末虫量下降幅度在40.8%~49.0%,平均下降率为46.2%。在玉米螟一般发生年份,利用一代放蜂的持续效果可以控制玉米螟的危害。
【英文摘要】Mass reared Trichogramma dendrolimi was released in a large area of corn in to control Asian cornborer, Ostrinia furnacalis. The results showed that the parasitic rate of T.d. on the first generation of corn borer eggs,which increased 62.8% than control, reached to 75.1%; meanwhile, the damage rated of corn reduced 62.3%. Thesustained effect of T.d. on the second generation of corn borer showed that the borer rate decreased 44.6%, the broken-stem rate decreased 51.9%, and the average control effect was 48.3%. At the end of autumn, the amount of cornborer decreased 46.2% at the average and restored the loss of 8.5% from 40.8%-49.0%. At the general year that cornborer damaged, the corn borer was controlled by the sustained effect of T.d. on the first generation of corn borer.

【题目】赤眼蜂种间沃尔巴克氏体水平人工转染供体蜂种的筛选
【中文关键词】沃尔巴克氏体 赤眼蜂 产雌孤雌生殖
【英文关键词】wolbachia
【中文摘要】实验室条件下以感染沃尔巴克氏体的引进种卷蛾赤眼蜂、食胚赤眼蜂、短管赤眼蜂为材料,比较分析3种赤眼蜂连续3代喂食抗生素后子代雄蜂率、寄生和羽化情况。除卷蛾赤眼蜂F_2代外,取食四环素后3种赤眼蜂各世代寄生率均降低,其中食胚赤眼蜂的寄生率与对照相比明显下降;3种赤眼蜂间寄生率没有明显差异。随着取食抗生素世代的增加,3种赤眼蜂子代雄蜂率逐渐增大,短管赤眼蜂F_1代开始出现雄蜂,F_3代雄蜂率高达54.54%,明显高于卷蛾赤眼蜂(20.58%)和食胚赤眼蜂(13.94%);食胚赤眼蜂3个世代羽化雄蜂率均最低,说明其产雌孤雌生殖方式比较稳定,较适合作为赤眼蜂种间沃尔巴克氏体水平人工转染的供体。

【题目】低温胁迫下戊唑醇和苯醚甲环唑种子包衣对玉米种子出苗和幼苗的影响
【中文关键词】戊唑醇 苯醚甲环唑 种子包衣 低温胁迫 玉米幼苗 种子出苗 叶绿素含量 幼苗生长 玉米种子 抑制作用
【英文关键词】tebuconazo le; difenoconazo le; seed trea tm en;t ch illing stre ss; m aize
【中文摘要】为研究低温胁迫下种子包衣对玉米种子出苗和幼苗生长的影响,以适宜温度(25℃/20℃,白天/晚上,下同)处理为对照,对不同剂量包衣的玉米种子进行低温胁迫。研究结果表明,戊唑醇和苯醚甲环唑种子包衣在适宜温度下对玉米种子出苗具有促进作用,能提高玉米幼苗植株的叶绿素含量,对玉米幼苗的株高和鲜重没有抑制作用。但在17℃/6℃、15℃/0℃、10℃/0℃低温胁迫下,戊唑醇和苯醚甲环唑均能抑制种子出苗和幼苗生长,加剧低温胁迫导致的膜脂质过氧化作用和对叶绿体的分解。但用苯醚甲环唑处理玉米种子比用戊唑醇更安全,前者能抑制低温胁迫导致的叶片细胞内电解质外渗,后者却会加剧电解质的外渗。比较玉米幼苗根系的呼吸作用也可以发现,苯醚甲环唑比戊唑醇更有利于玉米幼苗补偿和修复低温胁迫所致的伤害。

【题目】短期高温对感染Wolbachia 的松毛虫赤眼蜂发育和繁殖的影响
【中文关键词】松毛虫赤眼蜂子代 沃尔巴克氏体 高温冲击 生物防治 生殖方式 柞蚕卵 羽化 感染 繁殖 单卵
【英文关键词】Trichogramma dendrolimi , Wolbachia , heat shock, biological control
【中文摘要】感染了沃尔巴克氏体Wolbachia的松毛虫赤眼蜂Trichogramma dendrolimi Matsumura营孤雌产雌生殖方式,但高温可能影响这一特性。为了模拟该赤眼蜂在田间遇到短期高温后的受影响情况,研究了柞蚕卵繁殖的Wolbachia感染了Wolbachia的松毛虫赤眼蜂孤雌产雌品系,于蛹中期和蛹后期经历6h32,35,38°C高温单次冲击处理,对当代羽化出蜂率、单卵出蜂数、单卵雌蜂率、寿命4个指标和处理子代羽化出蜂率、有效繁殖个体、单卵出蜂数、单卵雌蜂率4个指标的影响。结果表明,短期高温刺激会对孤雌产雌的松毛虫赤眼蜂产生不利影响,尤其是38°C高温不利影响明显,主要表现在羽化出蜂率和单卵出蜂数两指标明显降低;高温冲击对子代蜂各指标影响不明显。2代赤眼蜂均未有雄峰出现,表明短期高温冲击不能对Wolbachia调控其宿主生殖方式的作用产生影响。
【英文摘要】Trichogramma dendrolimi Matsumura infected by Wolbachia has a character thelytokous reproduction.However, high temperature may affect this character. To simulate this condition in field, a test single heat shocks(32, 35 and 38) for 6 hours was applied to middle stage and late stage of pupae of T. dendrolimi infected byWolbachia. A series of data was recorded including the percentages of adult emergence rate, number of wasps per hostegg, female ratio and longevity as well as the number of wasps with parasitization, percent emergence, number ofwasps per host egg and female ratio in the next generation. The results showed the high temperature shocks hadnegative effect to both middle stage and late stage of pupae, especially at 38 . At this temperature, emergence rateand number of wasps per host egg were remarkably reduced. The sensitive level between middle stage and late stage ofpupae has no remarkable difference. For the progeny generation, all parameters as a whole seem to be little affectedby the heat shock experienced in the parent generation. In the two generations wasps, there is no male emergence.This indicates that short high temperature shocks can not influence the action of Wolbachia manipulating reproductionof their hosts.

【题目】共生菌毒素对亚洲玉米螟和玉米小斑菌杀虫抑菌活性的测定

【中文关键词】共生菌毒素 亚洲玉米螟 玉米小斑菌 生物防治 抑菌活性 昆虫病原线虫 高毒力菌株 抑菌圈直径 校正死亡率 杀虫毒素

【英文关键词】Symbiotic bacteria toxin; Ostrinia furnacalis; Bipolaris maydis; Biological control

【中文摘要】利用从全国采集的土样中收集到的28个品系的昆虫病原线虫,分离并筛选出28株高毒力共生菌菌株,对高毒力菌株的杀虫毒素进行初步提取,并以亚洲玉米螟和玉米小斑菌作为供试昆虫和供试真菌,对其杀虫抑菌活性进行测定。结果表明:共生菌毒素对两种病虫害均有一定的胃毒活性和抑菌作用,其中菌株5-5B毒素的杀虫抑菌活性最为明显,处理后120 h对亚洲玉米螟的平均校正死亡率为43.70%,抑菌圈直径为34.00 mm。

【英文摘要】Twenty- eight highly virulent strains of symbiotic bacteria were isolated from 28 entomopathogenic nematodesin the soil samples collected from different regions of China. The crude toxins were extracted from the 28symbiotic bacteria strains. Bioassay results showed that all crude extracts had virulent stomach poison activity and antimicrobialeffect to the first instar larvae of Ostrinia furnacalis and Bipolaris maydis to some extent, among which5- 5B strain was the best one. The average corrected mortalities to Ostrinia furnacalis was 43.70% and the diameter ofantibiotic circle to Bipolaris maydis was 34.00 mm.

【题目】孤雌产雌品系松毛虫赤眼蜂的遗传稳定性
【中文关键词】孤雌产雌 松毛虫赤眼蜂 遗传稳定性 世代 沃尔巴克氏体
【英文关键词】thelytoky; Trichogramma dendrolimi ; genet ic stability; generation; Wolbachia
【中文摘要】在20、25和30℃三个恒温与78%恒湿条件下,于室内比较了20代、80代的人工转染含沃尔巴克氏体的孤雌产雌品系和未感染的两性生殖品系松毛虫赤眼蜂的卵寄生数、羽化数、羽化率、成虫寿命、单雌产卵量,并对松毛虫赤眼蜂体内共生菌沃尔巴克氏体进行分子检测,以研究两个不同世代的孤雌产雌品系松毛虫赤眼蜂体内共生菌的遗传稳定性。结果表明,在20℃时,20代的孤雌产雌品系松毛虫赤眼蜂的羽化率低于两性品系松毛虫赤眼蜂;80代的孤雌产雌品系松毛虫赤眼蜂的羽化数和成虫寿命低于两性品系松毛虫赤眼蜂;在25℃时,80代的孤雌产雌品系松毛虫赤眼蜂的羽化率低于两性品系松毛虫赤眼蜂;其余温度条件下羽化数、羽化率、成虫寿命和单雌产卵量均无显著差异。在20和25℃时,两个不同世代的孤雌产雌品系松毛虫赤眼蜂羽化数、羽化率等指标均高于30℃时的孤雌产雌品系松毛虫赤眼蜂,但3个温度条件下各生物学指标差异均不显著。PCR分子检测显示20代和80代的孤雌产雌品系松毛虫赤眼蜂检测结果均为阳性。经室内数代繁殖生殖方式稳定。
【英文摘要】The parasitic eggs, emergence number, emergence rate, longevity and fecundity of Trichogrammadendrolimi Matsumura were compared between Wolbachia infected (T. d (w)) and not infected(T. d) lines under temperatures of 20, 25 and 30 . T. d (w) lines had been bred for about 20 and80 generations in laboratory. Moreover, the Wolbachia wsp gene of thelytokous line of T . dendrolimi wasdetected by PCR to test the genetic stability of symbiot ic bacteria between different generations. At 20

,the emergence rate of T. d (w) bred for 20 generat ions was lower than that of T. d; for 80 generations,the emergence number and longevity of T. d (w) were lower than that of T. d. At 25 , for 80 genera-tions, the emergence rate of T. d (w) was lower than that of T. d; at 30 , no significant differenceswere found. The emergence number, emergence rate and other parameters of T. d (w) bred for 20 and 80generat ions at 20 and 25 were higher than those at 30 , but differences were not significant. Thethelytokous line of T. dendrolimi bred for 20 and 80 generat ions were posit ive by PCR.

【题目】基于线粒体DNA COⅡ基因的亚洲玉米螟中国不同地理种群遗传分化及基因流研究
【中文关键词】亚洲玉米螟 地理种群 线粒体COⅡ基因 单倍型 遗传分化 基因流
【英文关键词】O strin ia furnacalis; geographic population; m itochondrial CO gene; haplotype; genetic differentiation; gene flow
【中文摘要】本文通过对中国亚洲玉米螟Ostrinia furnacalis(Guen é e)17个地理种群的线粒体COⅡ基因进行序列分析,对中国亚洲玉米螟种群间的遗传分化程度和基因流水平进行了初步研究。在获得的413条序列样本中共发现了34个变异位点、35种单倍型。总体单倍型多样性指数Hd为0.811,种群内单倍型多样度在0.424~0.862范围内。17个种群间的平均基因流(Nm)为2.02。总群体的固定系数Fst为0.234。AMOVA分子方差分析结果表明中国玉米螟的遗传分化主要来自种群内部(76.45%)。各种群的TajimasD值中性检验符合中性突变,说明中国亚洲玉米螟在历史上没有出现群体扩张,群体大小稳定。各地理种群的遗传距离与地理距离间不具有显著的相关性。各地理种群中的单倍型在系统发生树上散布在不同的分布群中,缺乏明显的地理分布格局。
【英文摘要】To invest igate the genet ic d ifferen tiation and gene flow among d ifferen t popu lations o f the A siancorn borer, O strinia furnacalis (Guen e) , in Ch ina, w e analyzed CO sequences ofm itochondrialDNA in17 geographical populat ions. In the tota l 413 CO gene sequences obta ined, 34 variable sites and 35hap lo types w ere observed. The mean haplotype diversity of a ll popu lations w as 0. 811, whereas it variedfrom 0. 424 to 0. 862 w ithin popu lation. The average gene flow (Nm) among the 17 popu lationsw as 2. 02.The overa llF st valuew as 0. 234. Mo lecular variance (AMOVA) ana lysis ind icated that a h igh proport ion o fthe tota l genetic variance was attributable to variationsw ith in popu lations (76. 45%) . The Tajima sD valueneutrality test results suggest that for theA sian co rn borer, therem ight be no populat ion expansion, so the irpopu lation sizes w ere steady. The genetic d istance w as no t significan tly co rrelated w ith the geographicaldistance betw een populat ions. The phylogenet ic tree revea led no obvious geographical pattern for theprevalence and distribution o f the hap lo types.

【题目】吉林省玉米大斑病菌生理小种的组成变异与动态预测
【中文关键词】玉米大斑病菌 变异频率 吉林省 生理小种组成 抗性基因 鉴别寄主 毒力 病菌分离 分离物 中晚熟
【英文关键词】Exserohihun turcicum; Interspecific variability; Jilin province
【中文摘要】通过1套鉴别寄主对2006~2007年采自吉林省7个地区100份玉米大斑病病菌分离物的致病性进行分析。结果表明,共鉴定出15个类型的生理小种:0、1、2、3、12、13、1N、23、2N、3N、12N、13N、123N、123、23N;吉林省玉米大斑病菌的小种组成十分复杂,在中晚熟玉米产区已没有明确优势小种的存在;1号生理小种虽然是主要小种类群,但所占比例仅为18%,并且出现了能够克服4个抗性基因的强毒力小种。不同玉米熟区的大斑病生理小种的分布与种间变异频率也趋于复杂。
【英文摘要】Using routine technique, one hundred isolates of Exserohihun turcicum, collected from7 farming areasof Jilin province from2006 to 2007, were identified in pathogenic variation to different Ht resistance gene by the groupof hosts. The results showed that 15 physiological races including 0, 1, 2, 3, 12, 13, 1N, 23, 2N, 3N, 12N, 13N, 123N,123, 23N were found. It was quite complex race component in Jilin province, and there were not dominant races aswell as in mid- serotinous production areas of maize. Race 1 was also the main races but its frequency was only about18% respectively. The virulence of the race 123N was so stronger that it could infect all the maize with single Ht gene.Races of Exserohihun turcicum distribution and interspecific variability in different maturity corn varieties areas alsobecame complex.

【题目】利用ISSR技术分析禾谷镰孢菌群体遗传多样性的研究
【中文关键词】玉米茎腐病 禾谷镰孢菌 ISSR标记 遗传多样性
【英文关键词】Maize stalk rot; Fusarium graminearum; ISSR; Genetic diversity
【中文摘要】采用ISSR标记对采自我国11个省的玉米茎腐病相关禾谷镰孢的遗传多样性进行分析。利用筛选出的14个ISSR引物对供试的115株禾谷镰孢菌株进行扩增,共获得63条扩增清晰、重复性高的条带,其中多态性条带为60条,占95.2%。扩增条带分子量为150~2000bp,平均每个引物扩增出4.5条带。遗传多样性分析表明,在地理种群水平上,基因多样性指数在0~0.2919之间,平均为0.1591;Shannon‘s多样性指数在0~0.4252之间,平均为0.2360,表明不同地理种群间存在一定的遗传变异。多样性指数、等位基因数的增大与各种群内样本数量增加有关。遗传相似性分析证明,山东省种群与河南省种群间的遗传相似性最高,内蒙古种群与河北省种群间遗传相似性最低。在相似性系数为0.682时,可将115个菌株区分为2个聚类组,各组下又可分为3个亚组,分组结果与菌株的地理来源有一定相关性,表明禾谷镰孢的遗传分化与生态地理有关。
【英文摘要】The genetic diversity of F. graminearum population collected from eleven provinces was determinedusing technique of inter- simple sequence repeat (ISSR). A total of 63 reproducible ISSR fragments were scored among115 individuals, of which 60 (95.2%) were polymorphic. The size of the amplified fragments ranged from 150 bp to2 000 bp and average number of bands per primer was 4.5. At geographic population level, Nei's gene diversity andShannon's information index were 0.159 1 and 0.236 0, respectively, that meant there was genetic variation betweengeographic population of F. graminearum. By analysis of genetic similarity coefficient the F.graminearum populationsof Shandong and Henan were closest and populations of Inner Mongolia and Hebei were the farthest. Based on geneticdistances all isolates were clustered into two groups at the similarity of 0.682 and three subgroups in each group. Thegrouping results indicated that genetic variation of F.graminearum was related with its geographic distribution.

【题目】利用伏马毒素合成基因对玉米种子寄藏镰刀菌的分子检测
【中文关键词】镰刀菌 伏马毒素 fum基因 分子检测
【英文关键词】Fusarium; fumonisins; f um1 gene; molecular detection
【中文摘要】我国玉米种子普遍受到拟轮生镰刀菌(Fusariumverticillioides)的侵染,该菌产生的伏马毒素对国家种质库中玉米种质的安全保存有着潜在的影响。fum1基因是F.verticillioides等镰刀菌中伏马毒素生物合成的必需基因。选用3对已知引物Fum5F/Fum5R、P1/P2和P3/P4分别对从玉米种子中分离出的9株镰刀菌和1株阴性对照菌链格孢菌进行PCR扩增检测,在F001和F003菌株中扩增出相应的特异性表达片段。测序表明,这些片段的长度分别为846bp、888bp和703bp,与已知fum1基因(AF155773)的同源性达99%以上。3对引物的检测灵敏度达到88pg/mL。结果表明,这3对引物都能够有效地检测产生伏马毒素的镰刀菌菌株,但引物Fum5F/Fum5R所扩增片段完全来自fum1基因内部,具有更强的特异性。在此定性检测基础上,需要进一步研究定量检测方法并进一步研究伏马毒素对农作物种质保存的影响。
【英文摘要】In this st udy, t hr ee pair s o f prev iously published primers, Fum5F/ Fum5R, P1/ P2 and P3/ P4, wer e usedto detect FB in nine Fusar ium strains. In str ain F001 and F003, 846 bp, 888 bp and 703 bp fragment s w ere ampl-ified by Fum5F/ Fum5R, P1/ P2 and P3/ P4, r espectively, w hich wer e then sequenced. The nucleot ide sequences ofthe three segments amplified from both str ains w ere compar ed with the f um1 sequence r etrieved from GenBank (acc.no. AF155773) . The r esult s demonst rated that they had a high ident ity (> 99%) . The detection sensitivit y was88 pg / L w ith the three primer s. The results show ed that all of the three primers could be used to effectiv ely detectFusar ium strains producing fumonisins. And Fum5F/ Fum5R w as the best pair because the pr oduct amplified wascompletely fr om w ithin the g ene f um1 .

【中文关键词】亚洲玉米螟 玉米螟赤眼蜂 人造卵 引诱剂
【英文关键词】Ostrinia furnacalis , Trichogramma ostriniae, artificial host eggs, attractant agent
【中文摘要】试验通过部分改变人造卵卵液成分和在人造卵表涂施引诱剂2种途径来试图提高人造卵繁育玉米螟赤眼蜂Trichogramma ostriniae Panget Chen的成功率。结果表明,不同比例的亚洲玉米螟OstriniafurnacalisGuen é e幼虫和蛹匀浆替代部分柞蚕蛹匀浆后,对赤眼蜂寄生率有明显提高,但赤眼蜂在人造卵内的化蛹率和羽化率均较低,赤眼蜂发育至老熟幼虫因卵液过剩而被淹死;在原卵液卵表涂施亚洲玉米螟卵和鳞片正己烷提取液后,评价繁蜂成功率的各项参数都有明显提高,赤眼蜂可以完成发育,羽化成蜂,但繁蜂成功率还较低。综合上述试验结果,应用人造卵繁殖玉米螟赤眼蜂研究重点要解决卵液过剩以及其它相关的营养学问题。
【英文摘要】In order to improve rearing of Trichogramma ostriniae wasps on artificial host eggs, two methods wereconducted, i. e. 1) partial substitution of the materials from pupae of the tussah moth (Antheraea p ernyi) withmaterials form larvae and pupae of Asia corn borer (ACB, Ostriniaf urnacalis Guen e) as the major ingredients of theartificial host eggs, and 2) applying hexane extraction of eggs and scales of ACB on the surface of artificial host eggs.The results showed that the substitution of artificial eggs significantly improved the parasitism rate. However, the rateof pupation and adult emergence were greatly reduced because mature larvae were drowned by the ex cessive nutrition(egg contents) in artificial eggs. Surface treatment of artificial host eggs resulted in significantly increasing in allparameters for evaluating successful parasitism by the wasp. Although the wasp was able to complete the developmentfrom egg to adult emergence, the rate of success remained comparatively low. Therefore, future study should befocused on resolving problems associated with excessive nutrition in artificial host eggs.

【题目】深松土壤病原真菌数量分布对玉米病害发生趋势的影响
【中文关键词】深松土壤 土壤病原菌 玉米病害 发生趋势
【英文关键词】Subsoiling; Soil pathogenetic fungi;Maize diseases; Occur tendency
【中文摘要】取玉米深松田10~40cm4个土层深度的土样,分析玉米病原菌变化对玉米病害的影响。结果表明,深松田土壤中的玉米致病菌、非致病菌和有益菌数量较常规耕作农田有大幅度增加。玉米病原菌数量在耕层中呈上下两层少中间多的纵向分布趋势。深松年限越长,致病菌数量越多,使玉米病害呈逐年加重趋势,增幅在23.0%~36.8%。
【英文摘要】Maize soil environments were changed by practicing the soil subsoiling technique for more years continuously.The types and numbers of the pathogenetic fungi of the stratified sampling from 10 cm to 40 cm in the subsoilingfields were analyzed. The results showed that the numbers of the maize pathogenetic fungi, non- pathogeneticfungi and useful fungi were increased significantly in the subsoiling soil than the conventional tillage. The distributiontendency in depth of the maize pathogenetic fungi numbers fromthe middle- level in the subsoiling soil were more thanthe top and bottom soil layers. The longer subsoiling time, the more the pathogenetic fungi numbers will be, and maizediseases were made or become heavier. The increased range of the maize diseases were in between 23.0% - 36.8%.

【题目】生防木霉菌生物安全性评价
【中文关键词】木霉菌 分生孢子 厚垣孢子 根际微生物 生物安全性
【英文关键词】Trichoderma; Conidiaspores; Chlamydospores; Rhizosphere microorganism; Biology security
【中文摘要】目的检测木霉菌(Trichodermasp.)的生物安全性,评价木霉菌应用后对部分生态因子的影响。方法采用常规试验方法,将木霉菌孢子进行种子接菌、土壤接菌、水中接菌,研究木霉菌对瓜类作物生长性状的影响,在水中的存活及对根

际土壤微生物的影响,对大白鼠、大白兔的毒性。结果大多数木霉菌对甜瓜种子安全,并且能够显著提高种子的出苗率、增加须根数和促进瓜苗生长;绿色木霉菌T23菌株对甜瓜及西瓜根际土壤真菌、细菌和放线菌群体数量无显著影响;木霉菌孢子在河水、井水、雨水及自来水中均不能萌发,分生孢子在水中存活约12~20d,厚垣孢子约20~30d,菌体自行消解;对鱼苗生长没有不良影响;对大鼠的急性经口和经皮毒性均属低毒类,对兔皮肤和兔眼粘膜无刺激性。结论与其它微生物农药一样木霉菌无毒、无污染,用于作物土传病害的生物防治无明显性风险。

【英文摘要】【Objective】To detect bio-safety of Trichoderma, to evaluate the impact on partial ecological factor after theapplication of Trichoderma.【Method】Inoculate spores of Trichoderma into seeds, soil and water by means of conventional testmethods, to detect its survival in water and its effects on rhizosphere microorganisms and growth of melon, as well as toxicity onmice and white rabbits.【Result】The majority of Trichoderma were safe to sweet-melon seeds and could increase significantlygermination ratio, the number of fibrous roots and improve the growth of melon seedling. Trichoderma viride T23 did not showsignificant effects on the number of fungi, bacteria and actinomyces in rhizosphere soil of sweet-melon and water-melon. Spores ofTrichoderma could not germinate in river, well water, rainwater and tap water. Conidiaspores and chlamydospores could survive inwater for 12-20 days and 20-30 days, respectively. Trichoderma had no harm on the growth of fish. Meanwhile, it had low toxicity onrats in both stomach and skin toxicity experiments, and no allergic reaction to rabbit skin and mucous membrane of eyes.【Conclusion】Trichoderma is in-noxious and has no pollution , as same as other microbial pesticide. It is no risk using Trichodermato control soil-spreading diseases.

【题目】外界生态因子对感染Wolbachia的松毛虫赤眼蜂生殖稳定性影响
【中文关键词】Wolbachia 松毛虫赤眼蜂 孤雌生殖 稳定性
【英文关键词】Wolbachia; Trichogramma dendrolimi; parthenogenesis; stability
【中文摘要】【目的】明确水平人工转染沃尔巴克氏体(Wolbachia)获得营产雌孤雌生殖松毛虫赤眼蜂生殖方式在环境条件改变时的遗传稳定性,探索Wolbachia与其宿主间的相互适应性。【方法】采用喂食抗生素、持续高温处理、与雄蜂交配等方法,观察产雌孤雌松毛虫赤眼蜂寄生和羽化等情况。【结果】抗生素诱导下,从F2代开始出现雄蜂,经诱导获得的雄性与正常雌性、诱导获得雌性交配可以产生后代,且20个后代群体都有雄性个体出现;25°C恒温下,与雄性交配的产雌孤雌松毛虫赤眼蜂寄生数和未交配的相比显著降低,到F7代恢复正常,只有交配的F2、F4后代出现个别雄蜂,其它世代和未交配所有世代均未出现雄蜂。而32°C高温下,交配与未交配至F5代所有羽化个体全为雄蜂。【结论】不同温度下与雄蜂交配不会改变Wolbachia感染引起的松毛虫赤眼蜂产雌孤雌生殖方式,抗生素处理和持续至少20d的32°C高温是改变感染Wolbachia的松毛虫赤眼蜂生殖方式的决定因素。
【英文摘要】【Objective】 To clarify the genetic stability of thelytokous line of Trichogramma dendrolimi (Matsumura) infectedwith Wolbachia by horizontal transfer under abnormal circumstance, and adaptation between Wolbachia and its host. 【Method】 Parasitic, reproductive and several other biological characteristics of thelytokous line of Trichogramma dendrolimi were investigatedin treatments of feeding with tetracycline, continuance of high temperature and mating. 【Result】 After treatment with tetracycline,male Trichogramma emerged in the F2 generation of the thelytokous line, the males induced by tetracycline mated with femalesinduced to produce offspring, and male individuals appeared in all 20 descendant families. At normal temperature of 25°C, themating of thelytokous line of Trichogramma dendrolimi reduced the number of parasitic compared to non-mating markedly until theF7 generation. However individual males presented incidentally in generations F2 and F4, not found in other generation with matingand all generation without mating. At relative higher temperature of 32 °C, individual males presented in whole generation of F5including mating and non-mating. 【Conclusion】 Stability of thelytokous line of Trichogramma dendrolimi infected with Wolbachiacan not be affected by mating at 25°C and 32°C, antibiotic treatment and higher temperature of 32°C lasting at least 20 d are the keyfactors to eliminate Wolbachia to alter thelytokous of Trichogramma dendrolimi .

【题目】温度对感染沃尔巴克氏体的松毛虫赤眼蜂种群参数的影响
【中文关键词】松毛虫赤眼蜂 沃尔巴克氏体 温度 生命表参数 发育历期 有效积温 种群参数 感染 赤眼蜂品系 实验种群生命表
【英文关键词】Trichogramma dendrolimi ; Wolbachia; temperature; life table parameters; developmental durat ion; effective accumulated temperature
【中文摘要】在16°C、20°C、24°C、28°C和32°C恒温下,观察了温度对感染沃尔巴克氏体的松毛虫赤眼蜂发育、存活和繁殖的影响,组建了相应温度下的实验种群生命表。结果表明,在实验温度范围内,感染沃尔巴克氏体的松毛虫赤眼蜂的发育历期随着温度的升高而逐渐缩短,5个温度下感染沃尔巴克氏体的松毛虫赤眼蜂世代的发育历期分别为23・2、17・8、13・2、11・1和7・8天,世代的发育起点温度和有效积温分别为7・40°C和212・69日・度,内禀增长率(rm)和净生殖力(R0)分别介于0・2448~0・4584和28・00~84・03之间。结果提示温度24°C~28°C为繁殖感染沃尔巴克氏体的松毛虫赤眼蜂的理想温度条件。
【英文摘要】Development and parasit ization of Trichogramma dendrolimi infected by Wolbachia were observed at16 , 20 , 24 , 28 and 32 respectively. The results showed that the developmental duration of T.dendrolimi infected by Wolbachia was affected by temperature. The higher the temperature, the shorter thedurat ion. The whole developmental duration was 23 2 d, 17 8 d, 13 2 d, 11 1 d, and 7 8 d at 16 ,20 , 24 , 28 and 32 , respectively. The thermal threshold, the effective accumulated temperature,the innate capacity of increase (rm) and the net reproduction rate (R0) of T. dendrolimi infected byWolbachia were estimated as 7 40 , 212 69 degree-day, 0 2448 - 0 4584 and 28 00 - 84 03,respectively. The results suggested that the optimal reproduction temperature of T. dendrolimi infected byWolbachia was 24 - 28 .

【题目】中国桃蛀螟不同地理种群的遗传多样性
【中文关键词】桃蛀螟 ISSR 遗传多样性 基因流 地理种群 中国
【英文关键词】Conogethes punctif eralis; ISSR; genetic d iversity; gene flow; geograph ic popu lation; Ch ina
【中文摘要】本文应用ISSR分子标记技术对中国桃蛀螟Conogethes punctiferalis11个地理种群的基因组DNA进行了遗传多样性和遗传分化分析。从34条引物中筛选出6条用于ISSR多态性分析,共扩增出211条带,其中209条具多态性,总的多态性条带百分率为99.05%。11个种群的遗传距离在0.0059~0.0237之间,Nei氏基因多样性指数为0.1750,Shannon信息指数为0.2966,遗传分化系数为0.053,基因流高达8.8724。结果提示中国桃蛀螟地理种群因基因流水平较高而种群遗传分化水平保持较低。
【英文摘要】G enet ic diversity among eleven geograph ic populat ions o fC onogethes punctif eralis in China w asinvest igated using Inter Simp le Sequence Repeat (ISSR) m arkers in th is study. S ix of the 34 used primersw ere chosen for our ISSR po lymo rph ic ana lysis. The resu lts show ed that 209 bands w ere po lymorphic,mak ing up 99. 05% of the tota l 211 amplified bands. The genetic d istances betw een d ifferen tC. punctif eralis populat ions w ere 0. 0059- 0. 0237. The N ei s index, Shannon info rmation index, andcoeffic ient o f genet ic (gene) d ifferen tiation among populations (G st) w as 0. 1750, 0. 2966 and 0. 053,respective ly, and the estimated value o f gene flow from G st w as 8. 8724. The results suggest thatC. punctif eralis popu lations in China keep a low level of populat ion genetic differentiation due to aconsiderab le gene flow.

【题目】我国桃蛀螟四个地理种群感染Wolbachia的研究
【中文关键词】桃蛀螟 Wolbachia 感染率 wsp基因 系统发生
【英文关键词】Conogethes punctif eralis; Wolbachia; infection frequency; w sp; phylogenetic ana lysis
【中文摘要】Wolbachia是一类广泛分布于节肢动物体内的细胞内共生菌,能参与调控寄主的多种生殖活动。桃蛀螟Conogethes punctiferalis(Guen晴e)可危害多种粮食作物和经济作物,近年来已成为我国玉米生产的重要害虫之一。本研究对通过对16SrRNA、ftsZ以及wsp基因片断的PCR扩增,对我国桃蛀螟4个地理种群进行了Wolbachia感染检测,并对感染个体中wsp基因片断克隆测序,初步探究了我国桃蛀螟种群中Wolbachia的感染率和感染类群。研究结果表明我国4个桃蛀螟种群中Wolbachia感染率在2.0%~8.0%,平均感染率为4.5%。通过对不同种群感染的Wolbachia中wsp序列比对及系统树构建分析,在桃蛀螟中发现了5种Wolbachia亚型,分别命名为wPun1-wPun5,分属于A组的Uni、Dro亚组,以及B组的Div、Con亚组。此外,本研究在采自河北保定的桃蛀螟种群中发现了Wolbachia的超感染现象。
【英文摘要】Wolbachia are maternally inherited endosymb io tic bacteria infecting a w ide range of arthropods.They can induce various reproduction a lterations in their hos.t Y ellow peach moth, Conogethespunctiferalis (Guen e), w hich in fests various o f food crops and econom ic crops, becomesmore serious inma ize recently in China. In this study, w e invest igated preva lence and diversity ofWolbachia in fect ion infour geographical popu la tions ofC. punctif eralis in Ch ina by PCR detection o f 16S rRNA, f tsZ and w sp.F ive stra ins o fWolbach ia (w Pun1- w Pun5) w ere iden tif ied based on w sp sequences iso lated in populations o fC. punctif eralis w ith infection frequency ranged from 210% - 810% (average ra te = 415%) .Phy logenetic ana lysis suggested that theseWolbachia variants belong to subgroup Un,i Dro in G roup A,and subg roup D iv, C on in Group B. In addition, superinfection w as found in Baoding population collec-ted inHebe iProvince.

【题目】沃尔巴克氏体感染对松毛虫赤眼蜂生殖力、发育历期和存活的影响
【中文关键词】松毛虫赤眼蜂 沃尔巴克氏体 产雌孤雌生殖 生殖力 发育历期 存活率 两性生殖 产卵量 赤眼蜂品系 感染
【英文关键词】Trichogramma dendrolimi ; Wolbachia; thelytokous parthenogenesis; fecundity; develop mental duration; survival rate
【中文摘要】在恒温恒湿条件下,比较研究了感染沃尔巴克氏体的产雌孤雌生殖品系和未感染正常两性生殖品系松毛虫赤眼蜂的单雌产卵量、发育历期、存活率。结果表明,感染和未感染沃尔巴克氏体的两种品系松毛虫赤眼蜂单雌产卵量分别为101.2和101.7粒,差异不显著;松毛虫赤眼蜂产雌孤雌生殖品系在预蛹期和蛹后期的发育历期极显著长于两性生殖品系,分别为1.9、0.9d和1.4、0.5d;沃尔巴克氏体感染使宿主松毛虫赤眼蜂卵和幼虫的存活率显著降低。
【英文摘要】Under constant temperature and humidity conditions, fecundity, developmental duration andsurvival rate were compared between Trichogramma dendrolimi infected and uninfected with Wolbachiausing the staining method by Safranin in egg of Antheraea pernyi . Results show that the fecundity was notsignificantly reduced by infection with Wolbachia. Developmental durat ions of pre pupal and late pupalstages (1 9 and 1 4 d, respectively) of T. dendrolimi infected with Wolbachia were significant ly longerthan those of uninfected wasps (0 9 and 0 5 d, respectively) . Wolbachia infection significant ly de creased survival rates of eggs and larvae of T. dendrolimi .

【题目】戊唑醇和苯醚甲环唑种子处理对玉米幼苗生长的影响比较
【中文关键词】戊唑醇 苯醚甲环唑 种子处理 玉米安全性
【英文关键词】Tebuconazole; D ifenoconazole; Seed treatmen;t Ma ize security
【中文摘要】采用药液浸种法研究了两种药剂对玉米种子萌发和幼苗生长的影响。结果表明,在试验浓度下,戊唑醇和苯醚甲环唑处理种子对出苗率没有影响,但对玉米幼苗的株高都表现出了一定的抑制作用,戊唑醇处理明显抑制玉米幼苗株高,但戊唑醇处理浓度低于300 μg/mL时,其显著增加了玉米幼苗的叶绿素含量,并明显增加了玉米幼苗的可溶性糖的含量。与戊唑醇相比,苯醚甲环唑处理浓度大于300 μg/mL时才表现出对玉米幼苗的抑制作用,苯醚甲环唑处理更有利于玉米幼苗的生长,苯醚甲环唑处理提高了玉米幼苗根系的呼吸作用。以上结果说明,苯醚甲环唑处理对玉米幼苗生长的安全性好于戊唑醇。
【英文摘要】E ffects of seed treatment w ith tebuconazo le and d ifenconazole on the emergence o fma ize seeds and thegrow th o fmaize seed lings w ere stud ied. The results show ed that although the emergence rate o fm aize seeds were notdifferen,t the maize seedling he ightw ere inhibited sign ificantly by seed treatm entw ith tebuconazole and d ifenocon azo le, especially treated w ith tebuconzaole. The contents of ch lorophy ll and soluble sugar w ere sign ificant ly in creased inma ize seedlings asma ize seeds treated w ith tebuconazole low er than 300 g /mL. 【题目】玉米不同种植方式对玉米螟的控制作用研究
【中文关键词】玉米螟 种植方式 不同作物 不同品种 向日葵 玉米品种 混种 间种 发生情况 作用研究
【英文关键词】Maize; Asian corn borer; Plantingmethods
【中文摘要】对玉米不同品种清种、混种和间种不同作物后玉米螟的发生情况进行了初步研究。通过玉米清种区与混种区的玉米螟发生情况比较、分析得出,混种对降低一代玉米螟卵量有明显作用,比清种一代玉米螟卵降低幅度在13%~45%。通过玉米间种不同作物后玉米螟发生情况分析得出,间种向日葵的小区中玉米螟的蛀孔数和活虫数明显低于其它处理,认为向日葵可能对玉米螟具有一定的驱避作用。
【英文摘要】The occur of Asian corn borer(ACB), Ostrinia furnacalis(Guenee), had been studied in this paper afternormal, mixed planting with different corns alternation planting with other corps. The study showed that the mixedplanting with different corns could evidently decrease the number of one generation ACB eggs for comparison with thenormal planting. The mixed planting could decrease the number of one generation ACB eggs about 13% - 45% thannormal planting. Through the study on alternation planting with other corps, we found that the numbers of wormholeand live larvae in area of alternation planting with sunflowers were lower than with the other corps. So we confirmedsunflower had avoidance effect to ACB.

【中文关键词】张颖
【英文关键词】magnesium-ammonium-phosphate;ammonia nitrogen;
piggery wastewater
【中文摘要】本书由环境专家张颖教授组织,污染监测的深入研究将对农业环境可持续的发展,有着重大的意义
【英文摘要】Magnesium-ammonium-phosphate precipitation method (MAP) is a newly-developed technique to remove ammonia nitrogen from wastewater. In this study, MAP method has been studied by using MgCl 2 · 6H 2 O and Na 2 HPO 4 · 12H 2 O as precipitators for treating highly concentrated ammonia nitrogen wastewater. The effect of pH value, formulas of precipitation and precipitator ratio on MAP precipitation efficiency has been examined. A lab scale study is conducted to optimize the reaction conditions by single factor experimentation and cross experimentation. The experimental results indicates that the effluent ammonia nitrogen and removal rate reaches 36.66mg/L and 95.15% respectively when pH is 9.5,the mole ratio n(PO 43-)∶n(NH 4+)∶n(Mg 2+) is controlled at 1∶1∶1.2 and the reaction time is controlled at 10 minutes.

【题目】Mechanism of Cu(Ⅱ) biosorption by Saccharomyces Cerevisiae
【中文关键词】张颖
【英文关键词】Saccharomyces Cerevisiae;Copper ion;Chemical
modification;FTIR;Adsorption mechanism
【中文摘要】本书由环境专家张颖教授组织,污染监测的深入研究将对农业环境可持续的发展,有着重大的意义
【英文摘要】This paper studies how chemical modification influences the Saccharomyces Cerevisiae adsorption on copper ion and the desorption of nitric acid, and carries out infrared spectrum analysis of native, adsorbing and desorbing Saccharomyces Cerevisiae. Results show that carboxyl and amino group in Saccharomyces Cerevisiae play an important role in the process of adsorbing Cu(Ⅱ). The adsorption on Cu(Ⅱ) by Saccharomyces Cerevisiae is mainly the process of surface adsorption. The process of biosorption on heavy metals is mainly reversible adsorption; however, there still exists irreversible adsorption. FTIR analysis further indicates that carboxyl and hydroxyl adsorption on Cu(Ⅱ) is reversible adsorption, which amino group adsorption on Cu(Ⅱ) is irreversible adsorption.

【中文关键词】张颖
【英文关键词】MBR technology; cleaning technology of membrane
pollution; mechanism of membrane pollution
【中文摘要】本书由环境专家张颖教授组织,污染监测的深入研究将对农业环境可持续的发展,有着重大的意义
【英文摘要】Membrane pollution and its cleaning technology in MBR water treatment process were tested. Membrane of short-term(22d) experiment and membrane of long-term(210d) experiment were cleaned separately by cold water → hot water → sodium hypochlorite → ethanol, membrane fluxes came back to the 94.4% and 70.3% of the new membranes, respectively. Another membrane of long-term(210d) experiment was cleaned with different process by cold water → hot water → sodium hypochlorite →sulfuric acid, membrane flux came back to the 61.4% of the new membrane. The cleaning test of membrane module showed: different cleaning process might bring different cleaning effect. Membrane pollution can be divided into biological pollution, organic pollution and inorganic pollution. They often occur simultaneously, and one kind of pollution can exacerbate another.

【题目】Planktonic Algae Community Distribution and Eutrophication Assessment of Xi Quanyan Reservoir
【中文关键词】张颖
【英文关键词】Xi Quanyan reservoir, planktonic algae, Comprehensive Trophic State Index, eutrophication assessment
【中文摘要】本书由环境专家张颖教授组织,污染监测的深入研究将对农业环境可持续的发展,有着重大的意义
【英文摘要】The distribution and composition of the planktonic algae community in Xi Quanyan reservoir was investigated, it showed the dominant species were diatom and chlorophyta. According to the comprehensive trophic state of the multiple monitoring results of the different sampling points in the entrance, centre and exit of the Xi Quanyan reservoir, calculate the Comprehensive Trophic State Index to gain the average of the whole year: the entrance is 56.2077, the centre is 54.4001, and the exit is 55.1305, which means that the reservoir is in the slight condition. And to analysis of variance for the different sampling points, the F value is 3.548, less than F0.05, which means that the difference of the eutrophication level is not significant among the each sampling points. By the matched data t test, the differences of eutrophication level among the 3 water periods are very significant: wet season>common season>dry season.

【中文摘要】本书由环境专家张颖教授组织,污染监测的深入研究将对农业环境可持续的发展,有着重大的意义
【英文摘要】Studies on the residue of atrazine in the soil have recently aroused great concern. This article studies the methods of determining the residue of atrazine in the soil, and thus helps solve the problems of pesticide residue. Use methanol aqueous solutions (9:1) to extract the atrazine in the soil. Concentrate the methanol, then chloroform extracted. After concentrating to a defined volume, use GC-14C gas chromatographic and FID detector to determine the residue of atrazine in the soil. This research has found that the recovery rate of residue atrazine in the soil reaches 85%-90%, and the relative standard difference

(RSD) is 2.3%-4.9%.

【中文关键词】寒地黑土 阿特拉津 筛选 鉴定 降解特性
【英文关键词】black soil in cold area; atrazine; isolation; identification; degradation characteristi
【中文摘要】从长期施用阿特拉津的寒地黑土耕层(0~10 cm)取样。利用富集培养的方法,筛选到2株阿特拉津降解菌,编号Z9和Z42。Z9以阿特拉津为惟一碳氮源生长, Z42以阿特拉津为惟一氮源生长, 15 d对阿特拉津的降解率分别为77·7%和65·6%。对其初步鉴定并对降解特性进行研究,结果表明,细菌Z9为微杆菌属(Microbacteriumsp.),细菌Z42为节杆菌属(Arthrobactersp.)。在室内进行降解条件优化实验,得出2株降解菌对100 mg/L阿特拉津的最佳降解条件为:温度30℃, Z9pH值为7, Z42pH值为8。
【英文摘要】Two bacteria named Z9and Z42were isolated from black soil in cold area (0~10 cm) of long-term applying atrazine by enrichment culture. Z9grew in medium with atrazine as sole carbon and nitrogensource, Z42grew inmedium with atrazine as sole nitrogen source. After15 days, the degradation rates ofZ9andZ42were 77. 7% and 65·6% respectively. Based on theirphysiologic and biochemicalcharacteristics, Z9and Z42were identified asMicrobacteriumsp. andArthrobactersp. By studying on degradation characteristics, the opti-mum degradation condition of two bacteria for100mg/L atrazinewas established: the temperaturewas30℃, pHofZ9and Z42were 7 and 8 respectively.

【题目】生物型水稻专用肥在黑土上应用效果研究
【中文关键词】生物型水稻专用肥;黑土;肥料利用率
【英文关键词】biotype rice specific fertilizer; black soil; fertilizer using efficiency
【中文摘要】黑土作为供试土壤,采用盆栽的方法,对生物型水稻专用肥应用效果进行初步研究,为完善在黑土上水稻专用肥配方提供依据。结果表明,生物型肥料有效的促进水稻在整个生育期内对钾的吸收,提高水稻植株的生物量,抽穗期生物型水稻专用肥处理的水稻植株干重比等养分化肥处理高4.3%~8.1%。生育后期生物型肥料处理的土壤中速效养分含量仍高于等养分化肥处理,表现出良好的长效机制。减少化肥用量的生物型肥处理与常规施肥相比,氮、磷、钾的利用率分别提高11.8%、18.9%和26.6%。生物型I处理产量显著高于其他处理,水稻品质好于其他处理,但未达到显著水平。关键词:生物型水稻专用肥;黑土;肥料利用率
【英文摘要】Pot experiments were conducted to preliminary study the effects of biotype rice specific fertilizers inblack soil, supplying according for biotype rice specific fertilizers more completely. The results indicated thatall biotype rice specific fertilizers could promote potassium absorption and increase plant biomass in all growthstages. Plant dry weights of using biotype rice specific fertilizers treatment were 4.3%-8.1% higher thanchemical fertilizer treatments contain equal nutrient contents at heading stage. The content soil availablenutrients at the later growth stage was also higher in biotype rice specific fertilizers treatment than that inchemical fertilizer treatments, indicating the better effects of bio-fertilizers. Compared with common fertilizertreatment, the using efficiency of nitrogen, phosphorus and potassium for biotype fertilizer I treatmentincreased 11.8% , 18.9% and 26.6% , respectively. The yield of biotype fertilizer I treatment was highersignificantly than other treatments. The quality of biotype fertilizer I treatment rice better than other treatments,but didn ’ t reach notable leave.

【题目】不同接种方式对生活垃圾堆肥水溶性有机物荧光特性影响
【中文关键词】生活垃圾堆肥;复合菌剂;接种方式;水溶性有机物;荧光光谱
【英文关键词】solid waste composting; compound microorganisms; inoculation methods; dissolved organic matter; fluorescence spectroscopy
【中文摘要】为了筛选生活垃圾堆肥过程中最佳的复合菌剂接种方式,试验对堆肥起始接种、高温期接种、高温后期接种、后腐熟接种和不接种菌剂5种不同接种方式下的生活垃圾堆肥过程中水溶性有机物(DOM)进行光谱分析,考察了生活垃圾堆肥中DOM组成随堆肥时间的变化规律。DOM荧光光谱解析表明:随着堆肥时间的增加,5个不同处理堆体中的DOM光谱学特性呈现出一定规律的变化趋势,结构复杂的大分子物质和腐殖质类物质不断增多,DOM性质逐渐趋于稳定化。从DOM的荧光图谱及相关参数综合比较而言,堆肥起始和越过高温期的高温后接种微生物复合菌剂,能够明显地加速堆肥的腐殖化进程。
【英文摘要】In order to determine the best inoculation methods of compound microorganisms in solid waste composting, dissolved organic matter (DOM) during the process of composting under five different inoculation methods, which were inoculation at the start time, at the high-temperature phase, after the high-temperature phase, at the maturity phase and without inoculation, was tested through spectral analysis to investigate the time variations of DOM components in solid waste composting. Fluorescence spectra analysis of DOM indicated that the spectral characteristics of DOM in the composting piles of the five treatments exhibited a certain trend with composting time increasing, in which macromolecules with complex structures and humic substances gradually increased, and the heap materials became more and more stabilized. The synchronous fluorescence spectrometry maps showed that after composting there were new absorption peaks near 341nm and 373nm, and red shifts were observed near 277nm, in which the absorption peaks in the treatment of inoculating at the start time and at the high-temperature phase right shifted to 285nm and 284nm, respectively, indicating notable red shifts. Meanwhile, the three dimensional fluorescence spectroscopy maps of DOM in the five treatments also undergo significant changes during the composting process, in which the protein-like fluorescent peak intensities increased gradually, and new fluorescence peaks of fulvic acid formed, with notably enhanced intensities and the disappearance of the transition peaks, which indicated increasing aromatization and complexity of the DOM. According to the comparisons of the fluorescence spectroscopy maps and related parameters, the treatment of inoculating compound microorganisms at the start time or after the high-temperature phase could notably speed up the humification process in solid waste composting.

【题目】pH及离子强度对渗滤液水溶性有机物同步荧光光谱的影响
【中文关键词】填埋渗滤液,水溶性有机物,pH值,离子强度,同步荧光光谱
【英文关键词】landfill leachate;dissolved organic matter(DOM);pH value;ionic strength; synchronous fluorescence spectra
【中文摘要】研究了填埋场不同填埋时期渗滤液水溶性有机物(DOM)在三个代表性pH值和不同离子强度下的同步荧光特性。结果表明,DOM的荧光特性受pH影响显著,填埋前、中、后期DOM在不同pH下的荧光峰位置与强度均不一致。离子强度对于DOM荧光特性影响相对较小,由于盐析等作用,随离子强度的增加,各DOM的荧光强度一般都在降低。填埋前、中期DOM在pH13时随离子强度的变化较显著,而填埋后期DOM在pH3时随离子强度的变化较显著。这可能是各不同组成成分的DOM在强酸、碱性条件下的物质结构不同,各DOM上的官能团和阳离子反应所导致的。
【英文摘要】Due to it's sensitivity, good selectivity and nondestructivity nature, fluorescence technique is suitable to the study of dissolved organic matter. In this paper, dissolved organic matter in leachate with different landfill ages in pH3, pH7, pH13 and different ionic strength from 0 to 0.4mol/L KCl was investigated using synchronous fluorescence spectra technology. Our experiment shows that in pH3, pH7 and pH13 synchronous fluorescence spectra changes as plain as salisbury, synchronous fluorescence peak for dissolved organic matter in leachate from young, medium and old landfill age are in different intensity and positions in pH3, pH7 and pH13. It is mainly because the different composition for each dissolved organic matter in leachate with three different landfill ages. Compared with the effect of pH 收稿日期:基金项目:国家重点基础研究发展计划项目(973)(2005CB724203);国家国家科技支撑计划(2007BAD87B03) 作者简介:耿春茂,男,1984年8月生,东北农业大学硕士研究生,主要研究方向为生物工程。*:通讯作者,weizm691120@163.comvalue on synchronous fluorescence spectra of dissolved organic matter in leachate with different landfill ages, ionic strength has a slight influence to synchronous fluorescence peak for each dissolved organic matter in leachate with different landfill ages. Generally speaking, as the increaseing of ionic strength, most synchronous fluorescence peaks of both three kind dissolved organic matter decrease slightly. That is mainly due to the salting-out effect to dissolved organic matter in leachate with different landfill ages under high ionic strength. Dissolved organic matter from young and medium landfill leachate change distinctly in pH13 with different ionic strength, whereas dissolved organic matter from old landfill leachate change distinctly in pH3. It may be because the different composition for these three dissolved organic matter. So the structure of them in pH3 and pH13 change differently, besides the adding cation may react with eletrophilic substituent on dissolved organic matter surface in leachate from three landfill ages in pH13 or pH3, that may results the intensity change on fluorescence peak of dissolved organic matter in leachate from three landfill ages.

【题目】长期培肥对农田暗棕壤土壤微生物量的影响
【中文关键词】暗棕壤; 大豆生育期; 长期施肥; 土壤微生物量碳、氮
【英文关键词】dark brown soils; soybean growth period; long-term fertilization; soil microbial biomass C N
【中文摘要】以黑龙江省农业科学院黑河分院“土壤肥力与肥效长期定位试验”的农田暗棕壤为研究对象,测定不同施肥制度下大豆土壤微生物量C、N 动态变化,探讨长期不同施肥处理对暗棕壤的培肥效应。结果表明,与不施肥、单施化肥、单施有机肥处理相比,化肥配施有机肥能显著增加大豆各生育期土壤微生物量C、N 量及qMB 值,增强了农田暗棕壤土壤养分容量的供应强度,有利于农田暗棕壤的培肥。
【英文摘要】The effects of long-term fertilization treatments on the soil microbial biomass for dark brown soil in farmland were investigated,based on the long-term site-specific trial of dark brown soils fertility and fertilizers effects set up by Heilongjiang Academy of AgriculturalSciences. Results showed that: Compared with no fertilizer, only applied organic fertilizer and chemical fertilizer, the compoundorganic and chemical N,P,K fertilizer application could enhance the soil microbial biomasses greatly in the whole soybean growth periods,and also increased the supplies of the soil organic matter and total nitrogen,which benefit to the fertility of dark brown soil.

【题目】平衡施肥对松嫩平原黑土玉米产量效益的影响
【中文关键词】平衡施肥;农学效率;玉米;产量
【英文关键词】balanced fertilization;agronomic efficienc;maize;yield
【中文摘要】研究了平衡施肥对松嫩平原黑土区玉米生长发育状况和产量效益的影响。结果表明:平衡施肥对双城、海伦和依安玉米生长发育及产量、效益有明显的正效应。黑龙江省黑土玉米产量限制因子依次为氮、磷、钾。与最佳施肥处理(OPT)相比,不施氮肥平均减产23·4%,少收入2 514元·hm-2;不施磷肥平均减产15·9%,少收入1 699元·hm-2;不施钾肥平均减产16·3%,少收入1 646元·hm-2;不施肥处理平均减产35·3%,少收入2762元·hm-2;农民习惯施肥(FP)平均减产4·9%,少收入458元·hm-2。说明最佳施肥处理设计合理。双城氮磷钾肥农学效率分别为23·9、48·2和31·5 kg·kg-1;海伦氮磷钾肥农学效率分别为11·4、16·9和21·7 kg·kg-1;依安氮磷钾肥农学效率分别为13·1、29·6和13·1 kg·kg-1。从肥料农学效率方面考虑,应该在所设定的最佳处理氮钾肥的基础上适当提高磷肥和钾肥用量,以使最佳处理不断优化,达到玉米高产、优质和高效的目的。
【英文摘要】:Experiment was conducted to evaluate the effects of balanced fertilization on yield and benefit of maizein the black soil of Songnen Plain· The results showed that balanced fertilization had a significant positive effectto maize yield and benefit of Shuangcheng and Hailun and Yi ’an· Limiting factor on yield of maize in the blacksoil of Heilongjiang province was N P K· Compared with optimum treatment,the maize yield and profit of nonitrogen fertilization treatment were decreased by 23·4% and 2 514 yuan·hm-2;no phosphate fertilization treat-ment by 15·9% and 1 699 yuan·hm-2;no potassium fertilization treatment by 16·3% and 1 646 yuan·hm-2;nofertilization treatment by 35·5% and 2 762 yuan·hm-2; farmer fertilization treatment by 4·9% and 458yuan·hm-2·The yield and benefit of optimum treatment was better than any other treatments,it means that thedesign of optimum treatment was reasonable· Nitrogen, phosphate and potassium agronomic efficiency ofShuangcheng was 23·9,48·2and 31·5 kg·kg-1and Hailun was 11·4,16·9and 21·7 kg·kg-1and Yi ’an was13·1,29·6and 13·1 kg·kg-1,respectively·Considering nutrient ’s balance and fertilizer utilization,the amount ofphosphate and phosphate fertilizer should be improved on the basis of the amount of nitrogen fertilizer,whichwould make the optimum treatment more reasonable to reach maize high-yield,high-quality and efficiency·

【题目】钾肥不同施用量对玉米产量效益及钾素平衡的影响
【中文关键词】钾肥;养分收支;玉米;产量
【英文关键词】potassium;nutrient s balance;maize;yield
【中文摘要】研究了黑龙江省玉米主产区双城地区不同钾肥施用量条件下,玉米产量、养分吸收规律以及土壤—作物系统中钾素投入—产出平衡状况。结果表明:施钾可明显增加玉米植株各部分含钾量,对秸秆钾含量的提高尤其明显。在一定范围内施用钾肥可显著提高玉米籽粒产量,随着施钾量增加,籽粒产量没有进一步提高,从而使钾肥效益降低。施钾肥的

K1、K2、K3、K4处理分别比K0产量增加1 190、1 460、1 070和729 kg · hm-2;各处理钾含量大小顺序为:籽粒K4>K3>K2>K1>K0;秸秆K4>K3>K1>K2>K0;各处理钾表观盈亏量均为负值,其中K1和K2处理钾的亏缺程度最大。双城地区钾的平衡系数均小于1。从产量、效益及平衡系数看,该地区钾肥用量以K2O 100 kg · hm-2为宜,可使土壤钾素趋于动态平衡,达到玉米的高产、优质和高效。

【英文摘要】:Maize yield and the nutrient ’ s absorption characteristic of potassium input-output balance in soil-cropsystem were studied under the condition of different potassium application rates in the main maize productionareas of Heilongjiang province.The results showed that K fertilizer could increase potassium content of differ-ent organs in plant distinctly,especially in straw.Application of K fertilizer could increase yield of grain butyield didn t increase with K fertilizer quantity s increasing and then K fertilizer s efficiency decreased.The aver-age yields of the maize under the K1,K2,K3,K4 treatments were increased by 1 190,1 460,1 070 and729 kg · hm-2compaerd with the K0 treatment;The order of the potassium content of the treatments was:grainK4>K3>K2>K1>K0;strawK4>K3>K1>K2>K0.The apparent budget of Potassinm was negative,the extent of K1 and K2 were the most.Potassium balance coefficient was less than 1.According to yield,bene-fit and balanced coefficient,the best application of K fertilizer was K2O 100 kg · hm-2,which would make thefertilizer application more reasonable to reach high-yield,high-quality and efficient maize.

【题目】平衡施肥对松嫩平原黑土区大豆产量效益的影响
【中文关键词】平衡施肥;黑土;大豆;产量效益;农学效率
【英文关键词】Balanced fertilization; Black soi;l Soybean; Yield and profit; Agronomic use efficiency

【中文摘要】根据土壤养分状况,设定最佳(OPT)施肥处理,并在此基础上做减素处理、喷施叶面肥、加种衣剂等,研究了平衡施肥对黑龙江省松嫩平原黑土区大豆生长发育、产量效益的影响。结果表明:平衡施肥对海伦、庆安和依安大豆生长发育、产量和效益有明显的正效应。海伦、庆安和依安3个地区推荐施肥分别比农民习惯施肥增产7. 4%、7. 6%和9. 5%,增效476、1089和836元 · hm-2。OPT+叶面肥处理有助于大豆产量的提高,而OPT+种衣剂处理未表现出显著增产效果。钾是黑土区限制大豆产量的主要土壤养分因子,其次是磷和氮。从肥料农学效率看,大豆增产肥料贡献率表现为氮肥>钾肥>磷肥。松嫩平原黑土区大豆生产农民习惯施肥中磷肥用量偏高,而钾肥用量不足,微肥重视程度不够。

【英文摘要】According to the content of soil nutrient, the optimal treatment(OPT), nutrient omission treatments, the optimaltreatmentplus foliar fertilizer treatment, the optimal treatment plus seed coating agent treatmentwere designed. Under thecondition ofbalanced fertilization, soybean growth and development, yield and profitwere studied in the black soil areas ofsongnen plain inHeilongjiang Province. The results showed thatbalanced fertilization had a significantpositive effect to soy-bean yield ofHailun, Qing an, Yi an. Compared with farmer usual practice treatment(FP), yield of soybean was increasedby 7. 4%, 7. 6%, 9. 5%, profitwas enhanced to 476, 1089 and 836 yuan · ha-1respectively underOPT conditions. Yieldof soybean was increased byOPT plus foliar fertilizer treatment, while notby the OPT plus seed coating agent treatment. Kwas the key limiting factorofblack soi,l followed byP andN, which restricts yield ofsoybean. Seen from agronomic efficien-cy ofapplied nutrient, the orderof contribution of fertilizer to soybean yieldwasN>K> P. The amountofPwas higher, Kwas not enough andmicroelementwas ignored in farmer practicewhen planted soybean in black soil ofSongnen plain

【题目】黑龙江省大豆磷肥适宜用量研究
【中文关键词】黑龙江;大豆;磷肥用量;产量;效益
【英文关键词】Heilongjiang; soybean; rate of phosphoric fertilizer; yield; benefits
5
【中文摘要】在黑龙江省北部黑土和东部白浆土大豆主产区设置大豆磷肥用量试验,以明确该地区大豆施磷效果和适宜的磷肥用量。结果表明:黑龙江省大豆磷肥适宜用量为P2O590 kg · hm-2,平均增产775 kg · hm-2,平均增产率为36.2%,平均增收2 260元 · hm-2。在施磷量为(P2O5)45、90、135、180 kg · hm-2条件下,磷肥利用率分别为19.33%、18.85%、13.46%和9.58%;磷肥农学效率分别为8.90、8.61、5.72和3.57 kg · kg-1,适量施用磷肥是大豆高产高效的重要措施。
【英文摘要】Field experiments of phosphoric fertilizer application on soybean were conducted in the main region ofsoybean production in Heilongjiang province to determine the effect and the optimum rate of it to soybean. Theresults showed that the optimum rate of phosphorus (P2O5) was 90 kg · hm-2; with it application the yield in-creased 775 kg · hm-2, the percentage was 36.2%, the benefits was 2 260 yuan · hm-2,on average. When thephosphorus (P2O5) applied at the rate 45, 90, 135 and 180 kg · hm-2, the recovery of phosphorus fertilizerwere 19.33%、18.85%、13.46% and 9.58%,respectively; the agronomic efficiency of them were 8.90、8.61、5.72 and 3.57 kg · kg-1respectively. It ’ s an important measure to obtain high yield and high efficiency soy-bean production by appropriate rate application of phosphorus fertilizer

【题目】依安县农田土壤速效养分空间变异特征初探
【中文关键词】农田土壤;速效养分;空间变异
【英文关键词】farmland soil; available nutrient; spatial variability
【中文摘要】采用全球卫星定位系统(GPS)和地理信息系统(GIS)技术,对黑龙江省依安县农田土壤速效养分进行了空间变异特征研究。结果表明:黑龙江省西部依安县土壤中氮、磷、钾的含量比较丰富,土壤缺硫和锌。土壤中硫、磷、硼、锰的空间分布具有明显的变异性。土壤中硫空间分布的偏斜程度较大。pH与有机质、有效锰、有效硼和有效锌都极显著相关;有机质与有效锰极显著相关。
【英文摘要】Spatial variability in Yi'an county of Heilongjiang province was studied using the technology of Glob-al Positioning System(GPS)and Geography Information System(GIS). The results showed that the black soil in the west of Heilongjiang province was relatively rich in fertilities; the content of nitrogen, phosphorus and potassium was fairly abundant,but the content of sulfur and zinc was lacking. The variation of spatial distribu-tion of sulfur, phosphorus, boron, manganese was obvious. "the declining degree of the spatial distribution of sulfur was fairly high. pH and organic matter,effective boron,efficient manganese and effective zinc were extremely significant correlative. Organic matter and effective manganese was significant correlative.

【题目】长期施肥对黑土和暗棕壤土壤酶活性及土壤养分的影响
【中文关键词】长期施肥;土壤酶活性;土壤养分;黑土;暗棕壤
【英文关键词】Long- term fertilization; Soil enzyme activities; Soil nutrients; Black soil; Dark brown soils
【中文摘要】:为阐明长期施肥对黑土和暗棕壤土壤酶活性的影响、土壤酶活性与土壤养分的关系,探讨土壤持续利用的培肥模式,采集了施用不同肥料28 年后的黑土和暗棕壤,对黑土和暗棕壤土壤酶活性以及土壤养分因子进行了测定和分析。结果表明,与不施肥对照相比,各施肥处理均可显著增加黑土和暗棕壤有机质和氮磷钾养分含量,提高土壤脲酶、磷酸酶、转化酶、过氧化氢酶活性,其中以化肥配施有机肥效果最为明显。土壤酶活性与土壤养分之间有很好的相关性,土壤脲酶、磷酸酶、转化酶、过氧化氢酶活性与土壤有机质、全氮、全磷、碱解氮、速效磷含量呈显著相关,黑土对施肥比暗棕壤对施肥更敏感。对不同土壤长期化肥配施有机肥均可为作物生长创造良好的土壤环境
【英文摘要】The soil enzyme activities and their corresponding nutrients of the black and dark brown soils under thesame fertilizer applications of twenty- eight years were measured, and their relationships were analyzed. The objectivewas to clarify the effects of long-term fertilization on the soil enzyme activities and to figure out sustainablemanagement of the black and dark brown soils. The results showed, compared to non- fertilization treatment, all thefertilization treatments could significantly increase the soil organic matter and total NPK contents of the black and darkbrown soils, and enhance the soil urease, phosphatase, invertase and catalase activities, especially for the chemicalfertilizer application combined with manure. There were good correlations among the soil enzyme activities and soilnutrients. Soil urease, phosphatase, invertase and catalase activities had a significant correlation with soil organicmatter, total

nitrogen, total phosphorus, nitrogen and available phosphorus contents. The effects of fertilizer applicationson the black soil enzyme activities were more sensitive than those of the dark brown soil. The long- term chemicalfertilizer application combined with manure could provide a good soil environment for the crop growth.

【题目】吉林省超高产玉米田土壤理化环境特征的研究
【中文关键词】玉米 超高产 土壤理化环境 传统耕作
【英文关键词】Corn; Super high- yield; Physiochemical environment of soil; Conventional tillage
【中文摘要】对吉林省超高产玉米田与农民传统耕作玉米田土壤理化性质比较分析,研究超高产条件下玉米田土壤的理化环境特征。研究结果表明,超高产玉米田土壤物理肥力特性较高,主要表现在耕层较深厚,土壤容重变化存1.01~1.26g/cm^3,土壤的结构破坏率较低;在土壤的化学环境特征方面,土壤碱解氮、速效磷、速效钾等均未表现出明显的变化规律;所有超高产田的土壤阳离子交换量(CEC)均不同程度地高于普通生产田,这与超高产田的定向培育有直接关系;一些超高产田有机质低于普通生产田,其原因与超高产田氮素施用量较高、促进了土壤有机质矿化有关。
【英文摘要】Through comparing analysis of soil physiochemical character of super high production cornfield andtradition cultivation cornfield in Jilin Province, we had initially understood the cornfield soil physiochemical characterunder the super high- production condition. The results indicated that the soil physical fertility characteristic of superhigh- production cornfield was high, mainly display in the topsoil was deep, soil bulk density changed between1.01- 1.26 g/cm3, disarrangement rate of soil structure was low. In soil chemical environment characteristic aspect, thesoil alkali- hydrolyzable nitrogen, the rapidly available phosphorus, the rapidly available potassium and so on hadn'tdisplayed the obvious change rule. All super high- yield field's CEC varying degree was higher than the ordinary productionfield, and this had the direct relation with the super high- yield field's directed cultivating. Some superhigh- yield field organic matter was lower than the ordinary production field. The reason had related with the superhigh- yield field high employment quantity of nitrogen.

【题目】吉林玉米带黑土水分渗透机理研究
【中文关键词】吉林玉米带; 黑土; 水分渗透
【英文关键词】Corn belt of Jilin; Black soil; Water permeability
【中文摘要】通过田间调查和模拟构型试验, 探讨了影响吉林省玉米连作黑土水分渗透的原因和机理。结果表明, 现行的以小四轮拖拉机为主要动力的耕作制度下, 土壤剖面中耕层与犁底层的界面为“ 波浪形 ”, 每年进行秋翻的玉米田, 其耕层与梨底层的界面为“ 平面形 ”。通过模拟构型, 研究了不同剖面构型的水分特征及对土壤肥力的影响。“ 平面形 ”剖面构造改善了土壤的通透性, 增加了土壤水分渗透的速率, 减少了雨水径流。“ 波浪形 ”剖面耕层土壤的耗水量比“ 平面形 ”剖面的大, 特别是后期, 易发生水分亏缺现象。因此, 现行的不合理的耕作是导致吉林玉米带黑土肥力退化的主要原因。
【英文摘要】By field investigation and imitate experiment, causes and mechanism of permeability of black soilin Songliao plain were studied. The results showed that the surface of the cultivated profiles and plough sole underthe cropping system and soil management motivated mainly by small four- wheeled tractor was wavy type while thesurface of the plowing layer and plough sole of the corn field under the cropping system of annual autumn plowingwas flat type. This paper systemically studied moisture characteristics and influences under different profilemorphological characteristics. And revealed that “ flat type ” section has better soil structure and appropriate poreratio, which improved the soil permeability, reduced soil erosion. The corn water- consumption of “ wavy type ” section cultivated horizon was bigger than that of “ flat type ” section. Soil water could appear shortage in “ wavytype ” section, especially in the post period. It thus follows that the present systems of improper cultivation is themain causes of fertility degradation of black soil in corn belt of Songliao plain.

【题目】吉林玉米带现行耕作制度对黑土肥力退化的影响
【中文关键词】退化 环境影响 土壤条件 肥力 耕作制度 吉林玉米带 黑土
【英文关键词】no
【中文摘要】该文从"体质"和"体型"两个方面探讨了吉林玉米带现行耕作制度对土壤肥力退化的影响。结果表明,现行的耕作制度下,土壤剖面中耕层与犁底层的界面为"波浪型",而每年进行秋翻的玉米田,其耕层与梨底层的界面为"平面型"。"波浪型"犁底层的土壤容重、三相组成与"平面型"剖面相比有明显差异,而耕层中有机无机复合体及其有机碳分布特征无明显差异,与底层土壤有较大差异。但由于"平面型"剖面耕层的有效土量是"波浪型"有效土量的2倍,因此,在生产上"平面型"剖面土壤保水性能、玉米产量等多方面都普遍优于"波浪型"土壤。吉林玉米带黑土肥力退化的主要原因是耕层有效土量过少。

【题目】不同施肥方式下黑土有机碳的变化规律研究
【中文关键词】黑土;施肥方式;有机碳;腐殖质; Kos值
【英文关键词】Black soil; Fertilization model; Organic carbon; Humus; Kos value
【中文摘要】通过长期定位试验研究了施肥对黑土有机碳总量、组成、品质的影响。试验设不施肥(CK)、单施化肥(NPK)、有机肥与化肥配施(NPKM)和秸秆与化肥配施(NPKS)4个处理。结果表明:施肥有利于土壤有机碳及有机碳各组分含量的增加。各处理有机碳及各组分含量的高低表现为:NPKM>NPKS>NPK>CK。单施化肥使土壤的HA/FA比值降低,胡敏酸的E4/E6比值提高,使各形态碳含量增加,Kos值降低,但变化较小。有机物质与化肥配施能使土壤的HA/FA比值和E4/E6比值都有所提高,显著地增加土壤中活性有机碳的含量,降低土壤有机碳的Kos值,其中NPKM处理效果更好。长期有机肥与化肥配施,对改善土壤腐殖质的腐殖化程度和提高其活性,降低土壤有机碳的抗氧化能力,提高土壤养分供应能力具有良好的作用,是保持土壤肥力的最优施肥方式。
【英文摘要】A long-term field experiment was carried out in Jilin province to study the effect of fer-tilization on the total content of soil organic carbon fractions and the soil Kos value in black soil.The experiment included four treatments: Zero fertilization (CK), chemical fertilizers alone(NPK),Combining application of organic manure and chemical ertilizers(NPKM),and combina-tion use of straw and chemical fertilizers(NPKS).The results showed that the fertilization couldincrease the contents of soil organic carbon and its components,with a quantity order of NPKM>NPKS>NPK>CK.The application of chemical fertilizers alone could decrease the HA/FA valueand the Kos value,but increase the E4/E6value of HA and the contents of different available car-bons.The combination of chemical fertilizers with organic matters could enhance the HA/FA,theE4/E6of HA and the contents of active organic carbon,while reduce the value of Kos,the treat-ment NPKM being the best.A long-term combinition of organic manure with chemical fertilizerscould improve the humification of soil humus,enhance the activity of humus,reduce the antioxi-dization ability of soil organic carbon,and increase the nutrient-supplying capacity,so was the bestfertilization model for maintaining the soil fertility.

【题目】吉林黑土区玉米田土壤真菌的多样性
【中文关键词】黑土;农田;真菌区系;施肥
【英文关键词】Black soil; Farmland; Fungal flora; Fertilization
【中文摘要】在2003年4月—2004年10月,在吉林黑土区采集玉米田土壤,采用稀释平板法、土粒淋洗法和土壤平板法,选用马丁氏、查氏和PDA 3种不同培养基进行真菌的分离和培养,共分离出131个土壤真菌菌株,在查氏培养基上经形态鉴定确定25属、55种、4变种,其中吉林省新记录种14个,即点枝顶孢(Acremonium strictumW.Gams)、华丽节丛孢(Arthrobotrys superbaCorda.)、扁豆枝孢(Cladosporium herbarum(Pers.) Link ar.lablabSacc.)、肉色曲霉(Aspergillus carnus(v. Tiegh.) Thom.)、蜂蜜曲霉AspergillusmelleusYukawa.)、桔黑青霉(Penicillium cit-reonigrumDierckx.)、桔青霉(Penicillium citrinumThom.)、顶青霉(Penicil lium corylophilumDierckx.)、微紫青霉(Penicillium anthinellumBiourge.)、托姆青霉(Penicillium thomiiMaire.)、瓦克青霉(Penicillium waksmaniiZa.l)、马昆德拟青霉(Paecilomycesmarquandii(Mass.) Hughes.)、节状镰孢(Fusarium merismoidesCorda.)和棕黑腐质霉(Humicola fuscoatraTraaen.)。结果表明,青霉属(Penicillium)和曲霉属(Aspergillus)为吉林黑土区玉米田土壤真菌的优势种群;土壤真菌区系与土壤剖面层次、施肥方式和种植作物种类有关;正常施肥土壤中真菌种类多于不施肥土壤及休闲土壤,耕层土壤真菌种类多于犁底层土壤。
【英文摘要】A total of131 strainswere separated from soil samples from black soilplantedwith corn in Jilin Province duringApril 2003 and December2004. Then the strainswere culturedwithMatins, czapek, and PDA culturemedia by themethods of dilution plate, soil particle leaching, and soil plate. Through the observation ofmorphological characteristics under light microscope, 25 fungal genera, 55 species and 4 varieties isolated from the soilwere identified, among which 14 species were recorded for the first time in Jilin of China, namelyAcremonium strictumW. ams,Arthrobotrys superbaCorda.,Cladosporium herbarum(Pers.) Link var.lablabSacc.,Aspergillus

carnus(v. Tiegh.) Thom,AspergillusmelleusYuka-wa.,Penicillium citreonigrumDierckx.,Penicillium citrinumThom.,Penicillium corylophilumDierckx.,Penicillium jan-thinellumBiourge.,Penicillium thomiiMaire.,Penicillium aksmaniiZa.l,Paecilomycesmarquandii(Mass.) Hughes.,Fusarium merismoidesCorda., andHumicola fuscoatraTraaen. Results show hatPenicilliumandAspergillusare dominant genera in the black soil in Jilin. Soil fungal flora is closely related to soil layer, fertilizationmethod and crop species. The fungal species in normal fertilization soil aremore than those in non-fertilization soil and fallow soi,l and the fungal species in upper layer soil aremore than those in plow layer soil.

【题目】几种纤维素分解菌在有机质转化中的作用
【中文关键词】纤维素分解菌; 玉米秸秆; 土壤有机质; 转化
【英文关键词】cellulose- decomposingmicroorganisms; corn straw; soil organic matter; transformation
【中文摘要】采用培养实验, 研究了在添加有机物料的条件下几种纤维素分解菌在土壤有机质转化中的作用。目的在于探讨黑土有机质变化的微生物机理, 并从中筛选出活性较高的菌株及其组合, 以期将之用于秸秆还田, 提高土壤肥力, 充分发挥微生物在生态系统中的作用。结果表明, 在添加有机物料培养条件下土壤有机质的转化与纤维素分解菌的种类与数量有一定的相关性, 不同的纤维素分解菌在有机质转化中的作用不同, 多种菌株联合接种比单一接种对有机质转化的作用要强。所选择的 4 株菌株中哈茨木霉(Trichoderma harziamum Rifai, Mycol) 比绿色木霉(Trichoderma atroviride .karsten,Finl.) 、桔青霉(Penicillium citrinum Thom.) 和黑曲霉(Aspergillus niger v.Tiegh.) 在有机质转化中的作用大。
【英文摘要】In order to investigate the microbial mechanism of organic matter transformation and to screen higher active strain and the combi-nation fromall the isolated strain in black soils for pplying the strawreturn to fields, increasing soil fertility and exerting the function of mi-croorganismon agricultural ecological system. The incubation experiment was carried out to study the effect of several cellulose- decomposingmicroorganisms on the soil organic matter transformation. Firstly, 14 genera, 27 species were identified and three of themwere recorded in Jilin ofChina from181 black soil samples from April in 2003 to December in 2004. There were 14 genera and 24 species in upper layer soil (0~20 cm) and 11 genera and 19 species in the sub- upper layer soil (20~40 cm). 11 genera and 19 species were the same in tested soil.Penicilliumand aspergillus were dominant amongcellulose- decomposingmicroorganisms with the relative amount 33.33% and 25.93%, respectively. The capability for decomposing cellulose was different, Penicillium citrinum Thom., Aspergillus niger v.Tiegh., Trichoderma harziamum Rifai, Mycol and Trichoderma atroviride P.karsten, Finl were stronger than Rhizopus stolonifer (Ehrenb.)Lind. and Geotrichum candidum Link. The application of fertilizer, especially chemical- organic fertilizer, can increase the number of cellulose- decomposing mi-croorganisms. Four strains were selected fromall the isolated strains in black soils in an incubation experiment. The effect of cellulose- de-composingmicroorganisms on soil organic matter transformation was prominent, which varied with different cellulose- decomposing icroor-ganisms. The interaction effect between different cellulose-decomposing microorganisms in mixed incubation was stronger than the effect of different cellulose- decomposing microorganisms in separate incubation in organic matter transformation. Among the selected four strains,Trichoderma harziamumRifai, Mycol had more effect on soil organic matter transformation than Trichoderma atroviride P.karsten, Finl, Peni-cilliumcitrinumThomand Aspergillus niger v.Tiegh.

【题目】东北黑土耕层土壤黏粒矿物组成的区域差异及其演化
【中文关键词】黑土;黏粒矿物;空间差异;演化机制
【英文关键词】no
【中文摘要】在东北黑土耕层土壤小于2μm黏粒的化学组成和X衍射分析基础上,对不同纬度的15个黑土的黏粒矿物组成和空间差异进行研究,并探讨了其影响因素及演化机制。结果表明:东北黑土耕层土壤黏粒矿物属伊利石—蒙伊混层矿物类型,但其组合因区域不同有所差异,高纬度黑土为伊利石—蒙伊混层型,低纬度黑土则为蒙伊混层—伊利石—蛭石型。影响黏粒矿物的空间差异主要因素有降水、温度、作物类型。由于这些因素在空间上的显著差异,使黑土黏粒矿物演化序列处于伊利石向蒙伊混层或蛭石的不同阶段,导致东北黑土黏粒矿物组成在纬度上形成显著区域差异。

【题目】长期地膜覆盖与不同施肥处理对棕壤活性有机碳的影响
【中文关键词】地膜覆盖;施肥处理;活性有机碳
【英文关键词】Mulching; Fertilization; Active organic carbon
【中文摘要】[目的]研究长期地膜覆盖与不同施肥处理对土壤活性有机碳的影响。[方法]采用KMnO4氧化法对沈阳农业大学棕壤长期定位实验站2003年玉米整个生长季内土壤活性有机碳含量的剖面变化进行了研究。试验设覆膜与裸地2种土壤。每种土壤设4个施肥水平,分别为CK、N、M、MNP。其中,CK为对照。N为单施氮肥处理,年施尿素N 270.0 kg/hm2。M为单施有机肥处理,施用的有机肥为厩肥,其有机肥含量为100.0 kg/g左右,全氮含量为10.0 kg/g左右,折合年施N量为270.0 kg/hm2。MNP为有机肥化肥配施处理,年施有机肥N270.0 kg/hm2,化肥N135.0 kg/hm2,P2O567.5 kg/hm2。[结果]土壤活性有机碳含量随着季节的变化而变化,剖面分布随深度的增加而下降。长期地膜覆盖使表层土壤活性有机碳显著增加,而对深层影响不显著。无论覆膜与否,不同施肥处理土壤活性有机碳含量变化趋势为:M>MNP>CK>N。有机肥化肥配施和单施有机肥处理都能显著提高土壤表层活性有机碳含量,而单施氮肥则对土壤活性有机碳影响不显著。[结论]地膜覆盖与施用有机肥是提高土壤活性有机碳含量的有效途径。
【英文摘要】[Objective] The research aimed to clarify the effects of long-termplastic mulching and ifferent fertilization treatments on the changes of soil active organic carbon. [Method] The changes of soil active organic carbonwere determined by using KMnO4 as oxidant in long-term located experimentstation at ShenyangAgricultural niversity in 2003. The soil typewas plastic filmmulching soil and uncovering soil, and 4 fertilizer treatments was designed persoil type, CK,N,M,MNPtreatmentrespectively. CKwas ntrol.NtreatmentwasNfertilizerapplicationtreatment, andtheyearapplication amount of ureawas 270.0 kg/hm2. Mtreatmentwasmanure application treatment, and the year application amount ofmanurewas 270.0 kg/hm2. MNPtreatmentwas inorganic and organic fertilizers treatment, and the year application amount of manure, N fertilizer and P2O5was 270.0, 135.0, 67.5kg/hm2respectively. [Result] The soil active organic carbon changed inthe corngrowthperiod and decreasedwith soil depth. Surface soil active organic carbon increased remarkablewith long-termplasticmulchingwhilenosignificant changehadbeenfound indeeperdepth.Whetherplasticmulchingornot,the change tendency of soil active organic carbonwas as follow: M>MNP>CK>N. The content of active organic carbon in soil surface could be enhanced both under application of inorganic and organic fertilizers treatment and under manure pplication treatment. [Conclusion] Mulching and organicmanurewere effective to increase the content of soil active organic carbon.

【题目】Bacterial Community Structure and Diversity in a Black Soil as Affected by Long-Term Fertilization
【中文关键词】无
【英文关键词】bacteria community black soil chemical fertilizer diversity manure
【中文摘要】无
【英文摘要】Black soil(Mollisol) is one of the main soil types in northeastern China. Biolog and polymerase chain reactiondenaturing gradient gel electrophoresis(PCR-DGGE) methods were used to examine the infiuence of various fertilizer combinations on the structure and function of the bacterial community in a black soil collected from Harbin,Heilongjiang Province. Biolog results showed that substrate richness and catabolic diversity of the soil bacterial community were the greatest in the chemical fertilizer and chemical fertilizer+manure treatments. The metabolic ability of the bacterial community in the manure treatment was similar to the control. DGGE fingerprinting indicated similarity in the distribution of most 16S rDNA bands among all treatments,suggesting that microorganisms with those bands were stable and not infiuenced by fertilization. However,chemical fertilizer increased the diversity of soil bacterial community. Principal component analysis of Biolog and DGGE data revealed that the structure and function of the bacterial community were similar in the control and manure treatments,suggesting that the application of manure increased the soil microbial population,but had no effect on the bacterial community structure. Catabolic function was similar in the chemical fertilizer and chemical fertilizer+manure treatments,but the composition structure of the soil microbes differed between them. The use of chemical fertilizers could result in a decline in the catabolic activity of fast-growing or eutrophic bacteria.

【题目】黑土质量演变初探V.东北主要黑土区表层土壤有机碳密度分布及碳库估算
【中文关键词】土壤有机碳密度; 有机碳储量; 空间分布; 黑土; GIS
【英文关键词】soil organic carbon density; organic carbon storage; GIS; northeast
【中文摘要】探讨土壤有机碳空间分布规律, 估算其碳库量, 对于提高土壤质量、保护黑土资源, 维持农业经济的可持续发展意义重大。基于配准完备的1:10 万或20 万的地形图和土壤图, 运用地理信息系统技术, 对东北主要黑土区共7 个市县的土壤表层有机碳密度及储量做出估算, 并对其空间分布差异进行了分析。结果表明: 全区的平均有机碳密度为6.27kg · m- 2, 变幅为2.43~11.36kg · m- 2, 土壤表层有机碳储量为2.92×108 t; 土壤有机碳密度具有高度的空间变异性, 从北向南呈逐渐递减的趋势, 且东北高、西南低。密度较高的土壤有机碳主要集中在北部的嫩江和五大连池的大部分地区, 吉林省中西部的公主岭地区的土壤有机碳密度较低。
【英文摘要】Studying the distribution rule of soil organic carbon and estimating its storage are valuable for improving the quality of soil, protecting land resource and agricultural economy. Based on soil map of Northeast main black soil area (1:100000 or 1:200000), topsoil organic carbon density and storage were estimated using GIS technology. Carbon density of different soil types ranged from 2.43 kg · m- 2 to 11.36 kg · m- 2, with average of 6.27 kg · m- 2. In total, about 2.92×108t was stored in topsoil. The amount of carbon varied significantly among different districts in the study area. The value decreased from north to south gradually,and there was higher carbon density in northeast, especially in Nenjiang and Wudalianchi, but lower in southwest, for instance Gongzhuling.

【题目】水热梯度变化及不同施肥措施对东北地区土壤有机碳、氮影响
【中文关键词】水热梯度; 施肥; 有机碳; 全氮
【英文关键词】radient of precipitation and temperature; fertilization; SOC; TN
【中文摘要】基于样区的野外观察、土壤实测数据和20年气象资料的统计,分析了东北样区内土壤有机碳含量、储量和土壤全氮含量的空间分布格局及其与年均温(t)、降雨量(p)、有效积温(s)和降雨量/年均温p/t之间的关系。分析了相同水热条件下长期施肥措施对土壤有机碳含量和土壤全氮含量的影响,以及不同水热条件下相同施肥措施间的差异。结果表明:样区内土壤有机碳含量、储量和土壤全氮沿纬度呈现出南低北高的分布趋势;有机碳含量、有机碳储量与气候因素之间存在良好的相关性,土壤全氮含量与p/t间存在良好的相关性。长期施肥处理表明,在相同水热条件下外源有机肥的加入,以及合理施肥都能提高土壤碳含量;相同施肥处理土壤有机碳、氮在不同水热梯度条件下差异显著。
【英文摘要】The spatial distribution patterns of the soil organic carbon (SOC), total nitrogen (TN) and the stock of SOC were studied in Northeastern China. The relationships among the SOC and TN with and mean annual tem-perature(MAT), and precipitation(p), effective accumulation temperature(s) andp/t (the ratio of precipitation to mean annual temperature) were also analyzed. The effects of long term fertilization on the content of SOCand TN in areas with different gradients of rainfall and temperature. The results showed that the contents of SOCand TN and the stock of SOC enhanced with the increase of latitude, and the significant relationships were foundamog the contents and stock of SOC and TN and the precipitation and temperature. The addition of manure andreasonable chemical fertilizers could increase the content of SOC under the same precipitation and temperature.The differences of the contents of SOC and TN and the stock of SOC were significant under the same fertilization and the different precipitation and temperature.

【题目】20 年来东北典型黑土地区土壤肥力质量变化
【中文关键词】黑土地区 土壤肥力 地统计学 空间变异
【英文关键词】Black soil area ,Soil fertility ,Geostatistics ,Spatial variability
【中文摘要】通过大量样品分析和数据收集,研究了最近20 年来东北典型黑土地区土壤肥力质量主要指标———pH、有机质、速效磷、速效钾和黏粒的变化情况,并在地理信息系统和地统计分析的辅助下,研究了该5 项肥力指标以及综合肥力指数的时空变异规律。结果表明:20 年中该地区土壤pH、有机质和速效钾平均含量明显降低,速效磷平均含量有较大增加;速效磷的变异系数变化最大,pH 变化最小;20 世纪80 年代该地区土壤肥力综合指数以一、二级为主(80 %以上) ,但21 世纪初土壤肥力质量几乎被二、三级地所占据(98 %以上) 。该地区土壤肥力质量明显降低可能与长期以来重种轻养有关。
【英文摘要】Geographical information system(GIS) combined with Geostatistics were applied to reveal the spatial and tem2 poral variability of soil fertility quality in the topsoil (0~20cm) in the northeastern area of China during last two decades.Soil fertility quality indices in this study include pH ,organic matter ,available P ,available Kand clay. The results show thatsoil pH ,organic matter and available K significantly decrease during the past 20 years while the available P increases withthe biggest variation coefficient . The areas with the first and second grade of soil ertility quality were over 80 % in 1980 ,whereas nearly 98 % belonged to the second and third grade in 2000. So the soil fertility quality has declined in this area due to the intensive cultivation in the past 20 years.

【题目】施用有机肥对黑土团聚体有机碳的影响
【中文关键词】颗粒有机碳 团聚体有机肥黑土 固碳机制
【英文关键词】particulate organic carbon;aggregate;manure;black soil;mechanism of carbon sequestration.
【中文摘要】采用湿筛法对不同处理下的黑土进行分离,得到4种不同大小(>2 000、2 000—250、250—53、<53 m)的团聚体,利用密度分组法分离出游离的轻组(free LF)和团聚体内的颗粒有机质(iPOM),以评价有机肥对黑土团聚体有机碳的影响.结果表明:与对照相比,施用有机肥显著增加了土壤的团聚化作用,可在一定程度上抵消耕作对团聚体的破坏作用,减缓团聚体的周转.团聚体内细颗粒有机碳(fine iPOM—C)含量显著高于粗颗粒有机碳(coarseiPOM.C)含量,说明施用有机肥有利于团聚体内细颗粒有机碳的积累,是施用有机肥条件下黑土团聚体内碳固定的主要形式.
【英文摘要】In this paper,black soil samples were separated into four sizes(>2 000,2 000-250,250-53,and <53 m)of aggregates by wet sieving,and their free light fraction(free tar)andintra-aggregate particulate organic matter(iPOM)were isolated by density fractionation,aimed to evaluate the efects of manure application on the organic carbon in diferent sizes of aggregates in black soil.The results showed that compared with the control,applying manure improved soil aggregationsignificantly,and compensated the disturbance of tillage and slowed down the turnover of aggregates to some degree. After applying manure,the content of fine iPOM—C was significantlyhigher than that of coarse iPOM—C.suggesting that manure application was beneficial to the accumulationof fine iPOM-C,which is the main form of carbon sequestration in the aggregates of black soil.

【题目】不同肥力土壤各级微团聚体中主要营养元素含量的变化
【中文关键词】不同肥力土壤; 微团聚体; 营养元素
【英文关键词】soil of different fertility; m icro2aggregates; nutrient elements
【中文摘要】为了探讨不同肥力土壤团聚体中主要营养元素含量的变化情况, 以我国东部3种地带性土壤(黑土、棕壤和红壤) 为研究对象, 分别测定了其全量营养元素的含量, 并进行了比较分析。结果发现, 各营养元素在不同类型土壤中呈地带性分布。由北向南, 有机碳、全氮、全磷、全钾、全钙、全镁的含量呈逐渐降低的趋势, 全铁、全铝的变化趋势则相反; 施用有机肥能明显增加土壤中各种营养元素的含量。无论哪个粒级的微团聚体, 有机碳、全氮含量呈北高南低的趋势; 钾素的变化呈北高南低分布。除了硅素外, 其余营养元素在< 2 Lm 粒级内富集。对于不同肥力的土壤而言, 各营养元素在高肥力土壤中含量较高; 在不同肥力的各级团聚体中, 也是主要分布在< 2 Lm 粒级范围内。
【英文摘要】In order to discuss the change on main nutrient element contents in m icro2aggregates of different fertility soils, th is paper determ ined and analyzed the contents of main nutrients in soil of the eastern Ch ina (black soil, brow n earth and red soil). The results are as follow s: the total nutrient element appeared to be distributed basing on zones. The content of organic C, total N , P, K, Ca, M g decreased gradually, but total Fe and A lincreased from north to south. App lying organic manure could significantly increase the contents of nutrientelements. No matter w h ich levels of m icro2aggregates in nature soils, the contents of organic C, totalN appearthe decreased trend from north to south, but the trend of total K reverse. Excep t Si, the other elements enriched in < 2 Lm m icro2aggregate. A ccording to different fertility levels, therew ere h igh contents in h igh fertility level.In different m icro2aggregates of different fertility levels, themain nutrient elementsw eremostly distributed in <2 Lm m icro2aggregate.

【题目】应用PLFA方法分析长期不同施肥处理对玉米地土壤微生物群落结构的影响
【中文关键词】长期不同施肥处理;土壤微生物群落结构;磷脂脂肪酸
【英文关键词】long-term fertilization;soil microbial community structure;PLFA
【中文摘要】土壤微生物群落被认为是土壤生态系统变化的预警及敏感指标,指示土壤质量变化,决定着土壤的生态功能。为了探讨长期施肥处理(1987~2004年)对土壤微生物群落结构的影响,采用磷脂脂肪酸(PLFA)法测定了沈阳农业大学棕壤长期定位试验站玉米地不同施肥土壤微生物生物量的活性部分及群落结构的变化情况。结论:长期施肥处理都能提高土壤微生物总生物量、细菌生物量及真菌生物量,特别是有机肥和有机无机肥配施在整个生育期对微生物总生物量的增加作用比较明显。真菌的生长与季节变化和玉米生育的关系较为密切,各施肥处理土壤真菌含量在抽雄期都明显降低。长期不同

施肥处理可以改变土壤微生物群落结构,单施氮肥处理土壤微生物群落结构与长期不施肥处理较为相似,没有明显的优势种群。施用有机肥和有机无机配施的土壤微生物群落均以含a15:0,i15:0,cyl7:0,i16:0,16:1w7t,10Mel8:0和15:0的微生物为优势种群。土壤有机质、碱解氮、速效磷和速效钾是微生物生长和活性的主要能源和营养因子。

【英文摘要】Abstract:Soil microbial community which indicates soil quality changes and controls the soil ecosystem functions has been regarded as the early warning and the sensitive indicator of soil ecosystem. In order to study the effects of long—term fertilization(1 987—2004)on soil microbial community structures,active microbial biomass and community structure were etermined by phospholipid fatty acid(PLFA)in the long—term located experiment with different fertilization treatments on brown earth in Shengyang Agricultural University.The results showed that total soil microbial biomass,bacterial biomassand fungal biomass were enhanced significantly with long—term fertilization treatments,especially in manure or manure withchemical fertilizers teatments. Fungal biomass in all fertilization treatments decreased during corn heading stage. Soilmicrobial community structure had been changed due to long—term fertilization,but no predominant group in single nitrogenapplied treatment.The microorganisms containing the PLFA of a15:0,i15:0,cyl7:0,i16:0,16:1w7t,lOMel8:0 and15:0 were dominance in microbial community in the treatments applied with manure. In addition,soil organic matter,alkali—hydrolyzable—N,available potassium and available phosphorus were main factors of energy and nutrition for growth and activities of microorganism.

【题目】连续施肥 20 年后棕壤团聚体分布和碳储量变化

【中文关键词】施肥; 棕壤; 团聚体分布; 有机碳

【英文关键词】no

【中文摘要】利用两种不同分离方法(干筛法与湿筛法) 对耕作施肥 20 年后棕壤的团聚体组成、团聚体有机碳含量以及有机碳储量进行了研究。结果表明: 棕壤团聚体以 0.25~1mm 团聚体为主。与长期不施肥比较,除 0.25~1mm 粒级外长期施用氮磷化肥使风干团聚体和水稳性团聚体中较大团聚体和微团聚体数量下降,降低了各级风干团聚体中有机碳积累,增加了水稳性团聚体中有机碳积累; 长期施用有机肥较大团聚体和微团聚体数量增加及其相连的有机碳含量和储量均增加; 长期有机无机肥配施大团聚体数量下降,微团聚体数量增加,有机碳含量均增加,大团聚体碳库储量下降,微团聚体碳库储量增加。由此可见长期施有机肥土壤结构改善,固 C 潜力增加。长期高量有机肥与无机肥配施可能有利于土壤固碳,但不利于作物生长。

【题目】不同有机质含量农田黑土的水热效应
【中文关键词】有机质; 含水量; 温度; 农田黑土
【英文关键词】soil organic matter; soil moisture; temperature; black farmland
【中文摘要】本文通过田间长期定位试验, 研究经空间移位后农田黑土有机质含量与土壤温度、含水量的关系。结果表明: 在土壤有机质含量低于60 g/kg 时, 土壤表层温度随有机质含量的增加而升高; 各处理土壤温度相差最高可达6.8℃; 10cm深处的土壤温度在夜间也存在较大差异; 在玉米全生育期内各处理之间土壤温度变化有明显的规律性, 在气温高时差异显著; 土壤有机质含量与土壤含水量呈显著正相关, 土壤有机质与土壤温度呈负相关, 但不显著。
【英文摘要】Based on a long-term field experiment established by soil removal, the relationships among soil organic matter, soil moisture and temperature were studied. The results showed: the top soil temperatures increased with the organic matter content increase when the soil organic matter content was less than 60 g/ kg, the highest difference of the top soil temperatures amongfive soil organic matter soils was 6.8°C. There were a big difference of soil temperature at the depth of 10 cm during night;during corn growth period, the five soil temperatures changed regularly, the differences among the five soils were large whenair temperature was high. There was a significant positive relationship between the black soil organic matter content and soilmoisture, a negative relationship between the black soil organic matter content and soil temperature, but it was not significant.

【题目】长期施用化肥和有机肥料对黑土酸度的影响
【中文关键词】化肥　有机肥料　黑土酸度
【英文关键词】no
【中文摘要】利用1979年在哈尔滨设立的"黑土肥力与肥效长期定位试验"的试验处理,分析了长期施肥条件下,黑土pH值变化规律.结果表明,氮肥(尿素)的长期施用能够使耕层(0~20cm)黑土pH值下降,施二倍量氮肥(尿素)使耕层黑土的pH值下降最明显,由1979年的7.22.下降到2006年的5.70,是导致黑土酸化的主要原因.然而施用化肥的同时配合施用有机肥料黑土pH值下降缓慢,比单独施用化肥对黑土pH值造成的影响要小的多.这说明有机肥料可以降低土壤酸化的速度,避免土壤酸化现象的加重.

【题目】不同培肥措施对水毁耕地修复作用
【中文关键词】风沙土; 水毁耕地; 培肥措施
【英文关键词】Wind-sand soil; Water erosion land; Amelioration measure;
【中文摘要】1998年松嫩流域洪涝灾害致使松嫩平原西部风沙土受到洪水冲刷、淤积和长期侵蚀,原本为中低产田的风沙土产量进一步降低。在遭受不同程度洪水侵蚀的风沙土上进行定点定位研究,以探明风沙土水毁耕地土壤理化性质及养分库容的动态变化规律。将黑龙江省松嫩平原西部风沙土遭受洪涝灾害的耕地按照淹水后土体平均含水量划分为轻度、中度、重度3级;在淹水地块进行了3年大豆培肥定位试验。探明了有机肥料的施入可以提高土壤持水性能、土壤养分以及可溶性盐含量,同时培肥地力能够改善大豆产量和品质。提出了风沙土水毁耕地以秸秆有机和鸡粪有机肥为主的培肥措施,建立了风沙土水毁耕地良性施肥体系。
【英文摘要】The flooding disaster in 1998 resulted in wind-sand soil scoured,deposited and long-term eroded in western of Songnen plain,and the yield of medium and low areas became further lower.This study research on different eroded sand soil located,in order to state the dynamics of the soil physical and chemical properties and nutrient sink.The wind-sand soil eroded by flooding disaster in Heilongjiang Songnen plain is classified into three degrees:flooding light,flooding middle and flooding heavily

【题目】黑龙江南部黑土区土壤重金属空间分异规律研究
【中文关键词】黑土区;重金属;空间分异; GIS;地统计学
【英文关键词】black soil area;heavy metals;spatial variability;GIS;geostatistics
【中文摘要】采用地理信息系统(GIS)技术和地统计学相结合的方法,研究了黑龙江南部典型黑土区双城市土壤全量铜(Cu)、锌(Zn)、铅(Pb)、镍(Ni)、镉(Cd) 5种主要重金属元素的空间分异规律。结果表明:研究区土壤各重金属的半方差函数模型均可用球状模型和指数模型较好地拟合。其中Zn、Ni和Cd具有强烈的空间相关性,表明这3种重金属元素受土壤内在属性影响较大。而Cu和Pb具有中等强度的空间相关性,表明这2种重金属元素由土壤内在属性和人为因素共同起作用。Cd、Pb和Cu较Zn和Ni的变程小,说明研究区土壤前3种重金属元素含量可能主要受到较小尺度因子的影响。研究区土壤各重金属元素空间分异规律如下: Cu和Ni呈东高西低的趋势, Pb呈南高北低的趋势,而Zn和Cd分别表现为块状分布和岛状分布的特点。图3,表2,参8。

【英文摘要】Geographical information system (GIS) combined with geostatistics was applied to reveal the spatial variability of heavy metals including Cu, Zn, Pb, Ni and Cd in soils of Shuangcheng in the southern black soil area ofHeilongjiang Province1The results showed that theoretical semivariogrammodels of 5 heavymetalswere best describedwith spherical or exponential models1The spatial correlations of Zn, Ni and Cd were strong, which were affected by intrinsic characters of soils, whereas the spatial correlations of Cu and Pb were moderate, indicating that they were affected by intrinsic characters of soil and randomfactors together1The ranges of Cd, Pbwere nearerthan Cu, Zn and Ni, ind-icating that the 3 former heavy metals were affected by shorter range factors1The spatial variability characters of heavy metals in studied areasoil were as follows1The contents of Cu and Ni were decreased from east to west, and contents of Pb were decreased from south to north,whereas the distribution of Zn was blocked and Cd was insularl.

【题目】作物秸秆与城市污泥高温好氧堆肥产物对土壤氮矿化的影响
【中文关键词】秸秆,污泥处理,堆肥,氮矿化,土壤
【英文关键词】straw, sludge disposal, composting, nitrogen mineralization, soil
【中文摘要】为揭示不同作物秸秆与污泥堆肥产物对土壤氮素矿化特征的影响,为科学施用城市污泥堆肥提供参考依据,通过室内培养试验研究了城市污泥与4 种秸秆(小麦、水稻、玉米和油菜)高温好氧堆肥产物施入酸性紫色土、黄壤、石灰性紫色土后土壤氮矿化的差异。结果表明,4 秸秆污泥堆肥均可显著提高3 种土壤氮的潜在矿化势(N0)和矿化速度(k),促进土壤氮的矿化,提高土壤NH4-N、NO3-N 质量分数,其中石灰性紫色土以油菜秸秆污泥堆肥和小麦秸秆污泥堆肥处理、黄壤以油菜秸秆污泥堆肥处理、酸性紫色土以小麦秸秆污泥堆肥处理提高幅度最大。作物秸秆与污泥堆肥施入土壤后,黄壤、酸性紫色土在培养60 d 和30 d 后趋于稳定,石灰性紫色土在培养60 d 后仍有增高的趋势,但不同秸秆污泥堆肥对土壤氮矿化速度的影响无明显规律。结果说明秸秆污泥堆肥对土壤氮矿化的效应因土壤及秸秆类型的不同而异,根据研究结果提出了4 种作物秸秆与城市污泥堆肥施用的建议。
【英文摘要】An incubation experiment was conducted to investigate the differences of nitrogen mineralization among three soils amended with four sewage sludge composted with the straws of wheat(XMC), rice(SDC), corn(YMC) and rape(YCC). The purpose was to understand the effect of sewage sludge composted with different crop straws on nitrogen mineralization in soils and establish a scientific way for sewage sludge compost application in agriculture. The soilstested included an acidic purple soil, a yellow soil and a calcareous purple soil. All the compost treatments could significantly improve the values of potentially mineralizable nitrogen(N0), promoted nitrogen mineralization,and consequently increase the NH4-N and NO3-N concentrations in soils. The optimal amounts of nitrogen mineralized and the N0 values were found in the treatments of YCC and XMC for the calcareous purple soil, in the treatment of XMC for the acidic purple soil and in the treatment of YCC for the yellow soil. The amount of nitrogen mineralized increased after 90 days incubation in the compost treated calcareous purple soil, while it became stable at 60 days and 30days incubation in the compost treated- acidic purple soil and yellow soil, respectively. However, no obvious tendency of the mineralization rate constant (k) values was found in the three soils treated with the four composts. The results illustrated that the effect of sewage sludge compost on the mineralization of nitrogen varied with soils and the properties of crop straws. Based on the results of the present study, some advices on the application of sewage sludge compost were put forward.

【题目】香石竹GA 20-oxidases基因的克隆及RNA 干扰载体的构建
【中文关键词】香石竹;GA 20-oxidase基因;RNAi
【英文关键词】carnation; GA 20-oxidase; RNAi
【中文摘要】:根 据已发表的菠菜、烟 草等植物 基因序列在保守区设计简并引物,通过RT-PCR和RACE 的方法克隆了Marster香石竹(L. cv. Marster)GA 20-oxidases 基因的全长cDNA(1 179 bp),命名为(Dc20ox 。同源性分析表明该基因与其它作物上发表的 e 基因的氨基酸序列同源性为 66%~75%。在此基础上选用香石竹基因同源性相对较高的400 bpDNA 片段,构建了RNA 干扰(RNAi)载体pART400。

【英文摘要】A pair of degenerate primers was designed based on a conserved domain of GA 20-oxidasereported in other plants. The full-length (1179 bp) carnation (Dianthus caryophyllus L. cv.Master) GA 20-oxidase cDNA (named Dc20ox) was cloned by reverse transcriptase-polymerasechain reaction (RT-PCR) and rapid amplification of cDNA ends (RACE). BLAST analysisrevealed that the deduced amino acid sequence had high homology (66 – 75%) with the GA20-oxidase sequences from other plants. An RNAi vector (pART400) was constructed from a400 bp fragment representing a highly conserved region of GA 20-oxidase.

【中文关键词】秸秆改良材料; 沙质土壤; 钾; 淋溶
【英文关键词】straw-modified material; sandy soil; potassium; leaching
【中文摘要】通过淋溶试验, 研究了沙质土壤在加入不同施加量和配比的秸秆改良材料后钾素的淋溶状况. 结果表明: 秸秆改良材料对沙质土壤钾素的淋溶有明显的抑制作用. 在一定范围内, 施加量大和配方中聚丙烯酰胺(PAM) 含量高的处理效果最好, 添加秸秆:膨润土:PAM为900:100:30的改良材料(处理T10-3) 的土壤钾素累积淋溶量较CK 减少了48%. 此外, 施用秸秆改良材料能有效抑制沙质土壤钾素的垂直迁移, 处理T10-3上层土壤中速效钾的含量较CK 提高了102%, 下层则降低了58%, 说明沙质土壤中施用秸秆改良材料具有抗钾素淋失的效应.
【英文摘要】In an experiment reported in this paper, the effect of straw-modified material on the leaching of potassium in the sandy soil was studied. The results showed that straw-modified materials had a significant inhibitory effect on potassium leaching in the sandy soil.Generally, a treatment with high rate of strawmodified material which contained much PAM (polyacrylamide) gave good results. Compared with CK,the treatment T10, 3 (the straw-modified material contained straw, bentonite and PAM with a ratio of 900:100:30) decreased cumulative leaching amount of potassium by 48%. The vertical migration of potassium in the sandy soil was restr ained by applying straw-modified material. In comparison with that of CK,the content of available potassium of the treatment T10, 3 increased by 102% in the upper layer of the soil and decreased by 58% in the lower layer of the soil, suggesting that application of straw-modified material may help reduce the leaching loss of potassium in sandy soil.

【题目】秸秆改良材料对沙质土壤饱和含水量的影响
【中文关键词】改良材料;沙质土壤;饱和含水量
【英文关键词】straw-bentonite-PAM improved material;sandy soil;saturated water content
【中文摘要】:为提高沙质土壤饱和含水量,以作物秸秆为主材,以膨润土和聚丙烯酰胺(PAM)为添加剂配制沙质土壤改良材料,采用模拟试验研究秸秆改良材料不同配比、施用量与时间等因素对沙质土壤饱和含水量的影响。结果表明:施加秸秆改良材料可以增加沙质土壤饱和含水量,不同秸秆改良材料改良效果不同,且随着改良材料施用量、配方中PAM含量(<2%)的增加、土培时间(<60天)的延长,沙质土壤饱和含水量呈现增加趋势;添加剂量为10g/kg,配方中PAM含量为2%的麦秆改良材料的土样,在土培60天后,饱和含水量为52.6%,是对照的2.32倍,对沙质土壤团粒结构改良效果最为明显。可见,添加秸秆改良材料可以增加沙质土壤饱和含水量。
【英文摘要】A simulation experiment was carried out to increase sandy soil ’s saturated water contents.Wedesigned the improved material which was made of straw,bentonite and PAM,and investigated the efects of different improved materia1.the content of PAM in improved material and the cultivated time.The results indicated that:the saturated water contents of sandy soil increased in the presence of improved materia1.and would be different with different improved materials,and also increased with the content of improved material,PAM (<2%)and the cultivated time(<60 days)approximately.Compared with the others,the treatments amended by wheat straw(the amount was 10 g/kg,the proportion of PAM was 2%),with 60 days cultivated time,its saturated water contents became 52.6%f2.32 times as the contro1),showed the optimal results.

【题目】PAM对潮土水分蒸发量的影响
【中文关键词】聚丙烯酰胺(PAM);潮土;土壤蒸发量
【英文关键词】polyacrylamide (PAM); alluvial soil; soil water evaporation capacity
【中文摘要】地表蒸发引起土壤水的散失是造成作物低产的重要原因之一。PAM是众多保水剂中一种,具有超强的吸水和保水能力,能够抑制土壤水分的蒸发,增加土壤含水量,增强土壤持水功能,对沙质土壤水分的调控具有重要作用。以分布于重庆三峡库区的潮土为研究对象,研究不同剂量、不同剂型的PAM对土壤蒸发量的影响,以期为农业灌溉上PAM的推广应用提供理论依据。研究结果显示:PAM能抑制土壤水分的蒸发。对不同剂量的PAM处理,潮土累计蒸发量较对照减少2.37%~12.459%;以200mg/kg抗蒸发效果最为明显。对同分子量不同水解度剂型的PAM处理,冷沙黄泥累计蒸发量较对照减小7.34%~17.81%,以30%抗蒸发效果最好,对同水解度不同分子量剂型的PAM处理,潮土累计蒸发量分别较对照减小12.25%~18.53%;以1000万的PAM抗蒸发效果最为明显。
【英文摘要】One of the major reasons of low-yield crops is dissipation of surface soil water evaporation. PAM is one of the insurance agents, it ’s a super-absorbent and water-retention capacity, which can inhibit the evaporation of soil evaporation, increase soil evaporation, enhance soil water retention function, it plays an important role on the regulation of sandy soil evaporation. In this study, the alluvial soil collected from the Three Gorges Reservoir Region was chosen to figure out the effect of different doses and dosage forms of PAMon the water preserving capacity, so as to provide theoretical evidence for the spread and exploitation of PAM on the agricultural irrigation. The results showed that PAM could inhibit the evaporation of soil evaporation.Compared with the control, the accumulated evaporation of alluvial soil was decreased by 2.37%-12.45%; the difference between different doses of PAM was significant and 200mg/kg was the most prominent dose. PAM with the same molecular weight but different charge density was treated, the

accumulated evaporation of alluvial soil was decreased by 7.34%-17.81%, while 40% was the most prominent dosage of alluvial soil, WhenPAM with the same charge density but different molecular weight was treated, the accumulated evaporation of alluvial soil was decreased by 12.25%-18.53%, while 10 million was the most prominent dosage.

【题目】PAM对潮土水稳性团聚体的影响
【中文关键词】聚丙烯酰胺(PAM);水稳性团聚体;分形维数
【英文关键词】PAM; water stable aggregates; fractal dimension
【中文摘要】:通过室内土柱培养,研究4 种不同浓度聚丙烯酰胺(PAM)对潮土水稳性团聚体的改良效果。结果表明,加入不同浓度PAM均可促使>0.25 mm水稳性团聚体的形成,并有效降低团聚体分形维数,改善土壤结构。随着PAM浓度的增加,改良效果逐渐增强。在加入浓度为1 g/kg 时达到最好的效果,较对照,>0.25 mm水稳性团聚体增加了42.69%,分形维数降低了10.11%。
【英文摘要】PAM was applied in soil column to study the effects of PAM on water stable aggregates of thealluvial soil. The results showed that PAM improved the structure of the studied soils by promoting the formation and reducing the fractal dimension of the >0.25 mm water stable aggregates effectively, and the effects were enhanced as the concentration of PAM increased. The best effect was found at the 1g/kg concentration, compared with the blank control, the >0.25 mm water stable aggregates increased 42.69%, while its fractal dimension decreased 10.11%.

【题目】PAM 对沙质土壤持水性能影响的模拟研究
【中文关键词】聚丙烯酰胺(PAM) ; 冷沙黄泥; 土壤持水性能; 抗蒸发
【英文关键词】polyacrylamide (PAM) ; sandy yellow soil ; water-holding capacity of t he soil; antievaporation
【中文摘要】通过试验模拟, 研究了不同剂量聚丙烯酰胺(PAM) 施入沙质土壤后对土壤持水性能的影响. PAM 设置0(对照) ,50 ,100 ,200 ,400 和1 000 mg/ kg 6 个水平. 实验结果表明, 与对照相比, 经PAM 处理后的土壤累积蒸发量减小了4112 %~14146 %; 平均含水量增加了1140 %~5164 %; 田间持水量增加20168 %~33171 % , 毛细管持水量增加18141 %~29104 % , 最大持水量增加18162 %~29170 %; 方差分析在5 %水平上各处理间存在显著差异, 最大差异出现在PAM 施加量为200 mg/ kg 时. 表明了PAM 能够改善土壤的持水性能, 其改良效果因PAM 施入浓度而异. 在改良该沙壤土保水性时, 其适宜PAM 施用量为200 mg/ kg.
【英文摘要】In a simulated experiment, sandy yellow soil was supplemented with polyacrylamide (PAM) at0,50,100,200,400 and 1000mg/kg to evaluate its effect on water-holding capacity of the soil. The results indicated that PAM rest rained the evaporation of soil moisture. Compared with the control treatment(CK), PAM treatments decreased the evaporation capacity of soil moist ure by 4.12%~14.46% and increased the average water contents of the soil by 1.40%~5.64% , field capacity by 20.68%~33.71%,capillary capacity by 18.41%~29.04% and maximum water-holding capacity by 18.62%~29.70%. Analysis of variance showed that significant differences existed among the treatments , indicating that t he effect of PAM application varied with it s rate. Under the conditions of the experiment, the treatment of 200 mg/kg PAM gave the best result of rest raining soil moisture evaporation.

【题目】不同剂型聚丙烯酰胺对冷沙黄泥土壤持水性能的影响
【中文关键词】聚丙烯酸酯类,土壤,分子质量,土壤含水率,蒸发,聚丙烯酰胺(PAM),冷沙黄泥,水解度
【英文关键词】polyacrylates, soils, molecular weight, soil moisture, evaporation, polyacrylamide, sandy yellow soil,hydrolysis degree
【中文摘要】为筛选用于提高沙质土壤保水能力的最佳保水剂型,以重庆市分布面积较大的冷沙黄泥为研究对象,采用模拟试验,研究了不同水解度和不同相对分子质量的聚丙烯酰胺(PAM)对沙质土壤的持水效应。结果表明,不同剂型的PAM均能在一定程度上抑制沙质土壤水分的蒸发,提高土壤的保水能力。施用质量分数为0.02%,相同相对分子质量(800 万),不同水解度(10%、20%、30%、40%)PAM 的处理,冷沙黄泥累计蒸发量分别较对照减小7.76%~20.17%,平均含水率分别较对照增加2.65%~5.96%,以水解度为40%(高水解度)的PAM 持水效果最好。相同水解度(40%),不同相对分子质量(400万、600万、800万、1000万)PAM 的处理,冷沙黄泥累计蒸发量分别较对照减小14.37%~20.74%,平均含水率分别较对照增加4.85%~6.11%,以相对分子质量为1 000 万的PAM 持水效果最好。可见施用质量分数为0.02%,水解度为40%,相对分子质量为1 000 万的PAM 对冷沙黄泥持水效果最好, 是有效提高冷沙黄泥吸水和保水能力最佳PAM 剂型。
【英文摘要】A simulation experiment was carried out to identify the optimal polyacrylamide (PAM) formulations (hydrolyis degree, HD; molecular weight, MW) for increasing the water holding capacity of sandy yellow soil distributing widely in Chongqing City. The results indicated that different formulations of PAM could maintain the soil moisture and reduce soil water evaporation rate to some extent. Compared with the control, the treatments amended byPAMs having a MW of 8 million but with different HDs of 10%, 20%, 30%, and 40% reduced the cumulative evaporation rate from sandy yellow soil by a range of 7.76% to 20.17%, while increased the mean soil moisture by a range of 2.65% to 5.96%, with the PAM having a HD of 40% showing the maximum water holding capacity. On the other hand, the treatments amended by PAMs having a HD of 40% but with different MWs of 4, 6, 8, 10 million reduced the cumulative evaporation rate from sandy soils by 14.37% to 20.74%, but increased the mean soil moisture by 4.85% to 6.11% when compared to the control, with the PAM of 10 million MW showing the maximum capacity to hold soil water. Therefore, with the dosage of 0.02% the PAM product with a HD of 40% and a MW of 10 million can be recommended as the optimal formulation for increasing water retention in sandy yellow soil.

【题目】Growth and Heavy-Metal Uptake by Lettuce Grown in Soils Applied with Sewage Sludge Compost
【中文关键词】化学肥料,重金属,生菜,污泥堆肥
【英文关键词】Chemical fertilizer, heavy metal, lettuce, sewage sludge compost
【中文摘要】通过盆栽试验研究了污泥堆肥的影响,单独施用化学磷肥对两种生菜重金属的积累的影响。处理包括空白、氮磷钾(NPK)肥、污水污泥堆肥率分别为27.45(SSC),82.62(3SSC),165.24(6ssc)t/公顷;其中N,P,K和氮磷钾化肥处理和混合使用归一化到当地的推荐率。SSC的应用增加了生物量,铜,锌,铅含量生菜。混合使用的处理取得了较大的生物量,NPK化肥并没有增加土壤和植物中重金属的积累。结果表明,SSC可以于化学肥料的土壤。
【英文摘要】A pot experiment was conducted to investigate the effect of sewage sludge compost(SSC) alone and applied with chemical fertilizer on growth and heavy-metal accumulations in lettuce grown on two soils, a Xanthi-Udic Ferralosol and a Typic Purpli-Udic Cambosol. The treatments included control; nitrogen – phosphorus – potassium (NPK) fertilizer; sewage sludge compost applied at the rates of 27.54 (SSC), 82.62 (3SSC),165.24 (6SSC) t hm – 2; and coapplication treatment (1/2 SSC + 1/2 NPK), where the N, P, and K inputs from NPK fertilizer, SSC, and coapplication treatments were normalized to the local recommend rates. The SSC application increased the biomass; copper,zinc, and lead contents in lettuce; and soil total and diethylenetriaminepentaacetic acid (DTPA) – extractable metals. However, SSC alone at the recommended rate caused less plant biomass than NPK fertilizer alone. Coapplication treatment obtained greater or similar biomass to NPK fertilizer alone and did not increase heavy-metal accumulation in soils and plants. The results demonstrated that SSC should be applied to soils with chemical fertilizers.

【题目】秸秆改良材料对冷沙黄泥中速效磷含量的影响
【中文关键词】冷沙黄泥; 秸秆; 膨润土; 聚丙烯酰胺; 速效磷
【英文关键词】sandy yellow soil; straw ; bentonite; polyacrylamide (PAM) ; available phosphorus
【中文摘要】以重庆分布面积较大的沙质土壤冷沙黄泥为研究对象, 将秸秆进行生物预处理后与膨润土、聚丙烯酰胺(PAM) 按比例配制成土壤改良材料, 采用盆栽土培试验方法, 研究了水稻、小麦、玉米和油菜4 种秸秆改良材料对冷沙黄泥速效磷含量的影响. 结果表明: (1)4 种秸秆改良材料均能明显提高冷沙黄泥的速效磷含量, 其顺序由高到低为油菜、玉米、水稻和小麦, 它们施入土壤后速效磷的平均含量分别增长了约39.4%-55.7%,38.9%-54.8%, 34.5%-46.1%和28.1%-42.5%. (2) 相同秸秆条件下不同分处理对土壤速效磷的增磷效果有所差异, 其中秸秆:膨润土: PAM = 900:100:30 的T3 处理对提高土壤有效磷含量的效果最好.

【英文摘要】Crop straws (rice straw , wheat straw , maize straw and rape straw) were mixed with bentonite and polyacrylamide (PAM) to make straw based soil conditioners, which were used in a pot experiment to investigate their effects on available phosphorus(P) content in a sandy yellow soil widely distributed in Chong qing. The results indicated that all the 4 materials significantly increased the content of available P in the soil, the order of increment being rape straw (39.4%-55.7%) > maize straw(38. 9% - 54.8%) > wheat straw (34.5% - 46.1%) > rice straw (28.1% -42.5%) . With the same straw, Treatment 3 (straw:bentonite:PAM = 900:100:30) showed the greatest soil amelioration effect by increasing available phosphorus (P) in the sandy yellow soil.

【题目】秸秆-膨润土-PAM 改良材料对砂质土壤饱和导水率的影响
【中文关键词】秸秆,砂,土壤,秸秆-膨润土-PAM 改良材料,饱和导水率
【英文关键词】straw, sand, soil, straw-bentonite-PAM improved material, saturated hydraulic conductivity
【中文摘要】为改善砂质土壤持水状况,设计了由作物秸秆、膨润土和聚丙烯酰胺(PAM)配制的改良材料,以重庆市分布面积较大的冷沙黄泥为研究对象,采用恒定水头入渗双环法,研究了秸秆改良材料对砂质土壤饱和导水率的影响。结果表明,施用秸秆改良材料能增加砂质土壤的饱和导水率,并且随着施用剂量的增大,土壤饱和导水率逐渐增加;随土培时间的延长土样饱和导水率均出现了先增大后减小的趋势,当土培时间为60 d 时土样饱和导水率达到最大值;添加麦秆改良材料(质量分数为10 g/kg,配方中PAM 质量分数为2%)的土样,在培养60 d 后其饱和导水率是对照组的4.97 倍,对砂质土壤改良效果最明显。可见,秸秆改良材料可以改善砂质土壤持水状况,对砂质土壤具有改良作用。
【英文摘要】In order to improve the water holding capacity of sandy soil, the improved material that was confected by crop straw, bentonite and polyacrylamide (PAM) was applied. The effect of straw improved material on saturated hydraulic conductivity of sandy soil was studied using the double rings method of constant waterhead infiltration. The tested soil was the sandy yellow soil that is wildly distributed in Chongqing. The results showed that the saturated hydraulic conductivity of sandy soil increased with straw improved materials applying. The saturated hydraulic conductivity of sandy soil increased gradually with the increasing amount of application. The saturated hydraulic conductivity of sandy soil which increased at first and then decreased with the cultivated time reached maximum when the soil cultivated time was 60 d; The improved material of wheat straw (dose of 10 g, PAM content of 2%) worked best whose saturated hydraulic conductivity reached maximum (4.97 times as the control) when the soil cultivated time was 60d. Therefore, the modified straw material is able to improve sandy soil, and this research can provide theoretical basis for applying modified straw materials into sandy soil.

【题目】秸秆-膨润土-PAM改良材料对不同类型土壤田间持水能力的影响
【中文关键词】秸秆-膨润土-PAM 改良材料;土壤;持水能力
【英文关键词】traw-bentonite-PAMimprovedmaterial;soil;water-holdingcapacity
【中文摘要】为了提高土壤的田间持水能力并对农业废弃物秸秆进行资源化利用,设计了以秸秆、膨润土及PAM 按照不同的配比开发出新型复合改良材料,通过田间试验研究了改良材料对四川省宜宾市三种主要土壤类型的田间持水能力的影响.结果表明,复合改良材料能有效提高三种土壤持水能力,添加秸秆改良材料后,土壤持水性能都比对照显著增大(p<0.05).但是各配比间的差别较大,根据各配比的改良效应不同,筛选了改良材料配方,研究结果为改良材料改良效果评估提供科学依据.
【英文摘要】Soil water is one of the material bases for plant growth and water holding capacity of soil is an important indicator of soil productivity. To improve water holding capacity of soil and find a way to reuse the straw, a novel ameliorant was designed with straw, bentonite, polyacrylamide (PAM) and fertilizer. The influence of the ameliorant on the water holding capacity of the three main types of soil in Yibin city was estimated. The result showed that water holding capacity of the three types soils was increased significantly (P<0.05). Compared with the control check, the water content in soil was increase respectively. This result is of some importance to estimate the improvement effect of the ameliorant.

【题目】秸秆-膨润土-聚丙烯酰胺对砂质土壤吸附氮素的影响
【中文关键词】土壤,秸秆,膨润土,聚丙烯酰胺,NH4-N,等温吸附
【英文关键词】soils, straw, bentonite, polycrylamide, NH4-N, isothermal adsorption
【中文摘要】为提高土壤对氮素的吸附能力,减少土壤氮素流失,通过土壤培养试验和等温吸附试验研究了经堆腐的玉米秸秆、膨润土和聚丙烯酰胺(PAM)配制成的复合改良材料对砂质土壤NH4-N 吸附特性的影响。结果表明,复合改良材料对土壤NH4-N 吸附的影响随土培时间的延长呈先增大后减小的趋势,60d 时最大。各处理NH4-N 的等温吸附曲线可用Langmuir 方程很好地拟合。提高复合改良材料用量使砂质土壤NH4-N 的最大吸附量Qmax提高,吸附常数(k)降低,表明复合改良材料可以提高土壤对NH4-N 的吸附容量,但不能增加其吸附强度。同一用量下,Qmax 随改良材料中PAM比例的提高呈先增大后减小的趋势,以PAM 比例为0.99%时为最大,k 则最低。提高复合改良材料用量使砂质土壤NH4-N的最大缓冲

容量(MBC)减小,改良材料中PAM 添加比例对MBC 无明显的影响规律。结果说明复合改良材料对土壤NH4-N 的保持量具有明显的促进作用,改良材料中PAM 的添加比例以0.99%最佳。

【英文摘要】In order to improve soil adsorption ability and decrease nitrogen loss, soil conditioners composited with cron straw, bentonite and polyacrylamide(PAM) were applied in sandy soil and incubated for 90 d. The effects of incubation time, proportion of PAM and rate of composite soil conditioners on soil nitrogen adsorption characteristics were investigated using isothermal adsorption experiments. The results showed that the quantity of NH4-N adsorpted bycomposite soil increased with incubation time but then decreased, which reached the maximum level at 60 d. The curves of isothermal adsorptions could be well fitted by Langmuir equation models. The maximum amount of NH4-N absorption (Qmax) increased with increasing composite proportion, but the absorption constant (k) decreased, which implied that the soil conditioners could improve the absorption capacity but reduce the strength of NH4-N adsorption by soils. Meanwhile, the adsorption amount of NH4-N increased then decreased as the proportion of PAM in the soil conditioner increased, with the highest Qmax value and the lowest k value being observed at the proportion of 0.99% for PAM. The maximum buffer capacity (MBC) for NH4-N of soils decreased significantly with the increasing rate of soil conditioners, but remained constant as the proportion of PAM changed. From the present study, it is concluded that straw-bentonite-PAM composite soil conditioner can improve the ability of nitrogen fixation, consequently decrease the loss of nitrogen from soils by increasing the NH4-N adsorption capacity of soils. The best proportion of PAM in the composite soil conditioner was 0.99%.

【题目】秸秆改良材料对冷沙黄泥土壤钾素吸附解吸的影响

【中文关键词】秸秆改良材料;钾;吸附-解吸;冷沙黄泥

【英文关键词】straw modified materials; potassium; adsorption-desorption; sandy yellow soil

【中文摘要】为了研究秸秆改良材料对沙质土壤钾素的调控作用,采用土培试验,研究作物秸秆、膨润土和聚丙烯酰胺(PAM)配制的秸秆改良材料,对冷沙黄泥土壤钾素吸附、解吸的影响。结果表明,秸秆改良材料能够显著提高沙质土壤对钾的吸附性能,增强固钾能力,随秸秆改良材料中PAM用量的增大,钾吸附量增加,不同土培时期,相比F0(900:100:0),F3(900:100:30)处理土壤钾素总平均吸附量达最大,10、30、60、90 天的F3(900:100:30)处理土壤钾素总平均吸附量分别增加6.1%、9.2%、10.9%、13.9%。施用秸秆改良材料促使土壤钾素解吸量提高,但低于吸附量,随秸秆改良材料中PAM所占比例提高,土壤中钾解吸率显著提高,与F0相比,10、30、60、90 天的F3 处理使土壤中钾解吸率分别提高6.1%、18.2%、17.2%、15.4%。秸秆改良材料能提高沙质土壤固钾能力,是适合修复沙质土壤的改良材料。

【英文摘要】In order to evaluate the regulative ability of modified materials on the adsorption and desorption of potassium in sandy soil, the effect of straw modified materials which were made of straw, bentonite and PAM,on the adsorption and desorption of potassium in sandy yellow soil was carried out. The results showed that the straw modified material significantly improved the adsorption property to potassium in the sandy soil, and enhanced the fixed ability to potassium of soil. With the adding amount of PAM increasing, the adsorption amount of potassium raised. Compared to treatment F0, during 10 days, 30 days, 60 days and 90 days, the average adsorption of F3 treatment reached the highest degree, which increased by 6.1%, 9.2%, 10.9% and 13.9%. Straw modified material promoted potassium to lose from soil, but the desorption still was lower than adsorption. While the proportion of PAM in straw modified material increased, the desorption rate of potassium also was improved significantly. Compared to F0, F3 treatment in 10 days, 30 day, 60 days and 90 days experiments, potassium desorption rate increased by 6.1% , 18.2% , 17.2% and 15.4% . Straw modified materials could improve the capacity to potassium of soil, which could be applied in restoration of degraded soil.

【题目】秸秆还田对土壤改良的研究进展
【中文关键词】秸秆;秸秆还田;土壤改良
【英文关键词】straw stalk, straw returning, soil improvement
【中文摘要】农作物秸秆中含有大量的碳、氮、磷等多种营养元素,同时富含纤维素、半纤维素和一定数量的木质素、蛋白质和糖等有机物质,是一种可以资源化利用的固体废弃物。秸秆还田可以改善土壤结构及保水、肥、气、热的能力,使土壤容重降低、孔隙度增加、有机质含量提高,养分结构趋于合理;秸秆还田能够节约化肥用量,降低生产成本,减少环境污染,确保农业生产的良性循环,保护农村生态环境,促进农业的生态化发展。
【英文摘要】Crop stalks are a resource utilization of solid waste, which contain a large number of carbon, nitrogen, phosphorus, and other nutrients. At the same time, they are rich in cellulose, hemicelluloses, and a certain amount of lignin, protein and sugar and other organic substances. Stalks can improve the structure of soil and keep the ability of water, fertilizer, gas and heat, decrease soil bulk density, increase porosity, improve the content of organic matter, make nutritional structure tend to reasonable. Straw returning can save the amount of chemical fertilizers, reduce production costs. It also can reduce the environmental pollution, ensure the agricultural production in virtuous cycle, protect rural ecological environment, and promote the development of ecological agriculture.

【题目】黄孢原毛平革菌对玉米秸秆木质素的降解研究

【中文关键词】黄孢原毛平革菌; 玉米秸秆; 木质素
【英文关键词】Phanerochaet echrysosporium; corn straw ; lignin
【中文摘要】农作物秸秆还田是目前合理利用秸秆资源的有效方法之一, 但不经预处理直接还田存在着许多不足之处.笔者通过分析玉米秸秆在黄孢原毛平革菌处理条件下木质素的降解情况, 筛选出黄孢原毛平革菌对玉米秸秆木质素降解的最佳粒度与时间, 为今后经济高效的还田产业提供理论基础. 研究结果表明, 黄孢原毛平革菌对大粒度的玉米秸秆(4~ 5 和1~ 3 cm) 较小粒度(0-5 cm) 的降解效果好. 在动态降解过程中, 玉米秸秆的降解速率出现了两个高峰期, 但不同粒度高峰期出现的时间略有不同. 3 种粒度的玉米秸秆分别在接菌35,40 和35 d 后累计降解率达到最大, 其值分别为21.6%, 351.6%和45.2%. 综合比较, 粒度为4~ 5 cm 的玉米秸秆接种黄孢原毛平革菌35 d 后,玉米秸秆达到最佳降解效果.
【英文摘要】Crop straw returning is one of the effective methods to reuse straw resources reasonably at present.How ever, direct returning crop straw to the field without pret reatment has many defects. Solid culture of Phanerochaete chrysosporium by using corn straw as the medium w as studied in this experiment . It focused on screening the best pretreatment conditions for lignin degr adation, in an attempt to provide theoret ical support for effective and economical straw returning in practice. The results showed that P1chrysospor iumino culation had better effect on the degradation of corn straw in large granularity (4-5cm and1- 3 cm) than that in small granularity (0.5 cm) . In the dynamic degradation process, the degradation rate of corn straw showed two peaks, whose occurrence time differed with different granularity. The cumulative degradation rate of the three different granularities reached the maximum about 35, 40 and 35days after P1 chrysosporium inoculation, being 21.6% , 35.6% and 45.2%, respectively . Of the treatments in this study, subculturing P1chrysosporium for 35 days on the corn straw with a particle size of 4- 5 cm gave the optimum degradat ion result.

【题目】黄孢原毛平革菌处理玉米秸秆的腐解特征
【中文关键词】黄孢原毛平革菌;玉米秸秆;腐解特征;生物氧化
【英文关键词】Phanerochaete chrysosporium; corn stalks; decomposing characteristics; biological oxidation
【中文摘要】通过完全试验在固态培养条件下研究了黄孢原毛平革菌处理不同粒度玉米秸秆的腐解特征,测定了秸秆降解率、木质素降解率、有机质、H/F、羧基和酚羟基含量变化。结果表明,在秸秆腐解过程中,有机质、木质素、酚羟基含量总体呈下降趋势,秸秆降解率、H/F、羧基含量总体呈上升趋势。培养35 天后,0.5 cm、1~3 cm 和4~5 cm 秸秆降解率分别为39.54%、49.91%和55.17%,木质素的降解率分别为42.73%、48.74%和52.23%,有机质含量分别由初始的78.75%、79.51%、79.62%下降到65.17%、62.51%、59.62%,H/F 则由初始的1.11、1.05、0.94 提高为1.35、1.43、2.08,羧基含量分别由最初的0.34、0.22、0.19mmol/g 上升到0.66、0.56、0.7 mmol/g,酚羟基含量分别由最初的0.84、0.80、0.76 mmol/g 下降到0.66、0.56、0.51 mmol/g。说明黄孢原毛平革菌处理可有效降解玉米秸秆,其分解率和分解时间与秸秆粒度具有相关性。酚羟基含量逐渐降低,羧基含量逐渐升高,表明秸秆的腐解过程为氧化过程。
【英文摘要】Through the complete test, decomposing characteristics of various granular sizes of corn stalks treated byPhanerochaete chrysosporium was studied in the solid-state cultural condition. Degradation rates of straws and lignin, and changes of organic matter, H/F, carboxyl and phenolic hydroxyl groups were all determined. The results showed that the contents of organic matter, lignin, phenolic hydroxyl overall decreased in the process of decomposition, with increasing trend of straw degradation, H/F, carboxyl. After 35 daysculture, from the 0.5 cm, 1-3 cm, and 4-5 cm granular size, the straw decomposition rate were 39.54%,49.91% and 55.17%, and lignin degradation rates were 42.73%, 48.74% and 52.23%, respectively. Meanwhile organic matter content decreased to 65.17%, 62.51%, 59.62% from the initial 78.75%, 79.51%, 79.62%, and phenolic hydroxyl decreased to 0.66, 0.56, 0.51 mmol/g from the initial 0.84,0.80,0.76 mmol/g, respectively.However, H/F ratio increased to 1.35, 1.43, 2.08 from the initial 1.11, 1.05, 0.94, and carboxyl increased to 0.66, 0.56, 0.7 mmol/g, respectively. In addition, phenolic hydroxyl from the initial 0.84, 0.80, 0.76 mmol/gdropped to 0.66, 0.56, 0.51 mmol/g. Thus these results suggestedPhanerochaete chrysosporium could be used to degrade corn stalk effectively, and the decomposition rate and time was related to stalk granular sizes significantly. Meanwhile, the decomposition is a oxidation process, because of Phenolic hydroxyl decreased and carboxyl increased gradually.

【题目】PAM对沙质土壤持水性的效应研究
【中文关键词】聚丙烯酰胺(PAM) 沙质土壤 土壤持水性能 抗蒸发
【英文关键词】Polyacrylamid(PAM),Sandy Soil, Water holding capacity, Anti-evaporation
【中文摘要】重庆市位于中国内陆西南部,地形复杂。近些年耕地面积减少速度快,人均耕地数量严重不足。重庆沙质土壤占一定比例,开发利用这些低肥力沙土地资源作为占用耕地补偿,一定程度上可以缓解重庆耕地资源缺乏带来的压力。而且重庆近些年来气候异常,夏天持续高温少雨,干旱发展迅速,农作物生长受到极大的威胁。除合理利用水资源外,还必须开发节水技术,改善土壤水分条件,为现代农业的发展和生态环境的恢复提供技术支撑。本文以重庆沙质土壤冷沙黄泥和潮土为研究对象,研究不同剂量、不同剂型的PAM对土壤持水性的调控效应,以期为农业灌溉上PAM的推广应用提供理论依据。研究结果如下:PAM 能抑制土壤水分的蒸发。对不同剂量的PAM处理,冷沙黄泥累计蒸发量分别较对照减少2.55%~12.59%;潮土累计蒸发量分别较对照减小2.37%~12.45%。两种土壤不同剂型PAM处理组间差异均显著,均以200mg/kg抗蒸发效果最为明显。对同分子量不同电荷密度剂型的PAM处理,冷沙黄泥累计蒸发量分别较对照减小7.76%~20.17%,潮土累计蒸发量分别较对照减小7.34%~17.81%。两种土壤PAM处理组间差异均显著,前者以40%抗蒸发效果最好,后者以30%抗蒸发效果最佳。对同电荷密度不同分子量剂型的PAM处理,冷沙黄泥累计蒸发量分别较对照减小14.37%~20.74%;潮土累计蒸发量分别较对照减小12.25%~18.53%。两种土壤PAM处理组间差异均显著,均以1000万的PAM抗蒸发效果最为明显。冷沙黄泥与潮土PAM所有处理的抗蒸发效果均差别不大,前者略好于后者。PAM 能增加土壤的含水量。对不同剂型的PAM处理,冷沙黄泥平均含水量分别较对照增加1.40%~5.64%;潮土平均含水量分别较对照增加1.23%~4.59%。两种土壤不同剂型PAM处理组间差异均显著,均以200mg/kg蓄水效果最为明显。对同分子量不同电荷密度剂型的PAM处理,冷沙黄泥平均含水量分别较对照增加2.65%~5.96%,潮土平均含水量分别较对照增加2.14%~5.38%。两种土壤PAM处理组间差异均显著,前者以40%抗蒸发效果最好,后者以30%抗蒸发效果最佳。对同电荷密度不同分子量剂型的PAM处理,冷沙黄泥平均含水量分别较对照增加4.85%~6.11%;潮土平均含水量分别较对增加4.49%~5.49%。两种土壤PAM处理组间差异均显著,均以1000万的PAM蓄水效果最佳。冷沙黄泥与潮土PAM所有处理的平均含水量均差别不大,前者作用效果相对好些。PAM 能提高土壤的持水量。对不同剂量的PAM处理,冷沙黄泥田间持水量分别较对照增加20.66%~33.67%,毛细管持水量分别较对照增加18.42%~29.06%;最大持水量分别较对照增加18.60%~29.69%。潮土田间持水量分别较对照增加8.43%~13.42%,毛细管持水量分别较对照增加3.55%~9.83%;最大持水量分别较对照增加3.91%~10.26%。两种土壤PAM处理组间差异均显著,均以200mg/kg持水性能最好。
【英文摘要】Chongqing is in the southwest inland of China, whose terrain is complicated. In recent years, the cultivated land decreased rapidly, so the per capita arable land is in acute shortage. The sandy soil in Chongqing is in a certain percentage, whose exploitation, as the compensation for the occupied farmland, would relieve the pressure from the shortage of farmland in Chongqing somehow. And the growth of crops is threatened by the abnormal climate in Chongqing, such as the hige temprature and the lack of rainfall. Besides the rational use of water resources, water resources conservation are also needed to improve the soil quality and the technical supply for the development of modern agriculture, as well as the recovery of the ecological environment. In this study, the cold sandy yellow clayer soil and alluvial soil were chosen to figure out the effect of different doses and dosage forms of PAM on the water preserving capacity, so as to provide theoretical envidence for the spread and exploitation of PAM on the agricultural irrigation.The conclusions as follows:PAM did restrain the soil water evaporation. Compared with the control, the accumulated evaporation of cold yellow clayer soil was decreased by 2.55%~12.59%, while that of alluvial soil was decreased by 2.37%~12.45% after being treated different doses of PAM. The difference between different doses of PAM was significant and 200mg/kg was the most prominent dose. When PAM with the same molecular weight but different charge density was treated, the accumulated evaporation of cold sandy yellow clayer soil was decreased by 7.76%~20.17%, while that of alluvial soil was decreased by 7.34%~17.81%, compared with the control. And the difference between them was also significant, while 40% was the most prominent dosage of cold sandy yellow clayer soil and 30% was the most prominent one of alluvial soil。 When PAM with the same charge density but different molecular weight was treated, the accumulated evaporation of cold sandy yellow clayer soil was decreased by 14.37%~20.74%, while that of alluvial soil was decreased by 12.25%~18.53%, compared with the control. And the difference between them was also sinificant, while

10 million was the most prominent dosage. The difference of anti-evaporation between all the processes of those two kinds of soil was not marked, but the cold sandy yellow clayer soil was slightly better than alluvial soil。PAM did increase the soil water content. Compared with the control, the average water content of cold sandy yellow clayer soil was increased by 1.40%~5.64%, while that of alluvial soil was increased by 1.23%~4.59% after being treated with different doses of PAM. The difference between different doses of PAM was significant and 200mg/kg was the most prominent dose. When PAM with the same molecular weight but different charge density was treated, the average water conten of cold sandy yellow clayer soil was increased by 2.65%~5.96%, while that of alluvial soil was increased by 2.14%~5.38%, compared with the control. And the difference between them was also prominent, while 40% was the most prominent dosage of cold sandy yellow clayer soil and 30% was the most prominent one for alluvial soil. When PAM with the same charge density but different molecular weight was treated, the average water conten of cold sandy yellow clayer soil was increased by 4.85%~6.11%, while that of alluvial soil was increased by 4.49%~5.49%%, compared with the control. And the difference between them was also significant, while 10 million was the most prominent dosage. The difference of average soil water content between all the processes of those two kinds of soil was not marked, but cold sandy yellow clayer soil was slightly better than alluvial soil。Compared with the control, all treatments amended with PAM showed an increase in water holding capacity. The field capacity and capillary capacity were increased by 20.66%~33.67% and 18.42%~29.06% for cold sandy yellow clayer soil, and 8.43%~13.42% and 3.55%~9.83% for alluvial soil. In the same way, the maximum moisture capacity was incerased by 18.60%~29.69% fo cold sandy yellow clayer soil, and 3.91%~10.26% for alluvial soil. The water holding capacity of tested soils was also significantly different with different application doses of PAM, with the dose of 200mg/kg being the most prominent one.

【题目】秸秆-膨润土-PAM对土壤理化性质和作物生长的调控效应
【中文关键词】秸秆 PAM 膨润土 土壤肥力 油菜 产量
【英文关键词】Straw; Bentonite; PAM; Soil Fertility; Rape; Yields
【中文摘要】秸秆是农作物生产中的主要副产品,其中含有丰富的有机物、氮、磷、钾等微量元素等,具有极大开发与利用的潜力。膨润土具有良好的粘结性、吸附性、阳离子交换性能、催化活性、触变性和悬浮性、保水保肥性等一系列优良理化性质,并含有动植物所需的常量和微量元素,是较好的土壤改良剂。聚丙烯酰胺(PAM)作为土壤改良剂可有效改善土壤结构,使土壤大团聚体数目增加,增大土壤表面粗糙度,降低土壤容重,使土壤总孔隙率和毛管孔隙度上升,进而使土壤颗粒和孔隙结构保持稳定,使土壤入渗率明显提高,增加土壤含水量。本研究将秸秆、与膨润土、PAM配施成秸秆改良材料,通过大田试验,探讨三者协同作用对土壤肥力和作物生长的调控效应,探求其改良与调控作用机理。
【英文摘要】Straw which includes abundance of organic matter, nitrogen, phosphorus, potassium and lots of microelements is the main by-production of agricultural activities with huge potential of exploration and utilization. Bentonite is one kind of soil modifier with capability of adherence, absorption, cation exchange, catalysis, moisture retention etc. Polyacrylamide(PAM) is able to improve soil structure, add the quantity of soil aggregate, enlarge surface roughness of soil, reduce bulk density, as well as improve the grass porosity and the pipe porosity of soil. Also, It could stabilize aggregate and soil structure so that to increase the water infiltration rate and the water content of soil. Straw, bentonite and PAM were made into amelioration materials by different ratio. Field experiments were carried out for finding out how different ratio of straw – bentonite – PAM in amelioration materials impact on soil fertility and crop yields.

【中文关键词】秸秆 改良材料 土壤结构 水分特征

【英文关键词】straw, modified material, soil structure, water characteristics
【中文摘要】近年来,各种土壤改良剂相继问世,并为改良沙化土壤取得很好成效。但土壤改良剂大多属于化学产品,成本较高,而且极易产生化学二次污染。为进一步研究退化土壤改良对策,并充分利用可再生资源、尽可能减少二次污染,本研究通过盆栽试验,试图配施秸秆预处理产物与膨润土、PAM,探讨三者协同作用对沙质土壤结构(团粒结构和容重)和水分特征(饱和含水量、田间持水量和饱和导水率)的改良与调控效应,揭示改良与调控作用机理.
【英文摘要】In recent years, a variety of soil modifiers have been come out, and achieved certain results in the modification of desertification soil. However, most of the soil modifiers belong to chemical product. They ’re cost and produce secondary pollution easily. In order to study further about the improvement measures of degeneration soil, make full use of renewable resources, and minimize secondary pollution, this paper tries to use straw pretreatment product, bentonite and PAM in the pot experiment, explore the synergy effect of the three on the improvement and control effect of the sandy soil structure (aggregates and bulk density) and water characteristics (saturated water content, field moisture capacity, and saturated hydraulic conductivity), and reveal the mechanism of improvement and control.

【题目】海南香蕉条斑病毒的检测
【中文关键词】香蕉条斑病毒;海南;整合;检测
【英文关键词】Banana streak virus (BSV); Hainan Island; integration; detection
【中文摘要】香蕉条斑病毒(Banana streak virus, BSV)是香蕉上一种重要的病毒。本文运用血清学检测法和PCR检测法对海南主栽巴西蕉(Musa Cavendish, AAA)、粉蕉(Musa Pisang Awak, ABB)进行了BSV的调查检测。结果表明,参试无症状或症状各异的样品血清学检测结果均为阴性,说明这些被测品中可能不含有游离BSV粒子;上述样品中部分样品的PCR检测结果却为阳性,将PCR扩增的特异条带回收、测序和比对,显示确实扩增到BSV部分基因组序列。结合血清学检测结果,说明海南部分香蕉的基因组已经整合了BSV的基因组序列。
【英文摘要】Banana streak virus (BSV) is a sidely distributed pathogen of worldwide. In this study, numbers of Musa Cavendish (AAA) and Musa Pisang Awak (ABB) in hainan Island were preliminarily surveyed for BSV infection by both serology method and PCR technique. The results showed that all the samples were negative in serology, which indicated that perhaps no episomal BSV existed in all of the samples. The specific band was amplified by PCR from some of the samples, which was then sequenced. The results demonstrated that BSVgenome has been integrated into ghe genomes of the genomes of the two banana species in Hainan.

【题目】香蕉束顶病毒海口分离物NSP基因的原核表达
【中文关键词】香蕉束顶病毒;Gateway 重组技术; NSP; 原核表达
【英文关键词】Banana bunchy top virus; geteway recombinant technology; NSP; prokaryotic expression.,
【中文摘要】应用PCR方法从感染香蕉束顶病毒的香蕉植株幼嫩假茎和叶片总DNA中克隆NSP(Nuclear shuttle protein)基因的编码区,并通过Gateway技术定向重组到原核表达载体pDEST-17的6×His标签下游,经菌落PCR和测序鉴定结果表明,成功构建了原核表达载体pDEST-17-NSP 。阳性克隆转化E.coli BL21 (DE3),经IPTG诱导表达、SDS-PAGE分析和western blot检测,结果显示,融合蛋白以包涵体的形式稳定表达,分子量约为20 ku,与预计值相符。通过诱导条件的优化,确定了最佳

的融合蛋白表达条件为25°C、0.1 mmol/L IPTG条件下诱导4 h。从而为制备NSP多克隆抗体和进一步研究NSP的功能奠定了基础。

【英文摘要】The opening reading frame of NSP gene of banana bunchy top virus was cloned by plymerase chain reaction (PCR) using total DNA isolated from tender pseudostem and leaf of banana plant infected with the virus as a template, and directionally cloned to the downstream of 6 His tag by the Gateway technology. The construction of prokaryotic expressive vector, pDESTTM-17-NSP have been identified by the colony PCR and sequencing, and transformed into E.coli BL21(DE3). Transformants were cultured and induced by IPTG, and then anlyzed by SDS-PAGE and Western blot. The results showed that the fusion protein of approximately 20 ku was expressed steadily as an inclusion body and accorded with the predicted size. The expression of NSP gene was optimized nuder the conditions that the transformants were indeuced with 0.1 mmol/L IPTG at 25°C for 4 hours. This result might provide a foundation for preparation of the plyclonal antibody against NSP and further functional study of NSP.

【题目】槟榔叶片总蛋白质提取及双向电泳条件初探

【中文关键词】槟榔;蛋白提取;二维电泳

【英文关键词】Areca catechu Linn.;protein extraction; two-dimensional electrophoresis

【中文摘要】采用3种提取植物组织蛋白的方法(TCA/丙酮法、E-TCA法、酚法)提取槟榔叶片总蛋白,在蛋白产量,一维和二维电泳图谱等方面对3种方法的提取效果进行比较。结果表明,TCA/丙酮沉淀法效果较好,是槟榔叶片总蛋白提取的可选方法,同时优化了双向电泳的条件和上样量。

【英文摘要】Proteins from betel nut (Areca catechu Linn.) were extracted by using three methods[Trichloroacetic acid (TCA)/acetone prcipitation, trichloroacetic acid precipitation (E-TCA);and phenol extraction],and their productivity and profiles were assessed by means of SDS-PAGE and two-dimensional electrophoresis.Of these 3 methods the TCA/acelone precipitation method was found most effective for the extraction and two-dimensional electrophoresis of proteins from Areca leaves. The conditions of two-dimensional electrophoresis and protein loading volume were optimized.

【题目】天祝白牦牛 LF 基因克隆及分子特征

【中文关键词】牦牛;LF 基因;克隆;分子特征

【英文关键词】yak; LF gene; clone; molecular characteristic

【中文摘要】【目的】哺乳动物乳铁蛋白(Lactoferrin,LF)在抗菌、抗病毒、抗肿瘤、调节免疫等方面起着重要作用。本试验对天祝白牦牛乳铁蛋白基因的编码区进行克隆和分子特征分析。【方法】以处于干乳期的天祝白牦牛乳腺组织为材料,通过 RT-PCR 克隆了包含 LF 基因编码区的 cDNA 序列(GenBank 收录号为 EU547252);将克隆获得的天祝白牦牛LF基因的cDNA与奶牛相应序列进行比对;对天祝白牦牛LF蛋白(GenBank收录号为ACB29795)与其它物种 LF 蛋白进行序列比对和进化树分析;对牦牛 LF 蛋白的特性和结构进行预测。【结果】克隆获得天祝白牦牛 LF 基因 cDNA 片段长度为 2 344 bp,其中 LF 基因编码区全长 2 124 bp,编码 708 个氨基酸;序列分析显示,克隆获得的牦牛 cDNA 序列与奶牛该序列存在 15 个碱基的变异,其中位于 LF 基因编码区的变异有 12 个,这些突变造成 4 个氨基酸变异;天祝白牦牛 LF 蛋白与奶牛、人、小鼠、山羊、绵羊、猪、狗、马、骆驼、猩猩、鸡LF 蛋白氨基酸相似度分别为 99.4%、69.5%、63.5%、92.4%、91.5%、72.9%、69.1%、72.6%、75.3%、69.5%和 50.9%;各物种 LF 蛋白进化树符合物种进化规律;同源建模预测 LF 3D 模型显示,LF 为多肽链在二级结构基础上折叠形成 2 个极相似的、对称的球状叶,即 N 叶和 C 叶,中间由 1 段对蛋白酶敏感的 α -螺旋连接,呈“二枚银杏叶型”结构。【结论】从天祝白牦牛克隆获得 LF 基因编码区全长序列并揭示了其分子特征,为牦牛 LF 蛋白基因工程和蛋白质功能的研究奠定了基础

【英文摘要】【Objective】 Lactoferrin play a very important role in antibiosis, antivirus, antitumor and immunomodulation formammal. The coding region of LF gene of Tian Zhu white yak was cloned, and it ’ s molecular characteristics were analyzed in thestudy. 【Method】 Using mammary tissue of Tian Zhu white yak as material, the cDNA sequence containing coding region of LFgene was cloned by RT-PCR. The cDNA of LF gene of Tian Zhu white yak obtained by cloning was compared to correspondingsequence of cow. Sequence alignment and evolutionary tree were analyzed on Tian Zhu white yak and other species. The

structureand properties of LF gene of yak were predicted.【Result】The 2 344 bp length cDNA of LF gene of Tian Zhu white yak was clonedfor the first time, and the length of coding region of LF gene is 2 124 bp, coding 708 amino acids. There are 15 mutations in thecDNA between yak and cow, 12 mutations being in coding region of LF gene, causing 4 amino acid mutations in LF protein. There ishigh homeology of LF protein among different species. Amino acid similarities of LF protein compared yak to cow, human, mouse,goat, sheep, pig, dog, horse, camel, chimpanzee and chicken are 99.4%, 69.5%, 63.5%, 92.4%, 91.5%, 72.9%, 69.1%, 72.6%, 75.3%,69.5% and 50.9%, respectively. The evolutionary tree of all species complies with laws of evolution. Homogenous 3D model of LFobtained by predict shows that LF protein forms two similar and symmetrical leaves, namely N-leaf and C-leaf, connected by anAlpha helix impressionable to prolease, and LF protein presents“ two-folium-ginkgo-shaped ” structure.【Conclusion】 The codingregion of LF gene in Tian Zhu white yak was cloned for the first time, and its molecular characteristics were shown. This work haslaid an important foundation for researches of genetic engineering and protein function of LF protein of yak.

【题目】海南胡椒中黄瓜黄叶病毒分离物的分子鉴定
【中文关键词】胡椒;黄瓜花叶病毒,血清学;CP基因,序列分析
【英文关键词】Piper nigrum Linn.; cucumber mosaic virus; serology; coat protein gene; sequence analysisy
【中文摘要】通过间接酶联免疫法,从海南罹病胡椒植株中检测到黄瓜花叶病毒(Cucumber mosaic virus, CMV)。从病叶中提取总RNA,用巢氏RT-PCR方法扩增获得657 bp的CMV CP基因片段,并与pMD18-T载体连接和转入大肠杆菌克隆,然后进行测序。序列分析结果表明,该分离物与CMV亚组Ⅰ、亚组Ⅱ之间的核苷酸序列同源性分别为92.54%-99.09%和76.97%-77.42%,推导氨基酸序列同源性分别为98.17-100%和81.74%-82.65%。该分离物CP基因与印度分离物同源性相对较低,应属不同株系。
【英文摘要】Cucumber mosaic virus was detected from infected piper nigrum Linn. in Hainan by using the indirect enzyme-liked immunosorbent assay. Total RNA was extracted from infected leaves and the cDNA fragment of the coat protein (CP) gene obtained by nested RT-PCR was 657 bp in length. The amplified CP fragment was linked with pMD18-T vector, cloned in E.coli cells, and then sequenced. The sequence analysis between the CMV-China CP fragment and those of the subgroup Ⅰ and subgroup Ⅱ shows that the CMV-China CP shares 92.54%-99.09% and 76.97%-77.42% nucleotide sequence identity and 98.17-100% and 81.74%-82.65% deduced amino acids identity, respectively, and that homology between CMV-China and Cmv isolated from Piper nigrum Linn. in India is relatively low by comparison. This suggests that CMV-China isolate fall within the CMV subgroup Ⅰ.

【中文关键词】落葵;黄瓜花叶病毒,血清学;CP基因,序列分析
【英文关键词】Basella rubra L.; cucumber mosaic virus; coat protein gene; sequence analysisy
【中文摘要】通过间接酶联免疫法(ID-ELISA)检测到染病落葵病样中存在黄瓜黄叶病毒(Cucumber mosaic virus, CMV)。从病叶中提取总RNA,用巢氏RT-PCR方法扩增获得657 bp的CMV CP基因片段,将扩增产物与T载体连接并进行测序。用DNAMAN将得到的CP基因序列与GenBank收录的黄瓜花叶病毒两亚组部分株系或分离物的CP基因序列进行比较,结果表明该CP基因与CMV亚组Ⅰ、亚组Ⅱ之间的核苷酸序列同源性分别为91.17%-95.43%和75.3%-75.76%,推导氨基酸序列同源性分别为95.41-97.71%和81.28%-81.71%。该CMV-Ba与亚组Ⅰ同源关系密切。
【英文摘要】Cucumber mosaic virus was detected from infected Basella rubra L.with the indirect enzyme-liked immunosorbent assay. Total RNA was extracted from infected leaves and the cDNAs of the coat protein of CMV-Ba were obtained by RT-PCR. The amplified cDNA fragments were then cloned into pMD18-T vector and sequenced. The result showed that the CP gene was 657 nuclecotides in length. This sequence was aligned with the obtained CP gene and some CMV strains or isoloates of the subgroup Ⅰ and subgroup Ⅱ in GenBank using DNAMAN software. The results shows that the CMV-Ba CP shares 91.17%-95.43% and 75.3%-75.76% identity with the known CP genes of the subgroup Ⅰ and subgroup Ⅱ respectively in nucleotide leve,onthe otherhand,amino acids deduced from CMV-Ba CP gene shared 95.41-97.71% and 81.28%-81.71% identity with the known CP of the subgroup Ⅰ and subgroup Ⅱ, respectively. This suggested that CMV-Ba CPgene belongs to CMV subgroup Ⅰ.

【题目】牦牛LPL 基因外显子7 多态性与生长性状相关性的研究
【中文关键词】牦牛; LPL 基因; 多态性; 性状标记; PCR-SSCP
【英文关键词】Yak; LPL gene; Polymorphism; Genetic marker; PCR-SSCP
【中文摘要】采用PCR-SSCP 技术对5 个牦牛品种共398 头牦牛脂蛋白脂肪酶基因(LPL) 外显子7 进行了多态性研究,分析了该基因与牦牛生长性状的相关性。结果表明,牦牛LPL 基因外显子7 存在2 个等位基因3 种基因型。各群体在该基因座上呈Hardy-Weinberg 平衡状态。三种基因型与牦牛部分生长性状的最小二乘法分析表明,该位点多态与牦牛的体重、体高、胸围存在显著相关(P < 0. 05) ,BB 型个体体重、体高、胸围显著高于AA 和AB 型个体。初步推断牦牛LPL 基因第7 外显子可作为牦牛标记辅助选择的遗传标记之一。
【英文摘要】The PCR-SSCP polymorphism of Lipoprotein lipase(LPL) gene sequence of part extron 7 and its correlationwith growth traits were studied in 398 individuals from five breeds yak. The results showed that there were twoalleles and three genotypes in the locus of LPL gene extron 7. They were at Hardy-Weinberg equilibrium state in thislocus. The least square analysis showed that the different genotype of LPL extron 7 had a significant effect on partialtraits of growth including body weight,heart girth,body height(P < 0. 05) ,and the genotype did not affected on bodyslanting length significantly(P > 0. 05) . Therefore,these results imply that the mutation at the extron 7 of yak LPLgene could be used as the molecular genetic marker for yak breeding.

【题目】牦牛生长激素基因及其受体基因的PCR-SSCP研究
【中文关键词】牦牛,gh,PCR-SSCP
【英文关键词】YAK,GH
【中文摘要】本研究以GH及GHR基因为候选基因,利用PCR-SSCP技术研究了大通牦牛、甘南牦牛、天祝白牦牛品种的遗传变异,并以牦牛的体尺和体重性状作为衡量牦牛生长发育性能的指标,运用最小二乘拟合线性模型,分析GH基因和GHR基因上的多态位点与牦牛生长发育性状的关系,寻找可用于标记辅助选择的分子标记,为选种选配提供理论依据。

【题目】牦牛数量性状基因的研究进展
【中文关键词】牦牛; 生产性能; 基因; 数量性状
【英文关键词】YAK
【中文摘要】牦牛在青藏高原具有广泛分布,对高寒、高海拔地区有较好的适应性,集肉、乳、毛、皮、役等生产性能于一身,是青藏高原上特有家畜和“ 全能家畜 ”; 但是牦牛是比较原始的品种,饲养管理粗放,生产性能没有完全发挥出来。为提高牦牛生产性能已开展了一系列的研究,并取得了一些成果。随着现代生物技术研究的深入,如何从基因角度诠释和高效利用牦牛,已经成为近年牦牛研究的热点,文章仅就牦牛生产性能相关数量性状基因的研究进展作一综述。

【题目】大通牦牛无角新品系培育的意义及思路
【中文关键词】牦牛; 无角品系
【英文关键词】YAK
【中文摘要】大通牦牛新品种是以野牦牛为父本, 采用低代牛横交方法和控制近交方式, 有计划地建立横交固定育种核心群、闭锁繁育、选育提高、推广验证等主要阶段, 获得了高生产性能(特别是产肉性能、繁殖性能和抗逆性能远高于家牦牛) , 体型外貌、毛色高度一致, 遗传性能稳定的含野牦牛基因的牦牛新品种。大通牦牛新品种主要用于改良家牦牛的生产速度、体重、产肉性能、产奶性能和繁殖性能, 遏止牦牛的退化, 增加牦牛的抗逆性及生活力, 能有效地利用高山草原, 是现行条件下加速牦牛品种改良和牦牛产品更新换代的有效途径[3] 。然而, 由于导入野牦牛血液,大通牦牛野性增加, 有角的大通牦牛在生产过程中伤人事件时有发生, 在生产性能提高的同时也给饲养管理带来困难。因此, 在现有大通牦牛的基础上, 培育生产性能高、易于生产管理的牦牛新品系显得极为重要。

【题目】牦牛SRY基因克隆与分子特征
【中文关键词】牦牛; SRY 基因; 克隆; 分子特征
【英文关键词】Yak; SRY gene; Clone;Molecular characterist ics
【中文摘要】SRY(Sex- determining region on the Y chromosome, SRY) 基因位于哺乳动物的Y 染色体, 对性别形成起着决定性作用。对高原牦牛SRY 基因的编码区进行克隆和分子特征分析, 以期从分子水平了解牦牛的性别形成机制。以雄性高原牦牛血液为材料, 从基因组DNA 中扩增SRY 基因编码区(单外显子) 序列, 将其克隆至pGEM- T easy 载体并测序。同时, 将牦牛SRY 基因编码区与奶牛进行序列比对; 对牦牛SRY 蛋白与其他物种SRY 蛋白进行序列比对; 采用在线生物软件对牦牛SRY 蛋白的特性和结构进行预测。牦牛SRY 基因(GenBank: EU547257) 编码区长687 bp, 编码229 个氨基酸。克隆获得的牦牛SRY 基因编码区与奶牛该序列存在2 个碱基的变异, 造成1 个氨基酸的变异; 各物种SRY蛋白具有较高的同源性; 牦牛SRY 蛋白(GenBank: ACB 29799) 主要由亲水性氨基酸构成, 同源建模预测的SRY HMG 区域的3D 模型显示, SRY HMG 区域三维结构呈由三个A- 螺旋组成的/ L0 型。首次从高原牦牛基因组中克隆了SRY 基因, 并进一步揭示了其分子特征, 为从分子水平人为的控制牦牛性别奠定了重要基础。
【英文摘要】SRY(Sex-determining Region on the Y Chromosome, SRY) gene is located on Y chromosome of mammaland plays a key role of sex determination. Aiming at discovering the mechanism of sex determination in yak, the SRY genewas cloned and its Bioinformatics characterization was analyzed. Taking the blood of Plateau yak as material, the SRYgene was amplified from Yakcs genome.The product was cloned to pGEM-T easy vector and was sequenced. At the samet ime, the coding region of SRY gene of yak was compared to cowcs. The SRY protein of yak and other speciesc wasaligned.Through bioinformatics software, the characterist ics and structure was predicted for the SRY protein of yak. Thetotal coding region of Yakcs SRY gene (GenBank: EU547257) is 687 bp, encoding a pept ide with 229 amino acidresidues.Through sequences aligned, it was discovered that there are 2 mutat ions in the coding protein of yak. There ishigh homology among different species.The SRY protein of yak is mainly constructed by hydrophilicity amino acids. Homogenous3D model of HMG of SRY obtained by predicting shows that HMG of SRY including three Alpha helixes, emergingdLd shape.The coding region of SRY gene in Plateau yak was cloned for the first time and its molecular characteristicswas shown.This work laid an important foundation for controlling sex format ion of yak.

【题目】大通牦牛IGF-I 基因多态性及其与生长性能相关性的研究
【中文关键词】大通牦牛; IGF I 基因; PCR SSCP; 多态性
【英文关键词】yak; IGF I g ene; PCR SSCP; polymorphism
【中文摘要】通过PCR SSCP 技术检测了大通牦牛I GF I 基因的遗传多态性, 对具有SSCP 多态性的片段进行克隆和测序, 找出等位基因的多态位点, 将该位点多态性与大通牦牛生长性状进行相关性分析. 结果显示: PCR SSCP 检测到大通牦牛具有AA、AB、BB 3 种基因型, A(B) 等位基因频率分别为0. 902 8(0. 097 2) ; 对IGF I 基因第1 内含子进行序列比对, 发现一处单碱基C 的缺失/ 插入, 造成了该位点多态性的出现; 6 月龄和12 月龄基因型为AA 的大通牦牛的体质量和体斜长最小二乘均值显著高于AB 和BB 基因型(P< 0. 05) ; 18 月龄基因型为AB 的大通牦牛的体高最小二乘均值显著高于BB

型(P< 0. 05) , 说明大通牦牛品种中基因型为AA 的个体生长性状有高于AB 和BB 基因型的趋势, 可以作为大通牦牛品种选育的目标基因型.

【英文摘要】T he polymorphism of IGF I gene o f Datong yak w as detected by using PCR SSCP technolo g y, and the PCR pr oduct s w ith po lymo rphism fragment s w ere clo ned and sequenced to detect single nucleo t ide po lymor phism; the relat ionship betw een the polymorphism and Datong yak's g row th t rait s w as ana lyzed. Result s indicated that the fr equences of allele genes A(B) is 0. 902 8(0. 097 2) in Dato ng yaks; the C base deletion in int ron1 of IGF I gene w as detected by sequence align, causing polymorphism in Dato ngyaks; the body w eight and body leng th of individuals w ith g enotype AA at 6 and 12 mo nths of age were sig nificant ly hig her than those w ith g enotype BB, AB(P< 0. 05) ; the body height of indiv iduals w ith g enoty peAB at 18 months of age were significant ly higher than tho se w ith genotype BB(P < 0. 05) . T he grow thtr ait s of individuals w ith genotype AA w ere significant ly higher than those w ith geno ty pe BB, AB in Da to ng yaks. This geno ty pe could be selected as target g enotype in Datong y ak.

【题目】牦牛IGF2 内含子的遗传多态性及其遗传效应分析

【中文关键词】IGF2; 内含子; 遗传多样性; 牦牛

【英文关键词】IGF2 ; Intron; Genetic polymorphisms; Yak

【中文摘要】采用PCR SSCP 方法检测牦牛胰岛素样生长因子2(Insulin like growth factor 2, IGF2) 基因内含子2, 7, 8 的多态性, 并分析其对体重、体高、胸围和体斜长的遗传效应。用BioEdit 软件对牛、羊、人、猪等相关序列同源性比对以后, 主要依据牛(NW 001494548) DNA 序列设计3 对引物。结果在intron7 和intron8 引物扩增的片段上发现多态性, 并对纯合子进行测序, 发现intron7 引物扩增片段91 位存在C T 转换, intron8 引物扩增片段存在330 位G C 和358 位A G 转换, 且在该两对引物扩增产物均检测到3 种基因型(AA、AB、BB) 。统计结果表明, intron7 的3 种基因型在大通牦牛、青海高原牦牛和新疆巴州牦牛群体中的分布处于平衡状态, 而在甘南牦牛和天祝白牦牛群体中则处于极端不平衡状态。intron8 的3 种基因型仅在新疆牦牛群体中处于不平衡状态, 最小二乘分析结果表明, AA 和AB 基因型同BB 基因型相比有较大体重(P< 0. 01) , 但在体高、体长和胸围性状上AA 与BB 基因型均不显著, 说明IGF2 基因有不赖于骨骼增长而增加体重的作用机制。

【题目】香蕉束顶病毒CP基因的克隆、原核表达及抗血清制备
【中文关键词】香蕉束顶病毒;CP基因;原核表达;纯化;抗血清
【英文关键词】Banana bunchy top virus; CP gene; Prokaryotic expression; purification; antiserum
【中文摘要】用PCR方法从感染香蕉束顶病毒(Banana bunchy top virus, BBTV)的香蕉植株幼嫩假茎和叶片总DNA中扩增外壳壳白(coat protein, CP)基因。回收目的片段,经Xho Ⅰ和BamH Ⅰ双酶切后与同样酶切的质粒载体pET30a(+)相连接,酶切验证及测序结果获得了含BBTV CP基因的重组质粒pET30a-CP。将重组质粒转化Codon plus表达菌,在25℃0.4mmol/L IPTG条件下诱导6h或过夜,经12%SDS-PAGE电泳分析可知,该重组菌表达了一个与预期分子量大小一致的His-CP融合蛋白,约为30ku,且主要以包涵体的形式存在。多次洗涤包涵体后得到高纯度的融合蛋白,用其免疫家兔,获得BBTV CP蛋白抗血清。间接ELISA法测定抗血清效价大于51200。Western blot分析表明,抗血清能与融合蛋白特异性结合。
【英文摘要】The coat proteins gene (CP) was amplified from total DNA isolated from young pseudostems and leaves of banana (mUsa paradisiaca) plants infected with Banana bunchy top virus by polymerase chain reaction (PCR). The CP gene was digested by Xho Ⅰ and BamH Ⅰ ,and inserted into the prokaryotic expression vector pET30a(+). The recombinant plasmid pET30a-CP was identified by enzymatic digestion and gene sequencing. Esherichia eoli codon plus containing the recombinant plasmid was induced at 25°C with 0.4mmol/L IPTG for 6 h or over night. And the result was that an expected 30ku His-CP fusion protien was expressed as inclusion body analyzed with 12% SDS-PAGE electrophoresis. Inclusion body was wased several times and obtained high purity of fused protein. The purified recombinant protein was used to immunize rabbits for production of antiserum against BBTV CP.The titer of the antiserum was higher than 1:51200 determined with indirect enzyme-linked immunosorbent assay (ID-ELISA). Western blot analysis revealed that antiserum specifically binded the fused protein.

【题目】香蕉束顶病毒海口分离物核穿梭蛋白(NSP)的纯化及抗血清制备
【中文关键词】香蕉束顶病毒;核穿梭蛋白;纯化;抗血清
【英文关键词】BBTV(Banana bunchy top virus);NSP (nuclear shuttle protein);Purification,Antiserum prokaryotic expression
【中文摘要】本研究以本实验室保存的含重组载体pDEST17-NSP的原核表达菌株E.coli BL21 (DE3)为材料,于25℃、0.lmmol/L IPTG条件下诱导4h,集菌后超声波破碎,获得以包涵体形式表达的约20KD的融合蛋白。实验结果表明,将沉演的融合蛋白溶于含6mol/L尿素的Binding Buffer中,再经Ni2+-NTA新和层析纯后,可获得高纯高的融合蛋白。将纯化融合蛋白经12% SDS-PAGE电泳,切胶回收目的带,液氮研研磨并按1:1(w/v)混合佐剂,4次免疫家兔,获得BBTV病毒核穿梭蛋白的特异性抗血清。以融合蛋白作抗原,间接ELISA法测定其抗血清效价为1:5000。田间检测样品的最佳抗血清工作浓度为1:500。Western Blot 鉴定结果表明抗血清能与目的蛋白特异性结合。本研究的结果将为下一步NSP基因转录调控和蛋白功能研究奠定一定基础。
【英文摘要】Prokaryotic expression strain E.coli Bl21(DE3) of the recombinant vector pDEST17-NSP was stored in our laboratory, and was induced at 25°C with 0.lmmol/L IPTG for 4 hours.Fusion protein of approximately 20KD was expressed steadily as an inclusion body. The results showed that precipitation of fused protein was dissolved in Binding Buffer containing 6 mol/L urea, then fused protein solution was obtained by purifing of Ni2+-NTA agarose affinity chromatography. The purified fusion protein was extracted by 12% SDS-PAGE, and was triturated with liquid nitrogen, finally was mixed with adjuvant of 1:1(W/V). The rabbits was immunized for 4 times, and the specific antiserum of NSP of BBTV was acquired from the immunized rabbits later. The titer of the antiserum was higher than 1:5000 by indirect enzyme-linked immunosorbent assay (ID-ELISA), and the best work of concentratio nof 1:500 was determined in field testing. Western Blot analysis revealed that antiserum had the capability of specifical binding with the target protein. These investigations work should be establish basis for the research of transcription regulation of NSP gene and its protein function.

【题目】槟榔黄化病叶片差异表达蛋白筛选与鉴定
【中文关键词】槟榔; 槟榔黄化病; 蛋白质; 双向电泳
【英文关键词】Areca catechu Linnaeus; Yellow-leaf disease; Differentially expressed proteins; Two-dimensional electrophoresis
【中文摘要】以相同品种, 树龄、 长势一致的黄化病槟榔和健康槟榔叶片为试材, 采用 TCA(三氯乙酸)/丙酮法制备蛋白质样品, 结合双向电泳-质谱结合技术, 分析病原菌-槟榔互作后差异表达蛋白。 结果表明, 双向电泳 SDS-PAGE 胶中黄化病槟榔叶片与健康叶片平均蛋白质点数分别为 1 081 个和 960 个 , 其中差异明显的点 34 个 。 选择 5 个差异蛋白点进行质谱(MALDI-TOF-MS)鉴定, 并进行数据库查询, 结果鉴定了 2 个蛋白质, 分别为核酮糖-1, 5-二磷酸羧化/加氧酶和蕈状支原体高同源蛋白, 这些蛋白质可能参与了槟榔黄化病发生和发展过程。 另外 3 个蛋白点在数据库中未检索到同源性和匹配率较高的蛋白质, 认为是未知蛋白。
【英文摘要】Preparation of protein samples of the leaves by the method of TCA (trichloroacetic acid)/acetone,taking leaves of yellowing-leaf disease and healthy areca as material which was consistent with species, age and growth. Differentially expressed proteins after interaction of pathogen and host was analyzed bytwo-dimensional electrophoresis combined to mass spectrometry technology. The results showed that average of protein point was of 1 081 and 960 on two-dimensional electrophoresis SDS-PAGE for yellow leaf disease and health of betel leaf, respectively, of which differentially expressed proteins are of 34. Five differentiallyexpressed proteins spots identified through spots mass spectrometry (MALDI-TOF-MS) and atabase queries.Two proteins was identified, namely, ribulose 1,5-bisphosphate carboxylase of/oxygenase and the mushroom-shaped mycoplasma high homologous proteins, the proteins may be involved in taking place and development of yellow disease of areca. Another three samples were not retrieved in the database and matching higher homology protein, considered to be unknown proteins.

【题目】海南兰花病毒病调查及病原检测
【中文关键词】海南; 兰花 ; 病毒病 ; 调查 ; 血清学
【英文关键词】Hainan ; orchid ; virus diseases ; investigation ; DAS-ELISA
【中文摘要】2007~2008 年, 对海南主要兰花种植基地进行病毒病危害情况调查 。 结果表明 , 海南兰花病毒病症状复杂, 以斑驳花叶型和坏死型最为普遍。 调查还发现, 兰花的病毒病发病率与龄期呈正相关, 文心兰、 石斛兰的发病率显著高于蝴蝶兰。 病原血清学检测表明, 海南兰花病原病毒主要为建兰花叶病毒、 齿兰环斑病毒, 以及二者复合感染, 检出率分别为 29.5%、 2.3%、 15.9%。 其中文心兰和蝴蝶兰带毒率较高, 石斛兰带毒率最低,石斛兰上未检出齿兰环斑病毒。
【英文摘要】Abstract Virus diseases of orchids in major orchid gardens were investigated in Hainan Province during 2007 to 2008. The investigation showed that symptoms of virus diseases in the orchid were considerably complicated, with the mild mottle and the necrosis being the most common in orchid. The investigation also showed that the virus infection rate was positively related to the age of orchids, and that the infection rates were obviously higher in Oncidium and Dendrobium than in Phalaenopsis. The double antibody sandwich enzyme-linked immunosorbent assay (DAS-ELISA) revealed that Cymbidium mosaic virus (CymMV), Odontolossum ring spot virus (ORSV) and their mixed infections were more common, with the infection rates being 29.5% , 2.3% and 15.9% , respectively. Oncidium and Phalaenopsis were more sensitive to viruses than Dendrobium, and ORSV was not found in the Dendrobium orchid.

【题目】兰花两种主要病毒双重 RT- PCR 检测方法的建立
【中文关键词】海南; 兰花 ; 病毒病 ; 调查 ; 血清学
【英文关键词】Duplex RT - PCR; Cymbibium mosaic virus; Odontoglussm ring spot v irus; Detection
;
【中文摘要】根据建兰花叶病毒 (Cymb idium m osa ic v irus, CymMV)和齿兰环斑病毒 (Odontog lossum ringspot virus ORSV)这两种主要兰花病毒的保守序列设计特异引物,在 CymMV 和 ORSV 单一 RT - PCR 优化体系的基础上, 建立了同时检测 CymMV和 ORSV 的双重 RT - PCR 检测 方法。此方法可特 异性地从感 染 CymMV 和 ORSV 的样品 中扩增 出 2条目的带, 即CymMV(781 bp)和 ORSV (588 bp)。 扩增产物测序表明,CymMV扩增产物与 GenBank中登陆的分离物核苷酸同源性为 84 ~ 97% , ORSV扩增产物与 GenBank中其它分离物的核苷酸序列同源性为 98% ~ 99% 。运用该方法对随机抽取的田间样品及组培苗样品进行检测, 都得到了特异性扩增条带, 其灵敏度达到了 10-5。
【英文摘要】A duplex reverse transcr iption- po ly erase cha in reaction (RT - PCR) techn ique w as successfu lly adopted to detec cymbidium mosa ic v irus (CymMV) and odontoglossum ring spot virus (ORSV) at the saeme time Based upon the establishment of the optiized RT - PCR detection of CymMV and ORSV, the duplex RT - PCR which can siultaneously detect the two viruses in orchid was developed. The results showed that all samples infected by CymMV and ORSV could be amplified simultaneously by duplex RT - PCR, and yield two spec ific bands of CymMV (781 bp) and ORSV (588 bp) visualized by agarose gel electrophoresis. Sequence analysis of the amplified products showed high homology of CymMV (84% ~ 97%) and ORSV (98% ~ 99%) with the sequences of CymMV and ORSV in GenBank. The rando samples collected from field and tissue culture were researched and amplified specifically by this method and its sensitivity was up to 10-5.

【题目】香蕉束顶病毒海南分离物 DNA2 编码区的克隆及抗血清的制备
【中文关键词】香蕉束顶病毒, BBTV DNA2, 编码区, 融合表达
【英文关键词】banana bunchy top virus; BBTV DNA2; encoding zone; fusing expression
【中文摘要】利用 PCR 方法克隆香蕉束顶病毒海南分离物(Banana bunchy top virus,BBTV- HN)DNA2 编码区,将其插入到原核表达载体 pGEX- 6p- 1 谷胱苷肽- S- 转移酶(GST)基因下游。所得克隆 pGEX- HN- B2 测序结果表明,插入的 DNA2 片段为 267 bp,且表达相位和理论上设计的完全一致。把此重组质粒转化到 E.coli Rosetta(DE3)中,经过异丙硫代半乳糖苷(IPTG)诱导后出现约 33 Ku 融合蛋白质表达条带。为获得特异的血清,切下目的表达条带并免疫兔子。经 Western- blotting 检测,获取的血清可以和表达的 33 Ku 融合蛋白特异结合,表明已成功获得 DNA2 编码蛋白的血清。
【英文摘要】The Opening Reading Frame fragment of Hainan isolate(BBTV- HN) DNA2 of banana bunchy top virusin Hainan Island was cloned by PCR and fused to the downstream of gulutathion- S- transferase gene in the expression vector pGEX- 6p- 1. After the correct encoding region was confirmed by sequencing, the recombinant plasmid pGEX- HN- B2 was induced by isopropyl- B- D- thiogalaotopyranoside (IPTG) in E.coli Rosetta (DE3). Compared to the control without inducing, a new protein band of 33 Ku was found in the induced products after running theSDS- PAGE. To prepare antiserum against the fused protein, the 33 Ku protein was used to immunize rabbit.Western blot analysis revealed that the antiserum against DNA2 encoding protein was obtained. This will help usunderstand the role of DNA2 encoding protein in the infected tissues.

【题目】红棕象甲为害调查与诱集监测
【中文关键词】红棕象甲; 为害调查; 诱集监测
【英文关键词】Rhynchophorus ferrugineus (Oliver); Damage survey; Trapping monitoring
【中文摘要】2006~2008 年, 累积多次在海南省多个县市开展实地调查, 发现红棕象甲[Rhynchophorus ferrugineus (Oliver)]的寄主植物 15 种, 常见受害寄主植物有椰子、 霸王棕、 美丽针葵、 酒瓶椰子等, 并对采集的红棕象甲虫源标本及为害特征进行观察。 在海南 8 个市县的椰子种植区及棕榈园共设 30 个监测点, 各个监测点均能诱到红棕象甲成虫。 田间实时诱集监测的 3 年积累试验数据显示: 全年均能诱集到红棕象甲成虫, 6~8 月份能诱到较多的红棕象甲成虫, 说明这时期是红棕象甲成虫活动的一个高峰期。
【英文摘要】From 2006 to 2008, the damage survey of Rhynchophorus ferrugineus (Oliver) was conducted inmany cities in Hainan. It was detected that there were 15 host plants for Rhynchophorus ferrugineus (Oliver). And Cocos nucifera, Bismarckia nobilis, Phoenix roebeleni, Hyophorbe lagenicaulis were among the most common ones. The insect samples and the damages caused by Rhynchophorus ferrugineus (Oliver) were also studied. Adult Rhynchophorus ferrugineus (Oliver) could be captured in all 30 monitoring stations in 8 cities of Hainan year around, while more adult insects could be captured in June and July, which meant that these two months were the occurrence peak.

【题目】红棕象甲外形态特征及生殖器官结构观察
【中文关键词】Rhynchorusferrugineus; Morphology;Reproductive organ
【英文关键词】Rhynchophorus ferrugineus (Oliver); Damage survey; Trapping monitoring
【中文摘要】描述了红棕象甲的外形态特征及生殖系统。结果表明,红棕象甲体长19~34 mm,宽8~15 mm,身体红褐色。雄性成虫内生殖器官包括一对睾丸、输精管、贮精囊、射精管、附腺组成;雌性成虫内生殖器官由一对卵巢、一对侧输卵管、中输卵管、受精囊等部分组成。
【英文摘要】Themorphology and reproductive system inRhynchorus ferrugineuswas described. The results showed that the body length of Rhynchorus ferrugineusis from 19mm to34mm, the bodywidth is from 8mm to15mm andRhynchorusferrugineusis reddish brown.The male internal reproductive organ is composed of two testicles, vasa deferentia, seminalvesicle, ejaculatory and accessory glands; the female internal reproductive organ includes in two ovaries, two lateral oviducts, one common oviduct, spermatheca etc.

【题目】一种简便分离香蕉枯萎病菌的选择性培养基
【中文关键词】香蕉枯萎病菌; 选择性培养基; 检测
【英文关键词】Fusarium oxysporum f. sp. cubense; selective medium; detection.
【中文摘要】摘要 为探寻在非无菌操作下能从土壤中快速且大量分离检测香蕉枯萎病菌, 研制了一种用于检测香蕉枯萎病病原菌的选择性培养基-PCEA, 其成分为: 马铃薯 200 g, CuSO4 · 5H2O 0.5 g, MgSO4 · 7H2O 0.6g, KH2PO40.1 g,敌克松结晶粉(75%)3 g, 硫酸链霉素 0.75 g, 95%酒精 10 mL, 水 1 000 mL, pH5.8, 琼脂 18~20 g。 该培养基与其它常见分离培养基相比, 无需无菌操作, 且成分简单、 检测率显著, 抑菌效果好, 病菌在其上生长快、 菌落典型, 是一种较为理想的选择性培养基。
【英文摘要】A new selective medium, PCEA, for simple mass isolation of Fusarium oxysporum f. sp. cubense(FOC) from the soil was developed for daily detection. The medium consisted of the following ingredients per liter distilled water: Potato 200 g, CuSO4.5H2O 0.5 g, MgSO4.7H2O 0.6g,KH2PO40.1 g, 75% fenaminosulf3 g, streptomycin sulfate 0.75 g, 95% ethanol 10mL, pH adjusted to 5.8, and agar 18~20 g. Compared to other selective mediums, this medium was simple and quick to isolate spores from naturally infested soil while rarely contaminated by other microorganisms. The colonies of FOC on the medium were large and white colored, and the mean recovery rate of FOC inoculated in the soil was upto 89.5% . In fact,supplemented with various antibiotics, antifungal substance and nutrients, this selective medium wasprepared easily but not necessarily in sterilized conditions. It was simple in ingredients, high in recoveryrate and better in inhibitory effect. The FOC grew fast with typical colonies on this medium and is hence believed a better selective medium for daily detection of FOC.

【题目】香蕉枯萎病菌fga1基因的克隆与序列分析
【中文关键词】尖孢镰刀菌古巴专化型; 生理小种; fga1; 致病性; G 蛋白 α 亚基
【英文关键词】Fusarium oxysporum f.sp. cubense; race; fga1; pathogenicity; α subunit of G protein.
【中文摘要】为了解fga1 基因在尖孢镰刀菌古巴专化型侵染香蕉过程中的作用 , 及其与尖孢镰刀菌古巴专化型生理小种 1 号和生理小种 4 号之间的致病力差异的关系, 采用 PCR 和 RT-PCR 方法扩增了 2 个生理小种的 fga1 基因,并对扩增产物进行了测序及相似序列搜索和比对, 还对基因编码的蛋白进行了氨基酸序列比对和功能分析。 研究结果表明 2 个理小种 fga1 基因开放阅读框均为 1 062 bp, 编码 353 个氨基酸, 基因同源性为 99.5%, 氨基酸序列相同。 推测 fga1 基因可能与香蕉枯萎病菌自身繁殖和附着胞的形成有关。 从 fga1 基因序列及其编码蛋白的氨基酸序列看, 2 个生理小种致病力的差异与 fga1 基因并无明显对应关系, 这为进一步研究 fga1 基因功能奠定了基础。
【英文摘要】Fusarium oxysporum f. sp. cubense (FOC) is the pathogen of the Panama disease. In order toknow the roles of fga1 gene in invasion process of FOC into banana and its relationship in pathogenic difference between the races 1 and 4 of FOC attacking the same banana cultivar, the fga1 genes were amplified by Polymerase Chain Reaction and Reverse Transcription Polymerase Chain Reaction, and the amplification products were then sequenced and aligned with DNAStar Meglignment software. The functions of the encoded protein by fga1 genes were also analyzed. The results revealed that the open reading frames of fga1 genes from both races of Fusarium oxysporum f.sp.cubense were 1 062 bp, and encoded 353 amino acids. The fga1 gene from FOC race 1 showed 99.5% similarity to FOC race 4, but their amino acid sequences were the same. These indicated that the fga1 gene probably controlled the reproduction andappressorium formation of FOC, but it seemed there was no relation between fga1 gene and the difference in pathogenicity to the same banana cultivar between FOC race 1 and race 4. These results would help to understand the function of fga1 genes in the follow-up research activities.

【题目】香蕉枯萎病菌cyp1基因的克隆与序列分析
【中文关键词】尖孢镰刀菌古巴专化型; 生理小种; 亲和蛋白基因; 寄主选择性
【英文关键词】Fusarium oxysporum f sp. cubense; race; Cyclophilin A gene (cyp1); host selective preference
【中文摘要】为了解亲环素基因(cyp1, 其编码亲和蛋白)在尖孢镰刀菌古巴专化型生理小种 1 号和生理小种 4 号之间及与其他镰刀菌之间的差异, 分析 cyp1 基因与两生理小种之间的寄主选择性差异的关系, 通过比对现有镰刀菌属的亲环素基因序列, 设计并合成引物, 采用 PCR 和 RT-PCR 方法扩增了尖孢镰刀菌古巴专化型生理小种 1 号和生理小种 4 号 2 个生理小种的 cyp1 基因, 并测序进行比较分析, 同时对编码蛋白进行了氨基酸序列比对和功能分析。 结果表明, 2 个生理小种 cyp1 基因全长均为 1 066 bp, 开放阅读框均为 675 bp, 编码 224 个氨基酸, 基因序列间差异为 0.8%, 编码蛋白间仅存在 1 个氨基酸的差异; 两生理小种的 cyp1 基因序列与镰刀菌属其他专化型或不同种间存在差异性, 与不同属之间其他种间的差异最大达 50%, 比对蛋白序列发现仅存在 0.85%的差异,这进一步证明亲和蛋白在真菌中较保守。 从 cyp1 基因序列及其编码蛋白的氨基酸序列在两生理小种之间的差异性分析结果推测, 2 个生理小种寄主选择性差异与 cyp1 基因并无明显对应关系, 这为进一步研究 cyp1 基因功能奠定了基础。
【英文摘要】In order to know the differences of cyp1 gene between Fusarium oxysporum f sp. cubense (Foc)race 1 and race 4 and other Fusarium, and analyze whether the host selective difference between the races 1and 4 were related with Cyclophilin A (cyp1) gene, the cyp1 genes of races 1 and 4 were amplified by Polymerase Chain Reaction and Reverse Transcription Polymerase Chain Reaction and sequenced, and the gene sequences and the encoded protein sequences were aligned by using the DNAStar software. The results revealed that the full length of cyp1 from Foc races 1 and 4 were both 1 066 bp, with their open reading frames being 675 bp, encoding 224 amino acids. The sequences of the cyp1 gene of Foc race 1 showed 99.2% similarity to that of Foc race 4 and there was only one amino acid different in the sequences. The cyp1 gene sequences of these two races were different from those of other specialized forms or species of Fusarium or from those of other species of different genera (the highest being 50.9% byalignment), and the protein blast result showed only 0.85% difference. This proved that the cyp1 protein was conserved in fungi,. It was inferred from the differences of the cyp1 gene sequence and protein sequences from FOC1 and FOC4 isolates that there was no obvious relation between the cyp1 gene and the host selective preference of FOC1 and FOC4. These results would help to know the function of the cyp1 gene from FOC1 and FOC4 in the future researches.

【题目】香蕉枯萎病菌pgx4基因的克隆与序列分析
【中文关键词】尖孢镰刀菌古巴专化型; 生理小种; pgx4 基因; 序列比对
【英文关键词】Fusarium oxysporum f. sp. cubense; race; pgx4 gene; cloned and sequenced.
【中文摘要】为了解pgx4 基因在尖孢镰刀菌古巴专化型侵染香蕉过程中的作用, 及其与尖孢镰刀菌古巴专化型生理小种 1 号和生理小种 4 号之间的致病力差异的关系, 以尖孢镰刀菌古巴专化型 1 号生理小种和 4 号生理小种的基因组 DNA 和 cDNA 为材料, 采用 PCR 和 RT-PCR 方法扩增了 2 个生理小种的 pgx4 基因, 并对扩增产物进行克隆测序后再用生物信息学软件对序列进行比对分析。 结果表明: 2 个生理小种 pgx4 基因的开放阅读框均为 1 395 bp,编码 465 个氨基酸, 且前 17 个氨基酸均构成该基因的信号肽。 通过 DNAStar7.1 比对发现, 尖孢镰刀菌古巴专化型 2 个生理小种 pgx4 基因的核苷酸序列存在 25 个碱基的差异, 而其编码的 465 个氨基酸中, 也有 3 个氨基酸不同, 分析这些核苷酸序列和氨基酸序列的差异可能与尖孢镰刀菌古巴专化型 1 号生理小种和 4 号生理小种在侵染蕉类不同栽培种时的识别专性寄主机制有一定关系。
【英文摘要】In order to understand the role of pgx4 gene in the invasion process of Fusarium oxysporum f.sp. cubense (Foc) which causes Panama disease in banana, and the relation of pgx4 with the athogenic difference between race one and race four of F. oxysporum f. sp. cubense infecting the same banana variety. Races one and four of F. oxysporum f. sp. cubense were used as materials to extract genomic DNA and cDNA from which pathogenicity -related genes pgx4 of F. oxysporum f. sp. cubense were amplified by

using Polymerase Chain Reaction and Reverse Transcription Polymerase Chain Reaction. The amplified products were cloned and sequenced, and sequence alignments were done by using the biological softwares. The results revealed that the open reading frames of pgx4 genes from both races one and four were 1 395 bp and encoded 465 amino acids and that the first 17th amino acids consisted of signal peptides of these genes. Alignment with DNAStar7.1 found that These 2 races had 25 different bases innucleotides of the gene pgx4 between each other, and also contained 3 different amino acids among the amino acids encoded in these genes. The sequences alignment result and the amino acid sequence showed that the difference in nucleotide and amino acid sequences between races one and four might had some relationship with host specific recognition of races one and four in attacking different banana varieties.

【中文关键词】砂田; 土砂比; 土壤含水量; 土壤养分
【英文关键词】sandy-field; soi-l sand rat io; soil w ater content; soil nut rient
【中文摘要】以宁夏香山地区种植1~ 17 a 砂田及撂荒砂田为研究对象, 对砂土比例、耕层土壤含水量(0 ~ 20cm) 、有机质含量、全盐量、速氮、速磷、速钾的变化进行了分析。结果表明, 连续种植可使砂田覆砂层含土量(由9. 24%增加到36. 15%) 、土砂比(由0. 09 增加到0. 57) 不断提高, 含砂量(由90. 76%降低到63. 85%) 、土壤含水量(由25. 30%降低到13. 70%) 、全盐含量(由0. 21 g / kg降低到0. 05 g / kg) 、速磷(由2. 42 mg/ kg 降低到2. 26 mg / kg) 、速钾(由172 mg/ kg 降低到109 mg / kg) 不断降低, 而有机质、全氮、速氮则先升后降, 在连续种植4~ 5 a 后达到最高(有机质: 12. 5 g/ kg; 全氮: 0. 32 g/ kg; 速氮: 15. 10 mg/ kg) , 此后不断下降。因此砂田连续种植4~ 5 a 必须人工补肥, 连续种植若干年后休闲1~ 2 a 有利于砂田性能的恢复。
【英文摘要】The test ing of the mix ed (rat io) of sand and soil, the water content of topsoil, the organic mattercontent , the total salt content, N, P & K of sandy-f ield planted for 1~ 17 years and abandoned sandy-field atXiangshan Mountain area of Ningx ia indicated that the loess content of the sandy-f ield (f rom 9. 24% to36. 15%) and the rat io of soi-l sand(f rom 0. 09 to 0. 57) improved gradually, w hile the sand content of thesandy-f ield(from 90. 76% to 63. 85%) , the w ater content of topsoil(f rom 25. 30% to 13. 70%) , the total saltcontent (f rom 0. 21 g / kg to 0. 05 g/ kg) , available P(f rom 2. 42 mg / kg to 2. 26 mg / kg) & K(f rom 172 mg / kgto 109 mg/ kg) decreased gradually. The org anic mat ter, total nit rogen, available N increased f irst and decreasedafterw ards, reached its peak (the organic mat ter: 12. 5 g/ kg, total nit rogen: 0. 32 g / kg, available N:15. 1 mg/ kg) at 4~ 5 years and then began to decrease. It is suggested that the sandy-field must be art if iciallyfert ilized af ter 4~ 5 years and leave in fallow for 1~ 2 years, w hich may be benef icial to improve the sandy-fieldperformance.

【题目】不同覆盖物下的农田地温和蒸发量对比
【中文关键词】不同覆盖物;地温;蒸发量;对比
【英文关键词】Different cover; Ground temperature; Evaporation capacity; Contrast
【中文摘要】为了进一步搞清不同覆盖物的保温效果以及农田水分利用率,特别以裸地为对照,对“ 砂石+地膜 ”、砂石、“ 裸地+地膜 ”3 种覆盖方式进行了对比研究。试验结果表明,3 种覆盖方式中“ 砂石+地膜 ”覆盖的保温效果最好,且水分利用率最高;其次是砂田,“ 裸地+地膜 ”。因此,建议在有充足的砂石来源基础上的干旱地区或有限灌溉地区,甚至是在低温年份应推广应用“ 砂石+地膜 ”覆盖,对保证作物出苗以及作物的正常生长都有重要意义。
【英文摘要】In order to find out the insulation effect of different cover further, as well as the extent of water use efficiency,especially for this problem this paper + plastic film on the sand and gravel, gravel, bare ground + three kind of plasticfilm mulching, as well as bare controls were compared. The results showed that: three ways gravel cover + plastic film coveringthe thermal insulation effect of the best and the highest water use efficiency, followed by sand fields, and bare land+ followed by plastic film mulch. So, it is recommended

adequate sources of sand and on the basis of limited irrigation inarid regions or areas, or even years at low temperatures should promote the use of sand and gravel + plastic mulching,crop emergence, as well as for ensuring the normal growth of crops are important.

【题目】不同覆盖方式下的西瓜地养分对比研究
【中文关键词】:不同覆盖方式;西瓜地;养分;对比
【英文关键词】different mulching methods;soil of watermelon;nutrient;contrast
【中文摘要】:对不同覆盖方式下的西瓜地土壤养分进行了对比研究。结果表明:地面增加覆盖物后可以减轻耕层的含盐量使盐分由上层转移到下层,而灌水能使土壤容重增加,其中抑盐效果最好的是地膜覆盖,其次是砂田+地膜覆盖、砂石覆盖次之;在无灌溉水的条件下,养分利用率依次是砂石+地膜覆盖>砂石覆盖>地膜覆盖,并且0~20cm和20~40cm土层土壤碱解氮和全氮含量最高的覆盖方式是地膜覆盖,最低的是砂石+地膜覆盖。因此,在干旱地区推广发展砂石+地膜覆盖并适当增施肥料,有助于增产增收,保持干旱地区农业的持续发展。
【英文摘要】Abstract:The watermelon soil nutrients in different mulching methods were studied.The results showed that increaseground cover will relieve the salinity of topsoil to make the transfer of salt from the upper to the lower deck,While irrigation can increase soil bulk density,which was the best salt inhibition plastic film mulch,followed by Sunada+plasticfilm mulch,gravel covering second;In the absence of irrigation water under the conditions of nutrient utilization followedby sand and gravel+mulching “ sand and gravel covered ” plastic film mulch,and the 0~20cm and 20~40cm layer ofsoil nitrogen and nitrogen content in the highest form of plastic film covering coverage,the lowest sand+mulching.Thus,in arid regions to promote the development of sand and gravel+by mulching and appropriate fertilizer to help increase production and maintain the sustainable development of agriculture in arid regions.

【题目】瓜实蝇的有效积温及其在中国的年发生代数预测
【中文关键词】瓜实蝇;有效积温;适生性;年发生代数
【英文关键词】melon fly; effective accumulated temperature; viability; annual number of genera
【中文摘要】瓜实蝇Bactrocera cucurbitae Coquillett是世界上重要的检疫性害虫,通过在14、18、22、26、30、34℃温度下孵化和饲养实验,测定该虫卵、幼虫、蛹、产卵前期、世代的发育起点温度和有效积温分别是8.0982℃、4.5245℃、4.5245℃、7.4751℃、10.0019℃和28.8506、162.7462、145.7249、166.5126、503.8343日度。根据该虫的致死温度和有效积温模型,运用数学分析和地理信息系统技术,预测了瓜实蝇在中国的适生区和年发生代数,结果表明:该虫可在中国48.96%地区发生(气象站点所代表的地区),1年发生2一12代,以4-6代为主。
【英文摘要】The melon fly, Bactrocera cucurbitae Coquillett, is an important quqrantine pest in the world. The3 developmental threshold temperature of this pest's egg, larva, pupa, preoviposition period and generation were 8.0982℃、4.5245℃、4.5245℃、7.4751℃、10.0019℃ respectively, and effective accurenulated temperature were 28.8506、162.7462、145.7249、166.5126、503.8343day-degree respectively, by the hatch and breeding expermentation under the temperature of 14、18、22、26、30、34℃. Based on the fatal temperature and the model of effective accumulated temperature, using themathermatical analysis and the technology of the Geographic Infrormation System,the suitable regions and annual number of generation ofBactrocera cucurbitae were predieted in China. The result showed that its potential suitable regions were about 48.96% of sites in China,it would complete 2-12 generations,

mainly 4-6 generations in one year in China.

【题目】螺旋粉虱在中国的适生区预测与风险区划
【中文关键词】螺旋粉虱;适生性;风险区划;预测模型;中国
【英文关键词】Aleurodicus disperses; viability; risk subdivisions; predictivemodel China
【中文摘要】螺旋粉虱AleurodicusdispersusRussell是新入侵中国海南的危险性害虫。根据制约螺旋粉虱分布的关键气候因子临界值、有效积温和生物气候相似距,选用Access设计数据库、MapInfoMapX和VisualBasic设计程序,构建螺旋粉虱地理分布模型(geographic distributionmodel forA.dispersus,GDMAD),并以我国670个气象站点30年的气象资料运行该模型。结果表明:螺旋粉虱在中国的适生区主要包括以广东、广西为中心的1个大区和以四川盆地为中心的1个小区。螺旋粉虱在上述适生区可以安全越冬,1年发生4~12代,以6~9代为主。其中,高度危险区主要包括台湾、海南、广东、广西的大部、福建东南部以及江西、云南的个别地区,面积约38. 84万km2;危险区主要包括浙江南部、江西中南部、湖南南部、福建大部、广西北部、云南中南部、四川东南部、贵州南部以及广东、湖北、台湾的个别地区,面积约85. 70万km2;轻度危险区主要包括四川、云南、贵州、湖南、江西、浙江等气温较低的部分地区和广东、海南、台湾等降水量过大的个别地区,面积约35.12万km2。
【英文摘要】The spiralling whitefly,Aleurodicus dispersusRussell, is a newly discovered invasive pest in Hainan Province of China. A geographic distribution model for A.dispersus(GDMAD) is established with Access Database Design, Map Info MapX and Visual Basic Design Process, based on the criticalvalue of key climatic factors of the pest distribution, effective accumulated temperature and bioclimate analogical distance (BAD). The meteorological data of 30 years duration from 670 stations in China were used to run GDMAD. The model predicts that the suitable areas for the survivalofA.dispersesin China containeda large area centered on Guangdong and Guangxi and a small area on Sichuan Basinwhere the spiralling whitefly can over winter. Of which, high-risk regions include the major areas (about 388 400 km2) of Hainan, Guangdong, Taiwan and Guangx,i and part of the Fujian, Jiangxi and Yunnan. Risk regions (about857000km2) include southern Zhejiang, central and southern Jiangx,i southernHunan, most of Fujian, northernGuangx,i centraland southernYunnan, southeastern Sichuan, southernGuizhou, and a small portion of Guangdong, Hubei and Taiwan. Low-risk regions (about351200km2) include coollocations in Sichuan, Yunnan and Guizhou, Hunan, Jiangxi and Zhejiang and a few locations of rich rainfall in Guangdong, Hainan and Taiwan. The predictions also indicate that the spiralling whitefly would complete 4-12 generations annually in suitable survival regions though 6-9 generations annually aremore likely.

【题目】壳聚糖对6株植物枯萎病菌的室内抑菌活性测定
【中文关键词】壳聚糖; 植物枯萎病菌; 抑菌活性
【英文关键词】chitosan; plant Fusarium oxysporum; antifungal activity
【中文摘要】以6株植物枯萎病菌为实验材料,测定了不同含量壳聚糖对植物枯萎病菌抑菌活性的影响。结果表明: 壳聚糖对 6 种植物枯萎病菌都有抑制作用,经壳聚糖处理后,植物枯萎病菌的形态出现畸变。在一定含量范围内,随着壳聚糖含量的增加,抑制作用增强,且在壳聚糖的 φ = 0.4% 时,对 6 种植物枯萎病菌的菌丝生长、产孢量以及孢子萌发的抑制作用均达到最大; 但是随着壳聚糖含量的继续增加,其抑制作用反而下降,这可能与高含量时壳聚糖分子之间通过氢键自相聚集造成有效含量的下降有关。
【英文摘要】The effects of different concentrations of chitosan on the antifungal activity against six different plant Fusarium oxysporum were investigated. The results indicated that the chitosan have antifungal activities within certain concentration range,and the distortion of morphology of plant Fusarium oxysporum treated with chitosan is found. With the increasing of chitosan concentration,the inhibitory activity of it increased ,and at 0.4% ,the antifungal activity was strongest,while the antifungal activities decreased with the chitosan concentration increased continuously,which might be due to the reduction of the chitosan effective concentration through aggregation by hydrogen bond.

【题目】抗旱龙在旱砂地枣树上的应用效果研究
【中文关键词】旱砂地;枣树;抗旱龙微肥;土壤养分;土壤含水量
【英文关键词】N/A
【中文摘要】2008-2009年,调查了宁夏中卫市香山乡红圈子村的西瓜间作枣树旱砂地土壤理化性质、养分状况和含水量,并对1~2年生枣树进行了叶面喷布抗旱龙试验,结果表明:旱砂地土壤严重缺乏磷、锌、铁,锰,氮素缺乏,钾和有机质含量较低,全盐含量达0.127%,比灌区丰产枣园相应土层的全盐含量高.在80cm的深度内,土壤舍水量随着土层深度的加大而逐渐下降,8月中旬之前,土层较厚的土壤含水量在8%~10%之间小幅波动;随着秋雨量的增加,土壤含水量逐渐加大,最高达12.64%;土层较浅的含水量仅6%左右.在枣树生长的前中期,叶面喷布3次800倍抗旱龙可使单叶面积增加46.5%~50.4%,百叶干重增加50.2%~57.2%,坐果率和单株坐果量大幅度提高,树体的营养生长也有不同程度提高.抗旱龙是旱砂地枣园值得大力推广的一种新型、经济和高效的抗旱微肥.

【题目】红棕象甲在中国的风险性分析
【中文关键词】红棕象甲;检疫;有害生物;风险分析;中国
【英文关键词】Rhyncnophorus ferrugineus(Red palm weevil); Quarantine; Pest; Risk analysis; China
【中文摘要】红棕象甲是我国林业检疫性害虫。运用国际植物检疫措施实施标准(ISPM)的有害生物风险分析(PRA)程序,建立红棕象甲传入风险分析评估模型,采用定性分析和多指标综合评估相结合的方法进行分析。结果显示,国内分布情况,风险值为2;潜在的经济危害性,风险值为2.4;寄主植物的经济重要性,风险值为3;传播扩散的可能性,风险值为1. 89;风险管理难度,风险值为2.33。红棕象甲的综合风险性值为2.29,符合高风险检疫性害虫条件,在我国很多地区易定殖,对我国的棕榈科植物威胁很大。

【英文摘要】Rynchophorus ferrugineusOlivier is a quarantine pest in the forestry ofour country. Based on the international standards for pestmeasurements (ISPM), pest risk analysis (PRA) model ofRynchophorusferrugineushas been established in this paper. The risk levelofR. ferrugineusin Chinawas comprehensively evaluated by the following five indexes: the distribution, the potentialdegree of damage, the economic value of the infected hostplants, the possibility of transmission and spreading, and the difficulty of riskmanagement. The risk values of the five indexeswere calculated as 2, 2.4, 3, 1.89 and 2.33, respectively. The overall risk value ofR.ferrugineuswas 2.29, which has reached the leve1 ofhigh-risk quarantine pests in China. The weevil can easily settle down in the many areas ofChina and will pose a great threat on palm trees.

【题目】虫害诱导植物挥发物的释放机制及应用
【中文关键词】HIVs;释放机制;应用
【英文关键词】HIVs, releasing mechanism, application
【中文摘要】虫害诱导的植物挥发物(HIVs)是植物受到害虫为害时产生和释放的,并且是植物进行通讯和保护自身的挥发性物质。HIVs能调节植物、植食性昆虫和天敌之间的关系,对昆虫的行为调控有非常重要的作用,近年来已引起人们的广泛关注。从HIVs的释放机制和应用两方面进行综述,有助于开发和利用HIVs保护植物,降低植食性害虫的危害水平,实施保护植物的新策略。
【英文摘要】Herbivor-induced plant volatiles (HIVs) from plants damaged by pest can communicate amongplants and can protect plants. They can manipulate relationships among plants, herbivores and their natural enemies, and it was very important for herbivor-induced plant volatiles to manipulate insect behavior. In recent years, herbivor-induced plant volatiles have attracted attention of people. In the paper, the releasing mechanism and the application of herbivor-induced plant volatiles were reviewed. It was helpful to exploit and use herbivor-induced plant volatiles for protecting plants and to carry out the new strategy of protecting plants.

【中文关键词】棕榈科植物挥发物;椰心叶甲;椰甲截脉姬小蜂;行为反应
【英文关键词】Palm plantvolatiles;Brontispa longissimat; Asecodeshispinarum; Behavioral responses
【中文摘要】[目的]阐明4种棕榈科植物挥发物对椰甲截脉姬小蜂的引诱作用。[方法]用/Y0型嗅觉仪观测了椰甲截脉姬小蜂雌蜂对4种棕榈科植物(椰子Cocos nucifera,大王椰子Roystonea regia,槟榔Areca catechu和散尾葵Chrysalidocarpus lutescens)的行为反应。[结果]4种棕榈科植物未受害心叶和机械损伤心叶挥发物对椰甲截脉姬小蜂没有明显的吸引作用;每叶10头椰心叶甲3龄幼虫为害20~48 h幼虫-散尾葵心叶复合体、幼虫-槟榔心叶复合体和幼虫-椰子心叶复合体对椰甲截脉姬小蜂有明显的吸引作用;幼虫-大王棕心叶复合体仅在36、48 h对椰甲截脉姬小蜂有明显的吸引作用;小于或大于这些时间范围,4种复合体对椰甲截脉姬小蜂都没有明显的吸引作用;相比之下,椰甲截脉姬小蜂对幼虫-椰子心叶复合体的趋向率稍强于其他3种复合体,但对4种复合体的行为反应没有明显差别。[结论]椰心叶甲幼虫为害寄主植物心叶后,诱导的植物挥发物可引起椰甲截脉姬小蜂的寄主栖境定向行为。
【英文摘要】[Objective] The article amied to elucidate the attracting effects of the four palm plants volatiles to Asecodeshispinarum. [Method] The behavioral response of A. hispinarum females to the volatiles emitted from 4 palm plants (Cocosnucifera, Roystonea regia, Areca catechuandChrysalidocarpus lutescens) were studied by using a Y-tube olfactometer. [Result]The volatiles emitted from undamaged and mechanically damaged heart leaves of 4 palm plants had not attraction to A. hispinarum; the attraction of volatiles from 3L-Cocosnucifera, 3L-Areca catechu and 3L-Chrysalidocarpus lutescenscomplexes to A.hispinarum females were only evident between 20 h and 48 h after infestation by 10 B.longissima 3th larvae per leaf, but not before or after. The volatiles from 3L-Roystonea regiacomplexes had evidentabstraction at 36 h and 48 h, but not at other tmie. The behavioral responses of the female parasitoids to different larvae-plam complexeswere not evident at 48 h; in contras,tparasitoids preferred the volatiles from 3L-Cocosnucifera. [Conclusion] The volatiles from heart leaves of host plants damaged by the larvae of B. longissimacould attractA.hispinarumto locate to the host habitat.

【题目】红棕象甲成虫对5种植物发酵挥发物的行为反应
【中文关键词】红棕象甲; 植物发酵挥发物; Y 型嗅觉仪; 行为反应
【英文关键词】Rhynchophorus ferrugineus; volatiles of plant fermented; Y-tube olfactometer; behavioral response.
【中文摘要】利用Y 型嗅觉仪测定了红棕象甲 (Rhynchophorus ferrugineus)成虫对甘蔗 (Saccharum officinarum)、 椰子 (Cocos nucifera)、 假槟榔(Archontophoehix alexandra)、 槟榔(Areca catechu)和菠萝(Ananas comosus)等 5 种植物发酵挥发物的选择行为。 结果表明, 红棕象甲成虫对不同植物发酵挥发物敏感性不同, 对寄主植物的选择性显著高于非寄主植物菠萝, 依次排序: 甘蔗≈椰子>假槟榔≈槟榔>菠萝。 雌成虫和雄成虫对椰子和甘蔗的行为反应同其他 3 种植物相比有更强的趋性, 但雄成虫对假槟榔、 槟榔和菠萝 3 种植物发酵挥发物的选择性无显著差异。 甘蔗、 椰子、 假槟榔 3 种植物食物诱饵的田间诱捕试验结果表明, 植物挥发物对红棕象甲聚集信息素具有极显著的增效作用($P < 0.01$), 3 种植物田间诱捕效果差异显著($P < 0.05$), 依次为: 甘蔗>椰子>假槟榔。 不同食物诱饵诱捕的雌成虫数均多于雄成虫。
【英文摘要】Behavior response of red palm weevil [Rhynchophorus ferrugineus (Olivier)] adult to volatilecompounds from fermented plants of 5 species, Saccharum officinarum, Cocos nucifera, Archontophoehix Alexandra, Areca catechu and Ananas comosus veterans, was tested by using Y -tube olfactometer in laboratory. The result indicated the R. ferrugineus adults had different

sensitivities to volatile compounds from different species of fermented plants, and had a higher preference to the volatiles from the host plants than to the non-host plants in the order of S. officinarum ≈ C.nucifera > A. alexandra ≈ A. catechu > A. comosus. Adult females and males have a significantly higher preference to the S. officinarum and C.nucifer than to the other three species of plants fermented, but no significant difference was found in behavior response of the adult males to A. Alexandra, A. catechu and A. comosus veterans. Field trapping experiment with Saccharum officinarum, Cocos nucifera, Archontophoehix Alexandra as baiting feed showed that the plant volatiles produced significant synergism to insect aggregation pheromone (P <0.01). The red palm weevil showed the strongest host preference to S. officinarum, followed by C. nucifera, and then A.alexandrae. However, more adult females than adult males were trapped by different species of plants fermented.

【题目】红棕象甲危害现状和主要防治措施研究进展
【中文关键词】红棕象甲;危害现状;防治措施
【英文关键词】Red Palm Weevil ;occurrent status; main control measures
【中文摘要】介绍了红棕象甲在国内外的危害状况,阐述了近年来其主要防治措施的研究进展 ,对该虫在我国的进一步研究有一定参考价值,同时对该虫综合防治策略和方案的制定也具有实用意义。
【英文摘要】This paper definitely reportsits occurrent status of Rhynchophorus ferrugineus (Olivier) both at home and abroat ,then to expound its research advvance on main control measures. There is some reference value to future research on it, and has significance to establish strategy and project of IPM-controlling this pest.

【题目】室内饲养红棕象甲的行为观察
【中文关键词】红棕象甲,交配,产卵,行为
【英文关键词】Rhynchophorusferrugineus, mating, ovipositing, behavior
【中文摘要】报道红棕象甲RhynchophorusferrugineusFab.成虫交配、产卵行为,描述在交配和产卵过程中发生的多种行为。红棕象甲整日均可见其交配行为,但在暗光周期开始015 h左右明显有一个交配高峰期。其交配持续时间、交配几率不受虫体大小的影响。在无外界因子干扰的条件下,交配持续时间均可达1min。红棕象甲卵为单产,一处1粒,主要是通过口喙蛀孔辅助完成;观察红棕象甲幼虫、蛹的行为,例如取食、争斗、蜕皮、做茧等行为。且随着低龄幼虫向高龄幼虫的过渡,幼虫的取食和钻蛀行为从棕榈植物中心向外围扩散。通过摇动或震动茧后红棕象甲在其中表现的行为,并结合茧的颜色和质地可准确判断茧中存在的3种虫态。
【英文摘要】The mating and oviposition behavior of red palmweevil,RhynchophorusferrugineusFab. was observed in laboratory. Mating behavior may be observed in the whole day, but a peak of mating occurred in the half hour of the beginning of the dark period. Moreover, mating duration and probability were not influenced by body size. Without external interference, mating duration may be more than 1 minute. After the copulation, females bored a hole, andlaid one egg each hole. In addition, larval and pupal behaviors were also studied, such as feeding, fighting,exuviating and cocooning. Withthe development from youngto old larvae, the feeding and drillingwere from centre to periphery of palms. Through the behavior of red palmweevil in shaking of cocoon and combinationwith observation of the color and texture of the cocoon, the three stages of cocoon could be distinguished.

【题目】Effect of temperature on the population growth of Rhynchophorus ferrugineus (coleoptera: Curculionidae) on sugarcane.
【中文关键词】无
【英文关键词】Rhynchophorus ferrugineus, developmental time, temperature, population, life table
【中文摘要】无
【英文摘要】The effect of temperature on the developmental time, survival, and reproduction of Rhynchophorus ferrugineus (Olivier) reared on sugarcane was studied at seven constant temperatures (16, 20, 24, 28, 32, 36, and 40 degrees C). The developmental threshold temperatures and effective accumulated temperatures for the whole generation were 17.41 degrees C and 1,590.72 DD, respectively. One generation had the highest survival rate (26.67%) at 28 degrees C. The egg failed to survive at 16 and 40 degrees C. The population trend index (I = 38.22) and net reproductive rate (R(o) = 38.3) were highest at 28 degrees C. The net reproductive rate (R(o) = 3.36), intrinsic rate of increase (r(m) = 0.0028), and finite capacity of increase (lambda = 1.0028) were lowest at 20 degrees C. The mean generation time (T(o) = 85.82) was shortest at 36 degrees C. The population double time (PDT = 27.08) was shortest at 32 degrees C. Based on these studies, we concluded that the temperatures from 28 to 32 degrees C were the most suitable temperatures for the development of R. ferrugineus.
